Throughout this Nation for generations property owners have protected themselves and their communities against invasion by colored hordes through restrictive clauses in their deeds to real estate. The Supreme Court struck down those clauses. Where there have been any sizable groups of Negroes, it has been the almost unvarying custom for whites to live in white sections and Negroes to live in Negro sections. White people have maintained white schools and white colleges and universities. White people have also maintained Negro schools and Negro colleges and universities. The contributions of Negroes to their own institutions of learning and their own public schools have been negligible. In 1950 I obtained from the records of DeKalb County the cost of operating the Negro schools in that county and the amount of taxes paid for school purposes by the Negroes of that county. The figures showed that the property-owning Negroes of DeKalb County paid a total amount of schools taxes of $1,925.35, or less than $1 per school year for the 2,042 Negro children who attended the county public schools. Yet DeKalb County spent that year an average of $85.33 per pupil. DeKalb County paid $2,000 each to operate four Negro school buses to haul Negro children to the county public schools, a total school bus expense for them of $8,000. The amount of school taxes paid by the Negroes was not enough to haul even one-fourth of their children to the schoolhouse door, and nothing for operating the schools themselves.

The white people have carried this burden, and have carried it uncomplainingly. It has been well known that the Negroes could not and would not provide educational facilities through their own efforts. Had their school opportunities and facilities been limited to such as they would have provided for themselves, it is doubtful if provision would have been made for Negro children, as a whole, to finish the first grade.

Over half the States of this Union have laws upon their statute books preventing the intermarriage of whites and blacks. In many of the States of this Union our political systems were built upon a system of white primaries, in which the white people of the States, the counties, and the cities could express their choice as white Democrats. The bar associations, the medical societies, and the professions have generally followed a policy of segregating themselves according to races. This is the custom which has been followed in schools, in politics, in residential developments, in industry, religion, and society in general. As far back as history goes, this has been the recorded pattern upon which civilization has been based. America grew to be the greatest country following this pattern. Under it our churches have grown and prospered, and we now have missionaries in practically every land on this globe which is populated by a colored race or a mongrel race trying to keep alive a spark of the Christian religion in those lands where colored and mongrel populations have demonstrated that they do not have the stamina to perpetuate and keep alive the Christian religion and it has lived through the centuries only by the efforts of the white race.

Yet these noisy advocates of integration and mongrelization have within the past 20 years successfully organized a conspiracy to thwart the will of the great majority of the people in this country through bypassing the legislative department of our Government, the Congress, and through the connivance of the executive department and the Supreme Court, have step by step, through so-called judicial decisions and Executive orders endeavored to destroy the accepted practices of our people and to force this repulsive pattern upon an unwilling people.

The people in Chicago, Ill., do not want to live among Negroes any more than the people in Atlanta, Ga., and proved it by staging a riot which lasted for more than a year when radicals behind the integration movement there arranged for a Negro to move into an all-white residential section. In Los Angeles, Calif., which boasts that it is broad-

minded, a long-standing custom was broken and a few Negro firemen were moved into white firehouses. This was so repulsive and disagreeable to the white firemen, who were unwilling to sleep and eat with the Negro firemen, that the fire chief of Los Angeles reestablished the all-white firehouses, and told the mayor and council they could fire him if they saw fit, but he would not order the Negroes back into the white firehouses.

President Eisenhower, in his efforts to make a second Harlem out of Washington, D. C., has, through his three appointed City Commissioners ordered a few Negro firemen into some of the white firehouses there. It is meeting with the same protest and resistance.

So diligent have the integrationists and mongrelizers become in Washington that an announcement has been made by officials of the Federal and city governments that the doors of all federally owned property will be closed to the boys' clubs of the Nation's Capital if they continue to operate as white boys' clubs and Negro boys' clubs. These clubs have been financed to the extent of $330,000 principally by white people through voluntary contributions, although there are 14,000 Negroes enrolled in the boys' clubs and only 8,000 whites. The clubs have taken boys off the streets with recreational activities in winter, and camps in summer. Yet one church in Washington has already closed the doors of a meeting place formerly used by a white boys' club, and thus deprived a group of fine white children the benefit of the wholesome influences of the boys' club program because the club and its board of governors refused to have this unacceptable intermingling forced upon them. What a fine demonstration of Christianity.

In Delaware where a school board announced mixed schools would be ordered another near riot occurred and separate schools were restored. In Washington, D. C., the mixed school order is deeply resented. White people are moving out of Washington into nearby Virginia in great numbers. In June 1955, the exodus of white people from Washington had resulted in a public school system composed of 61-percent Negro pupils and 39-percent white. These figures were reported in the U. S. News & World Report of June 10. The same article reported that white people who could afford it were moving out of predominantly Negro school districts. There is still another deplorable consequence. The article also reported, and I quote verbatim from it:

"Washington educators expressed shock at learning how far the general educational level of the Capital's Negroes is below that of the whites.

"The result, many school principals say, has been that the learning pace within most of the mixed schools has been slowed down to keep step with the general run of Negro pupils."

Thus one of the immediate and obvious results of mixing the schools in Washington is that white children will be held back because the Negro children have shown they cannot keep the pace.

This exodus of white people from Washington to avoid the mixed schools reported in June last year was not a temporary flare-up. It has not only continued; it has increased. The U. S. News & World Report 6 months later, in its November 25 issue reported as follows, and I quote verbatim from the article entitled "Mixed Schools—Second Year," as follows:

"More and more white pupils leave Washington.

"Negroes are pouring into Washington, white families leaving in droves. Result: A basic change in the population in the Nation's Capital.

"In schools 64 percent of students now are Negroes. In some residential areas, Negroes take over.

"Twenty years ago, 64 percent of the pupils in the city's public schools were white, 36 percent Negroes. Today this is reversed—64 percent Negroes, 36 percent whites. These figures are disclosed by new official count.

"Washington now has a greater proportion of Negroes in the public schools than any other large United States city."

This article also pointed out what everyone familiar with Washington knows, that the rush of white people to get out of Washington has been stepping up since 1948 when the Supreme Court, as a part of its program of usurping legislative functions, changed the law to invalidate restrictive covenants in deeds to real estate. This permitted Negroes to move into white neighborhoods, making them less desirable, and running down the value of the property.

Proof that white people do not intend to mix with Negroes, and cannot be forced to do so, is the manner in which the white people of Washington treated the order of the Federal Government abolishing segregation in federally owned swimming pools. Washington is a hot city in the summertime, and prior to the issuing of this order by the Federal Government, the white swimming pools have been crowded. When the order was issued in 1949 and 1950, it did not result in whites and Negroes swimming together, it simply resulted in the previously white swimming pools becoming Negro swimming pools, as the white people abandoned them to the Negroes.

Resentment of white people manifests itself in every section of our country—north, east, and west, as well as south over these efforts to force the unnatural practice of mixing the races. In Chicago, in many sections, a determined white population has successfully resisted forcible efforts to destroy their residential segregation pattern. This has been done although Illinois has had a governor, and Chicago has had a mayor who have sought by forcible means to ram this integration policy down their unwilling throats.

In Chicago on August 11, 1953, 1,500 persons rioted in protest over a Negro family being moved into Trumbull Park Homes in the South Deering section of the city.

The police commissioner had to send 3 shifts of 250 policemen, or 750 per day to keep down the violent rioting. On one occasion 1,250 policemen were called out.

The commissioner was quoted 16 days later, on August 27 as saying that racial disturbances had required the service of 12 percent of his 6,889 man force—in other words 826 policemen spent all of their time working with racial trouble.

Under these circumstances the battle was carried on in Trumbull Park Homes for more than a year. The Negro family was finally moved out, and then brought a damage suit against the Chicago Housing Authority. In 1 year there was more racial trouble in Chicago than in the whole South put together, and it resulted from efforts to force intermingling between whites and blacks.

Thank Almighty God that we do not have that kind of governor in Georgia willing to join hands with a packed Supreme Court and an appeasement-minded Chief Executive in destroying our Constitution. I thank Him that we have in Georgia a governor who has said:

"I speak for the people of Georgia when I say that we accept this challenge. We accept it with the firm assertion that we shall not surrender to this Court the inalienable rights of our sovereign State. We shall not surrender our right to conduct and regulate our own educational institutions. The State created them. The State built them. The State finances them. The State shall run them."

I am thankful that we have a lieutenant governor who is holding up the hands of the Governor in this crisis.

I am grateful that we have in Georgia filling the high office of attorney general an official who has the intelligence and ability to recognize this fraudulent scheme for the sorry thing it is, and the energy and courage to expose it and its backers not only to our people here at home, but in areas where hotbeds of radicalism exist in other sections of the country. I am grateful for the determined attitude of Georgia people who voted by a substantial majority to amend our Constitution so that if worst comes to worst, and the public schools in Georgia could only be operated as nonsegregated and mixed schools, this intolerable thing can be avoided by elimination of public schools entirely and the teaching of our children in private schools.

I am grateful for this legislature and its officials who are resolutely and determinedly enacting a program of legislation to keep within our own hands the conduct of our own affairs.

I am grateful for the chief justice of the Georgia Supreme Court, who wrote the opinion, and for the six associate justices who joined with him in a unanimous opinion by that court in the case of *Williams* v. *State of Georgia* in which the Supreme Court of the State of Georgia said to the Supreme Court of the United States:

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people. * * * (Constitution of the United States, 10th amendment). Even though executives and legislators, not being constitutional lawyers, might often overstep the foregoing unambigous constitutional prohibition of Federal invasion of State jurisdiction, there can never be an acceptable excuse for judicial failure to strictly observe it. This court bows to the Supreme Court on all Federal questions of law but we will not supinely surrender sovereign powers of this State."

This was a courageous declaration by the highest Court of our State warning the United States Supreme Court to stay out of our State affairs—a declaration to one and all that the State of Georgia knows her rights, and will have them. It was a stinging and merited rebuke.

This same group of sociologists on the Federal Supreme Court, of whom only 2 out of the 9 ever had judicial experience before going on the Supreme Court bench, are throwing up some trial balloons to test public opinion upon the important question of invalidating State marriage laws, as they threw up trial balloons to test public opinion upon the segregated school issue, and to acclimatize public opinion to it before the blow was finally struck.

In Virginia the law prohibits interracial marriages, which is the case in 28 of the States of this Union. The Virginia Supreme Court pursuant to that law, declared invalid a marriage between a Chinese seaman and a white woman, and annulled the marriage. The Chinaman appealed the case to the United States Supreme Court, and asked that Virginia's marriage law be declared in violation of the 14th amendment.

I do not think the Federal Supreme Court would hesitate to strike down the marriage laws of Virginia and 27 other States if these sociologist experts felt that public opinion would accept such a shocking decision. They know that public opinion will not accept it, and they want to kick the case back and forth for a while between Washington and Richmond to give the Communist Daily Worker, the so-called liberal press, the NAACP, the Americans for Democratic Action, the American Civil Liberties Union, and the other integrationists and mongrelizers some time in which to condition the public mind for a judicial decision striking down the last legal barrier which stands in the path of mongrelization. The Supreme Court en-

tered an order vacating the judgment, and sending the case back to the State Court, for further action, saying that it wanted additional evidence as to whether Virginia's Courts had jurisdiction in the case.

In rejecting this further attempt of the Federal Supreme Court to meddle in affairs belonging exclusively to the State, the Supreme Court of Virginia joined the Supreme Court of Georgia in refusing to recognize the right of the Federal tribunal to remand cases to the State courts "for further action" where no ground for reversal is shown in the record. The Virginia Supreme Court on January 18, last Wednesday notified the Federal Supreme Court that it refused to take further action.

It is a deplorable thing that the highest Court in our land, charged more than any other agency of our Government with the duty of preserving our Constitution, has so departed from its proper function that it now must be rebuked by State courts resisting its illegal efforts to guide them into wrong channels.

So repugnant are its sociological theories becoming that when a Federal court of appeals, following the Supreme Court's school opinion, ordered a United States district judge in Ohio to issue an order ending segregation in the grade schools at Hillsboro, Ohio, the district judge refused to issue the order, and demanded that he himself be given a hearing before the Supreme Court, and that the case be carried there in his own name.

It is a deplorable situation indeed when our people and our State courts must fight for the preservation of constitutional rights with the very agency of Government to whom we should be able to look with confidence as the ultimate guardian and protector of those rights.

But such is the situation.

As we survey the situation today we see that we in Georgia do not stand alone. We have led in this fight, and I believe the bold and courageous stand which we have taken in Georgia has been an inspiration to those in other States to brand this unconstitutional decision as an unwarranted invasion of the rights of States and of the people, and to take steps to effectively resist it.

We know that the Constitution is not, as some would have us believe, what the judges say it is. It has no such unstable or uncertain meaning. The Constitution, and all of its amendments, is the compact of the sovereign States who consented to its operation. It is the document under which we live—which we understand, and which the courts have understood for years and generations. Its meaning has been proclaimed again and gain. It is the document which every public official is sworn to uphold, and to which the loyalty of every public official is due. And let us never lose sight of this fact—that our loyalty is to the Constitution itself—not to a perverted opinion of nine men who happen for the moment to be occupying seats in the Supreme Court, and who seek because of that fact to change the true meaning, the established and accepted meaning of our Constitution. That authority does not belong to these nine men. It belongs to two-thirds of the membership of Congress and to three-fourths of the States, joining in concurrent action.

As we assert our position in this fight for our rights, determined people of other States are standing shoulder to shoulder with us.

In May of 1954 the Louisiana Legislature adopted a resolution by a vote of 84 to 3 in the house and 32 to 1 in the senate calling the Supreme Court action an unwarranted and unprecedented abuse of power, and declaring among other things that racial integration in schools is "clearly intolerable, impractical, and in the ultimate sense of the word, unenforceable upon the free people of the sovereign State." They followed that up in July 1954 by the passage of three bills by an overwhelming vote enabling Louisiana to use its inherent police power to continue public-school segregation despite the United States Supreme Court's decision. The people of that State have just elected a governor pledged to continue segregation of schools in the State.

The Legislature of Florida in July 1955 adopted a resolution proclaiming that the end of segregation in its schools would jeopardize the public health and safety; that it would tend to encourage the abhorrent, execrable, and revolting practice of miscegenation which is a criminal offense in Florida; that it would create a mongrel breed. The resolution asserted the aim of the Florida Legislature to provide equal facilities for maintaining the system of segregation in Florida's public schools and deplored any effort of the United States or any agency thereof to invade and usurp the rightful powers of the State of Florida by fostering integration of the two races in the public-school system.

The people of Virginia have voted 2 to 1 for the Gray Commission plan to retain segregated schools in Virginia. South Carolina and Mississippi have taken affirmative steps to join the increasing list of States determined to resist the unconstitutional usurpation of authority by the Supreme Court.

There is another matter which your honorable body may consider during the present session, and that is whether the Georgia Legislature wishes to adopt a resolution similar to the one which 34 of Virginia's 40 senators sponsored and introduced in that body last Thursday. The resolution provides that Virginia for its part asserts it has never surrendered its powers to maintain racially segregated schools. Secondly, Virginia challenges "the usurped authority that would inflict incalculable harm to the public schools," and would disrupt the education of her children. Thirdly, Virginia appeals to her sister States to join in applying to Congress to call a constitutional convention to oppose an amendment "designed to settle the issue of contested power here asserted."

The resolution further provides that until the question is settled "by clear constitutional amendment, we pledge our firm intention to take all appropriate measures honorably, legally, and constitutionally available to us to resist this illegal encroachment on our sovereign powers."

This is a fight in which there is no halfway ground and no middle course. Halfway measures will not win this fight. Vigorous, aggressive, and continuing action is required. There are suits pending now in Savannah asking that Negroes be admitted to white public-housing projects. Federal courts have already admitted them in other jurisdictions. Suits are pending to admit them to the university and grammar and high schools. But this school segregation issue is only a part of the problem. The ultimate aim of the NAACP and its allied radical organizations is not merely to abolish segregation in the schools of the Nation. The ultimate aim is to pressure the Supreme Court into declaring our marriage laws unconstitutional, and require all States to recognize intermarriage between the races as legal.

One of the Negroes who claims to represent the views of the NAACP stated in a magazine article as long ago as 1952 that the aim of the Negro is intermarriage with white people. It is a blind person indeed who is not now aware of that purpose. Unless we reject this school decision in toto, another Supreme Court decision holding that our marriage laws violate the 14th amendment is as certain to follow as night follows the day.

In conclusion let me say to you with all the sincerity and earnestness of which I am capable that the answer to this monstrous threat we face is organization. Too long we have permitted those who plot our downfall aided by some of our own false leaders, to deceive us and lull us to sleep with assurances that Negroes only wanted equal facilities and fair treatment. They have advised the white people against taking organized action to prevent destruction of our institutions and our way of life. Events of the past few years have shown the wrongness of that attitude. The time is here now to view the situation with realism. The time is here now to organize—not for violence—not for lawlessness, but to organize to combine into one strong, unified, determined group to retain our State sovereignty which we have never surrendered; to unite with other States, their officials, and their people; to keep within our own hands the right to conduct our own affairs; and to resist vigorously, aggressively, and successfully this and any other attempt on the part of a perverted court to take from us these sacred rights which are ours—the right to conduct our own affairs in the manner we choose and the right to protect and preserve our own ways—rights which were given to us by our own parents and forebears, and which we are dutybound to hand to our children and our descendants.

Colorado River Big Steal Up in Congress Again

EXTENSION OF REMARKS

OF

HON. MARGUERITE STITT CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1956

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks, I am calling the attention of my colleagues within the House of Representatives to the keen insight and convincing argument against the upper Colorado River project expressed in the following brilliant editorial printed in the Waukegan News-Sun, of Waukegan, Ill., on Monday, January 30, 1956:

COLORADO RIVER BIG STEAL UP IN CONGRESS AGAIN

Unless you want to help pay, at the rate of $5,000 an acre, to make arid land in the Upper Colorado River Basin a crop-producing area which will cost you more money when the Federal Government has the additional crops on which to support prices, you had better write your United States Senators and Congresswoman and tell them you oppose this huge project.

The matter of the upper Colorado River development is again threatening passage in Congress. It has the blessing of President Eisenhower, but here are some of the facts about the project that vitally concern every resident of Lake County, Ill.

The project will cost about $4 billion and the taxpayers of Illinois will pay 7.5 percent of that amount. The benefits to be derived include adding 570,000 acres of arable land to the United States farming acreage to produce more crops, most of which will be added to the present surplus of crops that are such a headache to farmers and taxpayers who must pay to support the prices.

Adding 570,000 acres of farm land simply does not figure when you consider that in Illinois alone there are 621,000 acres of good farm land lying idle because of crop surpluses, and more will be made idle if the land bank agricultural program is put into operation. At present there are 20,937,155

acres of idle farmland in the United States for that same reason. Adding 570,000 more acres is not going to help the situation.

Great waves of propaganda are coming out of the four arid States in the upper Colorado River Basin. It looks like a bananza to the people there who will have the rest of the country finance their efforts to gain farm land from the deserts and boom that area for business and industry.

The greatest rub comes in the fact that the 4 States that will benefit from this golden avalanche out of the United States Treasury will pay only 2 percent of the entire bill, while the remaining 44 States in the United States will pay 98 percent of the bill. Illinois alone will contribute $276 million in tax money to build the project.

The fact that this "big dip" into the United States Treasury originally including building the much discussed Echo Park Dam and flooding part of the Dinosaur National Monument, which is now a national park, is only a minor fraction of the objection that should be voiced all across the Nation. The major objection is that taxpayers in Lake County will be called upon to help promote a big business boom in four Northwestern States at a cost that staggers the imagination.

Senator Langer Spent $2,400 Government Funds Making Trips Back to North Dakota

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. BURDICK. Mr. Speaker, the reporter who took out after Senator LANGER for charging up an expense of $2,400 for trips to North Dakota really started something. LANGER is the luckiest politician I know of. He gets more publicity than anyone here, and invariably the charges against him are trivial. Several of his trips I know about, and each time he was doing a service to the people of North Dakota. His trip out in the mud to view the mistakes of the Army engineers who flooded 60,000 acres of the best land in Ramsey County unnecessarily was one trip, and all the others had to do with performing a service for the people of North Dakota. What about the other Senators and Representatives who traveled all over the known face of the earth this last summer and several summers before to view foreign countries to see what aid they could bring to people in Africa, India, Tasmania, Timbuktu, Greece, Italy, and the rest of Europe? These trips cost the Government for each Member many times LANGER's bill for attending to the people of North Dakota. Probably half of the Congress made these foreign trips, and I haven't seen any statement of what it cost the people. But let a Senator spend his time at home looking after the people of this country and the newspapers have a spasm and go into a fit of apoplexy.

While we are in this frenzy over LANGER's expense account, I am going to attempt to place before the people all the bills of the Members of the Senate and House who thought it necessary to look after the people of foreign countries. If I can do this LANGER's expense account will look like a flyspeck on the map of North Dakota.

A Bill To Amend the Railroad Retirement Act of 1937

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. PERKINS. Mr. Speaker, today I introduced a bill, a companion measure to H. R. 9065 originally introduced by the Honorable OREN HARRIS, of Arkansas, to amend the Railroad Retirement Act of 1937 to provide increases in benefits and for other purposes. The increased cost of living requires an adjustment in the retirement payments of this program.

The Railway Labor Executives' Association has prepared an excellent analysis of these amendments which I wish to offer as my own statement of the bill's provisions:

[Railway Labor Executives' Association: G. E. Leighty, chairman, 3860 Lindell Boulevard, St. Louis 8, Mo.; A. E. Lyon, executive secretary-treasurer, 401 Third Street NW., Washington, D. C.; Michael Fox, vice chairman, Suite, 1212, 220 South State Street, Chicago, Ill. Affiliated organizations: American Train Dispatchers' Association, Brotherhood of Locomotive Firemen and Enginemen, Brotherhood of Maintenance of Way Employees, Brotherhood of Railway Carmen of America, Brotherhood of Railroad Signalmen of America, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, Brotherhood of Railroad Trainmen, Brotherhood of Sleeping Car Porters, Hotel and Restaurant Employees and Bartenders International Union, International Association of Machinists, International Brotherhood of Boilermakers, Iron Ship Builders, Blacksmiths, Forges and Helpers, International Brotherhood of Electrical Workers, International Brotherhood of Firemen & Oilers, International Organization Masters, Mates and Pilots of America, National Marine Engineers' Beneficial Association, Order of Railway Conductors and Brakemen, Order of Railroad Telegraphers, Railway Employees' Department, AFL–CIO, Railroad Yardmasters of America, Sheet Metal Workers International Association, Switchmen's Union of North America]

EXPLANATION OF H. R. 9065 "TO AMEND THE RAILROAD RETIREMENT ACT OF 1937 TO PROVIDE INCREASES IN BENEFITS AND FOR OTHER PURPOSES"

The overall purpose of the bill is to provide a 15-percent increase in benefits (with limitations hereinafter noted); to raise additional funds in the amount of 2 percent of payroll to cover the cost of the increased benefits; and to offset the burden on employees of the increased contribution by excluding the employee contribution from income for income tax purposes. It is not proposed, however, to increases the overall social security minimum or to increase the present maximum on spouses' annuities which is equal to the maximum spouse's annuity payable under the Social Security Act; consequently, annuities being paid under the social security minimum and spouse's annuities may not be increased at all or may be increased less than 15 percent.

Section 1 (a) of the bill increases the several percentages of monthly compensation used in computing employee annuities by 15 percent each. The total effect is to increase these annuities so computed by 15 percent.

Section 1 (b) revises two elecents in the minimum employee annuity formula by increasing them 15 percent. This, too, would have the effect of increasing annuities computed under the minimum annuity formula by 15 percent, with the exception that no increase is provided with respect to those annuities which under the formula are equal to the average monthly compensation that the employee earned while in active service. It should also be noted that these changes affect only the minima computed under the Railroad Retirement Act formula itself and do not affect the general minimum provision providing benefits at least equal to the benefits that would have been received if railroad employment had been covered by the Social Security Act.

Section 2 (a) of the bill relates to the residual lump sum guaranty which assures to all employees that they will either draw in benefits while living or that there will be paid to surviving beneficiaries an amount at least equal to the employees' contributions, together with an allowance in lieu of interest. This amount is computed at 7 percent of the compensation on which taxes are paid at the rate of 6¼ percent. The amendment would provide for computing this amount at the rate of 8 percent of the compensation on which it is proposed that taxes will be paid at the rate of 7¼ percent.

Section 2 (b) relates to maximum and minimum survivor annuity totals and again adjusts both maxima and minima by an upwards revision of 15 percent.

Survivor annuities under the Railroad Retirement Act formula are computed from a so-called basic amount which is defined in section 5 (1) (10) of the act. Section 2 (c) of the bill proposes an upward revision of 15 percent in the elements going into the computation of the basic amount; thus the basic amount will be 15 percent higher with the consequence that survivor annuities computed therefrom will be 15 percent higher.

Section 3 of the bill provides a flat increase of 15 percent in pensions (i. e., those taken over from the railroad voluntary pension systems), in joint and survivor annuities (i. e., those under the former option provisions) awarded before the effective date of the bill, and in annuities awarded under the Railroad Retirement Act of 1935. The preceding sections of the bill do not apply to these classes of benefits.

Section 4 of the bill amends the Railroad Retirement Taxing Act provisions of the Internal Revenue Code so as to provide an increase of 1 percent in both the employer and employee contributions and an increase of 2 percent in the employee representative contributions (who now pay the equivalent of both the employee and employer contributions).

Section 5 of the bill excludes employee and employee representative contributions under the Railroad Retirement Taxing Act from gross income for income-tax purposes and from wages for the purposes of the withholding of income tax at the source. The result would be that any employees who have taxable income in an amount equal to or in excess of their railroad retirement contributions would realize an income-tax saving of at least 20 percent of such contributions; in such cases although the gross contribution under the bill would be 7.25 percent the net after income-tax savings would be 5.8 percent.

Section 6 of the bill fixes the dates on which the changes made in other sections become effective. Section 6 (a) makes the

increases in annuities (whether employee, spouse, or survivor) effective with respect to all accruals after June 1956 irrespective of whether the annuities have been therefore or thereafter awarded. The increase in lump-sum survivor benefits is made effective with respect to deaths occurring after June 1956. The increase in pension payments would be reflected in the August 1 payment to correspond with the date on which the first increased annuity payments would be made.

Section 6 (b) makes the amendments to the Railroad Retirement Taxing Act effective July 1, 1956, and specifies that the new rates shall apply to taxes on compensation for services rendered after June 1956.

Political Court?

EXTENSION OF REMARKS
OF
HON. PAUL BROWN
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. BROWN of Georgia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two important and timely editorials from the Augusta Chronicle-Herald of Sunday, February 19, entitled "Political Court?" and "No Interference":

POLITICAL COURT?

The press everywhere—and the politicians also—are quite upset over the fact that Vice President NIXON has placed the United States Supreme Court squarely in the middle of the political sideshow called the presidential campaign.

While one agrees with the obvious principle that the Court should steer clear of all political affiliations and devote itself to the job of interpreting law according to the Constitution of the United States, one cannot understand why so much surprise and indignation are now rife about labeling the Court as being politically inclined.

The South found out some time ago that the Court was functioning in a role other than that of unbiased interpreter of law according to the United States Constitution.

Mr. NIXON has taken the Court into the fold of the Republican Party in claiming credit for the nonconstitutional acts of the Court in connection with civil-rights decisions.

Maybe the Vice President was a little bit too hasty in trying to win glory for the Republican Party in that way because a good many of the States, outside of the South even, are beginning to appreciate the inherent danger of a court that functions according to political and personal opinions.

NO INTERFERENCE

The action of the Federal Bureau of Investigation in launching an investigation of the jury lists in Cobb County, Ga., has had interesting repercussions in the State of Alabama.

In the Cobb County case, which was brought on by the Supreme Court's reversal of the rape conviction of a Negro man on the basis that no Negro had served on a Cobb County jury for 18 years, the FBI investigation disclosed that Negroes are permitted to serve on Cobb County juries.

At Union Springs, Ala., Circuit Judge George Wallace issued last week a strong charge to the Bullock County grand jury in the course of which he declared that the FBI investigation in Cobb County was "an unwarranted and deliberate invasion of State sovereignty by the Federal police" and "a direct insult to the people of that county and to State sovereignty."

He declared that if any similar move is ever made in any of the three counties comprising his circuit he as judge will take "such action as necessary to protect the integrity of our State courts from illegal, unwarranted, unjustified, and deliberate interference by the United States Department of Justice through the Federal Bureau of Investigation." He would, he said, order the arrest of every member of the FBI or other Federal police involved in any such investigation.

The Alabama judge pointed out that Federal agents have no more right to investigate grand juries of the State courts than Alabama has to investigate Federal grand juries.

"Unless we assert ourselves," he warned, "and if we continue to allow such Gestapo methods in local affairs, then surely local government in America will be dead forever."

This is but another instance of the stiffening of resistance to efforts of the Federal Government and the Federal courts to destroy the rights of the States.

The Alabama judge is to be commended for the courage shown in his public avowal of opposition to such tactics.

It is to be hoped that both the Federal Government and the Supreme Court will pay attention to the signals of opposition that are being hoisted throughout the land, and that the people at large will be guided by reason as well as courage in their efforts to defend their constitutional rights.

Upper Colorado River Bill Before Congress Not Approved by Administration

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. HIESTAND. Mr. Speaker, the upper Colorado River storage project bill now before the House does not represent the bill approved by the administration. The bill's projects are different—the administration recommended authorization of 2 storage units, Glen Canyon and Echo Park, and 11 participating reclamation projects, at an estimated construction cost of $930 million.

The House bill authorizes 4 storage units—Glen Canyon, Flaming Gorge, Curecanti, and Navaho—and 11 participating projects recommended by the Secretary. It also in section 2 provides what is tantamount to an advance commitment of the Congress to authorize 23 additional reclamation projects.

The Bureau of the Budget definitely recommended against authorization at this time of Flaming Gorge, Curecanti, and Navaho. In addition, the administration recommended that the legislation provide that authorization of the 11 participating projects be conditioned on a new finding of favorable economic justification and of financial feasibility under specified financial requirements, with reports submitted to the Congress on each project; and that new studies of direct agricultural benefits be made jointly with the Department of Agriculture.

The bill contains no provision whatever for the reevaluation so specified by the administration and hence ignores this important requirement set forth as a condition precedent to administration approval.

Financial repayment features are basically contrary to those approved and recommended by the administration. The administration set up as a requirement that all reimbursable costs of the project should be repaid in 50 years, together with interest on the unamortized balance of the investments in power and municipal water supply features.

The bill departs materially from the specified repayment criteria. It would attempt to adhere to repayment of the irrigation investment in 50 years, but would do so by the device of extending the repayment period for the power investment to not exceed 100 years, or twice the 50-year repayment period specified by the administration.

Atomic Energy and the Solid Gold Cadillac Upper Colorado Project

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. HOSMER. Mr. Speaker, production of electric power by atomic energy is not a dream of the future. The age of nuclear power is here.

Today the United States is engaged in a vital contest with the Soviets to maintain its nuclear leadership not only in weapons, but equally in economic uses of the atom's secrets. If we fail in this, then we will fail to stem the tide of ruthless, aggressive, dictatorial communism. Such a failure would not be America's alone, but would be shared by people everywhere who look to us to preserve the peace and maintain the freedom and dignity of mankind.

Yet in the midst of this deadly struggle, Congress is being asked to waste hundreds of millions of dollars worth of our resources to build hydroelectric plants as "cash registers" for irrigating arid land at high altitudes in Colorado, New Mexico, Wyoming, and Utah. This is a project so infeasible that its water revenues could repay less than 15 percent of its cost. It is a project that could only add to the Nation's bulging agricultural surpluses.

I refer, of course, to the "solid gold Cadillac," multi-billion-dollar upper Colorado River storage boondoggle.

If political pressures are so great in an election year that Congress cannot resist this greatest stunt since P. T. Barnum invented the "egress," at least it should be carried off in a manner minimizing its drag on the Nation's vital strength in the great battle against the Communist evil.

If Congress should insist on spending billions of dollars to put arid new land

under cultivation and at the same time enact a $1 billion a year program to deposit 40 million acres of farm land in "soil banks," then at least in the process it should provide something of national benefit to salve the welts on United States taxpayer's backs.

This can be done if Congress firmly and courageously yanks out of the bill every cent of the $504,212,000 provided for "horse and buggy" hydroelectric plants and directs this amount of money be used to build nuclear-electric facilities.

Such a substitution has a greater value merely than giving the United States nuclear-electric program a half billion dollar shot in the arm to spur it toward supremacy over the Reds. The idea may well save from ruin the already shaky financial structure of the upper Colorado scheme. It is presently based on selling 6-mill power for the next hundred years. Obviously, 6-mill power will be rendered competitively obsolete in a fraction of that time by nuclear-electric developments. Starting out with nuclear power plants, they could from time to time be modernized and bring power production costs down. Starting out with hydro plants, nothing could be done to stop them from being turned into history's most monumental white elephants by swiftly unfolding technological developments.

In short, not only do common sense tactics vis-a-vis Soviet developments demand this nuclear for hydroelectric substitution, but dollars and horse sense as well demands it.

This is particularly true because there is no need for water storage behind power dams to enable the upper basin to make the new uses of 600,000 acre-feet of water annually contemplated in the bill. Over a million acre-feet of new uses can be made without such storage. The unnecessary storage provided for hydroelectric uses would permit evaporation from extensive lakes surfaces of over 300,000 acre-feet of precious water annually—125 percent of the amount put to beneficial use.

In the water short West this is an additional and compelling reason to pull out the hydro plants and put in nuclear ones.

There is no justification for building great hydroelectric dams when atomic power can be more effectively utilized. Circumstances in these trying time do not warrant foisting this solid gold-Cadillac reclamation plan on the already overburdened United States taxpayer.

Our Mental Health Problem—Mental Illness Can Be Cured

EXTENSION OF REMARKS

OF

HON. WALTER ROGERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1956

Mr. ROGERS of Texas. Mr. Speaker, under leave to extend my remarks, I include the ninth of a series of articles from the Amarillo Globe-Times on the national problem of mental health:

[From the Amarillo Globe-Times of January 16, 1956]

THE MENTALLY ILL CAN BE CURED—HOW ABOUT TEXAS?

(By Louise Evans and Mary Tom Rasco)

What of the other 1,047?

Texas mental hospital population took its first downturn in 30 years when the books were closed on the fiscal year of 1954–55 in August.

The overall population dropped last year by 108, just about the number of mentally ill that are sent each year from Potter County to the Wichita Falls Hospital.

But what of the other 1,047, because if Texas had reached the 7 percent decrease in hospital population that Kansas achieved in the past 5 years, 1,155 other Texans would be out of the State hospitals for the insane.

And countless thousands of others, who are on waiting lists through the State, would have been treated, as would have been thousands who hide their illness rather than be committed under a cruel and senseless law. They hide it now, perhaps, but when it is too late they will become lifelong charges of the State as they reach chronic illness, just as the physically ill, without treatment, become chronically ill.

BLUEPRINTS ARE UNUSED

In 1949 Texas and Kansas stood at exactly the same point, both had appointed special boards to act on a problem that had explosive qualities, the ricocheting advance in population of State mental hospitals.

On the minutes of the October 16, 1950, meeting of the Board of Texas State Hospitals and Special Schools is a 14-point program that is identical with that carried out by the Kansas State hospital system.

This year when the Texas Research League finished its long study of the Texas institutions, it found that only 5 of these 14 programs of reform in a perfect blueprint for care of the mentally ill have been used, even partially. One of the five was a simple modernizing of safety and fire programs.

In the care and treatment of the mentally ill, Texas is like a production superintendent who has the blueprints for a jet passenger plane—and an assembly line for single-motored trainers.

If a normally intelligent man were faced with taking over a business concern that does $20 million dollars annually found:

That he had only 16 percent of the key men needed to run the business.

That turnover of employees reached as high as 130 percent annually because there is no integrated policy for its 6,000 personnel.

That capital funds could be spent for warehousing inventory but none for hiring salesmen to sell the product.

That no one knew exactly where the merchandise was, and that a tiny bolt and an oversize tractor were stored side by side in a disorderly pile.

That the plant sprawls in isolated units over an area equal to Western Europe and the parts needed in one building may be stored 600 miles away.

That 35 percent of the plant, worth $150 million, should be immediately replaced and within 10 years will lose its total effectiveness unless more maintenance work is done.

That the plant is another $150 million short on storage space.

That he is to be faced with as much as 120 percent of new business and had no material on hand to fill the orders.

That he had no control over the source of his supply, and equally none over his sales territory.

What would he do?

He would look at his hole card. And that is just what Texans must do if they escape spending $235 million by 1975 to house the mentally ill.

You buy buildings only once. But have you thought of the fantastic cost of staffing and maintaining so many buildings in annual operating costs?

TWO BIG QUESTIONS

Texans are going to have to think through two important question:

1. What is the State's responsibility in caring for the mentally ill?

2. What plans are we going to make for an aging population?

Let us take the latter question first because we can't answer the first until we know some facts surrounding the second:

We have told you of the Massachusetts study, where comparison of hospital population showed that in the past 100 years there has been no appreciable change in the ratio per 1,000 population of patients between 20 and 50 years of age. The big increase in mental institutions today comes from those above 50 years of age. Already nationally about 30 percent of the State hospital populations are above 65.

If you think the crowded conditions in Texas hospitals are scandalous, be glad you live in Texas. This State has a relatively young population. Our percentage of over-65 citizens is much lower than the national average. Consequently only 22 percent of our hospital population is in that age group. Add the national average on older folk to our hospital population and we'd have to pitch some tents for housing.

But because we will follow the national trend toward an aging population, and with an accelerated rate since we will reach the national rate as well as increase our population, we can expect 1,132,000 Texans in the 65-and-over group by 1975, say population experts. Our State population will grow by 50 percent (to 12 million) but our aged will increase by 120 percent.

Actually, there will be an even nearer reckoning date for this problem of the aging population. It is estimated that at least 250,000—and possibly more—of aged Texans now on the public assistance and social security rolls will have no place to go for terminal illness except the State hospitals. They either have no children or their relatives cannot afford the support.

Consider a minimum cost of construction for a mental hospital bed of $9,000 and the cost of a nursing care bed at about $3,000 and you see it's good business to divert the aged senile from the hospitals and into nursing care homes.

As of now, there is no known cure of senility, any more than there is for old age. Expensive psychiatric care in the truest sense is not needed for these senile. On the other hand, no elderly person should be required to spend his last days in a psychotic ward of a mental hospital, frightened further by the knowledge from time to time of where he is.

There is no use to attempt to evade this question—unless Texans are ready to retreat to some primitive culture in which the older citizens are pushed off on an ice raft or left to starve in the jungle, we are faced with the care of an increasing number of aged.

The State hospitals for the insane are a poor answer to the question: "What plans are we making for our older population.

SENTENCE IS LIFE

The other question is "What is the State's responsibility in caring for the mentally ill?"

Fundamentally, a person of unsound mind can become as dangerous to a community as an intentioned criminal. It is upon this basis that care of the insane became the responsibility of the State.

The person who becomes mentally ill—sometimes only slightly sick, relatively speaking—is likely to become a person of permanently unsound mind unless he is treated. By every index, including that of

costly experience, the mentally ill who are shoved off in institutions lacking intensive treatment accept a sentence of lifetime illness. They retreat mighty fast from the reality of the "madhouse"—much faster than they would from their ordinary life, complex as it might have been. (In the case of the aged, Texas can depend on the greater number dying within a year after "commitment.")

The amazing success in Kansas and in other States which have tackled the problem of treatment rather than custody of the mentally ill has proved the dollar-and-cents value of a creative program of mental care.

We know the population is aging and that there must be provision for them. We might as well face the fact that untreated mentally ill Texans are going to end up in the insane wards or prisons of Texas. Economy demands a treatment program instead of costly, custodial and unending care.

But today no person can enter the State hospitals for treatment of more than 90 days without a jury trial. A jury trial to those who are mentally ill, as noted before, frequently can be the final blow that brings on chronic mental illness, just as chronic physical illness can result from repeated blows or untreated symptoms.

(If you don't think we need legislative reform, read the laws, the many, many laws in the Texas constitution surrounding the care of the mentally ill. A juror who tried to follow those laws exactly couldn't avoid sending a perfectly sane Texan to the State Hospital for the Insane. Conversely, read another way to meet all the necessary requirements of the conflicting laws, he couldn't send a frothing madman there. Since "insane," like "murder" is a legal term, better let the doctors choose who is mentally ill, and requiring treatment or custody of the State.)

LEGISLATION NEEDED

The Texas Research League on completion of its survey listed some of the legislation that must be built after the compulsory "jury trial" is eliminated by constitutional amendment.

The league drew on the talents of such men as Dr. George Stevenson, medical director of the National Association of Mental Health; Dr. Ivan Belknap, of the Department of Sociology of the University of Texas; Dr. Malcolm T. McEachern, of Chicago, universally recognized as one of the world's great authorities on hospital administration; and 14 Texas leaders in the field of mental health, including Dr. Titus Harris, chairman of the Department of Neurology and Psychiatry, University of Texas, and Dr. Robert Sutherland, director of the Hogg Foundation for Mental Hygiene.

The following major pieces of legislation were recommended:

Giving the board authority to operate foster home care programs, outpatient clinics, and rehabilitation programs.

Setting up a program for mentally ill children. (The league recommended the establishment, near a medical center, of a psychiatric residential treatment center for children who are mentally ill.)

Placing the nonpsychotic mentally retarded persons now in State mental hospitals in the proper facilities or discharging them.

Establishing the responsibility of adults, if economically capable, to pay costs of maintaining their parents in State hosptials and special schools.

Setting up a study commission on aging to make a thorough investigation of all of the problems of aging citizens.

Establishing legal methods whereby the cooperation of the Texas prison system and the State hospital system can be most effective in securing and caring for the criminally insane.

Transferring the State orphans' home to the State Department of Public Welfare, and the Blind, Deaf, and Orphans' Home to the Texas Education Agency.

Converting the Abilene State Hospital, where 95 percent of the population is mentally retarded, to a special school facility for the mentally retarded. (The 54th legislature passed one long-needed piece of legislation—the mentally retarded persons act.)

The league's recommendations on the handling of the criminally insane reflect the recent court decisions on insanity at the time of committing crime as opposed to true mental illness. The league suggests that the 380 criminally insane in the State prison system and the 400 to 500 in the mental hospitals be reevaluated. The psychopathic personality cannot be treated at the present time, and has no place in a mental hospital. Likewise there are insane in the prison system that can be treated and after recovery returned to the court of original jurisdiction or to the prison to serve out his sentence.

Additional legislation will be required in this field, of course.

REEVALUATION VITAL

A conspicuous omission in any legislation so far proposed in the field of the Texas mentally ill is that for the sex offender—even the one who commits only a misdemeanor.

In Kansas any sex offender may be sent to the State hospital for observation and treatment by the trial judge or on application of the defense or prosecuting attorneys.

Texas parents would rest a little easier if such treatment were enforced on the person who shows sexual aberration on first offense. The horrible crimes against our children are committed, for the most part, by those whom the authorities have had in court on earlier minor offenses.

THESE TEXANS SERVE ON HOSPITAL BOARDS

The Texas State program for the mentally ill is administered by the Board for Texas State Hospitals and Special Schools. Appointed first in 1949, members served overlapping terms of 6 years. By law, only three members can be members of the medical profession. Membership is:

Durwood Manford Smiley, former speaker of the house, chairman.

John G. Dudley, Houston, administrator of Memorial Hospital, vice chairman.

Dr. James H. Wooten, Columbus.

Rufus F. Higgs, editor and publisher, the Stephenville Empire.

Dr. Raleigh R. Ross, Austin.

James M. Windham, Livingston, contractor and former member of the house.

Mrs. Howard E. Butt,[1] Corpus Christi director of the Nueces County Tuberculosis Hospital.

Tom Tellepsen,[1] Houston, Tellepsen Construction Co.

Dr. H. R. Martin,[1] Mexia.

They control 6 mental hospitals, 4 tuberculosis hospitals, not including a new unit under construction at Harlingen, 1 hospital for epileptics, 3 geriatric homes, 3 schools for the mentally retarded, 1 school for cerebral palsied children, 1 school for blind, deaf and orphan children, the Corsicana State Home, the Texas Confederate Home for Women, the Alabama-Coushatti Indian Reservation, the State dairy and hog farm.

FOURTEEN-POINT PROGRAM FOR TEXAS STATE HOSPITALS AND SPECIAL SCHOOLS

1. Keep records that can be used for future planning.[2]

2. Start a stable employment program so that all departments in the hospital can be adequately staffed.

3. Start intraining programs to overcome present (and future) shortages in trained help.

4. Improve diagnosis, care, and treatment of patients.

5. Start research programs to find new methods of treatment.

6. Renovate and modernize buildings.[2]

7. Build a rehabilitation program that can be used for the care and treatment of patients from the time they enter institutions until they are reabsorbed in home community life.

8. Bring hospital standards to approval rating by American College of Surgeons, the American Psychiatric Association and other professional approving agencies.

9. Resurvey all patients and see that proper followup studies are made on each chronic and acute patient.[2]

10. Install a modern fire and safety program.[2]

11. Develop efficient and effective hospital administration through better administration and business methods.

12. As all citizens are actually stockholders in State institutions, programs of educational information to them should be started.

13. Develop a program for the best care of aged patients.[2]

14. Start outpatient clinics and day hospitals for use of mentally ill who do not yet need hospital care.

---

[1] New members.

[2] Only five programs even partially started in December 1954, according to Texas Research League survey. The 14-point program is on the minutes of a board meeting of October 16, 1950.

Cut Expenses, Reduce Debt, Lower Taxes

EXTENSION OF REMARKS

OF

HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1956

Mr. ADAIR. Mr. Speaker, under leave to extend my remarks, I include a recent editorial comment from the Steuben Republican, Angola, Ind. It expresses some sound views with respect to our national fiscal situation:

CUT EXPENSES, REDUCE DEBT, LOWER TAXES

With the prospect of the present Federal fiscal year ending June 30, 1956, with a balanced budget and a litle more to the good, the question arises whether to reduce taxes, increase expenditures, or pay a token amount upon the national debt now at an all-time high of $288 billion. At some time or other promises to do all of these things have been made by the present administration in its campaign propaganda, but obviously some choice must be made of the relative importance of these demands.

Candidates for office will urge most strenuously to reduce taxes. Second, to increase expenditures and, perhaps, if necessary, let the payment on the debt go hang. It is well to consider the impact of these various proposals upon our national economy. Reduction of tax rates will be greeted briefly with hearty approval and lowered taxes will leave more money for the private owner to expand in the development of his business and ultimately an enlargement of his income so that the remaining tax burden will be more easily met.

A token payment on the national debt has advantages in stabilizing the credit of the Government and making easier the sale of refunding bonds. The recognition of the fact that the national debt could only be paid now if every dollar of privately owned property were turned in for that purpose and the fact that debt doesn't seem to worry people nowadays tend to discourage any payment whatever. Nevertheless, acknowledgment of the fact that sometime the debt must be paid and that every possible effort to that end should be made when the country is in a prosperous condition, would have a wholesome effect on the confidence of the

people in their Government. The example would be a wholesome one to apply in private finances.

If the tenor of the people in this area can be used as a guide, increased expenditures would be the least desirable method of disposing of the modest surpluses we are about to enjoy. On the contrary, present expenditures should be drastically reduced. People do not enjoy being taxed to send money to nations around the world while the financial problems at home are becoming almost unbearable.

We believe the following program would be generally approved: Reduce expenses, reduce the debt in a token amount, and lower taxes proportionately.

With the prospect of a balanced budget and an election in the offing it will be well for voters to remember that our national budget has been balanced only twice in the past 20 years, and on both occasions it was done by a Republican Congress.

Tanks for Middle East

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. ADDONIZIO. Mr. Speaker, I wish to commend to the attention of the membership of this body the following editorial Tanks for Middle East, which appeared in the Newark (N. J.) News on February 20. I believe a congressional investigation of this Middle East fiasco is very much in order.

The editorial reads:

TANKS FOR MIDDLE EAST

The episode of the 18 American tanks for Saudi Arabia indicates that the State Department's handling of the entire Middle East crisis leaves a lot to be desired. It may well warrant investigation by the Senate Foreign Relations Committee, although the Senate at the moment has a first-class domestic crisis on its hands in the aftermath of the natural gas bill.

First the Saudi Arab shipment had to be embargoed by the White House so that the State Department could explain to President Eisenhower how such first-class heavy equipment happened to be en route to the explosive Middle East. This was at the very time the United States was withholding weapons from Israel to avoid encouraging an arms race in the area.

Finally—and within 48 hours—the White House lifted the embargo when it was convinced by the State Department that the Saudi Arabia transaction had been approved prior to Egypt's arms deal with Czechoslovakia. It was this deal that prompted Israel to make its own urgent request for some 50 million dollars worth of American arms.

Obviously the lifting of the embargo as well as the initial sale to oil-rich Saudi Arabia also took into consideration that in June an agreement must be renegotiated for the United States Air Force to remain at its Dhahran air base, which is within striking distance of the Soviet Baku oilfields.

However legitimate the shipment and whether or not it leads to more favorable action on Israel's request, the matter was badly handled by the State Department. The situation in the Middle East is critical enough without this obvious confusion among those who administer our policy.

Upper Colorado Storage Scheme Cries for Additional Hearings Before Presentation to House

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. UTT. Mr. Speaker, the proposed upper Colorado River storage scheme should have much more study by the House Interior Committee on testimony of witnesses, and upon reports from the Secretary of the Interior and the Bureau of the Budget before it ever comes before the House.

The projects proposed to be authorized, the repayment provisions of the bill, and the economic and financial aspects thereof have never been fully reported upon by the Secretary of the Interior or the Bureau of the Budget.

On the contrary, the reports received from those agencies recommended authorization of only 2 storage units, Glen and Echo—1 of which, Echo, has been excluded from the pending bill, H. R. 3383, although it is included for authorization in the bill, S. 500, passed by the Senate—and 11 reclamation projects. However, with respect to the 11 reclamation projects, the draft of legislation recommended by the Secretary of the Interior specified that their economic justification should be reexamined before construction should proceed. This request is ignored and omitted from H. R. 3383.

The bill proposes authorization of three storage units, Flaming Gorge, Navaho, Curecanti, which were not approved for authorization by the Secretary and the Budget Bureau.

Moreover, the Secretary and the Budget Bureau have never reported upon or approved the proposed repayment provisions of H. R. 3383, particularly the 100-year repayment period proposed for power features of the project. On the contrary, a 50-year repayment of the power investments was specified by these agencies, with interest on the unamortized investment.

In the recent report of the Presidential Advisory Committee on Water Resources Policy transmitted to the Congress by the President, it was concluded and recommended that the economic life of reclamation projects should not be considered to exceed 50 years for evaluation purposes. Of course, the proposal in the pending bill of 100 years repayment is totally unrealistic and unsound.

There are many unresolved questions as to engineering, economic and financial feasibility of the proposed projects which demand further study and report before Congress acts on this proposal. Even in the case of the major storage unit proposed for authorization, Glen Canyon, which is estimated to produce some 85 percent of the prospective power revenues, the evidence available indicates that there are serious questions with respect to the geologic formations of the reservoir affecting the functioning of this unit which demand further investigation before authorization. Moreover, the plans for the dam itself and its probable cost have not been adequately determined, lending uncertainty to the financial soundness of this unit which is set up to be the cash register of the upper basin development.

All these unresolved questions affecting the engineering, economic and financial feasibility of the projects proposed in H. R. 3383 should be reviewed by an impartial board of qualified engineers and experts and reported upon before Congress takes any further action. Such a board of review and procedure is recommended by the Presidential Advisory Committee on Water Resources Policy for all water resources projects. The proposed upper Colorado River storage project, with its intricate web of engineering and financial arrangements, cries out for such a review.

International Labor Organization: A Conspiracy for the Propagation of World Communism

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. SCHERER. Mr. Speaker, America's continued participation in the International Labor Organization has been questioned. A report on ILO was prepared at the direction of the fourth district Americanism chairman of the American Legion, Department of Ohio. The resolution resulting from such report was unanimously adopted by Madeira Post, No. 412, the American Legion, Department of Ohio, on January 18, 1956.

Both the report and the resolution throw considerable light on the issues involved and I am, therefore, requesting that they be inserted in the CONGRESSIONAL RECORD so that my colleagues may have the benefit of the study made by this agency of the American Legion.

The report and resolution follow:

INTERNATIONAL LABOR ORGANIZATION: A CONSPIRACY FOR THE PROPAGATION OF WORLD COMMUNISM

How many of you have even a remote knowledge of the International Labor Organization (ILO)? Are you aware of the extent to which it can control our daily lives? Unfortunately, few citizens realize the depths of communistic socialism that will engulf them if this agency continues to receive support from our Government.

During the current session, Congress will be asked to increase our financial support of the ILO from $1,750,000 a year to $3 million a year. This would amount to the United States furnishing over 25 percent of operating capital for the International Labor Organization. The appropriation provision of Senate Joint Resolution 97, if approved, will be one more example of American taxpayers' money supporting a little-known organization that is rapidly being dominated by Soviet Russia.

One of the greatest threats to our American way of life is contained in the provisions

of the ILO charter. This particular section states that any convention drafted by the ILO, and ratified by a member nation, becomes treaty law. This treaty law would then become the supreme law of our land. It would be in force over our Constitution. Article VI of our Constitution supports this contention that all treaties made under the authority of the United States shall be the supreme law of the land.

There is a very real belief among the delegates to the ILO that this body does in fact represent a world parliament. Under the "Declaration of Philadelphia" the ILO is empowered to consider any subject that in any way directly or indirectly may have any possible bearing upon the welfare of the workingman. Under this broad analogy it may presume to enact proposed international laws on any subject under the sun irrespective of the fact that the peoples of the United States of America have always fought for their inherent and God-given rights under our Constitution, to have the laws of this Nation written by our own elected representatives and not by the representatives of foreign nations.

Let us now review a few of the provisions that have come under consideration during the recent ILO conventions. Bear in mind if these conventions are ratified by our Government representatives, they will be the law by which we are irrevocably bound.

The subject of codetermination was considered by the ILO. This term defined, means that one-half of the board of directors of a company are to be chosen by management, and the other half of the board of directors are to be chosen by the union. Both would have equal voice in the management of a company. Under this combined directorship issues resulting in deadlock would be resolved by a third party. The third party, under the proposed system, would be Government. This was the Socialists' thinking to destroy free collective bargaining.

In 1951 the ILO passed a recommendation on collective bargaining agreements. This gives government the power to negotiate, conclude, revise and renew collective bargaining agreements. Under this, a union would present its terms to government, and government would decide the contract to be put in force. This convention also gives government the power to impose closed-shop conditions throughout entire industries.

In 1952, the ILO produced a convention on minimum standards for social security. If ratified, this would destroy all private insurance companies in the United States. Government would be obligated to pay all benefits. You, the taxpayer, would pay the Government.

Also in 1952 there resulted a maternity convention. Upon ratification, our Government would be campelled to guarantee avery expectant mother (even though she be unwed) 12 weeks off from work to have her baby. In addition, the Government would have to pay her hospital and medical bills plus two-thirds of her regular salary. When the mother returned to work her baby would be kept in Government-operated nurseries at her place of employment and she would be given time off each day to nurse the baby. A Government bonus would be paid every mother who nursed her baby with her own milk. If the infant receives a bottle instead, the Government pays for the milk.

During this particular convention an entire half day was spent debating whether or not international law should contain a provision that a mother should nurse her baby for a 1-hour period or 2 half-hour periods during the day. France held out for 2 half hours, and Israel for 1 full hour. As a result no conclusion was reached on this particular subject.

Representation in the ILO is supposed to be tripartite. This means there are three representative classes from each nation; namely, labor, management, and government. Russia's admittance in 1954 is in direct violation to the original concept of the ILO constitution. Since there are no free associations of workers and employers in Russia, she could not possibly qualify and should have been refused admittance. Yet, Russia has been seated with her satellite nations, and ironically holds a voting majority of 32 votes for the Iron Curtain countries to 4 votes for the United States.

The vote to seat the Soviet Union and her followers was 93 to 83. One tricky maneuver of the Russians to achieve this voting majority lies in the fact that Russia did not gain admittance to the ILO as an individual country with 4 votes, but was accepted as 3 separate countries, Russia, Byelorussia, and the Ukraine, with a total voting strength of 12 votes for actually a single representation. The Soviets, however, did not accord the United Sattes 48 independent representations with 4 votes for each of her States even though this would carry the identical logic.

Following the 37th International Labor Conference of the ILO, a Russian version was released. It was headed "The Agitators at the Conference Rostrum." Its caustic condensation of slanderous accusations is sufficient proof of Russia's intentions to dominate and control all conferences of the ILO. The following quote is in its entirety taken from the Russian release:

"The presence of delegates from the U. S. S. R., Ukraine, Byelorussia, and the democratic people's republics at the conference was undoubtedly a source of anxiety for the representatives of Wall Street and for the reactionary leaders of the American trade union organizations. Fearful of being unmasked in the eyes of the work people as enemies of peace and international cooperation, in common agreement they sought to slander the people's democracies and to deprive them of their right to take part in the work of the conference, making them the target of inflammatory speeches and organized attacks.

"The signal for the attack was given by Mr. McGrath, American employer delegate, together with a United States Government delegate. Both uttered cries of alarm, as if the ILO was threatened in its very existence by the reentry of the U. S. S. R. into the organization and both levelled calumnious abuse against the representatives of directors of Soviet undertakings and against the Soviet trade unions."

"Once the signal for anti-Soviet attack had been given, little time was lost by Delaney, one of the leaders of the American Federation of Labor who considers himself as a representative of the American workers.

"From the conference rostrum, Mr. Delaney, a fomenter of war and servant of the American monopolists, voiced his extreme dislike of the Soviet Union's return to the ILO, fearing cooperation with the peoples of the democratic countries. He slandered them with the old false accusations, long since disproved, of the forced labor practiced in these countries and of the absence of free trade unions in the U. S. S. R. and the people's democracies.

"Delaney's inflammatory attack has once again shown the trade union agents of America imperialism for what they really are. Not by oversight but with full intention, Delaney concealed the fact, known to all, that real forced labor exists in the United States and in its hangers-on. The delegates of the democratic countries were quick to take the floor and recall these truths to Delaney's mind."

No comment of the above is necessary other than this statement appears in a report under the heading "Organisation Internationale Des Employeurs, Secretariat General" datelined "Brussels, September 21, 1954, 33, rue Ducale."

Cincinnati can well be proud of the fact that William L. McGrath is a dissenting member of the governing body of the International Labor Organization. He has been waging a one man battle to protect our country from the Communist-dominated socialistic objectives of this treacherous organization. McGrath's basis for such action is contained in his statement before the 1954 conference. He asked:

"What will remain of the tripartite nature of this body, if we admit a solid block of 28 votes none of which represent free workers or employers, and all of which are under the direct dictation of the Kremlin?

"I charge that the purpose of the attempted reentry of Russia into the ILO is that of disrupting this organization and using it as a springboard for Communist propaganda.

"Unless steps are immediately taken to preserve the status of the tripartite structure of this organization as originally conceived and practiced for so many years, it is my intention to recommend to my Government, to my nominees and to the employers of the United States that they refrain from sending future employer delegations to this conference."

William L. McGrath has personally recommended to the President of the United States that under present conditions the United States withdraw from the International Labor Organization and grant it no further financial support.

EARL W. BARR,
Chairman, Americanism Committee, Fourth District, Department of Ohio, The American Legion; Member, National Counter-Subversive Activities Commission.

NEIL E. WETTERMAN,
Research Director, Americanism, Committee, Fourth District, Department of Ohio, The American Legion.

As a result of the preceding report on the International Labor Organization, American Legion Post, No. 412, Madeira, Ohio, passed the attached resolution with unanimous approval on January 18, 1956. In addition, appropriate remarks together with the resolution were made a matter of record at the fourth district conference, department of Ohio, on January 22, 1956.

RESOLUTION—INTERNATIONAL LABOR ORGANIZATION

Whereas World War I was officially concluded by the Treaty of Versailles, and part XIII of that treaty created the International Labor Organization. The ILO was officially established at Basel, Switzerland, as an agency of the League of Nations in 1919; and

Whereas as early as 1919, many loyal Americans suspected that the ILO was a clever effort to promote international socialism and as such the Senate of the United States refused to ratify part XIII of the Treaty of Versailles; and the United States could not, therefore, participate officially in the International Labor Organization; and

Whereas in 1934, the then President of the United States of America sponsored a joint congressional resolution which authorized our participation, and we have been an active member ever since; and

Whereas the original objective of the ILO has been completely subverted. Instead of trying to promote better conditions for the workingman, the ILO is now chiefly concerned with trying to gain more power for government. In recent years, the great majority of its proposals have had to do with government regimentation, government control, government regulation, and government dictation. It has sought to inject detailed government control into collective bargaining, insurance, medicine, employment agen-

cies, the nursing of babies, factory canteens and cafeterias, the upbringing and schooling of young people on the farms, determination of wages, migration of workers, etc., thereby invading internal domestic affairs which properly belong within the realm of self-government, and setting up a pattern for the socialist state. The ILO has ceased to be an International Labor Organization and has become an international government organization; and

Whereas the ILO has set up what it calls a technical assistance program, under which it sends out experts all over the world, presumably to show people, particularly in underdeveloped countries, how to improve productivity, but, as a matter of actual fact, devoting their efforts largely to propagandizing on behalf of the ILO socialistic concepts and helping government set up social security systems, labor departments, statistical services, cooperatives, insurance schemes, etc. Here again the emphasis is not upon the welfare of the workingman, but upon showing government how they can get more control over the lives of men. It is therefore not surprising that the Russians offered to supply the ILO with all the experts required to man its technical assistance program. By this device, Communist agents could be planted in every country in the world; and

Whereas the welfare of labor has long since ceased to be the main topic of discussion at the plenary sessions of the ILO Conferences. The subject of labor is used chiefly as an excuse to argue political ideologies. In recent years the ILO has become in fact an international debating society at which the advocates of socialism and the advocates of communism compete with each other for the followers among the nations of the world, with the American free competitive system disregarded and actually labeled as "long since outmoded and still lingering" by some quirk of fate. The re-entry of the Russians, abetted by their satellites, has stepped up the tempo of this ideological debate to such a point that the ILO has become to all intents and purposes merely an international forum for Communist propaganda, with many hours of speeches devoted to damning the United States and our free competitive system. Meanwhile the underdeveloped nations of the Far East, just emerging into industrialism, resentful of American prosperity and European colonialism, have attempted to form an Asian bloc against the United States position. In short, the original purpose of the ILO, that of helping the workingman, has now become hopelessly lost in a welter of conflicting political considerations and social and economic ideologies; and

Whereas the question of nationalization of industry is ever present in the ILO considerations. All Communist industry is nationalized. Many of the Far Eastern countries, such as Burma, have what they term a "mixed" economy with about half of the nations' industry nationalized and the other half under private ownership. Government and labor representatives from such countries lean toward nationalization. In England the coal mines are nationalized. Much ILO thinking and planning, therefore, is done on the assumption that worldwide nationalization of all industry is inevitable. The promotion of nationalization, therefore, has assumed much greater importance in the ILO than the welfare or freedom of the individual workingman. This is just another instance of the way in which the ILO has subverted its original intent to campaign on behalf of more power and control by government; and

Whereas there is apparently a very real belief upon the part of many of the delegates to the ILO that this body does in fact represent a world parliament. In fact, its director general made a statement to this effect. Under the declaration of Philadelphia, the ILO is empowered to consider any subject that in any way directly or indirectly may have any possible bearing upon the welfare of the workingman. On this assumption it map resume to enact international laws on any subject under the sun. This it is proceeding to do, even though the provisions of such laws have to do with the internal domestic affairs of member nations. The idea of doing something to help the workingman has been lost sight of in the light of the possibility that the ILO has actually within it the making of a world government whereby the ILO delegates, on their supreme wisdom, can plan Socialist legislation for the entire world, on a uniform basis, so that government could take over everything and dictate the minute affairs of every individual citizen; and

Whereas since the admission of the U. S. S. R. to the International Labor Organization in May of 1954, the Communist ideology has become a dominating and alarming factor. This danger is increased to the extent that ratification of any ILO Conference by the United States results in a mandated treaty by which we are irrevocably bound; and

Whereas the Communist countries have actually obtained ILO membership in violation of the original concept of its constitution which is based upon a tripartite system. This is verified by the fact that free associations of workers and management are nonexistent in Russia and her satellite nations. In addition we are in the minority at the ILO Conferences by a voting ration of 32 Communist representatives to 4 American representatives, and yet we finance this organization to the tune of over 25 percent of its international appropriation; and

Whereas this illegal entry into the ILO by Russia, puts Russia and her satellite nations in a strong position to gain voting control of the ILO and dictating to the working peoples of the United States of America; and

Whereas we of the American Legion and the peoples of the United States of America, have always fought for the inherent and God-given rights under our Constitution, to have the laws of this Nation written by our own representatives and not by the representatives of foreign countries; Therefore be it

Resolved by the Madeira Post, No. 412, Department of Ohio, American Legion, meeting in duly constituted session this 18th day of January 1956, That the members of the National American Legion and its national commander, call upon the Congress and the President of the United States of America to withdraw financial and legal support of the International Labor Organization; and be it further

Resolved, That we of the National American Legion will fight unto death if necessary, the right of government by the people, of the people, and for the people of the United States of America.

Copies of this resolution shall be promptly forwarded to the fourth district commander, the department executive committee, department of Ohio, and to the national executive committee, the American Legion for consideration and action. Further, copies of this resolution shall be forwarded to our proper congressional Representatives, urging them to support this resolution fully and to be guided accordingly when the matter of the ILO comes before the House of Representatives, or the Senate of the United States.

CHARLES JOHNSON,
Commander, Post No. 412, the American Legion, Department of Ohio.
THOMAS FLICK,
Adjutant, Post No. 412, the American Legion, Department of Ohio.

Executive Vice President

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. AVERY. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial entitled "Executive Vice President," which appeared in the February 19, 1956, edition of the Topeka (Kans.) Daily Capital.

I call this editorial to the attention of Congress because I feel it is an excellent analysis of a problem with which we are all concerned. It also illustrates the great interest of the public at large in new measures which will strengthen the operation of our Federal Government. And I might add that it serves as still another reminder that the American newspaper plays an important role in keeping the Nation well informed.

The editorial follows:

EXECUTIVE VICE PRESIDENT

While the world awaits President Eisenhower's historic decision on a second term in the White House, there is considerable concern regarding the burdens of the Presidency in these times .

Perhaps the complexities and responsibilities of the high office are too great for any one man to carry alone, whether he be Mr. Eisenhower or some other statesman.

With today's shrinking world and the United States firmly entrenched in the role of world leader, the Presidency of the United States is more than that—it actually is the leadership of the free world.

Even the far-sighted founders of this great country could not have envisioned today's complex world or the added responsibilities it has brought to the office of President.

We believe the time has come, whether or not Mr. Eisenhower is a candidate, to give the Vice President a greater share of the routine duties now handled by the President. The President, of course, would remain the Chief Executive. The Vice President would be elevated to Executive Vice President.

It is interesting to note that the founders of our country believed the Vice President should be a leading statesman. They believed he should be the person who received the second highest number of votes for the Presidency. But in 1800 the struggle for the Presidency which took place between Thomas Jefferson and Aaron Burr brought about a change.

Today the Vice President's principal duty is to preside over the Senate, but this simple duty has brought little importance to the office. And in that position he has little influence. He casts the deciding vote in case of a tie, but as presiding officer he is hedged in with rules to prevent him from influencing the deliberations.

Yet, the Constitution provides that if the President dies or becomes disqualified for holding office he shall be succeeded by the Vice President. This has occurred seven times, each time through death of the President.

We think it's good reasoning that since the Vice President may at any time be called upon to assume the Presidency that he be given more responsibilities and be better informed on the important problems at hand.

Some authorities on Government have held that the office of Vice President is too weak. They say any congressional committee chairman can exercise more power, and

as a result men of high ability usually do not seek the office. Even such great statesmen as John Adams and Thomas Jefferson have failed to make the Vice Presidency a very important job.

The trend to add importance to the position was started by Warren G. Harding. He was the first President to invite the Vice President to hold a seat in the Presidential Cabinet. Calvin Coolidge, however, attended irregularly. Vice President Dawes refused to sit in Coolidge's Cabinet, believing it unwise to function both in the legislative and executive branches.

Herbert Hoover invited Topeka's Charles Curtis to attend Cabinet meetings "in order to acquaint him with what was going on." Franklin D. Roosevelt repeated this policy during his administration.

Another step to provide more duties for the Vice President came in 1949 during the Truman administration when the Vice President became a member of the National Security Council.

And from the day he became President, Mr. Eisenhower has used Vice President NIXON more than any President used a Vice President.

It would seem that these recent Presidents, aware of the increasing physical and mental strain of the office, thought it wise to include the Vice President in activities even beyond his normal duties as outlined in the Constitution. Such action gave the Vice President a greater share in Government administration.

During the present administration, Mr. NIXON has presided over the Security Council meetings in the absence of the President.

Because the office of Vice President has little importance under our present system, only three since Thomas Jefferson have been elected President.

The Vice President must have the same qualifications for office as the President, since he may succeed him. But it seems we are doing little to prepare him for that important task.

We believe this matter is so important that Congress should give serious thought to a program that would relieve the President of routine responsibilities, and at the same time give the Vice President a greater share of these responsibilities.

Big Brother and Foreign Aid

EXTENSION OF REMARKS
OF
HON. JOHN DOWDY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1956

Mr. DOWDY. Mr. Speaker, I ask unanimous consent to insert in the Appendix of the RECORD two logical editorial which appeared on successive days in the Palestine Herald-Press, Palestine, Tex. The first is entitled "Big Brother" and it was followed the next day by "The Record of Foreign Aid."

The editorials follow:

[From the Palestine (Tex.) Herald-Press of December 29, 1955]

BIG BROTHER

Let a bully threaten a little boy, and the little one will run for his big brother.

But if big brother takes on the job of constantly protecting the little one, little brother won't even try to protect himself, and little brother, instead of being helped, is actually weakened by his big brother's solicitation. For there'll be the inevitable time when little brother will get in trouble and big brother won't be able to get there fast enough.

Now expand on that fact a little.

Children are only miniature people. The psychology of children is the psychology of adults.

And nations are like people. The psychology of people is the psychology of nations.

Right now, in the psychology of people and nations, the United States is acting the part of an overzealous big brother to a whole passel of smaller tykes among nations who have long since passed the stage of hoping we'll take care of them. They now believe our protection is their right.

The result of this attitude is sadly obvious. In years of trying to build up "joint" defense, with United States troops scattered throughout the world to back up local forces, this country has succeeded nowhere. The simple reason other countries have not built their defenses is that they, like little brother, prefer to let us do their spending, and their defending, and, if necessary, their fighting for them.

For proof of this, take a look at Turkey, the only bright star in the dark sky of anti-Communist defenses. Turkey is not a "Western" nation, and, therefore, has gotten little of the bounty the United States has passed around so generously elsewhere. The Turks, uncomfortably close to the Russian giant, have maintained stout defenses all along. They haven't waited for big brother.

It is possible, of course, that if the United States hadn't committed itself to defend smaller Western nations, some of them might have been gobbled up by Russia before now. But it is also likely that if the United States had not been so lavish in its protections and promises and handouts to our so-called allies, that the small Western nations long before now would have built creditable defenses of their own and united them.

In other words, it may be proper for the United States to act as a big brother to threatened free nations, but perhaps we are actually weakening the defenses of the free world by carrying our big brother act too far.

If these are facts, they have not impressed themselves on our national leadership in either political party.

We threw away billions in foreign-aid giveaways through the tenure of President Truman. And under the leadership of the Republican Party we have continued the process.

Now it is reported that the Eisenhower administration plans to ask Congress for power to commit the United States to a 10-year program of economic aid to friendly nations. Tht is carrying the giveaway to a new extreme. Until now Congress has been willing to extend foreign aid on a year-to-year basis.

A 10-year promise of protection by big brother would delay by that length of time any serious effort by our smaller allies to build their own defense to full potential.

We should be talking reduction of foreign commitments, not expanding them. And we should tell our little brothers very bluntly we are no longer willing to take up their fights unless they are willing to do some of their fighting for themselves.

[From the Palestine (Tex.) Herald-Press of December 30, 1955]

THE RECORD OF FOREIGN AID

As President Eisenhower is reported planning to ask Congress for a 10-year executive authority to pass out American billions in foreign economic aid, the logical question is: What good will it accomplish?

On the record of past performance, it won't accomplish much, if anything.

Foreign economic aid is referred to by a variety of complimentary names by those internationalists among Americans who support the aid on the basis of charity. But the average American taxpayer, preparing right now to stage another battle with his annual income-tax papers, thinks of foreign aid on only one basis—defense of the United States against Russian aggression.

This average taxpayer realizes tht this country must have allies, that American bases must be maintained in other parts of the world, to attempt to stop an attack on this country before enemy planes reach our shores. He knows that we can retain these bases, now ringed around the perimeters of Russia and her satellites, only if we make them profitable to nations where they are located.

He is convinced, then, that a certain amount of spending of his money overseas is necessary. But he has a right to wonder if the excessive spending by this country into the coffers of foreign nations—some of them extremely doubtful as allies—has bought us anything worthwhile.

For the record, 10 years of foreign aid by the United States in which we have given away $51 billion has certainly not stopped Russian aggressions and expansions.

Since 1945, communism, at the dictation of the Kremlin, has conquered between 700 and 800 million people by force, including the European satellites of Russia, Yugoslavia, China, North Korea, North Vietnam, and Outer Mongolia.

The Communists, with Russian advisers liberally sprinkled among their Chinese brothers, didn't hesitate to launch war in Korea. They are threatening a new war now, against Formosa, the remnant of Free China we are pledged to protect.

There has not been a single instance in these past 10 years in which this country or its allies have been able to shove communism out of an area it has seized. We have not been able to restore Germany as a sovereign nation, although Russia, our former ally, was committed to a joint program of occupation and restoration.

In other words, the record of the past 10 years has been one of Communist gains and free world losses.

Our great outpouring of funds, our attempt to offset the Iron Curtain with a curtain of American gold, has not accomplished protection for free nations.

In many cases, our aid program has actively helped the enemy. Our money and military goods, poured into threatened areas, frequently have fallen intact into the hands of the Communist invaders.

It is extremely doubtful that American economic aid will prevent future Communist aggressions.

Congress should look long and critically at all plans for foreign aid. Concrete plans for bolstering actual defense are worthwhile and should be approved. But foreign aid on the basis of charity or one-worldism should be denied.

We have to be realistic about handing over American wealth to foreign friends, particularly the doubtful ones who make up the majority. For we do nothing whatever to bloster the defense of the free world by weakening its one great power—the taxpaying ability of the people of the United States of America.

With Malice Toward None

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by

Hon. James A. Farley at the annual dinner of the Peekskill Lincoln Society, held at the Bear Mountain Inn, Bear Mountain, N. Y., on February 11, 1956:

WITH MALICE TOWARD NONE

(Address by Hon. James A. Farley, chairman of the board, the Coca-Cola Export Corp., at the annual dinner, Peekskill Lincoln Society, Bear Mountain Inn, Bear Mountain, N. Y., February 11, 1956)

To any American, the opportunity to talk to his fellow citizens about Lincoln is an honor, and also an exercise in humility. I am not going to presume on the opportunity. Many men have spent their whole lives studying and writing about Lincoln. I know very well that I could not add to their efforts. So I hope instead you will let me talk for a few minutes about a very great man, who for years has been a guiding star in many of the problems with which I have been confronted.

One of the proofs of Lincoln's greatness is that he does have something to say to everyone, high and low, rich and poor, no matter what his occupation. Most of us who have briefly emerged in national affairs will swiftly pass. Great men do not pass; and Lincoln was one of these.

I am very glad that his old associate and friend, William Henry Herndon, who was angry at seeing Lincoln made into a legend, decided to try to collect the material which would paint a picture of the man. Herndon, you remember, had known him as a country lawyer, a neighbor, a politician, a district worker, a job seeker, and a friend. It was his simple faith that the more people knew about the real Lincoln the greater he would be.

For this reason, Herndon spent the latter years of his life in bringing together everything he could find about Lincoln, good or bad, big or little. As a result, we have not a picture of an angel in a church window but a knowledge of the man, great enough to give inspiration to every American; a Lincoln so human that everyone of us feels he has had him for a friend. Not many men in history could pass that test.

A famous New York newspaperman, Don Seitz, used to spend much of his time outside his job in studying Lincoln. At the close of many years' work of this kind, he made this statement, "I would have Lincoln freed from all the sentimentality that has enmeshed him, from the embraces of the sob sisters of fiction and those who try to tie him to romance and religion, to stand forth coldly and clearly in his highest form as an American politician of the first rank".

I do not know that Lincoln's principal significance is as a politician but that was certainly one of his great contributions and it is worth thinking about a little in these times.

There is a striking contrast between the view which was held about Lincoln while he was alive and the personality which has emerged since his death. It is not easy for us today to believe that Lincoln was pictured in his lifetime as a weak man. It was said that he did not follow a clear line of policy; that he wavered; and that he was dominated by stronger men around him. It has taken a good many years for the history books to make us realize that none of these judgments, which were freely passed by his contemporaries, was even remotely true.

Being a first-class political leader, Lincoln had the wisdom to call in and consult all sorts and kinds of men. Again with fine political instinct he frequently allowed his visitors to believe that they were really initiating the policy of the country. More than one man of the period published his diary or papers and showed that he was laboring under the delusion that he, and not Lincoln, carried off many of Mr. Lincoln's best strokes. Only later, as the whole truth comes out, have we discovered that it was Mr. Lincoln who made the policy, though he was humble enough and adroit enough to allow lesser men to believe that they were running the Government.

Somewhat the same thing is true of his alleged indecision. We know today that he was constantly calculating the political support needed to bring the Union together. He was constantly trying to bridge the wide gaps between all sorts of groups. Each one of these groups thought they had the only method of saving the country; yet Mr. Lincoln knew that if the country was to be saved he needed to get them all working together.

This, I think, explains a good deal of the misunderstanding of the time. What seemed like hesitation then we now know was really a long and carefully thought-out campaign to bring group after group nearer to common ground, and on that common ground to build the political structure which enables a democratic government to function. It was politics, if you please. It was cruel to the President but it saved the country.

And today, 91 years after his death, we honor the man who was great enough to think out that political structure, humble enough to permit other men to take the credit for it, and brave enough to stand, without complaint, the endless amount of criticism and abuse which it aroused.

This is a model worth following and it is worth remembering when loose tongues are raised against the people on whom falls the burden of carrying the country through difficult times.

Mr. Lincoln is frequently thought of as a war President. Yet the policy which has made him great in American history was his persistent use of political methods. He was convinced that wherever political measures could be used force might be avoided. He stuck to this both before and in the middle and at the end of the Civil War.

Politics, as he practiced it, was a means by which people are brought to agree on a line of action; brought to agree in numbers great enough so that the policy can be carried out. He was no stranger to all of the means that were used at the time. They were, in fact, much the same means as those which are used today. Politics has not changed in the past 91 years except that, I really believe, it is cleaner and less devious today than it was then.

So we find Lincoln endeavoring to make political compromises, rather than to force the issue which led to the Civil War. He differed on the point from many of his colleagues and rivals. Seward, a capable New York politician, had taken a position which represented the opinion of New York but did not give enough common ground on which the entire country could stand.

Lincoln's antislavery sympathies were certainly as strong as Seward's. But when he made his famous campaign in 1860 he was careful to emphasize those elements which would hold the country together, rather than those which would split it in two. Let me be bold enough to risk a theory of my own as to the history of that period.

It seems to me at least possible that if Lincoln had taken office immediately upon his election in November 1860, instead of having to wait until March of 1861, the Civil War might possibly have been avoided. The reason I think so is this:

Passions were running high in 1860 and the only chance of avoiding the Civil War lay in bringing together, by political methods, the moderates, both of the North and of the South.

But during the months between election and the inauguration, a President-elect cannot do very much to guide political movements. He is obliged to leave the holdover President as free as he can, and President Buchanan seemed obviously unable to handle the situation.

Lincoln was doing his best to see that the extremists in the North did not force matters to an impossible point and he was trying, so far as he could, to establish contact with the more thoughtful Southerners who realized the dangers which would come from forcible uprising. Actually, the moderates in both the North and South probably were a majority.

Yet the people who were making the most noise were the extremists. On both sides of the Mason and Dixon line they were building up hatred, at a time when Lincoln's policy was to build up understanding. Until he actually reached the White House there was not a great deal he could do and during that fatal period emotions were being aroused all along the line. If ever we needed Lincoln, the politician, it was then.

No one can prove an historical "might have been," but having had some contact with politics, I really wonder whether Lincoln's very great gifts in handling politics and politicians might not have been able to bring about a solution by political methods instead of by war.

There is a lesson to be learned from this. Today we can go over the history of that period and we can see that the extremists on both sides were probably wrong. We know that Lincoln was not the uncouth and brutal figure which some southern hotheads made him out. The southern group who felt so bitterly, obviously were sincere and thought they knew what they were talking about, and yet they were dead wrong and history proves it.

Those northern extremists who thought Lincoln was a floundering weakling were equally mistaken. Because he did not press for immediate reform they believed him a failure. On one occasion the New York Times actually proposed to replace him with a dictator. Today history has shown that they were as wrong as their southern counterparts.

Perhaps we, all of us, will be a little more humble and a little better advised if we take the lesson to ourselves. Bitter feelings are not unkown in politics today. We do not have to go back to the Civil War to find people who feel strongly about national affairs, indulge in personalities and very sincerely believe evil of men, without reason.

Intolerance, as a political weapon, has been used in connection with issues other than that of slavery. If we remember the lesson of the Civil War, a lesson which is better taught by the life of Lincoln than in any other way, all of us may be protected a little against our natural inclination to feel violently and talk violently.

All of us may realize that we do not always know the whole truth and that sometimes it is wise to suspend judgment. All of us, in time, may even learn to feel that the men who are trying for a common agreement are usually safer guides than the men who are trying to make divisions or stir up hostility.

As a man, I think the use of hatred and of intolerance and of evil stories is plain wrong. As a man who has been active in politics, I had an added dislike of that kind of tactics. The reason is simple. These weapons make it impossible for men ultimately to agree; while it was my job in politics to try to find ways by which they could agree.

Lincoln's doctrine was that democracy would be impossible if nobody ever agreed, and particularly if a minority felt that it could break ranks and go its own way when political decisions had been reached. This is as true now as it was in his time.

Consequently, I know that if issues are not discussed on their merits but on personality; if any political group tries to stir up hatred and of course thereby provokes hatred on the other side, or if resort is had to the tactics of abuse, it becomes extremely difficult for these groups ever to agree again.

Men tend to repay hatred with hatred, or insult with insult, and if that process is

allowed to go on it becomes impossible for them finally to cooperate in carrying out any course of action. And yet, in a democracy like our own, our entire national life is a vast cooperative scheme. To the technical politician, extremism is not only a crime, it is a blunder.

I think Lincoln taught us this and though from time to time some may forget the country as a whole has learned its lesson. It cost us the life of our ablest and noblest statesman. But I think that if he were to come back today he would say that the sacrifice was not in vain.

In this year of 1956, we see a world where group still fights group, doctrine clashes with doctrine and nations engaged in cold wars. Nevertheless, even in this mad disorder and strife, the United States has steadily preserved the ideal of good will, of moderation, of justice. Even in our internal political conflicts today we do usually remember that there is something to be said for the other fellow's point of view. Even when we are engaged in the terrible rage of war we do have the tradition of justice to opponents, as we demand it for ourselves, our allies and the victims of aggression.

We are able to attack social problems which are often bitter in the extreme and still find the way of moderate commonsense toward an ultimate goal of progress.

Without trying to usurp the place of the historian, I think I may say that we owe this in great measure to Abraham Lincoln. Indeed, I think it is not impossible that Lincoln himself hoped that this might be one result of his life's work. His second inaugural address, which contains, as you remember, the famous words, "With malice toward none; with charity for all," was itself a plea for greater understanding.

Thurlow Weed, a politician of the time, wrote him a note of praise. Mr. Lincoln's answer is not as well known as is the second inaugural address, but what he said was this: "Thank you for yours on the notification speech and on the recent inaugural address. I expect the latter to wear as well as, perhaps better, than anything I have produced; but I believe it is not immediately popular. Men are not flattered by being shown that there has been a difference of purpose between the Almighty and them. To deny it, however, in this case is to deny that there is a God governing the world. It is a truth which I thought needed to be told and, as whatever of humiliation there is in it falls most directly on myself I thought others might afford me to tell it."

This was Lincoln anticipating the coming peace, and trying to bring back the state of mind and the political attitude which would make real peace possible. He was engaged in his last and greatest attempt to bring this about and to reunite the country, almost to the hour of his death.

Time after time, since then, this country has had its problems and its troubles. Time after time wild tongues have again been loosed. Yet the lesson of a great spirit and a great man has remained with us to make of this country a union so firm that even the forces of today which are tearing Europe and Asia apart beat harmlessly against our coasts.

The Union was saved, with God's help, for all time. But the real authors of its salvation were the great spirits, north and south, who followed Lincoln's plan, who cast hatreds aside and in Lincoln's sympathetic spirit attempted to make the Government a means by which this Republic binds all Americans in common brotherhood.

The bond was forged faithfully and well. In its time it has overcome the peril from within, and now we see that it is no less staunch and true against the peril from abroad. That is our legacy from Lincoln and out blessing from God.

Speech Prepared for Delivery by Hon. J. Glenn Beall, of Maryland, Before a Lincoln Day Dinner of Pinellas County Republicans in Clearwater, Fla.

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. CRAMER. Mr. Speaker, under leave to have inserted in the Appendix of the RECORD, I include a speech prepared for delivery by Senator J. GLENN BEALL, of Maryland, before a Lincoln Day dinner of Pinellas County Republicans in Clearwater, Fla.

The speech follows:

Abraham Lincoln died 91 years too soon.

Unfortunately, he never had the opportunity to see how effective and able the women of this great Nation can be when they take a direct part in politics.

Men have always suspected, of course, that women would be a wonderful adornment to the political scene. But now they have found that you women are much more than that. You women have shown without question that your active participation in politics is essential to good government. And we men need you.

We need you as loyal and understanding wives, and that is especially true on those many occasions when dinner gets cold while we are out politicking.

We need some of you as candidates, for a government without a direct voice from women can get to be like a symphony orchestra without a violin section.

And finally, we need millions of you as volunteer workers, for there is always that very practical matter of winning elections.

As you probably realize, there is one major, and all-important point which we have in our favor in this business of winning elections.

We have popular opinion on our side.

I realize the limitations of statistics, but I'd like to quote some fairly overwhelming figures which, I think, show just how strong we really are.

These results were announced by the American Institute of Public Opinion (which is better known as the Gallup Poll) several months ago.

First of all, citizens of this country were asked point blank: "Do you approve or disapprove of the way Eisenhower is handling his job as President?"

A tremendous 73 percent of the people said "Approve."

Only 14 percent said that they disapprove.

The other 13 percent indicated they had no opinion on the matter.

Now let's take a look at a breakdown of those figures in regard to the South.

When the poll takers reported their findings on a regional basis we found that in the South, 68 percent of the people said they approve of the way Mr. Eisenhower is doing his work;

A mere 18 percent disapproved, and 14 percent said they had no opinion.

Here's another point which I found extremely interesting.

The question this time was: "If the President's doctors say it is all right, and if he decides he wants to run in 1956, would you vote for him?"

The answers were: 56 percent, "Yes:" 31 percent, "No;" and 13 percent undecided.

Comparing that survey with another one which was taken prior to the President's attack, the Gallup men discovered that the drop in the ranks of those who said they would cast their ballots for reelection was only 5 percent.

As I said, we definitely do have popular opinion on our side.

Here are some of the reasons why that is true.

At the national level of government, officials of the Eisenhower administration have faced up to the grave issues and the problems of these years with faith and with courage—and success has attended our labors.

We can also point with equal pride to many men and women of the administration who serve the public in official capacities in various localities of our Nation.

Since the glorious birth of this Nation, many fine men of outstanding character, unusual wisdom and unquestioned devotion to the great principles of our heritage, have served in the highest office that our free people can bestow, the Presidency of the United States.

But until the present time two have towered above the others on heights rarely reached by others in the entire history of the world.

George Washington strode with giant steps to the stage of great events in the crisis of the colonial rebellion against the tyranny of a distant monarch.

With ragged volunteers from the 13 colonies he welded together an Army which helped forge the greatest Nation on earth.

The other was Abraham Lincoln, whose memory we honor this weekend.

Although many persons were in honest disagreement with the policies of Lincoln, they never had the slightest thought that his actions were ever marred by cowardice or greed or pettiness.

Now, at last, another man has attained the stature of those other forthright Americans.

As history brings these troubled and dangerous times into the perspective of the whole, literate people in all of the civilized world will associate with Washington and Lincoln, as representatives of all the timeless greatness of America, the name of their new, great partner, the incumbent leader of the people, the President of the United States, Dwight David Eisenhower.

Yes, Dwight Eisenhower, born to our magnificent traditions of freedom and human dignity, trained in love and respect for God and for his fellow men, and tested in the terrible trials of massive war, was drawn to the full height of his great stature, like Washington and Lincoln, in time of crisis—crisis for this Nation and for the world.

He came to the Presidency in the midst of a stalemate in a cruel and costly war, a stalemate which his opponents said could not be broken—a war which they said could not be ended.

He moved with dispatch.

He acted with decision.

He brought into play the skills of the great soldier that he is, and the intellect of the great statesman that he is.

The stalemate was ended at the conference table.

The shouting, suffering, and slaughter were stopped in the hills and across the plains of Korea.

Dwight Eisenhower moved into the White House while the tyrants, the would-be conquerors of the world, were rattling their sabers with new vigor, when the initiative was all on their side, when confidence was lacking among our allies and those who should be our allies in the event of war.

Under the wise leadership of Dwight Eisenhower, our Nation has taken the initiative, not the boastful, blustering initiative of war-

mongers, not the threatening initiative of those who would enrich themselves through the conquest of the lands and goods of others, but the calm, courageous, directional initiative of enlightened, civilized people who are as proud in their pursuit of a permanent peace as they were courageous in conflict.

Our policies and our purposes have been stated clearly by President Eisenhower.

The mist of doubt has been removed.

The confidence of allies has been strengthened, and the power of our defenses and of our weapons of offense, if necessary, has grown in mighty steps.

Our internal economy never was basically better.

The calm that has replaced near-hysteria within the Government has been transmitted to the people.

The fear that seemed normal prior to the Eisenhower administration has disappeared.

The economic recession which men of little faith had called inevitable never developed.

Make no mistake * * * the troubles and the dangers of the world have not yet been brought to an end.

They never could have been brought to an end under the directionless course we have known in the recent past.

They can, and I am confident will, be brought to an end with the leadership of Dwight Eisenhower.

"To protect our nations and our people from the catastrophe of nuclear holocaust," said this great President of ours, "free nations must maintain countervailing military power to persuade the Communists of the futility of seeking to advance their ends through aggression.

"If Communist rulers understand that never shall we buy peace at the expense of honor or faith, they will be powerfully deterred."

Yes; these are the words of Dwight Eisenhower, and the Communists have been powerfully deterred.

But the grand results—the final victory of peace—cannot be accomplished overnight, or even in the short period of 4 years.

We have found in Dwight Eisenhower, I believe with all my heart, the master of the crisis in the world.

We must, in the name of humanity, in the cause of decency, for the generations of today and for the sake of the generations to come keep Dwight David Eisenhower in his great job through a second term if he chooses to run.

I can understand his yearning for the quiet of his home in Gettysburg.

I can sympathize with him, too.

But I know his great love for his country and for humanity.

I know of his great faith in God and of his conviction that the search for a just and lasting peace is far from hopeless.

I feel that if he is convinced that he is needed, he will yield to the wishes of the people.

If the prayers of the people are answered, and Dwight Eisenhower heeds their rising call for him to continue his great crusade for peace and justice, he cannot be defeated.

Let the disciples of doubt raise their cries of fear and confusion.

When the chips are down and the sovereignty of the citizens is exercised again at the voting machines and ballot boxes across the land, the decision again will be, more overwhelming than before, that Dwight D. Eisenhower continue as President of the United States.

It could not be otherwise, because no other man since Washington and Lincoln has earned so well and kept so completely the confidence and faith of his fellow citizens.

I've been dwelling at length on the President himself.

Now let's consider the administration in general.

It has gained its strength, not only from the regular members of the GOP, but also from the many thousands of Americans who have become disgusted with Trumanism and its heir, Stevensonism.

Take my own Free State of Maryland, for instance.

In Maryland, as in Florida, the members of the President's party are in the minority.

Yet, today, because of the profound beliefs of the people of Maryland in individual liberty and the principles of the Eisenhower administration, Maryland has a Republican Governor, Theodore R. McKeldin, who had the honor of placing President Eisenhower's name in nomination at our national convention in 1952.

Maryland is also represented by two Republican Senators of which I have the honor to be one, together with Senator JOHN MARSHALL BUTLER.

In addition, Maryland is represented by 3 GOP Representatives out of 7 for the State.

How is this possible?

Because the people of Maryland have voted their convictions that they are better represented by the ideals and principles of this administration.

These convictions were not lightly arrived at, just as they were not in the case of the voters of Florida.

But knowing that when the philosophies of the two parties are brought home to the people they will vote for truly liberal government, I look forward to even greater gains in Florida this fall.

You have already gained national recognition by electing such a worthy Representative as BILL CRAMER, and now you will be expected to live up to the great promise you have shown.

I've done quite a bit of talking about BILL CRAMER since I arrived in your State, and I'm going to keep it up.

In the first place, BILL CRAMER has the bigwigs of the opposition plenty worried.

Personally, I don't blame them.

I'm just very glad that he's on our side.

On Capitol Hill, BILL CRAMER has made a reputation for fighting for what he wants.

Furthermore, he gets what he wants—and that is a real trick.

Just look at the $11 million harbor project he got for the Tampa area, and the appropriations he has gotten for your post offices, sponge industry, fish business and other activities.

It isn't easy getting things like that in Washington—I know.

I was in the House of Representatives for 10 years myself, but perhaps I could still take lessons from BILL CRAMER.

If anybody ever wants to know about a two-party system in the South, just point to BILL.

Florida can be proud of him, as we all are.

One of BILL's biggest jobs as part of the Eisenhower administration is to give the United States a liberal, representative government.

Liberalism is a word that is being lightly tossed around these days.

The New Deal-Fair Deal Party and its supporters have claimed to be liberals.

But what is the true meaning of liberalism?

Does it mean excessive taxation, a flagrant spending of the resources of the American people for brazen political purposes—the placing of more and more controls and restrictions on the lives and economy of the Nation?

If that is true liberalism, then the New Deal-Fair Deal Party has been liberal.

But that is not true liberalism. It is liberality, liberality with the American people's money, freedom, initiative, and heritage.

The Eisenhower administration does not confuse liberalism with liberality.

Our true liberalism has respect for tradition, and it has vision of the progress in the future.

Our liberalism is based on the principle of individual freedom and liberty which permits each man and woman to be the maker of his or her own destiny.

It is a liberalism which stands by to aid in times of distress but exacts no tribute in the form of control over the people's economy or pocketbooks.

President Eisenhower himself has said, "This administration is committed to a program of progressive moderation, liberal in its human concerns, conservative in its economic proposals, constructively dynamic and optimistic in its appraisal of the future.

"This program, I firmly believe, merits the endorsement and support of thinking, confident, forward-looking Americans.

"For our national economy, we seek a dependable stability in our present assets, a vigorous expansion in our future growth.

"These can be best achieved, we believe, by giving the private citizen the greatest possible opportunity—consistent with the rights of others—to contribute to the development of the economy and to share in its abundance."

Since this present administration has been in power, we have made the following key policy changes:

1. In place of a stalemate war in Korea—a truce.
2. In place of reaction in foreign affairs—action.
3. In place of peak target dates in defense—the long pull.
4. In place of softness toward Communism—firmness.
5. In place of planned deficits in finance—a balanced budget.
6. In place of increases in taxation—reductions.
7. In place of a shrinking buying power of the dollar—stability.
8. In place of unchangeability in agriculture—flexibility and adaptability.
9. In place of misguided favoritism in labor—fairness.
10. In place of antagonism to business—encouragement.
11. In place of Government paternalism in natural resources—partnership.
12. In place of promises on housing—better housing.
13. In place of wardships in social security—a cushion against shock.
14. In place of socializing medicine—improving private care.
15. In place of corruption—integrity.
16. In place of monopoly in atomic development—sharing.

Today there are more than 65 million persons at work at the highest wages in history.

Construction has set a record at $42 billion in 1955.

American businessmen sold $14 billion worth of goods abroad.

Inflation has been halted.

Government spending has been reduced, taxes cut, and we are approaching a balanced budget.

These accomplishments are but a prelude of those to come in the dynamic program which the Eisenhower administration has presented to the American people.

Confident of the integrity, the honesty, and the belief in the American people and constitutional government, which this administration represents, the Nation can go forward to even greater heights in the future.

For the first time after two decades of New Deal-Fair Deal administrations, the American people now have the Federal Government back in their own hands—a Government which represents them—not a Government of a chosen few who would direct and regiment this American Nation.

Don't forget how long it has been that the South has had to fight against becoming stagnant under one-party rule.

It reminds me of the story of the young wife who nagged her husband with the following:

"What's the matter with you?" she asked.

"Monday you liked baloney.

"Tuesday you liked baloney.

"Wednesday you liked baloney.

"Now, Thursday, all of a sudden, you don't like baloney."

Well, now, all of a sudden, the South is fed up with baloney, too.

I'm sure you will keep doing something about it.

Thank you.

Text of the Speech Delivered by Dr. Francisco Urrutia, Colombian Ambassador to the United States, at the World Trade Luncheon Held at Tampa, Fla., on February 9, 1956

EXTENSION OF REMARKS

OF

HON. WILLIAM C. CRAMER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1956

Mr. CRAMER. Mr. Speaker, at the World Trade Luncheon held in Tampa, Fla., on February 9, the Honorable Francisco Urrutia, Colombian Ambassador to the United States, delivered an address of importance to the United States and our international trade relations with South America. It is doubly important because he has quite capably pointed out the problems faced by the Americas today and at the same time has offered the basis of a solution to many of these problems.

Beyond the interest his address held for students of trade and economy, I was particularly concerned with the references made to the First District of Florida by the Ambassador that were not included in his prepared address. Dr. Urrutia pointed out that the port of Tampa was one of the major gateways to Latin American trade being the largest and busiest port of the southeast United States from Norfolk to Mobile. It is the logical recipient of Latin American shipping and because of its advantageous location an important point of origin for cargoes directed there.

The large and active Latin population in the First District of Florida has led to the development of many cultural and national ties between the areas that have resulted in advantageous trade relations for all and a common ground of friendship that tends to see this growth develope between these logical terminals of trade. I feel certain because of these factors that a means of increasing these trade activities will be found in the future. The economy and well-being of our respective nations will benefit from such understanding and mutual effort. The words of Dr. Urrutia will benefit both the first district and the United States in their clear statement of today's conditions.

Mr. Speaker, I ask permission to include these remarks and the address of the Ambassador of the Colombian nation in the RECORD.

When Mr. Thomas Wilson told you last year that world trade was vitally important to the United States economy, he pointed out the indisputable fact that every man, woman, and child in this country is directly affected by foreign trade. He explained thoroughly the trade problems of the United States with Canada and Western Europe, but he did not have enough time to concentrate on the particular problems of international trade between the United States and Latin America. This is why I would like to give you this year some additional information which, I am sure, will help you to understand better the reasons why Latin America has not been able to develop its trade more intensively with the United States.

Mr. Thomas Wilson pointed out last year that United States trade with Canada had reached, in 1953, an all-time high of $5,660 million. "This exceeded," Mr. Wilson added, "the total trade of this country with South America and, after excluding military aid, the United States total trade with the Continent of Europe."

Why is it that Latin America has not been able to have as large a volume of trade as one country alone—Canada—has with the United States? My answer is that trade is the natural result of economic development and it is because we have not been able to achieve it that trade with all of the Latin American countries represents for the United States less volume than its trade with Canada.

It is impossible to understand these problems without realizing first the fundamental differences between the economic organization of North and South America.

We must realize that North and South America were organized under quite different circumstances:

The British, German, Irish, and other European people, who came to North America in search of a new life in a new world, were fed up with the religious and political wars in Europe.

They were only interested in organizing a new state where different religions would cooperate with each other and freedom for private enterprise would prevail.

The opposite happened in Latin America.

In the eighth century, the Moslems and the Moorish, as you know, were able to conquer the entire Spanish peninsula with the exception of Asturias and the Basque country. It was only after seven centuries of wars that the Christian kings were able to get rid of the Moslems and Moorish, after they defeated them in Granada the same year Columbus sailed for the first time to America (1492).

To drive the Moslems and Arabs out of Spain, the Spanish kings had led a war, supported mainly by the religious enthusiasm of the Catholic Church. It was a total war and as a result, all powers, including religious power, was kept by the king. When a few years later Spanish officers came to organize our countries, they only understood and believed in the form of government that had enabled them to win their religious and civil wars in Spain.

While the European settlers, coming to North America intended to stay in their new country and to organize all the necessary industries they needed for their new life, in South America Spanish and Portuguese adventurers were only interested in mining gold or in discovering hidden Indian treasures, always hoping to go back home to enjoy the fortunes they had found or would find.

When the Latin-American countries achieved their independence (a) their economic system was based on mining and in the production of a few tropical products they could export to Europe; and (b) their political systems, although organized in a republican and democratic way, as a normal reaction against their former rulers, kept most of the laws, ideas, and organization of the old ones.

Latin-American countries lost the opportunity of the great economic and industrial prosperity enjoyed by the rest of the Western civilization in the last century and thus the 20th century found them almost as underdeveloped as at the beginning of the 19th.

Some progress has been attained, but we are still much behind the Western civilization standards.

I wish to point out a few facts which will help you to understand it better.

1. For each 100 miles of roads in the United States we only have 7 miles of roads in Latin America.

2. Our workers are paid US$1 a day, whereas in the United States workers are paid US$1 an hour.

3. Sixty-two percent of the rural housing of Latin America is far below the hygiene and human standards prevailing in the United States.

4. We have only 3 percent of the total number of automobiles and trucks that are in use in the United States.

5. The total electric power of Latin America is only 8 percent of the United States output.

6. The total production output of Latin America is only 10 percent that of the United States.

7. The Latin Americans have an average yearly per capita income of US$211.45, against the average yearly per capita income of US$1,900 of the American.

8. There is a difference of more than 1,000 calories per day in the food consumed by the American worker in contrast to that of the Latin-American laborer.

The Latin-American countries realized that they must make up for the time lost during the last century and are changing their economics accordingly.

Unfortunately progress has been slow because in the 20th century underdeveloped countries cannot find the capital and fair trade responsible for the development of those who underwent the same process of industrialization during the last century.

Let us study how the lack of capital and the lack of fair prices have been responsible for the slow development in Latin America's economy, and as a consequence for the insufficient trade between North and South America.

A. As far as capital is concerned, you all know that the United States could not have developed its industries without the European capital brought in during the last century.

In the last century, European capital came to this country with the incentive of bigger returns on investments.

With a population increasing at the rate of 2½ percent per year, in order to maintain the present inadequate standard of living, we must be able to increase national production by the same 2½ percent. To do so, Latin America would need $7.5 billion a year of new capital investments. Latin Americans are reinvesting their earnings at a rate of $6 billion a year. Thus, $1½ billion more are needed.

Because of taxation laws in their countries, private capital is not interested in investments in Latin America. A return of 15 or 20 percent a year on a foreign investment is of no interest to those who must pay in taxes 50 or 60 percent of this excess benefit and can only net 1, 2, or 3 percent more than what they should have received for investments at home.

As a result of this peculiar situation, returns on investments in Latin America average 15 percent a year and, in spite of

this fact, the United States for instance, receives each year in dividends and income from Latin America much more than it invests.

From 1946 to 1951 the United States received $3 billion in income from Latin America and invested only $1,600,000,000 in new capital.

According to the latest United Nations statistics, in 1954 the inflow of capital from the United States to Latin America was:

	(*Millions*)
1. Direct investment	93
2. Loans from the Export-Import Bank	100
3. Loans from the International Bank	69
4. United States grants (Bolivia and Guatemala)	38
Total	300

But the outflow of captal from the Latin-American countries to the United States, without taking into consideration private Latin American investments in the United States, was:

	(*Millions*)
(a) For debt repatriation	35
(b) For amortization of loans	49
(c) Dividends and financial services on private capital	630
(d) Financial services on official loans	43
Total	757

Thus, the outflow of capital was $450 million larger than the inflow, and this proves that it is certainly not with private investments alone that Latin America shall be able to close the gap of $1½ billion needed every year in new capital investments just to keep up with the present inadequate standard of living.

On January 26, 1956, Mr. Hollister, Director of International Cooperation Administration, said that since 1934 the United States had "provided some $3.342 million in loans and grants for Latin America" and he broke this figure into these categories:

	(*Millions*)
Export-Import Bank loans	2,400
World Bank loans	600
Economic and technical aid	242
Agricultural surpluses	100

I wish it were true. Unfortunately, these figures correspond to the authorized loans but not to the loans actually made and failed to take into account the loans already paid.

According to the November 30, 1955, figures, $1,100 million have already been repaid to the Export-Import Bank of the $2,400 million mentioned by Mr. Hollister, and only about 70 percent of the loans approved by the International Bank have until now actually been executed.

The total outstanding loans of both Export-Import Bank and International Bank represent less than $2 billion for all of Latin America.

As for economic and technical aid and agricultural surpluses, Mr. Hollister gives a total of $342 million for Latin America; that is, less than one-half of 1 percent of the total grants given to the rest of the world by the United States.

The rest of the world has received direct aid, not to be reimbursed. If only a part of all this money had gone to Latin America our governments would have been spared many internal troubles.

B. As far as fair prices are concerned, Latin American goods are only 8½ percent higher than in 1947, and we get this figure only because of coffee and crude oil. If we do not take into consideration these 2 products, we find that Latin American goods are sold today 7 percent below the 1947 prices and 25 percent below the prices obtained during the Korean war in 1951.

Studies have been made by the United Nations and the International Bank to compare the average prices of the goods exported with the goods imported by Latin America. These averages are called index prices, and the comparison between the index prices of imports and the index prices of exports in each country are called terms of trade.

In terms of trade, in 1922 Latin America could only buy 84 percent of the goods bought in 1900 with the same amount of export goods, and only 60 to 70 percent in the years 1930 to 1935.

Only during the 2 wars could Latin America buy more than in 1900 with the same amount of goods exported.

In 1953 the terms of trade were only 5 percent better than in 1900, ond only because in 1953 the coffee prices were higher. With the present coffee prices the terms of trade will again be below the level of 50 years ago.

Minerals, for instance, in terms of trade buy today 30 percent less of the same goods than in 1900.

The two problems I have explained, that is, the lack of capital required to develop our countries and the inadequate prices for our products, have an immediate and direct effect on our trade. In 1927 exports and imports trade represented 27 percent of the gross income of Latin America, while now it only represents 16 percent.

Although Latin America's population is increasing at the rate of 2½ percent per year, its imports today, as it was the case 10 years ago, only represent $6 billion a year. This means that in 1947 Latin America exported $45 per capita and imported $43 a year. In 1953 Latin America could only buy $40 of foreign goods per capita, and, as it could only sell $37 per capita, we were, and are still today, $3 short per capita each year in our trade balance.

Latin America is being criticized for not having been able to meet all its commitments and also for not having increased her trade with the United States. The fact is that in 1954, on the one hand, Latin America received from the United States only $3,289 million for its exports, but on the other, it had to pay $3,371 million for the goods bought from this country, plus $450 million for the balance between the outflow and inflow of capital. This meant that Latin America had to pay a total of $3,821 million to the United States, although it only received $3,289 million.

It is a great pity that these problems are misunderstood or ignored in the United States because:

1. Latin America is by far the best of the United States clients. Of $11 billion sold last year by the United States, 26.6 percent went to Latin America and of $10 billion imported, 33.6 percent came from Latin America.

2. Latin America pays the United States with the moneys received for its goods while other continents pay this country with the same dollars received as grants or aid.

3. In the event of war, Latin America must be in a condition to continue to provide strategic materials. Of a list of 77 items considered as strategical by the United States, 30 came from Latin America. In the last war, 75 percent of the food supplies and 40 percent of the raw materials imported by the United States came from Latin America. We must be in a position to defend the maritime supply lines, provide for maritime and airbases and send troops to the battlefronts as did Brazil in the last war and Colombia in Korea.

4. We have 170 million inhabitants (more than the United States) and are the biggest market this country can ever dream of.

5. Our population is increasing at the unbelievable rate of 2½ percent per years and this means that we shall have 30 percent more population than the United States 25 years from now and twice the population of the United States 50 years from now, with the potential buying power this means.

Address by Hon. Edward Martin, of Pennsylvania, Before Women's Patriotic Conference on National Defense

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 21, 1956

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me on February 16, 1956, before the Women's Patriotic Conference on National Defense, at Washington, D. C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY UNITED STATES SENATOR EDWARD MARTIN, OF PENNSYLVANIA, AT THE OPENING DINNER OF THE WOMEN'S PATRIOTIC CONFERENCE ON NATIONAL DEFENSE, AT WASHINGTON, D. C., FEBRUARY 16, 1956

It is a great honor and a real inspiration for me to be here this evening. The women's patriotic organizations represented in this important conference have earned the gratitude of every loyal American.

They exemplify devotion to the ideals of our free Republic. They work for a strong America—a God-fearing, righteous America—a Republic of spiritual and cultural power, dedicated to the highest standards of honor and justice.

I am proud to salute the members of this conference and its participating organizations as loyal and courageous soldiers in the battle to defend and preserve the American system of government.

In the gracious invitation for me to address you this evening it was suggested that I discuss the Bricker amendment and the dangers that arise from what has come to be known as treaty law.

In that connection I think it is appropriate to review the nature of the American plan of government and the reasons for our greatness as a nation.

First, let me point out that we Americans are a peace loving people. It is our proud boast that we are the most powerful Nation in all history—yet we have never imposed tyranny upon any people of the earth. We have never fought a war of conquest. We have never sought territorial gain by force of arms.

Whenever we have been forced into armed conflict we have fought on the side of honor, justice, and freedom. We have made terrific sacrifices in blood and treasure to liberate oppressed and persecuted people. American heroes have suffered and died to repel aggression that would rob free people of their liberty and would enslave them under savage cruelty.

Our sole objective in war has been to uphold the integrity of free nations, to preserve the principle of individual freedom and to protect the right of free people to live under the form of government chosen by their own free will.

For 150 years we have been able to keep our shores free from armed invaders. Of all the world's great nations we are the only one that has escaped the desolation and destruction of war.

In two world wars we gained great military victories. Our fighting men covered themselves with everlasting glory. But the peace for which they offered their lives was not achieved. Secret deals at the conference table sabotaged American power for peace

and opened the way for Communist dictatorship over one-third of the world.

As we look back to the reasons for our national greatness we must turn to the foundations upon which the Founding Fathers erected the structure of American freedom.

First, and most important, we have the ideals of Americanism so eloquently expressed in the Declaration of Independence:

"That all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these rights are life, liberty, and the pursuit of happiness."

Those rights are the essence of our individual freedom. They are not granted by government. They come from God.

Government that attempts to restrict or curtail them, or to take them away, transgresses against the divine law, to which the Founding Fathers gave their firm allegiance.

Next we turn to the Constitution of the United States, the charter of our liberties, which has been described as the greatest state document ever produced by the hand and brain of man.

Under the Constitution and the Bill of Rights there was created a government that has demonstrated its capacity and fitness to serve the people for generations far into the future.

For the first time in world history it gave recognition to the individual. For the first time in world history there was brought forth a new concept of government which derived its just powers from the consent of the governed. Never before had there been a government whose powers were specifically defined as grants from the people and limited within the bounds of a written Constitution.

And it is important to remember that in adopting the Bill of Rights the Founding Fathers did not propose to establish freedom of speech, press, assembly, religion, or to protect the rights of property. They recognized these rights as God-given rights, bestowed upon all mankind by the Creater of the universe. They set forth in language of biblical simplicity, the areas of human dignity and individual freedom upon which government was forbidden to encroach.

Under that plan in less than 200 years, Americans, living in freedom, have built the richest, the soundest, and the strongest nation in all history.

We hold the Constitution in the greatest reverence but that great State document, within itself, provides the method by which it can be amended to conform with changing conditions. I need not stress the point that proposed amendments should be approached with utmost caution. I think every good American will agree that the test of any proposed change is whether it will strengthen the fundamental principles of free government laid down by those whose vision and wisdom gave us the Constitution.

I submit, my fellow Americans, that the Bricker amendment meets that test.

I believe it to be one of the most important pieces of legislation now before Congress. Its importance, as you know, grows out of the various interpretations that have been given regarding article 6 of the Constitution which reads, in part, as follows:

"This Constitution and the laws of the United States which shall be made in pursuance thereof, and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land and the judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding."

We who support the Bricker amendment regard it as most unfortunate that there is so much difference of opinion, even in the courts, regarding the meaning of this article. For that reason we believe it should be amended and spelled out in the same simple language that we find in the first 10 amendments—the Bill of Rights.

It should be amended so as to give added force to article 1, section 1, which provides:

"All legislative powers herein granted shall be vested in a Congress, which shall consist of a Senate and a House of Representatives."

Please note the words "all legislative powers herein granted." They make no exception. They confer no legislative powers upon the executive branch of government and certainly none on any foreign government.

Furthermore, in support of this exclusive grant of legislative power the 10th amendment states:

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

In the 2d session of the 83d Congress the Bricker amendment was debated in the Senate at great length. Every word was examined with extreme care. A great many decisions of the Supreme Court were quoted. Legal technicalities were brought forth and ably expounded with force and eloquence by proponents of the proposed amendment and by those who were opposed. Substitute proposals were offered and on the final vote the proposed amendment failed to pass by the margin of 1 vote less than the required two-thirds.

I shall not attempt to go into further detail of the legislative record. But to my mind one thing is very clear. We are confronted with one of the most fundamental principles that has to do with the stability, if not the permanence, of the American form of government. Unless legislation is limited by the Constitution we destroy one of the mightiest safeguards for the preservation of liberty. We place in danger every sacred right for which brave men have fought, suffered and died in their striving for freedom.

The Founding Fathers were strong in their determination to restrict the powers of Government. I cannot accept the conclusion that they would make a grant of unlimited power over foreign and domestic affairs.

I am opposed to the ues of international treaties for making domestic laws for the people of the United States. I am opposed to overriding the Constitution without the consent of the people.

For many years of our history the dangers of treaty law did not become apparent. Treaties between the United States and foreign countries dealt with international subjects such as alliances, war and peace, boundaries, trade agreements and so forth. It never occurred to the average American that a treaty could interfere in the domestic life of our Nation. It did not seem conceivable that a treaty could in any way infringe upon our individual rights as American citizens.

The Bricker amendment is needed to safeguard the right of the American people to make their own laws within the framework of the Constitution through their elected Representatives in Congress. It is needed to protect the American people from the will of a super-government to which they have not given their consent. It is needed to preserve the system of checks and balances which have served us so well in separating the functions and powers of the three branches of our Government. It is needed to prevent the unwarranted encroachment of executive authority upon the legislative branch of Government.

I do not question the high integrity or sincere purpose of President Eisenhower in his opposition to the Bricker amendment. I do not fear that he will lead us into national peril.

But I can look back to the agreements at Yalta and Potsdam which were conceived in secrecy and withheld from Congress and the American people. I need not remind you that by these agreements we committed our country to make tremendous concessions to Russia and helped extend the power of the Communist conspiracy.

I can look forward with apprehension to the future when unprincipled men, ambitious for power, may seek to enlarge Federal authority over the American people by means of treaties and executive agreements.

If treaty law can override the Constitution it can deprive people of the rights enumerated in the Bill of Rights.

I subscribe wholeheartedly to the sentiment expressed by the distinguished senior Senator from Ohio [Mr. BRICKER], when he introduced his proposed amendment in the 83d Congress.

Addressing his colleagues, Senator BRICKER said, and I quote:

"The fight for the protection against treaty law has only just begun. This fight to prevent the sovereignty and the Constitution of the United States from being undermined by treaties and executive agreements will be carried on in elections, in national organizations, and in Congresses until it is settled to the satisfaction of the overwhelming majority of the American people. That majority would rather live without fear under a government of constitutional restraints than live in jeopardy under a government of men."

Therefore I say to you that the responsibility for freedom rests not in Washington but in the hearts of the people.

It is a responsibility so grave that it must not be assumed without solemn rededication to freedom of the individual as the keystone of our national faith.

The fight for the Bricker amendment can be won if we can reach the hearts of the people. It can be won if organizations like yours take leadership in old fashioned patriotism.

Love of country and loyalty to its ideals are the great and indispensable virtues of American citizenship.

Just a few days ago we celebrated the birthday anniversary of one of the greatest of all Americans, Abraham Lincoln.

Let us, in his immortal words, here highly resolve "that this Nation under God shall have a new birth of freedom and that government of the people, by the people and for the people shall not perish from the earth."

Veto by the President of the Natural-Gas Bill

SPEECH

OF

HON. EDMUND P. RADWAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. RADWAN. Mr. Speaker, the President of the United States performed a great public service in vetoing the natural-gas bill. This particular bill engaged the attention of the entire Nation. I, for one, could see no public interest in the measure—either from the standpoint of the gas-producing States or let alone from the gas-consuming States.

The entire country, I am sure, is grateful for President Eisenhower's wise decision in this matter. It is difficult for me to understand those arguments that are now being advanced, and in poor taste, that the veto message is an attack upon the Congress. The President of the United States was merely echoing the sentiments of the entire Nation when

he made reference to the brazen sponsors of this legislation, and when I say "sponsors" I mean those outside the Congress.

If and when this measure comes before the House in an attempt to override the President's veto, you may be assured that I will vote to sustain the President's action. If, therefore, there are those who feel that the President's veto was an attack upon the Congress, they are at liberty to test such sentiment by bringing the measure up in an attempt to override the veto, but I am certain, Mr. Speaker, they will not dare do this.

The Mideast South Asia Crisis

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, February 21, 1956

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an extremely interesting and informative article by Mr. John Cowles, the distinguished president of the Minneapolis Star and Tribune, which appeared in the Herald Tribune of New York on February 15. Mr. Cowles has just returned from a month in Asia and the Middle East, during which, through personal observation and many interviews, he was able to secure information and some impressions which I believe are of vital interest and importance to the American people regarding the present situation. I hope that this article will have wide circulation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MIDEAST SOUTH ASIA CRISIS CALLED VITAL PROBLEM FOR UNITED STATES IN COLD WAR

(By John Cowles)

After a month of concentrated question-asking and observation in South Asia and the Middle East, I am convinced most Americans are unaware of the gravity of current developments in that part of the world.

First, the Israeli-Arab situation is imminently critical. If war breaks out—and some responsible, informed authorities believe there is a 50–50 chance of that happening within 90 days—no one can foretell where it might spread.

If such a war is not averted, most of the Middle East might quickly be lost to the free world. Even if such a conflict did not rapidly develop into world war III, as it might, the loss to Great Britain of its Middle East oil reserves, if that happened, would be a catastrophe of incalculable dimensions.

COULD MAKE BRITAIN SECOND-RATE POWER

Not only would the Communist world's warmaking potential be enormously increased, but economically Great Britain would be reduced to the position of a second-rate power.

If an Israeli-Arab conflict is to be avoided, real concessions will have to be made by both sides. Since the Arabs will not negotiate directly with the Israelis, either the United States or Britain, or both, must act promptly as go-between.

No matter how sympathetic most Americans are with Israel, we must realize that all justice is not on one side. Moreover, not only Israel but conceivably the whole free world might face disaster if a settlement, which can only be attained through mutual compromise, is not speedily reached.

Second, the Bulganin-Khrushchev tour of India, Burma, and Afghanistan was a major success for the Russians. The Communists are clearly gaining throughout much of Asia. Communist propaganda is diabolically clever and effective. Unless the United States adopts a much more imaginative and understanding psychological approach toward Asia and enlarges the scope of its economic aid, the probability is that much, if not most, of Asia will gradually slip into the Communist orbit.

Third, most Americans have no comprehension of the psychological importance throughout Asia of the phrase "western colonialism." It is of supreme importance that the American Government try in every possible way to dissociate itself from all aspects of colonialism.

For example, official statements that can be interpreted, no matter how erroneously, as implying American approval of continued Portuguese occupation of Goa and other enclaves on the Indian subcontinent do the free world incalculable harm.

ECONOMIC AID FOR INDIA CALLED URGENT

Fourth, our paramount concern in Asia should be to try to prevent the presently "neutral" or uncommitted nations from slipping into the Communist orbit. India, with its 370 million people, is overwhelmingly the most important country in this category, and Nehru the most influential Asian leader.

Nehru believes deeply in the principles of democracy. He is sincerely convinced that the course he is following is the most likely way of averting world war III.

Americans who criticize Nehru for being a Socialist and for not giving at least lip service to the American principles of free enterprise overlook the stark fact that the average Indian has an income of only about $55 a year.

India must be developed industrially, but there are no pools of private savings, as there are in the United States, for this purpose. The Indian Government must, therefore, either get foreign loans or "go totalitarian," as Russia and China have done, and depress an already unbelievably low standard of living to extract from its miserable people the funds necessary for national development.

In my opinion, the United States in the interests of its own national security cannot afford not to give India substantial financial aid.

I favor our giving India a line of credit of a billion dollars, payable at the rate of about $200 million annually, to help India with its new 5-year plan. Withdrawals on this loan should be made with the approval of the American ambassador as the 5-year plan progressed.

The granting of such a loan would not of course guarantee that India might not slip into the Communist orbit, but it would greatly reduce that likelihood.

WARNS OF STRINGS ON ECONOMIC AID

In proposing such a loan, we should neither ask for nor expect any shift in India's present political alignment of neutrality. We should make the loan for two reasons:

Because of a sincere desire to try to help India develop itself and raise the almost incredibly low standard of living of its people without India being forced to abandon democratic processes to accomplish it.

Because our own national security would be gravely jeopardized if India were forced into the totalitarian orbit in order to satisfy the material aspirations of its people.

Fifth. We should put less emphasis on our military pacts in Asia. Certainly we should continue to supply arms to those friendly nations desiring and needing them to prevent possible Communist infiltration and subversion.

Some of our Asia military pacts, however, wholly in addition to providing effective propaganda material for the Communists are causing discord in two other ways. On the one hand, the recipient nation doesn't get the amount of military equipment it, perhaps naively, assumed it would get; on the other hand, a neighboring nation frequently fears that the arms that we have provided may be used against it.

In addition, there is ground for the belief that some of our military pacts with Asian countries may have tended to induce the recipient nation to spend a larger proportion of its own national income and manpower on its armed forces than it can afford.

If the recipient nation is thus economically weakened, its government may be more susceptible to being overthrown than would have been the case had we given it a smaller amount of military aid.

Sixth. Some Congressmen have expressed the view that our foreign economic aid should be greatly reduced or eliminated.

Unless we are willing to reconcile ourselves to letting all Asia slide under Communist rule, which to me would be sheer insanity, we should recognize that our foreign economic aid is going to cost us large amounts for many years to come. I am not suggesting billions more than the present level, but perhaps a few hundred million more for economic aid. Possibly such an increase can be fully offset by reduced foreign military aid.

While we should plan our overall economic aid on a long-term basis, the bulk of it should not be earmarked for specific countries in specific amounts at specific times, so that those recipient nations get the feeling that they have a right to it regardless of their own government's actions.

Perhaps half of our total economic aid appropriations should be given to the President to spend where, when and how he thinks wisest. Our Ambassadors would then have authority to increase, reduce, delay or withhold aid depending on how effectively the recipient government was making use of the aid, and whether the recipient government was genuinely endeavoring to do the things it might have committed itself to do, such as tighten tax collections, eliminate graft in connection with the distribution of our aid, reduce fiscal deficits, carry out agreed-upon land-reform programs, etc.

Our foreign-aid dollars could be far more effectively and productively spent on such a flexible basis, and in addition the President would have the greatly needed authority to divert dollars from one country to another as relative needs changed.

MOST ASIANS WANT RED CHINA IN U. N.

Seventh. The American people should realize that an overwhelming proportion of the Asian countries, including even those like Pakistan with which we have military pacts, want Red China admitted to the United Nations. Leaders throughout Asia say that since the Red government is securely in control of China's 600 million people (one-fourth of the world's population) and since Russia is accepted as a member of the U. N. they can see no valid reason why Red China should not also be seated.

Some argue that if Red China is seated in the United Nations Peiping might become more reasonable. Some argue that if Red China were made a member of the United Nations, that would tend to increase the likelihood of China and Russia taking divergent lines on some matters of foreign policy.

Some definitely non-Communist Asian leaders even express the view that the admission of Red China to the United Nations would tend to accelerate the possibility of an eventual split between China and Russia.

Asians who argue for Red China's admission to the United Nations largely agree that it would be proper to continue Nationalist

China's (Formosa's) membership in the United Nations as an independent nation. Several Asian leaders told me emphatically, however, that Red China would not publicly accept this as a solution, but that if the Nationalist Chinese withdraw from Quemoy and Matsu, they doubted that Red China would go to war with the United States in order to try to regain Formosa.

Americans should realize that within a year the pressure for Red China's seating in the United Nations will probably become so overwhelming that only a United States veto, if a veto is legally appropriate in such a proceeding, could prevent it.

Eighth. The American people should realize that historians a century hence, if there are historians then, will probably record that a new chapter in the conflict between the Communist and free worlds began in the year 1956.

The hundreds of millions of uncommitted peoples of Latin South America, have become determined to develop their natural resources and industrialize their economies in an effort to raise their standards of living.

The Russians are encouraging them, and offering help. Perhaps the Russians will not deliver on their promises, but it would be folly for us to risk our own future security in certain of the strategically critical areas of the world on the assumption that the Russians will not deliver.

Unless the United States demonstrates its genuine interest in helping these underdeveloped nations, and is able to devise mechanisms for accomplishing it, probably the governments in most of those areas will ultimately tend to follow the Russian method.

RED CHINA PARALLELS SOVIET INDUSTRIALIZATION

Russia proved during the twenties and thirties that a backward, illiterate, underdeveloped country could successfully force industrialization. Ruthless repression was required, and savings were forced from a people with an already extremely low living standard, but the goal of industrialization was achieved. China is apparently moving along this same path.

Now for the first time in human history it is at least theoretically possible to abolish poverty throughout the globe, and in the space of only a couple of generations.

Whether the people of the United States will come to appreciate quickly enough what is now happening in the underdeveloped areas of the world, or whether we will wait passively until the backward countries begin to accept Moscow's political and economic philosophies as their model, is the overriding political question of the period immediately ahead. Compared with it, most of our other problems shrink into insignificance.

Many Americans have exaggerated ideas of what we are now spending for foreign economic aid. The bulk of our foreign aid is for military purposes. Most of what we are currently paying out under the name of economic aid is going to Formosa, South Korea, South Indochina, and other areas directly affected by military operations, or for the direct or indirect support of military forces. Only a tiny fraction of the funds of the International Cooperation Administration (formerly called the Foreign Operations Administration; previously to that called point 4 or the ECA or the Marshall plan) are going to the economic development of militarily uncommitted nations, even though these areas may be of great strategic importance.

It is not necessary for us to spend additional billions for foreign economic aid; but a very few hundred additional millions, plus some changes in our methods and psychological approach, might make a decisive difference.

While nothing should deter us from accelerating the development of our military strength and intensifying the scientific research on which our national security may depend, military weapons alone in the period ahead may well prove insufficient to insure the permanent maintenance of our freedom.

The World Health Organization and Nursing

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, February 21, 1956

Mr. WILEY. Mr. President, one of the outstanding organizations working throughout the globe is the World Health Organization.

When the history of this era is written, when the substantial developments have been separated from the trivial items of our times, when the wheat has been separated from the chaff, it will be found that the World Health Organization has written one of the finest chapters of this era.

For the first time in the history of mankind, the human community, acting on the basis of its collective conscience, and its humanitarian instinct for its fellow human beings, has conducted a global assault against mankind's age-old scourges.

I send to the desk a further statement which I have prepared on this subject, along with supplementary material regarding the "heroines in white"—the nurses of the world—who are helping to spearhead this effort. I ask unanimous consent that this material be printed in the Appendix of the RECORD.

There being no objection, the statement and other material were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILEY

In the February 1956 issue of the World Health Organization Newsletter there is a great amount of inspiring information concerning the fight by organized medicine under the banner of the United Nations and, in particular, the WHO, to improve mankind's health.

The overall report of the issue concerns WHO activities in the Western Pacific region in 1954–55.

There is an article concerning the battle against malaria on Taiwan. It reports, for example, how 5½ million people in Taiwan's malarious areas have been protected by DDT spraying.

There is a review of a new book, Mankind Against Killers, by James Hemmings, published by Longmans Green & Co., Ltd. As Dr. Brock Chrisholm, former Director-General of WHO states, "It is the first time, to my belief, that a book dealing with health on a world scale has been attempted with the aim of interesting young people."

Continuing with the battle against disease in the Western Pacific, there is a report, on the efforts for maternal and child health, for environmental sanitation, against communicable diseases, against tuberculosis, yaws, and for education and training.

One of the phases which inevitably comes up is the matter of necessarily expanding the reservoir of nurses in the area. Indeed, almost any discussion of the improvement of mankind's health brings up the question of increasing the availability of the heroines in white, the tireless women who devote years of their lives, indeed often their entire lives, to the healing of men, women, and children.

ARTICLE ON MEETING AT TEACHERS COLLEGE

Coincidentally enough, I noted in last Sunday's New York Times a report concerning a veritable international meeting at the spring session of the Division of Nursing Education of Teachers College, Columbia University. It brought out clearly the continued serious shortage of nurses throughout the world, a shortage which our own Govenment and our own private nursing schools have been deligently trying to help relieve.

The need is acute. Thus, for example, it was noted that in our sister Republic of Brazil, a great and promising land, there are unfortunately fewer than 5,000 nurses, for the country's vast and increasing population of 60 million. In our sister Republic of Haiti, which has been making laudable progress in many fields, it was reported that nurses unfortunately still are so scarce that a new hospital, built by American philanthropy, could not be opened because it lacked qualified nurses to staff it.

Other instances of shortages, especially in what has come to be known as underdeveloped areas, could be cited. But these should not proved discouraging to us. On the contrary, we have a right to be proud of the wonderful progress which has been made toward relieving the shortages. Thus, the republics of Latin America have become increasingly aware of this problem. Despite often meager financial resources, they are exerting ever larger efforts to meet the problem, by attracting their finest young woman-power into this magnificent profession and training them in modern scientific ways.

Lest we ourselves in North America take too superior an attitude, let us realize that even in our own country, with its great wealth and resources, we have faced a shortage of nurses. This situation has given deep concern to our medical profession, to Members of Congress, like the ever active Congressman FRANCES BOLTON, as well as to many laymen throughout the land. Of course, with our tremendously high American standard of living, we have come to expect and to receive the finest and most abundant medical and nursing care in the world.

But we know that to reach the still higher standards which we desire for ourselves, we must have still more nursing schools, more modern facilities for them, higher enrollments, more financial assistance and more inducements to our women to enter and remain in this esteemed career, particularly specialized phases of it, where shortages are especially severe, as in the instance of psychiatric nursing.

Of course, by comparison, the shortage elsewhere in the world is infinitely more serious, because there, the fight is to reach not top standards but the most minimal health standards with at least a minimal number of qualified nurses.

And so, I wish the best of good luck to the World Health Organization and to all the individuals and groups associated with it, including of course UNICEF, in the fight to make available the blessing of nursing and medical care to ill peoples throughout the world.

THE WORLD NEEDS MORE NURSES

Fifty-one nurses from 20 different countries and territories of the western Pacific attended the second nursing education seminar of WHO held in Suva, Fiji Islands. They had come to study and discuss the many problems connected with the training and education of nurses for whose services there exists still a desperate need in many parts of the world

For instance, it has been estimated that while in New Zealand there is 1 professionally trained nurse to 400 of the population and in Japan 4 to 530, the figure for the Philippines is 1 to 5,400, while for India it is 1 to 55,000.

Commenting on the seminar, Miss Alice Reid, regional nursing adviser to the WHO Western Pacific Regional Office writes:

"Living and working together in close proximity and sharing opportunities for leisure time enjoyment made it possible for nurses from many different countries to come to know one another really well, to realize that people in any country are very much alike and that the nurses everywhere have similar jobs to do and similar problems to resolve.

"The task of problem-solving went on, not only in organized study groups, but in informal and earnest groups of people sitting on mats, on bedroom floors, or gathered in corners of the recreation room.

"In the beginning, differences in terminology and methods were a source of irritation: later they became a subject of good-natured banter and finally, with the development of greater understanding, were replaced by feelings of real respect and a desire to learn from one another.

"A Filipino nurse wrote in her report, 'Truly, there is much to learn from the British system of nursing,' and at least two British nurses expressed their intention of studying in the United States."

During the seminar the real problems faced in carrying on the training of nurses and staffing of medical and health services were brought out of the experience of the participants. Groups then took up specific areas to study and to plan for ways to develop methods of solving these problems.

Group 1 worked together on the training of the community nurse, including her services to the public as a health worker and midwife.

Group 2 worked on the problems of carrying on general public health education, infant welfare, and teaching better ways of nutrition by using local materials and local foods.

Group 3 had the large field of the basic-nursing curriculum and set up 3 smaller groups to study clinical teaching, the need of helping to prepare nurses in the art of teaching, and the teaching of public health throughout the student nurses' learning experience.

Group 4 studied problems of postgraduate nursing education and gave particular attention to programs for international students.

The notes on this page, contributed by some of those attending the seminar, give a picture of nursing life and conditions in various countries of the western Pacific region.

(By Mrs. Felicidad D. Elegado, principal, School of Nursing, North General Hospital, Manila, P. I.)

The Philippines has an area of 114,000 square miles with a population of about 22 million. A study of nursing resources done by Filipino Nurses' Association, Department of Health, and other agencies, revealed that there are 8,857 people able to do nursing, but how many are actually in practice we do not know, for there is as yet no effective system of registration.

Every province has graduate nurses, but many provinces do not have enough to meet the health needs of the people.

Nursing is actually rendered in hospitals, health departments, and homes by the graduate nurses, licensed midwives, and attendants, with little distinction between them.

There is a marked difference in preparation of these workers. Some have no training, some have several years of nursing education, yet all these persons give general bedside nursing care.

One of the serious problems facing nursing education in the Philippines is the increasing number of students who finished 1 year liberal arts courses (being a requirement for entrance to a school or college of nursing) who seek accommodation in schools and colleges of nursing that have no room for them.

Because of lack of faculty, clinical and physical facilities, many hundreds of young girls cannot be accommodated even after spending money and time in college.

In this seminar we have exchanged ideas and experiences and our minds have been opened to various possible solutions of our nursing problems.

(By Mrs. Laura Yergan, nursing education consultant for Vietnam, U. S. International Cooperation Administration)

My job, as one of the American nursing education consultants for Vietnam, is carried out in Saigon at the main branch of the National School of Nursing.

Before the division of Vietnam my work was chiefly at Hanoi, where the North Vietnam branch of the school was situated. After July 1953, however, all American technical assistance had to be withdrawn from that area.

When I left North Vietnam some of the nursing students also evacuated to South Vietnam and continued their studies at the Saigon School, so we had the consolation that all of our previous work was not entirely lost.

In Saigon the nursing education consultants all have Vietnamese counterparts who are being trained to take over the teaching positions as soon as they are qualified.

Since there are no schools in Vietnam for university-level study to prepare nurses for positions as educators and administrators, the United States Operations Mission to Vietnam, for whom we work, gives scholarships to Vietnamese nurses of outstanding ability for training outside Vietnam, usually in America.

One such nurse has just completed her studies at Syracuse University in New York and is returning as nursing director of the National School of Nursing. In 1956 we hope to send 3 or 4 more nurses who are now teaching under my supervision for advanced study abroad.

It is my belief that the standards of nursing education, professional nursing and health service to the people of Vietnam will eventually achieve a level of which any country might well be proud.

(By Miss Doris Cowsill, acting matron, General Hospital, Singapore)

Singapore is a rapidly expanding colony heading toward self-government. Expansion in the medical services program is taking place to meet the ever-increasing demands of the population of Singapore, which now has 1,165,000 people over an area of 217 square miles.

To serve this population there is only 1 general hospital of 900 beds. There is a maternity hospital of 240 beds, with an average of 60 births a day, and there are also tuberculosis, mental, leprosy, infectious diseases, and children's hospitals.

As regards nurse training, we have 464 student nurses, of whom 43 are men, 110 student assistant nurses, and 72 student midwives.

The 10-year medical plan which was devised in 1950 has gone ahead with great success. This year has seen the opening of a surgical block consisting of 10 theaters and 50 postoperative beds. Also nearing completion is a pediatric unit of 200 cots.

The next stage of the building program includes the building of a new 1,000-bed general hospital, district hospitals, health clinics, accommodation for staff, and a nursing school.

(By Miss M. H. Paton, principal, Central Nursing School, Tamavua, Suva, Fiji)

There are two nursing schools in Fiji, 1 at Tamavua and 1 at Lautoka. At the end of the preliminary period of a month's training time, 8 nurses are sent to Labasa Hospital from the Central Nursing School for 1 year.

I am stationed at the Central Nursing School, Tamavua, but my duties include supervision of the Lautoka School and regular visits to Labasa Hospital, at which places discussions on education and student supervision take place.

At present there are 207 student nurses in the schools, both Fijian and Indian, and a comprehensive curriculum is presented.

At the completion of 3 years and 3 months' training students sit for the qualifying examination under the Nurses' and Midwives' Board of Fiji.

After registration, an endeavor is made to keep qualified nurses in the hospitals for 1 year's postbasic experience before being transferred as district health nurses, or to staff rural hospitals.

At regular intervals I visit schools in the Suva area to aid recruitment, also in the Lautoka area, where I am assisted by the Lautoka tutor sister.

(By John Waterer, WHO nurse educator, Penang, Malaya)

I am a male nurse, a nurse-educator in the ranks of the nurses of the World Health Organization. I trained in England just before the last war. I served in the war in the ranks, and as an officer of the Royal Army Medical Corps.

After the war, I attended the University of Manchester and obtained a diploma qualifying me as a nurse tutor. After a period of service in that capacity in London, I entered the service of the World Health Organization as their first male nurse-educator.

The program in which I am working is in Penang, Malaya. At the end of hostilities the Government of Malaya established schools of nursing and young Malayan men and women are admitted for a period of 3 years and 4 months nurse training.

These young Malayans are anxious to serve their people in the true spirit of service.

Today the Malayan hospital and health services are expanding with the ever-increasing number of available trained workers. The World Health Organization has been assisting in this education program since 1950.

At the moment, in Penang, we have a team leader who specializes in postgraduate training and comes from Canada, an educator specializing in Public Health nursing who comes from New Zealand, and myself.

I assist the Government's education staff lecturing and demonstrating to both male and female nurses. In addition, I, of course, take an especial interest in the male nurses and their training.

The nurses represent all the peoples of Malaya: Malay, Indian, Chinese and Eurasian. It is a wonderful experience to work with these enthusiastic young people and alongside trained nurses from different parts of the world.

(By Miss Wilhelmina Visscher, WHO nursing education consultant in Cambodia, Vietnam, and Laos)

In December 1951, two nurses of the World Health Organization went to Cambodia as the first members of a nursing education team to help the Government establish modern nursing and midwifery educational programs.

Cambodia is situated between Thailand and Vietnam and has a population of 4 million people of whom 600,000 live in Phnom-Penh, the capital.

Life is peaceful for the Cambodians and nature is good to them. The normal temperature varies from 30° to 33° centrigrade and the provision of clothing for children is

not a problem. Rice is a staple food and the Mekong River provides enough fish.

Most of the education in the past has been given by the bonses, who are the Buddhist priests, and formerly only boys were allowed to attend classes. Education for girls was not thought to be very necessary. Some changes have taken place: Girls are now attending the public schools and, under the leadership of a few educated ones, women have begun to take part in a very small measure in community affairs.

The infant mortality rate is very high and it is not unusual to have a mother tell you that from the 10 or 12 children she has had, only a few are alive.

Two Cambodian nurses, 1 man and 1 woman, were assigned as national counterparts to the World Health Organization nurses. We started to work with them in an informal way and slowly introduced them to the concept of modern nursing. A health center called a dispensaire, which gives outpatient service, was made available by the Government to be used as a demonstration center for all public-health activities.

Well-baby and prenatal clinics were started. The nurses were given a special course in public health and home visits were started.

The giving away and adoption of babies are common practices and are treated very casually by all concerned. A mother will tell us that the baby is not growing too well. After we have heard that she does not nurse her baby, the value of breast feeding is explained. She listens very patiently.

After the explanation has gone on for 10 minutes, we then discover that the baby is not her own baby but has been adopted from one of her neighbors.

In the hospital we helped with the opening of a children's ward and the nurses had to be trained to care for the babies.

Nursing as it is known in most countries has been unknown in Cambodia in the past. Treatment as prescribed by the doctor would be given, but the actual bedside nursing care was left to the relatives.

The patient was taken to the hospital as a last resort. Many "cures," such as drinks compounded of different herbs, were first given, so that by the time the patient was admitted he was often in a critical condition.

Slowly the people have begun to realize that the hospital is there to help them get better.

The nurses have been taught how to care for babies, how to bathe them, how to prepare the feeds and how to feed them. They have learned that milk should be given to a baby after being heated, and that a hot water bottle should be placed next to the premature baby rather than on top of the child. The mothers have been encouraged to stay with the babies they have brought to the hospital and this has helped to increase their confidence in the hospital staff. It has also given excellent opportunities for them to learn how better to care for their babies.

The World Health Organization nursing team has grown and now consists of four nursing and midwifery educators. Each of us has a national counterpart working with us, who will gradually take over more and more responsibility for the program.

At present prefabricated buildings are serving as school buildings and a basic nursing course is being given to 13 selected students.

With the help of American funds, a nursing school is being built. Teaching materials have already arrived. We hope that the status of nursing in Cambodia will be raised and that better-educated girls and boys will be attracted to take up nursing.

(By Miss Aya Maeda, professor, St. Luke's Junior College of Nursing, Tokoyo, Japan)

I completed my basic training and postgraduate course in the College of Nursing in Tokyo, and took advanced study at the Teachers' College, Columbia University and at the University of Toronto in Canada. I have worked as a public health nurse for many years.

After World War II, with the help of the American nurses, the status of the Japanese nurse improved remarkably. Nursing education has also improved a great deal.

Our problem at present is that there are not enough qualified people to take teaching positions. There are 160 schools of nursing in Japan where candidates must be high-school graduates. There is only one school of nursing which has a women nurse director.

The Japanese Nursing Association is one of the strongest women's groups in Japan. It has about 50,000 members including midwives, clinical nurses, and public health nurses.

Lithuanian Independence

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 21, 1956

Mr. DIRKSEN. Mr. President, on February 12 many thousands of American citizens, many of them of Lithuanian descent, gathered at Maria High School in Chicago to commemorate the 38th anniversary of the independence of Lithuania.

It was truly an inspiring occasion, in the course of which a number of notable addresses were delivered. Among these was the address by the Honorable Petras Dauzvardis, consul of Lithuania, who serves in Chicago. His observations are eminently worthy of inclusion in the CONGRESSIONAL RECORD, and I ask unanimous consent that this be done.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY PETRAS DAUZVARDIS, CONSUL OF LITHUANIA, AT THE LITHUANIAN INDEPENDENCE DAY COMMEMORATION, FEBRUARY 12, 1956, MARIA HIGH SCHOOL AUDITORIUM, CHICAGO

We are observing the anniversary of Lithuania's independence this year on the birthday of two heroes of freedom: Thaddeus Kosciusko and Abraham Lincoln. This adds significance to our commemoration—it binds Lithuania's history more closely with that of America. Kosciusko ties ancient Lithuania to young America. Lincoln symbolizes unity and freedom. And unity and freedom bring into the picture Grand Duke (King) Mindaugas of Lithuania.

In a Lincolnian manner, the State of Lithuania was established and united by Mindaugas over 700 years ago. Mindaugas met the same fate as Lincoln. Both these great men died at the hands of enemies of their states.

Thaddeus Kosciusko defended Lithuania from Russian invasion and occupation, and fought for America's independence. After America had won her independence, Kosciusko returned to his homeland for his final struggle against the Russian attackers of Lithuania-Poland. During this struggle he was wounded and taken prisoner by the Russians. They released him only the following year (1796) after the seizure and occupation of Lithuania. Kosciusko never returned to Lithuania. He went to Western Europe and became the first DP. While living abroad he kept up the struggle for Lithuania's independence. During the Vienna Congress of 1815 he wrote to Russia's Czar Alexander requesting him to restore Lithuania's and Poland's independence. The Czar did not satisfy Kosciuskos' request. Lithuania was made into a Russian province. The present occupants of Lithuania are doing the same—converting Lithuania into a Russian colony.

Dedicated to liberty and human rights, and having been a colony, America is opposed to colonialism and slavery. Her Declaration of Independence is based on supreme human rights and freedom. Lincoln effectuated these rights and freedoms. He unified the country and formulated many of its national ideals. His Gettysburg address and other statements epitomize America's national philosophy and aims. For example:

"Let us have faith that right makes might * * *.

"With firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in."

Lincoln left these words as a sort of testament which his successors are carrying out to this day. Guided by justice and humaneness, his successors (Woodrow Wilson) proclaimed the principle of self-determination of nations after World War I. In consequence of this credo and with its own national determination, Lithuania regained its independence. This principle is incorporated in the Declaration of Restoration of Independence of Lithuania.

When the aggressors began rampaging and seizing foreign lands, America proclaimed the doctrine of nonrecognition of the spoils of aggression. This doctrine became international law. Lithuania and other victims of Soviet aggression have availed and are availing themselves of this law and doctrine. America and other nations do not legalize the Soviet perfidy and continue to recognize Lithuania as an independent state.

In contrast to the aggressor's disregard for law and violation of obligations—their throttling of the occupied states and enslaved nations—the United States proclaimed the declaration for liberation of enslaved nations, and made it a part of American policy. (Eventually this declaration will become reality.) All of these principles, declared and being carried out by the United States, became principles of international law. They are incorporated in the United Nations declaration of 1942, the United Nations Charter, and other appropriate international pacts and undertakings. These principles are firmly and clearly reiterated and stated in the Washington declaration recently made by United States President Eisenhower and Great Britain's Premier Eden. This declaration, among other things, states:

"We have dedicated ourselves to the goal of self-government and independence of all countries whose people desire and are capable of sustaining an independent existence.

"During the past 10 years, 600 million people in nearly a score of lands have, with our support and assistance, attained nationhood. Many millions more are being helped surely and steadily toward self-government.

"During this period, the Soviets, who assert the supremacy of the state and deny the inherent rights of man, have also been active.

"Millions of people of different blood, religious and traditions have been forcibly incorporated within the Soviet Union, and many millions more have in fact, although not always in form, been absorbed into the Soviet Union bloc. In Europe alone, some 100 million people, in what were once 10 independent nations, are compelled, against their will, to work for the glorification and aggrandizement of the Soviet Communist state."

The first part of the last paragraph refers to Lithuania, Latvia, and Estonia. This is important and significant. The Lithuanian people are grateful for this to the Governments and peoples of the United States and Great Britain.

Grateful for the significant statements and for the nonrecognition of the treacherous incorporation of Lithuania into the Soviet Union, Lithuanians await the day when the Soviets will be told to get out of Lithuania, to match their actions with their words about "equal rights, respect for state sovereignty and noninterference in internal affairs of other states" (quoting Premier Bulganin's note to President Eisenhower). In his most recent note, Bulganin also stated: "The Soviet Union has always maintained, and maintains at the present time the principle that the internal system in any state is the domestic concern of its own people."

The plight of Lithuania and its people forcefully and undeniably points up the Soviet hypocrisy and belies their boasting. The Soviets violated all treaties with Lithuania, seized and occupied Lithuania by force and deceit, not only interfered in Lithuania's internal affairs, but wrecked them. They disenfranchised and robbed her people, forced them into Soviet slavery and deported many thousands of them from Lithuania. Is this what the Soviets mean by noninterference in the internal affairs of other states?

The Lithuanians protest against the Soviet aggression against Lithuania and their violence in Lithuania. They demand that the Soviets get out of Lithuania with their army, police, agents, and colonists. They demand that the Soviets return the Lithuanians deported to Siberia, Vorkuta and other desolate areas of Russia. They demand that the Soviets observe the treaties of peace and nonaggression whereby they undertook to respect the independence of Lithuania and the integrity and inviolability of its territory.

Use of Radiant Heat on Farms

EXTENSION OF REMARKS
OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 21, 1956

Mr. MUNDT. Mr. President, Derald F. Cox, a junior at South Dakota State College, Brookings, S. Dak., won the annual scholarship contest sponsored by East River Electric Power Cooperative, which has its headquarters at Madison, S. Dak., for a student studying agricultural engineering at the college.

His winning essay entitled "Using Radiant Heat on Farms," discusses the many uses of radiant heat on the farm and how radiant heating is becoming more widespread.

Cox, 26, is the son of William Cox, former publisher of the Bristol (S. Dak.) New Era. The scholarship winner has two sons. He is a veteran, having spent 4 years in the Navy.

The widespread interest in radiant heating, and especially farm uses for this type of heating, makes his essay demand reading. For that reason, I ask unanimous consent that the essay be printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

USING RADIANT HEAT ON FARMS

(By Derald F. Cox)

If one were to tour American farms he would see modern and up-to-date machinery, but in most of the same farm homes he would find old-fashioned coal, oil, and wood-burning heating units. At the watering tank he would likely find a smoking coal- or oil-burning tank heater. In the brooder house there would likely be a gaseous smell from the old brooder stove, which was probably the cause of many losses among the chicks. Such a stove may even explode and burn down the brooder house taking with it the entire chick crop.

As one continues his tours he will find that some of our more progressive farmers have learned to make electric radiant heat work for them.

These farmers find that radiant heat waves go through the air without heating the air and turn into heat when they strike a solid. Ultimately the air comes up to the desired temperature because the surface and objects in the path of the rays have become saturated with heat and they in turn will warm the air by convection.

By raising the temperature of the room surfaces, radiant loss from the body is slowed down and convective body loss can be increased by dropping the air temperature. Thus the farmer may be more comfortable at lower temperatures under radiant rays than he is at the same temperatures of other heating systems.

Temperature distribution throughout the room is very uniform in radiant heating. This is especially noticeable in constancy of the air temperature at various heights above the floor. Often the temperatures from floor to ceiling remain within 2 degrees, while in other systems they often vary 10 to 15 degrees with cold floors and hot ceilings.

Farmers are enjoying many advantages of electric radiant heating systems. They do not need a furnace, or a basement, or utility room in which to hide the contraption. No pipes, no chimney, no open flame, and no delivery or storage problems are a few of the advantages of a radiant heating unit on the farm. Dirt, noise, and the danger of explosion are also eliminated.

There are no moving parts to cause wear which would result in unnecessary expense and maintenance. Electric radiant heating systems can have a very fine degree of control. A thermostat can be placed in each room or an on-off switch by each door. If both are employed the heat can be flipped on as one enters the room, then the thermostat keeps the room at the proper temperature.

Farmers can and do find many applications for electric radiant heaters:

1. They often heat their entire farm home by radiant heating systems.

2. Often a farmer may build an addition to his home and find that his present heating system cannot be adequately employed to take care of this added load. Radiant heaters will do a wonderful job of heating this extra space with just a simple installation.

3. Very often a farmer might find that he has cold areas in his home. Electric radiant heaters can quickly relieve this problem.

4. Radiant heaters are a health guard over the child's crib or in the children's nursery.

5. Radiant heat brings comfort to reading and sewing areas.

6. Potatoes and other food can be saved from freezing in coldest weather in the basement by electric radiant rays.

7. There are radiant panels on the market designed as wall panels. These can be converted into a portable tray which can fry eggs, warm baby's bottle, and handle shop jobs such as glue thinning and paint drying.

8. Radiant rays are a whiz at barbeques.

9. Farmers have found that radiant heat rays work very nicely for keeping livestock watering tanks from freezing; although for continuous use the resistant elements and insulated tanks are preferred.

10. Bedding under cows could probably be kept reasonably dry by the use of electric radiant heat.

11. A permanent radiant heating panel in the garage under the car will insure starting in the coldest weather. Farmers will find that radiant heat under the car has an advantage over the head bolt heater because the crankcase oil will become viscous in a matter of minutes. With the head bolt heater, the engine block must become quite hot before the oil in the crankcase begins to flow easily.

12. Farmers are finding that one of the finest means of keeping their milkhouse temperatures above freezing is through electric radiant heating systems. While the radiant rays keep the temperature between 35 and 40 degrees Fahrenheit the farmer works in comfort under the infrared rays just as the sun's rays keep skiers in bathing suits comfortable at Sun Valley, Idaho, during the winter months.

13. That it is clean, odorless, fire safe, automatically controlled, and that its heat source can also provide light are some of its advantages for brooding. Radiant heaters should be installed according to approved methods.

14. Pumps and waterlines in wellhouses are kept free of ice in coldest weather by electric radiant heaters.

15. Milking parlors are kept comfortable during milking time by radiant heat.

16. Farmers are finding that they can have a warm stall in their barns for sick and chilled animals without the expense of partitioning off a separate room. "The quantity of energy transferred by convection between the panel and its surroundings is usually so small with respect to the needs for ambient-air heating that it can be neglected and regarded solely as a loss due to inability to achieve complete energy dissipation by radiant means."

17. Local or spot pane radiant heaters can be employed to transfer energy directly to or from a farmer whose activities are localized within a restricted area. A farmer can repair his machinery during the coldest months in his shed with the light and comfort of infrared rays.

18. Radiant rays warm both rooms.

There are a number of means of bringing about radiant heat. When one means of radiant heat will heat nicely in one place another kind will do a better job in some other place.

Infrared ray lamps are probably the most popular radiant heat source on farms today. Infrared ray heat lamps can easily be set up and taken down in most farm buildings. They provide light as well as heat. Infrared rays are excellent for brooding. Most farmers find it to their advantage to use the splash-proof lamps, which are specially treated to withstand water splashing on them when they are in operation. Farmers who are using infrared lamps for the first time should check with their local rural electric cooperative for the approved methods of installation and operating procedure.

It is generally believed that it is not economically feasible to heat with radiant heating systems in the northern part of North America, but this is not necessarily true. If an electric radiant system is well planned, installed properly, and in an area where electricity is not unreasonably expensive, it can compete economically with oil burning systems. Electric heating costs much less to install than other systems, has a heat loss of only 5 percent compared with 25 percent to 50 percent in conventional methods and requires no maintenance.

During Canada's coldest March in 11 years, Arthur B. Johnson, Montreal engineer, tested a new radiant glass heating system in an eight-room cottage in the Laurentians. He reports that the house was warm at −30° F. The cost of heating the house for the month was $29.60 as compared to a similar house with 80 percent as much living space, heated by an oil-fired hot-water system, which cost $53.20 to heat for the month. After reading Johnson's report, one wonders why anyone would install anything but an

electric radiant heating system. His system was evidently well designed. Every successful heating system must be carefully planned.

John E. Fritz, manager, Codington-Clark Electric, Watertown, reports that a milking parlor 12 feet by 14 feet by 9 feet near Watertown, was heated for 6 weeks during some of the coldest weather for the winter, from the middle of January to the end of February, at a total consumption of 280 kilowatt-hours and cost of $5.60. Hundreds of dollars can also be saved by the elimination of the basement and chimney needed in conventional homes.

The above examples would seem to indicate that electric radiant heating can be economically used on farms everywhere. Without proper insulation electric radiant heating on the farm can be very expensive. An electrical engineer should be consulted before installing a large electric radiant heating system. Local electric power cooperatives will usually render every assistance in planning an electric heating system.

Bethlehem Steel and Maryland History

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, February 21, 1956

Mr. BUTLER. Mr. President, steelmaking is rooted deep in the industrial history of the State of Maryland, and in large measure, this great industry has paced the economic growth of our State. Important in this constant development have been the activities of the Bethlehem Steel Co., whose plant at Sparrows Point, Md., is to be expanded once again.

In this regard, Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Bethlehem Steel and Maryland History," which appeared on the editorial page of the Baltimore Sun on February 3, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BETHLEHEM STEEL AND MARYLAND HISTORY

For some few years Bethlehem's steel plant at Sparrows Point has been the world's biggest steel plant on tidewater. Now, according to the company's announcement of a $200 million expansion program, Sparrows Point will become the biggest steel plant on or away from tidewater.

Here indeed is a milestone in the economic progress of our State. It is one that is not without coincidental color in the matter of timing. It was 40 years ago that the Bethlehem Steel Co. acquired Sparrows Point from the old Maryland Steel Co. and the Pennsylvania Steel Co.

The plant at the time was 29 years old, having been started in 1887 with four blast furnaces. Those who had started it had chosen Sparrows Point for its location for three reasons: (1) Imported ores were to be used and the site was on tidewater, (2) coal for producing coke was readily available in Maryland, Pennsylvania, West Virginia, and Virginia, and (3) there was a "favorable labor supply."

The vision of these early planners has paid off and continues to pay off. Operations at Sparrows Point are still based on the importation of foreign ore, mostly from the company's own developed mines in Venezuela. Coal is still coming in from the same planned sources. And the labor market has remained favorable. Of course, there has never been any question about the ready market for Sparrows Point products.

Whether Sparrows Point, once it has become the biggest steel plant in the world, can retain that title, poses a question. Other companies are also expanding their plants; the title of "biggest" could be a passing fame.

On this point Maryland can offer a little history of its own. Maryland was one of the earliest colonial producers of iron. Probably the earliest smelter in the colony was Principio furnace in Cecil County. The second furnace of record was on John Moale's land at the mouth of Gwynn Falls. It was built in 1723.

Maryland production of iron ore remained high throughout the colonial period and well into the 19th century. Then came the opening and development of the big ore deposits in the Lake Superior region and, to a lesser extent, in Alabama.

This ore was of a better grade than the Maryland product. Mining in Maryland dwindled to nothing. Worse still, the old furnaces were closed one after the other—all giving way to the huge developments in the Middle West and South.

Then came the revival with the opening of Sparrows Point and the turning to foreign ores. In the last several years, with the threatened exhaustion of high-grade ores around Lake Superior, the turning to imported ores has been rapid. It has brought the big development of United States Steel on the Delaware River above Philadelphia.

But our immediate interest, and all of Maryland's too, is in the expansion at Sparrows Point—an expansion which speaks well for the economic future of the State.

Tribute to Morton Tompkins

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, February 21, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD a fine editorial from the Oregon Daily Journal of Portland, February 16, 1956, in tribute to the late Morton Tompkins, of Yamhill, Oreg., who died last week after a notable and outstanding career as master of the Oregon State grange and, later, as a leader in the fight for public development of the great river systems of the Pacific Northwest.

The editorial is entitled "A Fighter for His Convictions."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A FIGHTER FOR HIS CONVICTIONS

The death of Morton Tompkins at 71 removes from the Oregon scene one of the stout fellows of the State grange and of the public power movement of the Pacific Northwest.

In fact, for many years Mort Tompkins' militant advocacy of the PUD movement, CVA and all-Federal development of our rivers made his name synonymous with those programs. He was a controversial figure.

The fact remains that Mort Tompkins was willing to fight for his convictions, regardless of cost. He had courage. He was untiring. He made a name for himself in Oregon agriculture and in Oregon politics. He was a frontline fighter for the things in which he believed.

For that he will be remembered and admired.

United States Aid To Burma

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, February 21, 1956

Mr. LEHMAN. Mr. President, I have already asked consent to have printed in the Appendix of the RECORD an article by John Cowles, which was published in the New York Herald Tribune on February 15, regarding the crisis in south Asia. On the 16th of February there appeared in the New York Herald-Tribune also an article by Mr. Cowles entitled "United States Is Urged To Rush Aid to Burma To Keep Russia From Taking Over." This also is an exceedingly interesting and timely article, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES IS URGED TO RUSH AID TO BURMA TO KEEP RUSSIA FROM TAKING OVER

(By John Cowles)

In Rangoon, Burma, a few weeks ago, I had the feeling that tragedy impended, that unless the United States rapidly finds means of getting American dollars and American technicians into Burma, then rubles and Russian technicians might soon take over one more important Southeast Asian country.

Burma is a weak, neutral, politically adolescent, geographically exposed but strategically important nation of nearly 20 million people to which the United States is currently giving no financial support.

An expenditure of perhaps $15 million a year for 4 or 5 years by the United States for economic aid might prevent the Bamboo Curtain of Asian communism from enclosing it and sealing it off from a continued exchange with the free world of people, products and ideas.

Burma has hundreds of miles of common frontier with Red China, and Burma wants both from philosophical conviction and from expediency to keep neutral as between the United States and Red China.

BURMA WANTS TO KEEP INDEPENDENCE

Burma does not want to go Communist. She wants to retain her independence. She fears, however, that if she should sign any kind of military pact with the United States, which she has no intention of doing, China might use that as a pretext for invasion and occupation.

Burma does not want even to accept dollar gifts from the United States for fear that that might jeopardize her position of neutrality. Burma wants to sell rice, her principal article of export, to get the foreign exchange she needs to develop her economy.

But the United States, which has huge surpluses of wheat and rice of its own, not only is uninterested in buying Burmese rice but has actually been depriving Burma of its

normal markets by selling, or dumping, American rice and wheat in Japan, India, South Korea, Indochina, etc.

Burma wants American technicians. She wants to improve the docks at Rangoon; she wants new locomotives and freight cars for the railroad that runs to Mandalay; she wants more diesel engines, a cement plant, a small tire factory to use the rubber she grows, and a small paper mill in which she can convert her bamboo pulp.

But Burma does not want to accept "charity" from America, or aline herself with "western capitalism." She wants to keep independent and scrupulously neutral in the cold war.

RUSSIANS OFFER TO BUY BURMESE RICE

Russia has now offered to buy all of Burma's rice surplus at world market prices and supply the industrial machinery that Burma wants. Of course, the Russians add, that would involve their sending Russian technicians to Burma to maintain the equipment and train Burmese workers.

Currently, the only important American assistance to Burma stems from the Ford Foundation. It finances, among other things, a technological school near Rangoon where young Burmese are trained in carpentry and mechanics and engineering and electronics. It is operated by a handful of Americans, selected by the Dunwoody Institute of Minneapolis, who inconspicuously guide Burmese teachers in the training of the students.

The Russians are now offering to build a much larger technological school in Rangoon.

One member of the Burmese Cabinet told me he deeply feared that this would really be a training school for Communists and a center for revolutionary subversion.

"If we could only sell the United States some rice," he said passionately, "we wouldn't need to sell Russia our rice and take Russian industrial equipment and Russian technicians in payment."

Burma's situation illustrates the bankruptcy of the political philosophy of those Americans who take the position that "those who are not with us are against us; therefore we should help only those nations that are our military allies."

GOVERNMENT NOT YET IN FIRM CONTROL

The important thing for us to do in Asia is not to press solely for more military pacts, or to make threats against the Russians and the Chinese, but to try to prevent presently neutralist nations from being surreptitiously taken over by the Communists.

Burma has many problems. The central government is not yet in firm control of the whole nation. Rebels and bandits hide in the jungles and hills and periodically emerge to pillage villagers and disrupt economic life.

Half a dozen separate bands of armed groups, numbering in the thousands, still defy the central government. They are so-called "White Flag" or Stalinist Communists; "Red Flag" or Trotskyite Communists; Karen Christians, who dislike Buddhist rule and want their part of Burma made a separate nation; two different hill tribes, the Shans and the Kachins, who want their independence, or use it as an excuse for robbery and lawlessness; and lastly some remnants of Chiang Kai-shek's Nationalist Chinese forces which fled to Burma when Chiang left the mainland, who have refused offers to be transported to Formosa, and who live largely by pillage.

The situation is, however, better than a year ago. The rebels, including Communists, are surrendering in increasing numbers.

I saw many inmates of a rehabilitation camp doing construction work. After they have been taught a trade they are released.

As an illustration of Burma's neutrality between the Communist and free worlds, consider this:

At the ceremonial parade, which I was fortunate enough to witness, marking the eighth anniversary of Burma's independence from Great Britain, one of the honored guests, who received a high government decoration, was Sir Hubert Rance, the last British governor who ruled Burma as a colony.

(Incidentally, can any American imagine the United States giving the representative of King George III an American decoration of honor just 8 years after we won our independence from England?)

MME. SUN YAT-SEN ALSO IS HONORED GUEST

Also in the reviewing stand as an honored guest was Mme. Sun Yat-sen, widow of the Chinese revolutionary leader and herself now a member of an important government committee in Red China.

The President of Burma in his speech made it crystal clear that Burma was neutral between the two great power blocs whose representatives were seated near him.

That evening, I attended a dinner of the faculty of Rangoon University, where U Nu, the able, idealistic, and democratic Prime Minister of Burma, spoke.

A small, hard core of disciplined Communists in the student body at the university is urging other students not to study, telling them that a general strike will be called at the time the spring examinations are given and every student will be promoted without examination.

Although U Nu did not mention the word Communist, he exhorted the faculty not to promote students who refused to take their examinations and not to submit to what he called mobocracy.

Afterward, two faculty members who had received part of their education in America and who are pro-Western, told me they feared this impending student strike would be tied to a general strike planned for the time of the Burmese election, which will presumably be held in late March or April. They expressed apprehension that despite U. Nu, Rangoon University might be taken over by the Communists, just as has happened in Singapore, where the Communists control both the faculty and the student body.

AMERICA IS URGED TO SAVE COUNTRY

When one sees at first hand a country like Burma, a country of gay, friendly people, politically naive and pitifully unprepared for self-government, but equally determined to have it, teetering on the abyss of communism, one wonders: "Can't America try to save it?"

It is true that we already have more wheat and rice than Agriculture Secretary Benson knows what to do with.

But would it not be wise for us to buy $10 million worth of Burmese rice, or even teakwood, so that Burma could get American technicians and American machinery instead of Russian?

It is true that Burma sold supplies to Red China while the fighting was going on in southeast Asia. That technically makes Burma ineligible for American aid. (The Burmese viewed the Indochina war simply as an anticolonial uprising against the French. Their opinion on the Korean war is less clear.)

Perhaps Burma will slide under Communist rule whatever we do.

But, at least, if we gave Burma aid we would have the satisfaction of knowing that we were giving to a relatively honest government. Informed people, Americans, British, and Asians alike, say there is much less governmental corruption in Burma than in almost any country in the Far East, and our dollars would not go for the enrichment of a few dishonest officials. So, regardless of legal technicalities, regardless of mathematical odds, can America afford not to see that Burma gets some economic aid?

Our doing it might save 20 million more people from becoming Communist serfs.

The Federal Food and Drug Administration

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, February 21, 1956

Mr. WILEY. Mr. President, on many occasions on the floor of the Senate I have pointed up the vital role of the Federal Food and Drug Administration.

It is my earnest hope that this year, as the Nation celebrates the 50th anniversary of the pure food and drug law, we will honor this agency and the memory of all those who contributed to its establishment and continuation, by appropriating sufficient funds for FDA to handle its tremendous and increasing responsibilities.

It was a Republican President, Teddy Roosevelt, who signed the Food and Drug Act into law.

It is my hope and belief that the present Republican administration, with the support of Republican and Democratic Members of Congress, will help fulfill the greatest potentialities of this law in the public service.

The question of shortage of funds for some Government enforcement agencies is almost a perennial one in any administration.

In the past, unfortunately, FDA has not been given sufficient appropriations by both Republican and Democratic administrations.

I am hoping now, however, that after its look-see, in its initial years of office, that the present administration will add to its laurels by continued fullest efforts in cooperation with the citizens committee on the FDA to support this agency.

I send to the desk the text of two editorials which tell the FDA story frankly and eloquently. The first is from the February 19 issue of the New York Times; the second is from the February 17 issue of the Milwaukee Journal.

I ask unanimous consent that the text of both editorials be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times of February 19, 1956]

FOOD AND DRUGS

In 1906 President Theodore Roosevelt signed the Food and Drug Act, now a legislative monument to the late Dr. Harvey W. Wiley, chief chemist of the Department of Agriculture, a man who had the passionate indignation and zeal of the born crusader. The 50th anniversary of the passage of the act, his conception, is to be celebrated over a period of months by the Association of Food and Drug Officials of the United States and by the very food and drug industry that had so bitterly opposed Wiley.

When the crusading that culminated in the act began, the preparation of food was rapidly passing from the kitchen to the factory. The pioneers in the commercial preparation of food were no experts in bacteriology or even in food technology. Spoilage was costly and frequent. Hence preservatives

were used with little regard for their physiological effect. Factories were none too clean. All this Wiley changed by arousing public opinion through the press and his lectures. His pure food and drug law has been acclaimed as "the strongest national law on the subject." The law of caveat emptor no longer applies to food and drugs. The consumer reads the label and knows what he is getting, and the retailer knows what he is selling.

Farseeing though he was, Wiley probably did not foresee the full effect of his activities. His old opponents, the food processors, have long been stanch supporters of the Food and Drug Act. It has turned out that it is good business to prepare food in factories so clean that the public can be invited to inspect them, and that pure food sells itself. In fact, the food industry now maintains the Nutrition Foundation under the direction of Dr. Glenn C. King to carry on scientific research on food so that advantages may be taken of new scientific discoveries. We no longer have to worry about the quality of what is canned or packaged. Instead, we have to consider what is good and what is bad for us from the standpoint of the biochemist whose business it is to discover what happens to a forkful of peas or a piece of beefsteak after it is swallowed. Times have changed since Wiley was crusading up and down the land. Because they change, the Food and Drug Act will have to be amended occasionally, as it was amended in 1938, to keep pace with the new knowledge.

[From the Milwaukee Journal of February 17, 1956]

FOOD AND DRUG ADMINISTRATION SHOULD BE MUCH STRENGTHENED

One day soon, in the Appropriations Committee of the House of Representatives, the question of a $1 million increase in the annual funds of the Food and Drug Administration (FDA) will come up. If the Congressmen are properly concerned with the national health, they will grant the boost, possibly even increase it.

The FDA is one of the most important small agencies of the Federal Government. It is charged with protecting the public from poisonous materials in food, insanitary conditions in food manufacturing, food adulteration, false and misleading food claims, dangerous drugs, adulterated or misbranded cosmetics and deceptive packaging.

For years the FDA has not been able properly to carry out its assigned tasks. Why not? Because it didn't get enough money to hire necessary staff and purchase necessary equipment.

A top-level citizens' committee brought out the shocking story last summer. Here are a few findings:

There were fewer FDA enforcement agents in 1955 than in 1941, despite a 30 million growth in population. At the 1955 inspection rate, food establishments would be visited on an average of once every 60 years. Approximately 80 percent of the food, drug, and cosmetic imports coming through the New York International Airport were passed without examination because the FDA could afford to station an inspector there only 2 days each week.

Under the Eisenhower administration FDA appropriations dropped from $5.6 million in fiscal 1953 to $5.1 million in fiscal 1955 and $5.4 million in fiscal 1956. Now, spurred by the citizens' committee report, the President has asked $6.7 million for next year.

This sum, according to a recent speech by Bradshaw Mintener, Assistant Secretary of Health, Education, and Welfare, would enable FDA to increase the number of permanent employees from 891 to 1,025 and the number of inspectors from 250 to 300. It would make possible an increase in the number of inspections from 11,700 this year to 13,800 next year.

Such a program is encouraging, but hardly impressive. It makes only a dent in the problem. The citizens' committee outlined the true scope of the problem when it said a truly efficient FDA would have 1,000 inspectors, a modern building to house administration and research, money to sponsor a broad educational and information program, a threefold to fourfold budget increase.

The necessity of truly effective food and drug protection, at a time when volume and variety and character of products are constantly changing, should be obvious. Congress should seriously consider whether a greater strengthening of FDA than that proposed by the administration is not demanded.

Why Stop the Farmer at 90 Percent When Everybody Else Is Getting 110 Percent?

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. CANNON. Mr. Speaker, Knox County is one of the great livestock counties of Missouri. Its farmers are among the most advanced and progressive of the State. I am including in my remarks in the RECORD a statement and recommendations adopted on February 8 by the Knox County NFO representing a membership of 750 farmers and businessmen, as follows:

A CONCENSUS OF THE KNOX COUNTY, MO., NATIONAL FARMERS ORGANIZATION PREPARED BY THEIR RESOLUTIONS COMMITTEE, FEBRUARY 8, 1956

We speak as farmers in Knox County, Mo., and members of the National Farmers Organization.

We declare that an agricultural emergency exists. We call on the Secretary of Agriculture to take emergency action to prevent disaster, and we request the Congress to work out a long-range program which will insure the farmer of his fair share of the national income.

We feel that a long-range, comprehensive program is the only answer to the farm problem, but one cannot help a drowning man by drawing blueprints for a boat. Our recommendations to the Secretary of Agriculture are these: That he begin immediately the purchase of live hogs and cattle. For a 90-day period of time he should purchase hogs from 160 to 180 pounds, and fed cattle from 700 to 900 pounds at prices not less than 100 percent of parity. Purchases should not be made from the packers, as this would turn a farm program into a bonanza for the packers. These animals should be purchased from farmers at the stockyards, processed on contract with packinghouses, and used by the Government in feeding the military forces and in providing an adequate school lunch for children in the public schools.

Long-term credit must be made available at once on the basis of producing ability rather than usual collateral requirements.

Our further recommendation to the President of the United States is that if the present Secretary of Agriculture fails to do this, using powers and funds which already have been voted to him by the Congress, that the President remove him from office and replace him with a man who realizes the extent of the present emergency and is willing to take steps to remedy it.

Our recommendations to the Congress are the following.

We have a high conception of the purpose of government in a democracy. We feel its function is to control economic forces wherever necessary in the best interests of its citizens. As farmers we feel that we now live in a controlled economy, controlled by large business interests to their own advantage. We prefer control by an elected government.

We feel there is no free market for our products, and no free operation of the laws of supply and demand, so long as individual farmers are at the mercy of huge buying monopolies.

A few farmers resist the idea of controls. These are either men who feel no social responsibility, or those who hope to enlarge their own operations at the expense of small farmers who are crowded out of business. These individuals, and their lobbyists in Washington, do not represent us and do not express our views.

We realize that we have responsibility to society not to misuse our land, or to produce beyond consumption requirements. We feel that society has a responsibility to us to see that we receive a fair price for our products.

We are opposed to the Soil Bank Plan. We feel this plan will work to the advantage of large landowners and those who are misusing their soil, and to the disadvantage of small farmers. We see no sign that payments offered will be adequate to pay for fencing, seeding, soil treatments, and weed control on the acres affected.

If such a plan is put into effect, we feel there should be a distinct limit on the amount of payments made to any one farmer.

We feel that all acreage figures used should be fixed with reference to the needs and abilities of the individual farm and farm operator; crop histories used should be based on a longer term of years than at present, possibly 6 years. Tax records and actual measurements of crops should be employed to check doubtful crop histories.

It should never be made necessary to comply with acreage allotments in order to qualify for soil-building assistance.

Our recommendations for a long-term farm support program follows closely those of the Heinkel Plan. This is a simple, effective plan which would apply to farmers in all regions producing all sorts of crops and livestock. It would eliminate the need for controls. It would protect the family farm.

We ask the Congress to enact a law providing that every farm operator may market up to $10,000 worth of farm products at prices supported by the Government at 100 percent of parity. Beyond that figure, farmers would be free to raise and sell any quantity of produce on the open market.

We further recommend to the Congress that present surpluses be reduced in such amounts as deemed necessary by giving these foods to school lunch programs, old-age pensioners, and those of low-income groups in this country, and also for relieving famine conditions elsewhere in the world.

BOB WILSON, *Chairman*

Air Force Program for Fiscal Year 1957

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 21, 1956

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement of the Air Force pro-

gram for fiscal year 1957 as presented by Gen. Nathan F. Twining, Chief of Staff, United States Air Force, at a meeting of the Armed Services Committee.

It was a very important statement and one that I feel should be read by every Member of the Senate. I take this method of bringing it to the attention of the individual Members of the Senate.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

AIR FORCE PROGRAM FOR FISCAL YEAR 1957—SUMMARY OF STATEMENT OF GEN. NATHAN F. TWINING, CHIEF OF STAFF, UNITED STATES AIR FORCE

Mr. Chairman and members of the committee, the questions "Are we still ahead in airpower?" "Are the Soviets overtaking us?" and "How do we stand in the race for new weapons like the ballistic missile?" have assumed the greater importance over the last year.

The Secretary of the Air Force and I gave you an estimate of the situation last June after we had received new intelligence including the Soviet flyovers in late April and early May. We presented you a revised evaluation of Soviet strength and also gave you our forecast of what we estimated the Soviets could do in the future.

Because we believe they can build strength faster than we originally predicted, we recommended to this committe a step-up of our aircraft production program.

We chose to speed up production of two of our newest and best fighters in order to have them in combat units by the time the Soviets get enough long-range bombers to be able to mount a large scale attack.

Because we believe the Communists can build strength faster than we originally predicted, we recommended a step-up of our aircraft production program to this committee.

We chose to speed up production of two of our newest and best fighters in order to have them in combat units by the time the Soviets get enough long-range jet bombers to be able to mount a large scale attack.

We also stepped up the planned production rate of our newest heavy bomber, the B–52. This was to maintain the margin of advantage we would need to penetrate improving defenses of a potential enemy and deliver our planned counterattacks, if war comes.

Despite these actions, the questions, "Are we still ahead in airpower?" and, "Are the Soviets overtaking us?" assume greater importance than ever before.

Here are estimates and facts that are the basis for answers to these questions.

If we are speaking about numbers of aircraft in combat units, we are not ahead, and have not been ahead for years. In Soviet combat units are now some 20,000 combat aircraft.

This compares to thousands less in the United States Air Force. Our counter to this quantity of force has been quality—better airplanes, better weapons, better airmen. It is in quality that we have been able to stay ahead. However, the Soviets are now closing the quality gap. This concerns us much more than comparisons of numbers.

Nevertheless, numbers are important. Let us look at a few comparisons which are indicative of relative effort and capability.

Let us first compare our striking forces.

The Soviet air force has more Bisons than we have B–52's right now and they can maintain this advantage for some time—if they keep on the production curve we are now predicting.

We have more B–36's than they have Bears—their turboprop heavy bomber, but they could pass us in this category in the next 2 years. This will be by default since we are phasing B–36's out and are not making turboprop bombers by choice. We believe that with the combination of tankers, jet bombers are far more effective.

We have many more B–47's than they have Badgers, their medium jet bombers.

They have thousands more light jet bombers, the Beagle, than we have B–57's.

They have thousands more new jet fighters than we have.

We have many more all-weather fighters than they have Flashlights—their newest all-weather fighter. But our estimates show that they could close this gap and outnumber us in the next 2 or 3 years.

To sum up, they either have overtaken us in quantity, or can overtake us, in all categories of warplanes except that of the medium jet bomber.

The figures I have given you are comparisons of the aircraft of the Soviet Air Force against those of our Air Force. It is true that aircraft from our other services would add to our air strength—a part but not all, of the combat aircraft in the United States Navy and Marines would conceivably be available to help out in the all-important air battle of any war.

However, most of them, as you understand, would be tied to tasks such as control of the sea, or support of surface forces, which have little effect on the air battle.

It is also true that our allies can make a worthwhile contribution to free world airpower. The British Air Force, particularly their bomber command, is improving. But if we include allies in any comparison, we must also include the satellites of the Communist bloc and we find the pattern of relative numbers is about the same.

You can see that any comparison of numbers is far from encouraging. However, as I said before, it is their push for quality that is of even greater concern.

Their new jet bombers, the Bison and the Badger, compare very favorably with our B–52 and B–47. We have retained a slight edge in performance.

The operating range of our jet bombers is further increased by the use of aerial refueling and overseas bases. These are two of our most important advantages—aerial refueling and bases.

It would be imprudent to assume that the Soviets cannot conduct aerial refueling operations. Nevertheless, I am convinced that we are far ahead of them in this technique. It is now routine in our Air Force.

Our advantage in bases is not so much in number but in location. We can hit the Soviets from many directions, and leave the target in any direction.

The Soviets, in comparison, are limited in the directions from which they can launch attacks. However, they are taking steps to correct this.

The quality and extent of their base system is improved.

They are modernizing and expanding their air facilities in eastern Europe and the Far East.

They have recently completed or have under construction many new airfields in the satellite areas. In the past year they completed several major airfields in China and they have started construction on several more.

In the Arctic, they are also continuing the development of bases.

This development of Arctic bases indicates a determined effort to further develop year-round capability to handle long-range aircraft all along this perimeter. From these Arctic bases alone, the Soviets could launch several hundred long-range bombers in a single attack.

These two items, air refueling and forward bases, are needed to give extra range to the jet bombers of both nations.

However, both nations also have a number of truly intercontinental bombers.

We estimate that their new turbo-jet bomber, the Bear, has intercontinental range. Two years ago they did not have a bomber with this range. We have the B–36 which has comparable performance.

Now, before I leave this comparison of offensive air forces, I should mention one more important USAF advantage. That is experience in long-range operations. In spite of greater Soviet production, we should be able to ready heavy jet-bomber organizations much more quickly than the Soviets.

The quality of Soviet air defenses is improving. They lagged in developing an all-weather fighter. They now have all-weather interceptors and they are capable of producing them at a fast rate.

We must plan on meeting increasing opposition. This could mean more severe losses to any attacking force we might have to push through their defenses.

Our newer interceptors, like the F–102, are just coming into the picture. These will be superior to anything the Soviets are known to have, both in speed and in hitting power.

Soviet day fighters, the Fresco and the Farmer, are superior to the MIG–15. But our F–100 is also superior to the F–86 which was better than the MIG–15. We feel that our F–101 and F–104 which will be in production in the future will put us into an even better position in defensive fighter performance.

Before leaving this comparison of airplane quality, I must touch on airlift. Here we enjoy a decided advantage, not in numbers, but in quality. Except for a few modern transports, the Soviets depend mostly upon the equivalent of our old C–47 or DC–3.

In contrast, we are now beginning to modernize our airlift and increase our capacity to fly cargo or troops. This capability will begin to get a considerable boost during the fiscal year 1957.

During the coming year we will begin to get C–130's to replace the C–119, Boxcar. The C–130 is our first turboprop transport. It is better than a hundred knots faster and can carry twice the payload of the C–119.

In fiscal year 1957 we will get the first models of a better turboprop transport, the C–133. This will go into the Military Air Transport Service. It will gradually replace C–54's and C–124's. This will be our first intercontinental transport. These planes will enable us to carry troops and supplies nonstop from the United States to Europe or North Africa.

As to Air Force capability to move Army forces, we can now lift an airborne division, without its heavy equipment. But to do this, we would have to divert aircraft from the Military Air Transport Service. And the Army would have to fight with light equipment, waiting for the shipment of heavier equipment. We do not have enough lift to do this job, and at the same time carry out the wartime priority task of moving air forces into striking position. However, the future increases in airlift capacity will mean more mobility for the Army as well as the Air Force.

In addition to the tactical airlift within the regular force, we have 13 troop carrier wings of the Air Reserve. These can be used in the early phases of war or other emergencies.

Now let us move from aircraft to nuclear weapons.

As you know, we have our biggest advantage here. Nevertheless, the Soviets are making impressive efforts.

So far in this discussion, for the sake of clarity, I have compared like items by quantity and quality.

These comparisons must be qualified. Except to indicate relative effort and progress, matching similar types is meaningless. More meaningful comparisons would be to match our bomber offensive capability against their

defenses, including their radar, their fighters, and their missiles. Similarly, we must compare Soviet bomber capabilities against our defenses.

Our own defenses and Soviet attack capabilities are both increasing. By the time the Soviets have a bomber force large enough and effective enough to wage a global war, our defenses will be formidable. Our present F–100 would be effective against the Soviet Bison, comparable to our B–52, but the Soviet Bison is available now only in limited numbers. By the time the Soviets get a sizable force of Bisons we will have the F–101, F–102, and F–104 in quantity, and this will provide us with an even more effective defensive weapon.

Comparing our attack strength with Soviet defensive strength reduces itself to the question: Can our bombers get through? The Soviets have thousands more jet fighters than we, but they also have an enormous area to defend. In my judgment the Strategic Air Command continues to have the ability to get through.

I cannot deny that the Soviets are narrowing our margin of superiority. They have long since passed us in quantity and they are making remarkable strides in quality.

As I said before, in our build-up of airpower we have retained a lead in quality.

The Soviets are attempting to close this gap by greatly increasing their research and development efforts. This is our real concern. It is apparent that they are putting more men and money into this battle of the laboratories than we are.

This greater effort could also result in the Soviets obtaining better missiles sooner than we.

They captured much data and equipment from the Germans and they gathered large numbers of German scientists. They have announced progress in the field, including ballistic missiles, and they have stated they expect to have ocean-spanning weapons in the near future.

Judging from their progress in aircraft, they could make good this combination of promises and boasts.

Here is our side of the missile picture.

For air defense, we have the surface-to-air weapons, the Nike. You are familiar with this missile. It has been in operational use for some time. New units are being continually added to the Continental Air Defense Command.

For use by our interceptor aircraft we are now getting the Falcon. This is a proven air-to-air missile of great accuracy.

Our first tactical missile is the Air Force Matador. It is already in operational use. Two squadrons are in position in Europe. Another is being added. This missile is subsonic. It can carry a nuclear warhead several hundred miles.

Under development we have the Snark and Navaho. These are longer range weapons.

In ballistic missiles—weapons with speeds that will exceed 10,000 miles per hour, the Air Force has two interrelated programs: the IRBM and the ICBM.

First, the Intermediate Range Ballistic Missile, or IRBM. We have had this weapon under development for some time. The Redstone IRBM is a back-up to this Air Force project already underway.

Of course, the big strategic development is the ICBM.

We are on schedule with this weapon now. But no one can guarantee at this time that our future schedules on these ballistic missiles will be met.

Finally, another new weapon of great strategic significance is the nuclear powered aircraft. Its almost limitless endurance and range will make it a priceless asset to our deterrent force, for it will enable us to keep more of our force in the air at all times. From this standpoint it represents a potent counterweapon even when ICBM's come on the scene.

This, gentlemen, is the basis for the answer to the questions of how we stand in the race for new weapons.

I have given you our estimates of their capability, compared with our development and production plans.

This winds up my discussion of comparative strengths.

Here are the Air Force programs and problems relevant to the budget now under consideration.

In fiscal year 1957 we will reach our goal of 137 wings. I will give you a report on this buildup by major combat commands.

First, the Strategic Air Command will get a big boost in offensive capability. Four heavy reconnaissance wings will have been converted to heavy bomb wings. Now these units are equipped with B–36's. Eventually they will get B–52's. This will give us more heavy bomb wings.

Our Tactical Air Command will also increase in capability. It will grow from 34 wings to 41 wings.

Tactical day fighter wings will be increased by seven wings. These units are capable of a very important mission—instantly reenforcing our air defenses in the event of war. And they will have the dual capability to perform ground attack missions.

The flexibility and range of our tactical air forces is being increased with aerial refueling. Nuclear weapons and global mobility make the Tactical Air Command part of our deterrent to general war as well as a potent, if not decisive, force to meet any peripheral challenge.

The Air Defense Command will continue to grow. Aiding the regular forces in air defenses are units of the Air National Guard. Pilots in planes from Air National Guard wings are standing alert at 17 locations throughout the United States. And we are now considering plans to increase this effort.

Our warning system is expanding in size, width, and depth as the speeds of Soviet bombers increase.

This is the overall composition and a report on the 137-wing force. However, 137 is just a number.

I emphasize again that numbers are no measure of effectiveness.

Our 137 wings must be good wings, not merely a force level. A number our wings are not at top effectiveness today.

To perform their missions, all of our units must be combat ready. The pace of the air battle in a modern war would be so swift and attacks would be so destructive that we could not depend on bringing units up to readiness after a war started.

However, our combat effectiveness is growing. We plan further increases in combat capability this year and next year.

But let me remind you that this increase in combat readiness is a goal we are aiming at—not a reality.

Achievement of this goal is dependent on two things—men and money.

Under the personnel ceilings imposed on the Air Force, we must have high-quality people. If we are to man the 137-wing Air Force under the present manpower ceilings, they must be good men. The Secretary has already outlined the vital significance of manpower so I will not discuss it further. However, I would add that the top-quality airmen are what we lack. We are getting the cook, baker, and the truckdriver in our increased reenlistments. We are still not getting enough topnotch maintenance and electronic technicians.

The second thing our readiness depends on is money—and I refer to a special kind of money—money to support the force we build.

During this year, achieving planned readiness may not be possible, handicapped as we are by limited operation and maintenance funds. We face a similar difficulty in fiscal year 1957 unless we get the funds requested.

The seriousness of this situation is felt throughout the Air Force. The question I hear from all my major commanders is, "When are we going to get some relief on operation and maintenance funds?"

I want to emphasize to you that operation and maintenance money can be the difference between an effective and noneffective combat force. There is no point in spending billions of dollars for air weapons systems and bases if we are not going to have enough money to maintain and operate them properly—money to pay operating costs, money to maintain our bases, money to buy the fuels, spares, and supplies we need to keep the Air Force operating.

Airplanes like the B–47 would be useless if restrictions in flying hours prevented the crews from maintaining proficiency. We must not only keep today's combat crews proficient, we must maintain the skill level in replacement crews. If we do not keep our pilots flying—repeatedly practicing their missions—they will not be ready when we need them.

Shortages in operation and maintenance funds are inevitably reflected in loss of future combat potential. I cannot overemphasize the importance of adequate operation and maintenance funds. One of our biggest stumbling blocks over the last year has been the lack of things that these funds can buy.

Operating costs are increasing. This is inevitable. We are building up. We are increasing the number of combat units and the number of new planes. These new jets cost more to operate. The increasing complexity of electronic and other technical mechanisms are all factors that cause our operating costs to climb. And every year the amount that a dollar will buy decreases.

Our growing force also calls for an expanding base system.

Nuclear weapons make dispersal and survival synonymous. Our striking force is now jammed on too few bases.

Our plan to reduce this vulnerability, and to decrease the reaction time of our striking force is to disperse our heavy bomber units one squadron, or one-third of a wing—to a base. We also plan to cut down the medium jet B–47's to one wing per base. We now have two wings on many bases.

Our present deficiency of facilities not only endangers our striking force, it slows our buildup. It cuts our combat capability. It reduces flying safety, and it cuts sharply into our efforts to keep our skilled men in the service.

Thus, this deficiency has the total effect of reducing the combat capability of the ready force. Let me warn you that, if war comes, our success in the decisive phase will depend on the force we have in being the day war starts.

Our future force effectiveness will depend more and more on new weapons. Overall we have had a head start.

But this margin must be modified by these two Communist advantages. They can start a war at a time of their own choosing. While I certainly agree with our policy of nonaggression. I must point out the military advantage of the initiative—of striking first—in any modern air war.

Their second advantage is that, having the ability to regulate the timetable, they can select weapons and put on crash programs whereas we in the United States must program a force capable of meeting all types of air attack. We must guard against the danger that they could select weapons and put on crash programs that could be decisive.

We must remember that our programs are dependent on getting the resources we need

to meet planned schedules. If these resources are not made available we could easily drop behind.

In the situation we face, we cannot afford to be complacent. It looks like the Communists could catch up. If they continue their rapid pace, it may be necessary for us to speed up.

The program I have outlined and the budget for fiscal year 1957 is austere. It meets only our most essential needs on a minimum basis. To keep this minimum program going and to reach and support 137 wings, will require an increased budget in 1953. On this basis, I urge support of this year's program.

Gentlemen, this concludes my prepared statement. I shall now attempt to answer any questions you may have.

Report on Operation of Alcoholics Anonymous

EXTENSION OF REMARKS

OF

HON. PRICE DANIEL

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 21, 1956

Mr. DANIEL. Mr. President, I ask unanimous consent that a report of Mr. Robert J. Conner, assistant director of probation, on the operation of alcoholics anonymous in the municipal court for the District of Columbia, be printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

THIS IS ALCOHOLICS ANONYMOUS IN OPERATION IN THE MUNICIPAL COURT FOR THE DISTRICT OF COLUMBIA

(By Robert J. Conner)

Forward. So efficiently and so faithfully Alcoholics Anonymous goes forth in the municipal court serving mankind. Such inspiring loyalty and helpfulness are not to be found from any other source.

Beginning January 1, 1955, a total of 149 probationers were referred to Alcoholics Anonymous. Of that number, 11 were revoked and 6 absconded. We accepted 12 individuals for voluntary supervision from various sources. Of that number, approximately 8 successfully made the Alcoholics Anonymous program, making a total of 140 successful cases.

All of the above people were individuals whose past had finally caught up wtih them. So what do men do when their past catches up with them? Some go to jail, some go insane, and others die. We have endeavored to help them by first persuading them to take a moral inventory, followed by a constructive plan of rehabilitation. To instigate a constructive program, one must by reason of necessity be brought face to face with his present situation. He also must be taught to recognize that he is following one or the other of two things, the convictions of his inner dwelling conscience or his inclinations. Then he must be brought to an understanding within himself to follow the dictates of his honest convictions rather than his inclinations.

We, the members of Alcoholics Anonymous, do not claim to have all the answers to all of mankind's problems. We do, however, definitely claim good judgment because good judgment comes from actual experience and experience comes from bad or poor judgment. In ordinary life, one is expected to practice what he advocates. In Alcoholics Anonymous we are taught to practice the principles of our program and thereby become known to ourselves and others for what we really are, rather than what we originally pretended to be. In Alcoholics Anonymous it matters little who we are, the important thing being what we are. The Alcoholics Anonymous program is predicated on the premise that by helping others to succeed, we help ourselves. The composite of Alcoholics Anonymous has been made better by suffering. We find great inspiration in the process of transformation and learn to respond sanely to the daily problems of life. After all, a smooth sea never made a good sailor and neither does an uninterrupted life produce a mature person.

Here in this court every Saturday morning is the truth personified and vindicated.

EXAMPLES

I. On December 24, 1945, Harry M., Jr., a white male 42 years old, stood before the late Judge McMahon after a conviction of intoxication. Harry was a decent-appearing person despite his present condition, namely, suffering from the effects of excessive use of alcohol. He very readily admitted that he had been drinking heavily for many years and that he had been in considerable trouble as a result of his drinking. It was also determined that he had been exposed to various types of treatment for alcoholism without any success. It was at this time that the court placed the defendant on probation and turned him over to the probation officer for whatever help we could give him. Harry was the first man that I ever referred to Alcoholics Anonymous for assistance with his alcoholic problem.

Immediately after he was placed on probation his employer, a rather fiery type of businessman, was contacted. He was advised of what had taken place in the court with respect to his employee, at which time the employer responded by saying, "You can just keep Harry as far as I am concerned. He has been one of the best employees I ever had, but he just won't stay sober, and therefore is of no value to me. I am through with him." At that time the employer was advised that we were going to put forth a concerted effort through the medium of AA, and we felt that our chances were better than average in effecting rehabilitation. After some hesitation on the part of the employer he stated, "All right; send him on back and I will put him to work. Maybe the two of us can keep him sober."

Immediately Harry accepted the AA program, became a part of it, and has made excellent progress in every direction. He is still an active member of AA, owns his own home, and today if you call the place of business that is still being operated by the same employer, you find Harry running the place. Periodically we have received direct communications from the present employer, stating that Harry is today the best employee he has. It is further noteworthy in this case that Harry is still active in AA and continually contributing something worth while for the benefit of those who still suffer from alcoholism.

II. On September 16, 1948, Mark R., a white male, 41 years old, stood before Judge Neilson and entered a plea of guilty to driving while drunk. A sentence of $100 or 30 days was imposed and an additional 30 days. The fine was paid, the 30 days straight time suspended, and defendant was placed on probation for a period of 1 year. This man had an arrest record going back about 5 years. He was an oil-burner mechanic, but working only part time, and what money he was earning was being spent in the realm of dissipation. His family was found to be destitute and the home in a great state of confusion. The day after he was placed on probation a field visit was made to his home in nearby Arlington and he was found paralyzed drunk. Directions were left for him to report to the probation office the following day, which he did. At that time an effort was made to indoctrinate him with some of the principles of AA, and very shortly thereafter he began to respond.

This man had been without a job and through my efforts he secured employment with the Post Office Department in Arlington during the Christmas season rush, where he earned approximately $200. He then obtained various jobs for a very nominal salary. All during this period he remained sober and participated in the meetings of AA. His probation was allowed to expire in September 1949 after a very successful period of probation and apparently a good degree of indoctrination into the AA plan of living.

Later on as a result of the previous Post Office work, he felt that he would like to become a letter carrier. He made application for that job, took the examination, and made an excellent passing grade. However, the Civil Service Commission made its investigation and declared him ineligible for the job because of his past record of arrests and convictions for drunk and driving while drunk. At this time Mark came to the Probation Office and in a very despondent state of mind, stated, "Well, my past record for drunkenness has barred me from this job." At this point, of my own volition, I wrote a letter to the Director of the Civil Service Commission, setting forth the history of this individual and outlining the progress which he had made through AA with respect to recovering from alcoholism. In detail and very frankly, a true picture was presented. The following day a personal call was received from the Civil Service Commission to verify the fact that I was the one who had sent the letter. A few questions were asked and the Commission requested that Mark return for another interview. He did that immediately, and very shortly thereafter the Civil Service Commission reversed itself and declared this man eligible. Not long after that, he was hired and went to work as a letter carrier. Today he is one of the best letter carriers in North Arlington, he is discharging his duties in an excellent manner, he owns a $20,000 home in Fairfax County on which he has already paid approximately $15,000, and he owns a 1956 automobile.

I personally contact this man about once a week and it is most gratifying to observe his serenity and the progress he has made in every direction. He attends his church regularly, and there is no state of mental confusion in his home but instead harmony and unity are there. Mark has consistently kept up his affiliations with AA. The final result of this case is typical of the progress and recovery of many alcoholics that I know personally who have had their beginning in the probation office in this court.

CONCLUSION

The plan of rehabilitation of alcoholics in operation in the municipal court through the probation office and with the cooperation of AA continues. It has been proved to be the most successful method. The total of individuals personally selected for rehabilitation through this plan numbers in the neighborhood of 800. Of that number, better than 60 percent have been rehabilitated. They are self-sustaining individuals. Many have returned to their families and are today living good normal lives, earning a good living and paying their fair share of taxes. All of this has been accomplished without any additional appropriation of the taxpayers' money for the rehabilitation of this segment of society.

We are forever reminded that none of this fine work could ever have been accomplished without the support of our program and excellent understanding of alcoholism by all of the judges of this, the municipal court for the District of Columbia.

Tribute to Wisconsin's 32d National Guard Division

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, February 21, 1956

Mr. WILEY. Mr. President, I was pleased to see in last Sunday's issue of the Milwaukee Journal a fine roundup article concerning the National Guard Division of the Badger State, the 32d Infantry, the largest such division in the United States, and with one of the great records in our national annals.

Commanded by Maj. Gen. Jim Dan Hill, it is the pride of my State, and it will, I trust, reach still higher enlistment totals.

I send to the desk the text of the article and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal of February 9, 1956]

THIRTY-SECOND DIVISION AIMING TO INCREASE ITS MIGHT—LARGEST NATIONAL GUARD UNIT IN THE NATION TO RECRUIT NEW SOLDIERS THIS SATURDAY

Wisconsin's National Guard division, the 32d Infantry, is the largest in the United States, but only by a slim margin, the adjutant general's office learned last week. Efforts will be made this Saturday to make it by far the mightiest in the Nation.

On January 1 the division had 11,525 men in its ranks, including 773 officers, 131 warrant officers, and 10,621 noncommissioned officers and privates. The 51st Division, composed of Florida and South Carolina units, was second with 11,464. The 39th Division of Louisiana and Arkansas was third with 11,185.

STATEWIDE CAMPAIGN

Maj. Gen. Jim Dan Hill, Superior, division commander, and his troops hope to gain a more comfortable lead Saturday in a statewide enlistment campaign. Under recent orders the division was authorized to enlist 3,285 enlisted men and more than 100 officers for a total of 14,754—considered to be a full strength division.

The division's air arm, located in Milwaukee and Madison, will join the enlistment campaign, although it plans to add only 100 men to its ranks of 1,000 officers and men.

Open houses at armories and hangars from Beloit to Superior, Oconto to Hudson, will be the feature of the day in 80 State cities. Displays, drills, parades, and evening social events have been planned in some places.

PLANES WILL "BUZZ"

Wednesday will be the first National Guard day in the United States, but the Wisconsin troops decided that their recruiting campaign would be more effective on a Saturday. All of the troops will be activated to ring doorbells of homes of prospective guardsmen, act as hosts at the armories and stage drills and parades. All during the week other members will be speaking in schools throughout the State, explaining the guard to pupils.

The air guard planes will "buzz" Milwaukee and other towns and cities within a radius of 75 to 100 miles between 2 and 3 p. m. Saturday to attract attention to the recruiting drive.

Emphasis on the recruiting will be to inform prospects on how they can fulfill their military obligations by training with their neighbors in home town armories.

By joining the guard, a youth between 17 and 18½ years old can complete his military service without leaving home. If he prefers not to be deferred, he need serve only 6 months' active duty and have the time of his Reserve service reduced.

Guardsmen earn a full day's pay in grade for training once a week and also have an opportunity to get a higher rank.

TRAIN IN 31 ARMORIES

Although the 32d Division can trace its ancestry to before the Civil War, the current organization dates from November 8, 1946, when it was reorganized after World War II.

By January 1, 1950, the guard had grown to 8,289 men, including 613 officers. Four years later the strength was 9,012, with 712 officers.

One hundred years ago, the guardsmen—then called militiamen—had no uniforms, no weapons and no drill halls. Today a guard division the size of the 32d has equipment valued at approximately $14 million, its annual payroll for armory drill nights is more than $2 million and last year's payroll for 2 weeks' training at Camp McCoy totaled $981,260.

The guard trains in 31 armories. Seven 1-unit and 1 2-unit armories have been built since 1945. A 5 unit armory at Madison and a 2 unit armory at Racine are to be completed March 1 and July 1, respectively. Within the next 18 months, 8 or 9 more armories, now in the planning stage, are expected to be completed.

Wisconsin's guardsmen use 17 types of vehicles, ranging from quarter ton jeeps to 5 ton prime movers, used to carry bulldozers or to cart heavy artillery pieces. Their weapons range from .45 caliber pistols to bazookas, mortars and 155 millimeter howitzers. In the air, Wisconsin guardsmen fly F-89 Scorpions, 2-place fighter planes.

STRICTLY A STATE OUTFIT

The guard, formally organized in 1879 under that name, fought in both World Wars and also played a small part in the Spanish-American War of 1899 and the Mexican border incident of 1916.

From 1919 until the end of World War II, the organization comprised units in both Michigan and Wisconsin, but wartime reorganization of the Army enabled the post-World War II 32d Division to be reorganized as strictly a Wisconsin outfit, which it has been since.

In October, 1940, the 32d was mobilized for the last time as a Wisconsin-Michigan division. Reorganization of the Army from quadrangle to triangle divisions reduced it to 3, instead of 4, regiments and to fewer artillery units. One of the detached units went to the European theater of war.

At a training camp in Louisiana, the division's units, which then mobilized at about half strength, were filled up and in April 1942, the division was shipped to Adelaide, Australia. The division trained there and in Brisbane.

PRIED OUT ENEMY AT BUNA

Buna was the 32d's first World War II campaign. Some infantrymen hiked over the towering Owen Stanley mountains of New Guinea, others were flown to near the battle scene. Early in 1943, after fighting short rations, jungle fevers and the stifling, humid heat as well as the Japanese, the Yanks and Australians pried out the last of the enemy at Buna.

Refortified in Australia, the division went back into action on New Year's day, 1944, fighting up the New Guinea coast, then on to the Philippines. Saidor, Aitape, Morotai, Leyte and Luzon battles followed. When the Japanese tried to break through the division's lines at the Driniumor river, near Aitape, New Guinea, the Red Arrow men killed 9,300 of the enemy.

The division's final assignment was to clean Gen. Yamashita's troops off the Villa Verde trail north of Manila. That job alone required 119 days.

Demobilization took place on February 28, 1946, in Japan, 5½ years after the division was called to duty. Its records showed that 3,235 men were killed, 10,711 wounded in 654 days of combat. Few of the men who had sailed with the division from San Francisco were with it when it returned.

Federal Disaster Assistance to Alaska

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. MILLER of Nebraska. Mr. Speaker, I ask permission to revise and extend my remarks in the Appendix of the RECORD, and to include a report on Federal disaster assistance to Alaska.

Mr. Speaker, the United States Government has not overlooked the needs of Alaska in its effort to meet the needs of depressed areas and groups. The attached report on this subject, which follows, is illuminating, and I recommend its reading to my colleagues:

REPORT ON FEDERAL DISASTER ASSISTANCE TO ALASKA UNDER PUBLIC LAW 875 AND MEASURES BEING UNDERTAKEN TO ALLEVIATE CONDITIONS IN ECONOMICALLY DEPRESSED AREAS

The need for emergency relief assistance in Alaska under Public Law 875 has arisen because of the near failure of the salmon runs in certain areas in the seasons of 1953, 1954, and 1955. Many communities, almost entirely dependent on the commercial salmon fishery, faced disastrous economic conditions.

THE FISHERY PROBLEM

The basic problem is not of recent origin. Wide variations in the fish runs from year to year have always been a problem to the industry and the communities dependent on them. A critical overall decline in most of the important areas coupled with a marked increase in the number of fishermen, has been taking place for many years. Drastic curtailment in the total fishing effort is required to bring the runs back. The Fish and Wildlife Service has initiated an intensive rehabilitation program. However, there is almost no prospect that this program can become effective to alleviate the poor condition of the salmon runs within the next year or two. Conditions which have developed over a period of many years cannot be remedied overnight. The drastic curtailment of fishing effort that is required necessarily involves an increased short-range burden on both the industry and the workers dependent on it. The situation will vary considerably from area to area. As an example, the Prince William Sound district will be opened to fishing on a limited basis in 1956 after being completely closed for the 1954 and 1955 seasons. This was the most drastic curtailment undertaken so far in the Territory. The economic burden was not as severe in this area as in Bristol Bay

or southeastern Alaska because of the shellfish industry and the relatively healthy Copper River salmon fishery which remained open.

The Fish and Wildlife Service has taken steps to increase employment opportunities by increased recruitment of local native labor for work in the Pribilof Island fur seal activity and by increased local employment of stream guards in its fishery protective program.

The Department has recommended to the Congress favorable action on legislation to eliminate fish traps over a 10-year period. If such action is taken it would spread employment in the industry but can hardly be considered a solution to the immediate problem.

THE FISHERMEN'S AID AND WORK PROGRAM

Under the leadership of Governor Heintzleman, a three-phase program was inaugurated during the winter of 1953–54 following the disastrous 1953 fishing season. It involved the following:

1. Emergency direct relief under the fishermen's aid program. This is the assistance made possible under Public Law 875 following Presidential declaration of the affected areas as "disaster areas." It was necessary to request this disaster assistance again after the 1954 and 1955 seasons. The direct financial contribution has been small and used entirely for costs of administration, travel and transportation of surplus food commodities to the affected communities. Expenditures amounted to approximately $10,000 out of a $40,000 allocation in 1953–54 which was supplemented by a $10,000 allocation from the American Red Cross; approximately $9,000 out of an allotment of $20,000 in 1954–55 which was supplemented by $5,500 out of a $10,000 Red Cross allotment; and an allocation of $25,000 for 1955–56. The major Federal contribution has been in the form of surplus food commodities.

2. An Emergency Public Works program with the participation of the Alaska Public Works Agency, the Territorial Highway Engineer, the Department of Aviation and local communities. This provided some assistance to the affected communities by providing work relief on useful local public projects such as roads, docks, schools, and airfields. An allotment of approximately $200,000 was made in 1953–54 out of Alaska Public Works funds, and an additional allotment of $100,000 has been made in 1955–56. However, the effectiveness of this program in providing employment has been largely limited to southeastern Alaska communities and other population centers where project sponsorship by the towns has been feasible. It has been of limited application in some of the areas of acute need such as the Bristol Bay and Bering seacoast regions.

3. Creation of new employment and income opportunities. With the active support of many Federal and Territorial agencies, it has been possible to encourage recruitment of workers for both governmental and industrial jobs from the affected localities.

Mr. Waino Hendrickson, secretary of Alaska, has headed and coordinated this overall program with the cooperation of all of the Federal and Territorial agencies involved.

TERRITORIAL RESPONSIBILITY

It is quite generally agreed that the basic responsibility for emergency relief and welfare of its citizens falls on the Territorial Government. Federal assistance is appropriate in extraordinary circumstances, such as those permitting assistance under the disaster relief provisions of Public Law 875, or under the welfare program of the Bureau of Indian Affairs which provides assistance to the Indian and Eskimo population on the same basis as in the States.

Territorial public-assistance programs financed jointly by Federal grants-in-aid from the Department of Health, Education, and Welfare and the Territory are provided to persons eligible without distinction as between natives and nonnatives. Beneficiaries of these programs (old age assistance, aid to dependent children, and aid to the blind) are, in fact, preponderantly native ranging up to 85 to 90 percent of the total beneficiaries. Under Territorial law as presently interpreted, however, general assistance financed exclusively by Territorial funds is extended only to nonnatives.

Exclusion of the native population from general relief, financed entirely by the Territory, is based on interpretation of the law which defines as eligible "any needy resident of the Territory who has lived in the Territory for 1 year immediately preceding the date of application for relief assistance who is not eligible for aid from any other public agency or department providing similar services in the Territory."

Funds appropriated to the Territorial Department of Welfare by the 1955 legislature for the biennium ending March 31, 1957, amount to a total of $3,055,000. Of this amount $710,000 was earmarked for general relief. The balance was allocated to the following regular programs:

Administration	$345,000
Old-age assistance	450,000
Juvenile code	500,000
Aid for dependent children	1,000,000
Aid for the blind	50,000

Apart from the problem of eligibility of the native citizens for general relief the amount of the appropriation provides limited means with which to meet sudden large increases in general relief assistance. In the recent emergencies due to fishing failures, it has been thought to be impracticable to use the general-relief procedures for a group of fishing villages which, as estimated by the Governor in 1955, would total 3,600 persons.

BUREAU OF INDIAN AFFAIRS WELFARE ASSISTANCE

The Bureau of Indian Affairs provides welfare to those natives not presently eligible for public assistance under Territorial laws as interpreted, namely the disabled, handicapped, and unemployable, importantly including convalescent tuberculosis patients recently released from sanatoria. The amount expended by the Bureau for all welfare programs in Alaska in fiscal year 1955 amounted to $514,755, of which $272,315 was for general assistance. The fiscal year 1956 allocation is $715,656, of which $400,000 will be available for general assistance. The Bureau welfare programs are not predicated on meeting the general relief needs resulting from extraordinary changes in economic conditions.

COORDINATION OF WELFARE PROGRAMS

Although it is understood that there is no duplication of welfare assistance as between the programs of the Bureau of Indian Affairs and the Alaska Department of Welfare, the closest possible cooperation between the two agencies is required to insure that no twilight zone develops in which needy persons are not served by either agency. Although such cooperation is the practice, and all possible effort is made by both agencies to prevent duplication and to coordinate services, administration is very difficult, particularly in remote native villages. It is costly and it is generally agreed that integration through consolidation of the total programs in the Alaska Department of Welfare would be an important step in improving, simplifying and making the total operation more efficient.

THE ALASKA RURAL DEVELOPMENT BOARD

The 1955 legislature created an agency which is intended to coordinate efforts of the several Territorial agencies in seeking ways and means of improving the basic economic conditions in rural and remote areas. Without so stating, it appears that the purpose is to assist communities and regions of predominately native Indian, Eskimo or Aleut population. The Alaska Rural Development Board is composed of the heads of the departments of labor, public works, health, education, welfare and civil defense under the chairmanship of the Governor. Among the enumerated powers and duties of this board is responsibility for coordination of administration of emergency relief, surplus food distribution, or other public assistance programs other than the regular relief and assistance programs of the Territorial and Federal Governments.

The appropriation to this board for the biennium ending March 31, 1957, was $100,000.

EXTENSION OF EMPLOYMENT OPPORTUNITIES

As indicated above, one phase of the Governor's Emergency Aid and Work Program has been to seek the cooperation of all Federal and Territorial agencies in providing additional employment opportunities for the native population which has suffered the most from the disastrous failures in the fish runs. In addition, the native population in many outlying areas has always been on a near-subsistence level with much deprivation and malnutrition accepted almost as a way of life.

The Office of Terirtories has met with representatives of the United States Air Force to broaden the policy relating to the employment of Eskimos in the construction and maintenance of the distant early warning line bordering the Arctic Ocean. In addition to prior approval authorizing contractors to employ Eskimos for construction of distant early warning line facilities, the Air Force during December 1955 approved the use of Eskimos on maintenance contracts. Meanwhile, a Department letter was addressed to the Secretary of Defense urging the establishment of an interdepartmental policy that would provide priority for employment of Alaska natives by all Defense and Interior agencies operating within the Territory. This would include both maintenance and construction performed by either force account or contracts. Agencies affected would include not only military installations but also Alaska Public Works, Alaska Road Commission, the Alaska Railroad, and others. The implementation of such a policy would materially aid the economy of the Territory and raise the living standard of the residents of Alaska.

In southeastern Alaska five salmon canneries are operated by Indians, four of which were acquired with loans from the United States through the Bureau of Indian Affairs. They have also had the assistance of Government operating loans. These canneries suffered substantial losses in the disastrous 1953 fishing season. In order to protect the interests of the United States in its loans, reduce further Government financing to a minimum and still provide a market for the fish and labor of the Indians a great deal of analysis, planning and negotiations was required. In 1954, although only one cannery was financed by the United States, arrangements were worked out to protect the fish and labor income of the Indians. In 1955, the operations of two of the canneries were consolidated with Government financing. The sharp freeze unit of the idle plant was leased as in 1954 to a commercial operator to provide a market for Indian labor. One other cannery was financed and operated by the Government and arrangements were worked out with a commercial operator to finance and operate the remaining cannery on a share basis.

The problem in southeastern Alaska is expected to be further alleviated in the next few years by increased employment opportunities in the logging and pulp industry.

Our State Leads the Nation

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. COLMER. Mr. Speaker, one of the real assets of our Nation is its forests. A comparatively few years ago this great asset was threatened by the profit motive and the ruthless methods of exploitation. But, today thanks to the foresight of many good citizens the trend toward the depletion of our forests has been stopped. Today more and more people throughout the country have become forest conscious. Among these people are the lumbermen and tree growers. The true value of our forests are finally recognized. Selective cutting and replanting are taking the place of the former practices of wanton destruction of our magnificent forests.

I am very happy that among the leaders in this noble and truly worthwhile movement are the citizens of my own State of Mississippi. In fact, Mississippi now leads the Nation in the number of certified tree farms as is reflected in the following editorial from a recent issue of the Jackson (Miss.) Clarion-Ledger:

OUR STATE LEADS THE NATION

One of the most significant developments in recent years has been Mississippi's rise to national leadership in the number of certified tree farms. We now lead every State in the Union in this important category with 826 tree farms. Texas is second with 779, with Alabama in third place with 578 such units. There are 1,500 certified tree farms in the Nation.

A. M. Dantzler, chairman of the Mississippi Forest Industries Committee and himself a tree farmer, points out that this industry-sponsored tree-farm program is bringing about maximum production of timber crops from our State's 16.5 million acres of commercial timberland. More than 1.8 million acres now are enrolled in Mississippi's tree-farm program, with one-third of this total coming into the program during the past year.

Technically defined, a tree farm is an area of privately owned, taxpaying, forest land dedicated to the growing of repeated forest crops for commercial purposes. The program is sponsored by the Mississippi Forest Industries in cooperation with public and private leadership in this field. Nationally the program is sponsored by the American Forest Products Industries in Washington, D. C.

Tree farming is valuable to our economy, especially to small farmers. It not only assures regular harvests through scientific management but also makes for better soil and water conservation. Tree farming results in cover and food for wildlife and better streams and pools for fishing. Growing trees help prevent soil erosion, muddy water, and loss of moisture. Most important, perhaps, tree farming affords cash income and helps pay off mortgages and finance other farm improvements.

Mississippi's national leadership in tree farming is all the more significant at this particular time, when the Nation's agricultural picture in general is growing steadily darker. This program offers an increasingly promising future for the small landowner and should be encouraged by every possible means. Much of our future prosperity lies in commercial forestry. Mississippi has the capacity and the opportunity to utilize this method of increasing our cash income and elevating our general standard of living.

Must Get Practical Results

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. CANNON. Mr. Speaker, under leave to extend remarks in the RECORD, I am including a timely and pertinent article by Fred V. Heinkel, president of the Missouri Farmers Association. It is an authoritative statement and offers a program based upon many years of observation and experience by a man who has rendered exceptional service to Missouri and American agriculture.

The article is as follows:

FARM PROGRAM NO HELP TO REGION
(By Fred V. Heinkel)

It is a far more simple matter to put ships in "moth balls" than it is farms.

The President has recommended a two-point soil bank program. The first part is designed to take crop land out of production with the idea that our grain surpluses might disappear. The second part is aimed at taking marginal land out of production, and is a long haul proposition. It would plant these marginal acres in trees or subject them to other conservation practices.

The President's message is encouraging in that he shows he realizes there is a farm depression and that the farmer's problems can be best solved by Government action. He stressed that "Government should accept the responsibility."

The primary fault of the President's proposal is its failure to recognize the real farm problem. That problem is low income—not surpluses. By law the surpluses are insulated from the market and cannot be sold in this country for less than 105 percent of the support price plus storage charges.

The idea that if support prices are abandoned, the surplus will vanish, has found its way into the thinking of persons who have not checked the records.

During the twenties when general prosperity was at a highlevel, farm products brought less than a living wage to their producers. There were no support prices then, yet the ruinous prices were attributed to overproduction.

Sliding supports have aggravated the situation. In a desperate effort to meet increased expenses, farmers have worked harder and produced more. You never did hear of a farmer not planting his full quota of wheat just because support prices had dropped and his wheat was worth less than before.

The Salina (Kans.) Journal in an editorial stated: "In proposing the soil-bank program, the administration in effect has scuttled the flexible support scheme—although it may not want to admit it. If the flexible scheme is not to be relied upon to reduce production, then the reason for lowering the loan price has ceased to exist. The immediate question is a subsidy for ailing agriculture. Considering the need, the subsidy might as well be adequate."

THE PRESIDENT'S SOIL BANK PLAN DOESN'T HELP THE OZARKS

Is the soil-bank proposal adequate to help Ozark farmers? A reduction in grain acres certainly will not help milk prices.

Our Ozark farms are not much of a factor in creating the grain surpluses. About all the grain that is grown in this area is fed to livestock—in fact, it is necessary to ship in additional grain each year for feed purposes.

Instead of selling cash grain, most Ozark farmers market their row crops when they sell their hogs, milk, butterfat, beef cattle, poultry, eggs, lambs, and wool. The livestock farmer is "left out" so far as the soil-bank proposal is concerned. In Missouri between 70 and 75 percent of income from farm marketing is from livestock.

Most Ozark farms are family size operations. If these small farmers are compelled to reduce present crop acres they will not be able fully to utilize their time or their equipment. Both the farmer and his equipment will become partially unemployed.

Many young men get started in farming by the renter route. They purchase machinery and rent additional land until they can save enough money to purchase more acres. It is likely that 100 percent of the Government soil-bank payment would be more attractive to the landlord than 50 percent of the crop he would receive as rent. What will happen to our young people? We don't want them all to move to the cities.

Most of our surplus grain in Missouri is grown in the river and creek bottoms. If this land is allowed to go unattended, the willows and cottonwoods will soon take over. In the Ozarks, brush would be a problem. The land would have to be reclaimed before it could ever again be planted in crops. You cannot put farm land in "moth balls" like you do tanks and battleships.

We agree with the President that the problems of our farmers are of the utmost urgency. Drought conditions of the last few years have left few Ozark farmers in financial shape to face the decline in farm prices. This winter has been drier than 1930, 1934, and 1936—the years we associate with the Dust Bowl. It is time to get some cash in the hands of these people.

It has been proposed that the farmer be paid in certificates good for grain now in storage to compensate him for keeping acres out of production. This would not cut down on the amount of grain on the market. It would not help the price of wheat. The Government would dump some grain but it would not help farm income.

I am convinced that the long-term conservation feature of the proposal has merit. But the marginal acres proposed to be taken out of production under this section are not much of a factor in creating our surpluses. Most farmers do have some land that would be suited for trees. Unfortunately, however, due to the advanced age of most of our farmers they will never see trees they plant converted to timber. It might be better for the Government to purchase some of these marginal acres and place them under the management of the United States Forest Service. I believe, however, that in the not too distant future pulp mills will be built in the Ozarks, which will utilize the lower grades of timber in this area.

Besides the soil bank plan, the President stressed eight other points dealing with the farm situation.

These are of less importance, to be discussed in the next issue.

The main point is that the program does not meet the basic problem of Ozark farmers, low income. If the farmer received parity prices for his milk, beef, hogs, wool, and grain crops there would be little need for any of these nine proposals advocated by the President.

Foreign Trade and Antitrust Laws

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. CELLER. Mr. Speaker, some members of the American community engaged in business overseas recently have been making an intensive effort to exempt in varying degrees foreign trade from compliance with antitrust principles. I am disturbed by any movement to curtail antitrust enforcement because I have maintained a firm belief in the benefits derived by the United States from its historical policy of maintaining both domestic and foreign trade free from artificial restraints.

The theme underlying demands for special antitrust privileges in the foreign field essentially is that American business is hampered or obstructed by strict application of our antitrust laws to trade and investments abroad. Numerous proposals have been advanced to remedy this condition. If accepted, these proposals would necessitate reversal of a primary policy of Congress embodied in numerous pieces of legislation and the overruling of a long series of key judicial decisions.

The recommendation of the American Chamber of Commerce in London, for example, would exempt from the antitrust laws acts performed outside the territorial limits of the United States. To accept this extreme proposal would upset a multitude of court decisions going back to 1911 when the Dupont powder trust, combining German, Britain and American explosives manufacturers, was held illegal.

Special treatment for foreign trade under the antitrust laws is urged because customs and laws abroad relating to business differ from those of the United States. This contention also has been examined and rejected by the courts. In the National Lead case against international titanium cartel in 1947, the court reviewed opposing European and United States philosophies and pointed out:

> The major premise of the Sherman Act is that the suppression of competition in international trade is in and of itself a public injury; or at any rate, that such suppression is a greater price than we want to pay for the benefits it sometimes secures. * * * The economic theory underlying the Sherman Act is that, in the long run, competition is a more effective prod to production and a more trustworthy regulator of prices than even an enlightened combination.

Indeed, the Sherman Act does represent a policy of a high order. It is now commonplace to speak of it, in the words of Chief Justice Hughes, as "a charter of economic freedom." Inherent in the statute are values of deep significance to economic and political democracy.

By prohibiting monopolies and restraints of trade, the Sherman Act undertook to provide one thing only, freedom. It does not have the negative purpose of regulating competition. Its single aim was to prevent artificial aggregations of economic power in private hands, by which others could be foreclosed from the free pursuit of callings which are the common right of all. To that end the statute sought to provide freedom of access to lawful callings, freedom of those in the market to exercise and develop their powers and freedom of consumers to choose among products and sellers.

These are the values to be weighed, when you consider conforming with customs and laws of other countries. A reinterpretation of the antitrust laws to permit American concerns to increase their foreign business by combination with their competitors would subordinate our basic policies to the policies of the foreign countries and would hamper the long continued efforts of the United States to encourage foreign nations in realizing the benefits from more competitive economic conditions.

Such interpretation would set the stage for a gradual fusion of the private enterprise system of the United States with the systems abroad, still largely feudal in basic values, in which cartels and cartel members are often instruments of government policy, and territories are divided in terms of national boundaries. Activities and investments abroad by American companies cannot be hermetically sealed off from their activities at home. There is a continuous and inseparable interrelationship and circulation of the capital, credit, technology and knowledge in world commerce. Participation by American firms in restrictive combinations abroad would produce a resulting comixture of the two systems which in the long run would dilute and weaken our own system of free private enterprise.

Although the extra territorial application of the antitrust laws to combinations restraining our domestic or foreign commerce has been clear since the Dupont powder case in 1911, the antitrust program against international cartels has been most active in the period following World War II. Most of the cartel cases have been in this period.

Enforcement of the antitrust laws in these cases to strike down restrictive international arrangements uniformly has had multiform benefits to the economy of the United States. From one industry to another can be found a lowering of prices, a broadening of markets and a growth of productive capacity.

Gains in size and strength have followed for those outside the combination and for the participants who come to enjoy a new birth of freedom. When in retrospect it is possible to see only improvement and growth following anticartel enforcement, it would be a strange kind of reasoning which would look ahead with expectation of deterioration.

Moreover, the presence of this very active program to enforce the antitrust laws against international cartels does not appear to have resulted in any harm to United States overseas operations.

Since 1946 direct investments by United States corporations have jumped from $8 billion to $17.7 billion. In 1954, alone, direct investments increased $1.4 billion.

Since 1946, profits on United States overseas operations of all kinds have nearly tripled, going from slightly over $1 billion in 1946 to $2.8 billion in 1954. In 1954, United States corporations earned profits of $2.3 billion on their direct investment of $17.7 billion, a 13-percent return. This profit is equal to 14 percent of the earnings after taxes of all United States corporations.

These statistics demonstrate the very active antitrust program since the war has not resulted in injury to our overseas commerce.

Another justification for special exemptions for overseas operations is that antitrust enforcement conflicts with and undermines the Government programs designed to assist friendly foreign nations by stimulating investments abroad. The above statistics demonstrate that it is both commercially feasible and that American companies have been able to make profitable investments abroad within the restrictions of the antitrust laws. Rapidly expanding volume of American investment abroad, shown by these statistics, discounts claims that our foreign assistance programs have been harmed by conflicts with our antitrust policies.

Further, the agencies of the Government responsible for implementing the foreign policies of the United States have advised that application of competitive principles to their programs has not resulted in any impairment to their programs. The Department of Defense, for example, advised the Attorney General's Committee:

> We find that in certain cases, adherence to the principles contained in the antitrust laws has inconvenienced and perhaps to some extent delayed Defense Department procurement activities abroad, particularly in areas where cartel arrangements are the rule rather than the exception. However, it is believed that the long-term benefit to be derived from opposing combinations in restraint of trade, a policy now expressed in the Mutual Security Act, counterbalances any advantages which this Department might derive from a less stringent application of antitrust principles to our foreign procurement.

Similarly the State Department summarized its views on relationship of the antitrust laws to promotion of foreign private investments as follows:

> The Department is keenly interested in encouraging American foreign investment. At the same time, it is recognized that investment surrounded by restrictions illegal under the antitrust laws would generally lack the benefits normally expected to flow from United States overseas investment and would be likely to create barriers to the accomplishment of other United States policy objectives. For example, one result could be the creation of restraints on the availability from foreign areas of raw materials important to United States industry. In addition, a United States policy of permiting foreign investment on this basis would hamper our efforts to encourage foreign countries in developing more competitive economic conditions since it would tend to give support to foreign justifications of cartels as instruments of internal and international trade.

In its administration of the Government's investment guaranty program, the Foreign Operations Administration has advised:

We do not feel that the application of the antitrust laws to foreign commerce has operated to the detriment of the FOA program in any significant way, and it may have contributed to these objectives in many instances.

Representation of FOA could cite only seven cases which had arisen in its guaranty program involving substantial conflicts between proposed technology licensing arrangements and the antitrust laws. In four of these cases the investor was able to modify his licensing agreements and qualify for guaranty assistance. In three instances, the applicant refused for various reasons, to alter the agreements proposed and so was not granted assistance. In these instances FOA did not know whether the proposed arrangements nevertheless were consummated.

It is clear that antitrust has been no substantial bar to Government programs designed to stimulate technical assistance and investments in foreign countries. In any event, to the extent that foreign investments cannot be made except by permitting territorial allocation and price-fixing arrangements now illegal, it is my firm view that the antitrust law should prevail.

Instead of weakening the principles of antitrust applicability to foreign commerce by permitting American firms to enter restrictive arrangements it would seem to be the better course to eliminate the few areas in which American firms now are permitted to combine. Repeal of the Webb-Pomerene exemptions, for example, would be an affirmative step in persuading other countries to abandon similar restrictive practices. That act is a clear negation of antitrust philosophy and was enacted as purely a defensive measure to counteract the economic power of European buying cartels. Times have changed, such protections are no longer necessary.

Further, intensive support should be given by our Government to establish international procedures to cope with restrictions on international trade. Our antitrust laws, in themselves, are not sufficient to eliminate restraints by foreign conspiracies upon the foreign and interstate commerce of the United States. Since many of the participants in such conspiracies are foreign, our courts cannot proceed against all of the parties involved. Some kind of international control of this problem seems to be the only way to protect the American economy against the damage caused by foreign cartel arrangements. Moreover, international control would be much more advantageous to American industry than the present unilateral antitrust enforcement against their foreign operations.

The remedy for this situation is not to admit that United States commerce is to continue to be artificially restrained. To protect our own economy we must lead other countries to recognize the value of antitrust and apply its principles to international commerce.

Cartels foster an economy of scarcity. A free economy provides abundance. Abundance is a powerful weapon for combating the appeal of totalitarianism to impoverished and discontented peoples. Modern competitive man must indeed become cooperative if he is to survive, but cooperation cannot be achieved by the powerlessness which monopoly and restriction inevitably produce. Cartel agreements do more than apply self-imposed restraints; they restrict those outside the group, both consumers and competitiors. As to these, the cartel is not a form of cooperation, but of oppression. Only measures chosen pursuant to law to promote the interest of all, by insuring freedom from monopolistic power, can provide the conditions for cooperation.

A Tribute to Frances Willard

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. REES of Kansas. Mr. Speaker, last Friday, under the auspicies of the Woman's Christian Temperance Union of the District of Columbia, services were held in Statuary Hall commemorating the date of the death of a great American woman, Frances Willard. I am including herewith a brief address I made on that occasion:

We meet here this afternoon at a hallowed spot in the Nation's Capitol to honor and pay tribute to the memory of a great soul. She has been likened to George Washington in that she was first in peace, not first in combat war, but moral war against the liquor traffic and kindred evils that were sapping the vitality of her country. Certainly she was first in the hearts of her countrywomen.

Frances Elizabeth Willard was born in Churchville, N. Y. She was reared in Janesville, Wis. She received her early education in Evanston, Ill., where she later became the first president of the first women's college in this country.

One of the foremost women of her day said at the time of her death: "The home-going of no other woman would have made so many women feel as though the sun had set."

Frances Willard was honored by the great and near great of two continents. A grateful people of the State of Illinois reared this statue in her memory. She is the only woman so honored in the Hall of Fame of the Nation's Capitol. Miss Willard requested that the date of her death, which is February 17, be celebrated as what she described as "her heavenly birthday."

I am honored in joining with you in this ceremony in paying tribute to the memory of a great character, a great soul.

I want at this moment to pay tribute to you, the Women's Christian Temperance Union, and to the membership of your organization for your efforts in carrying on the work of the organization established and founded by Frances Willard. I wish there were sufficient time during which I could name some of the people who are gathered here this afternoon on this occasion. Each of you gathered here this afternoon is a distinguished person. Kansas, my home State, is proud to claim the president of your organization, Mrs. Glenn G. Hays, as one of the daughters of your union. Incidentally, the Women's Christian Temperance Union and its associates are extremely fortunate to be represented in Washington by Miss Elizabeth Smart. You have good reason to be proud of her and her work.

Frances Willard was not only the founder of your great institution. She was a leader in a continuous battle against the use of intoxicating liquors. She was also a great teacher. As an instructor in high school and college, she had opportunity of getting acquainted with the lives of people at first hand. At the age of 17 Frances Willard attended what was described as "the Milwaukee Female College." On examination day she was honored when she read her essay on the subject "Originality of Thought and Action."

Miss Willard was elected president of the Woman's Christian Temperance Union in 1879. She held this position during the years that followed. It would only be repetitious for me to recount the growth of the organization and its influence in this country and in Europe. The record, with which you are familiar, speaks for itself.

And so, we, who survive, are engaged in a great crusade, a greater and more important one than most of us realize or appreciate. Miss Willard has submitted a challenge to you and to the American people that we can't escape even if we choose to do so.

Of course, it is impossible to measure the cost in money and misery that has been caused by the use of intoxicating liquors. There are figures that are somewhat revealing. Reports of major crimes committed in the United States during the year 1954 indicated a new high of 2,267,000. Of these 1,690,000, or almost 60 percent of the total, were attributed either directly or indirectly to the use of alcoholic liquor. This is a report from the Federal Bureau of Investigation. The high cost of drunkenness is difficult to estimate. It should be observed, however, the liquor bill for last year in the United States amounted to $9,700,000,000. This amount, if applied on our Federal expenditures, would pay for all the employment in Government which means the salaries of more than 2 million employees during the year. As a matter of fact, it would pay one-sixth of the total amount of the Federal expenditures, including defense costs.

These are only cold figures. The number of deaths on our highways caused by drunken driving is mounting every year and the greatest cost of all, which cannot be measured, is the cost of broken homes, human misery, and poverty all because of the use of intoxicating drink.

My friends, you are facing one of the greatest challenges of our time dealing with a hydra-headed monster most difficult to destroy. If you and I are convinced that the thing is wrong, then we have a responsibility we cannot escape. It is to combat this thing to the best of our ability and strength.

Frances Willard has handed the torch to you and to me and to all thinking American citizens. May you hold it high. The battle has just begun. May it be said of Frances Willard, "She did the best she could. No one could do more." May we join in the great crusade so it will be said of us, "We too did the best we could."

Nothing for the Navahos in Upper Colorado River Scheme

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. WILSON of California. Mr. Speaker, the upper Colorado storage project bill, H. R. 3383, would not assist the Navaho Indians.

It provides for the Navaho Dam and Reservoir, but not for the present construction of the Navaho project. However, the construction of the dam would have the effect of committing Congress to constructing the irrigation project works. The cost of the dam is estimated at $36,500,000; the irrigation project an additional $175 million. There are some 1,100 Navaho families involved, meaning a construction cost of close to $200,000 for each Navaho farm. This is just to bring water to the land and does not account for assistance which will undoubtedly be necessary for equipment to get the lands in production. This astounding cost should be most carefully considered before Congress acts, particularly since H. R. 3383, as recently amended, now provides that costs allocated to Indian lands which such lands cannot repay shall be nonreimbursable—section 6. This amendment was advertised as a gift to the Indians by newspapers reporting on recent upper basin conferences which led to the amending of H. R. 3383. It is a gift Congress might well inspect closely. Certainly some more realistic and more economic method of providing for the Indians can be considered. By this gift, the upper basin shows its unwillingness to have the costs of the Navaho project paid for by the power revenues, as all the other costs are supposed to be. Instead, this money will go into the funds to be apportioned among these States, leaving the taxpayers in the rest of the country to carry the load.

Thirty-eighth Anniversary of Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

FREEDOM FOR LITHUANIA

Mr. WILLIAMS of New Jersey. Mr. Speaker, last Thursday marked the 38th anniversary of Lithuanian independence and I take this opportunity to salute American citizens of Lithuanian decent. We join with them in their wishes—that their people, the freedom loving people of Lithuania, will again be free. In 1913, after 138 years of Russian rule, they achieved independence. During this period of independence they experienced a rebirth of their national culture and political freedom. Yet only 27 years later they found themselves helplessly within the Soviet orbit and today they suffer the severest form of Soviet occupation.

I think that today we all realize our commitment not only to the people of Lithuania but to those people in all areas of the globe under Soviet tyranny—a commitment to keep upermost in our minds the goal that they will again be free. Therefore, we resolve it to be our duty to see that political freedom again takes its proper place in the world scene.

Roy Tasco Davis, United States Ambassador to Haiti

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, February 21, 1956

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the international edition of Time magazine on December 5, 1955, concerning one of Maryland's leading citizens, Hon. Roy Tasco Davis, our Ambassador to Haiti. With his down-to-earth philosophy of life, Ambassador Davis has gained the respect and admiration of the people of Haiti, and this service in representing our Nation deserves the plaudits of all Americans.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HAITI

HOMESPUN AMBASSADOR

Near the tiny village of Bonneau, the United States Ambassador to Hait rolled up his trouser legs one day last week, trudged into a freshly plowed field. There he planted a cocoa-tree sapling, symbolic of thousands that will be grown in a new nursery set up by the United States and Haitian Governments. Later, he scraped some red dirt from his shoes, wrapped it in a banana leaf and crammed the muddy package into his coat pocket. "A souvenir of Bonneau," he explained with a friendly smile. The watching crowd laughed and cheered, and school kids sang in Creole:

"There is in our tongue a very little word—
And that little word says thanks."

CANE AND SPATS

Down-to-earth Ambassador Roy Tasco Davis is probably the best known, best loved United States Foreign Service officer between the Rio Grande and the Amazon—and he is not even a career diplomat. Born at Ewing, Mo., in 1889, he was a congressional page boy under House Speaker Joseph G. ("Uncle Joe") Cannon, then took his degree (bachelor of philisophy) at Brown University. Later he served as secretary and business manager at Missouri's Stephens College. In 1921, President Harding named loyal Republican Davis to be United States Minister to Guatemala. Determined to play the correct diplomat, Davis bought a cane and spats, and just as quickly abandoned both—the cane after a Boy Scout thoughtfully led him across a street, and the spats when he found they made his ankles sweat.

After that, Davis gave the back of his hand to protocol and concentrated on making friends. During Panama's 1931 revolution, he advised against United States armed intervention (then permissible by treaty); in gratitude, Panama named a local lake for him. In Costa Rica, he was pronounced the "best liked gringo," and villages named streets for him. During World War II he organized the State Department's Inter-American Schools Service which fought Nazi influence by sending United States teachers for 70,000 students in Latin American schools; Ecuador later named a school building for him.

PUZZLED PUNCTILIO

Haiti proved a different matter. With a small Negro nation's fierce pride in being correct, Haiti had taught tricks of punctilio even to veterans of Rome, Berlin, and the Court of St. James's. From its diplomatic corps it expected sartorial elegance, smooth address, and good taste in wines. So it was with considerable bewilderment that upper-crust Haitians made the acquaintance of Roy Tasco Davis.

He chucked babies under the chin at church bazaars. In the big white embassy residence, he presented visitors to motherly Mrs. Davis by saying: "Mama, shake hands with —." Once at a formal dinner he led the comely daughter of the chief of Haiti's armed forces up to her father and with a smile said: "General, I'd like you to meet the prettiest girl in Haiti." Top society and even palace aids, unaccustomed to homespun humor, for days debated the meaning of the Ambassador's presentation to the general of a member of his own family.

A WONDERFUL GUY

But—as President Paul Magloire was one of the first to note—Davis' disconcerting affability symbolized real warmth toward Haiti. Hurricane Hazel had hardly whirled away last year before Davis telephoned Washington for direly needed help. In this year's famine, he again called for United States food and medicines that doubtless saved hundreds of lives. He has traveled all over Haiti to promote the growing of cash crops—such as coffee and cocoa—that give promise of raising the overcrowded country's standard of living.

As a result, most Haitians have long since taken plain Roy Davis to heart. The Port-au-Prince taxi drivers greet him cryptically, but enthusiastically, with shouts of "Allo, Monsieur Tasco." A Haitian newsman once wrote in Le Nouvelliste: "One would like to tell him, patting him affectionately on the shoulder and using a common expression of his beautiful and great country, 'Roy, you're a wonderful guy.'"

Upper Colorado Project Means More Farm Surpluses

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. HOSMER. Mr. Speaker, the Federal Government, this means all of us, now has more than $8 billion in surplus farm products stored in warehouses around the Nation.

Storage costs alone are $1 million a day.

These surpluses are steadily increasing.

On the one hand, Congress is proposing to take 40 million acres of land out of production and put it in a so-called soil bank.

The Government would pay farmers $1 billion or more a year to remove this land from production to help decrease the huge surpluses.

But, on the other hand, there is an incredible proposal before Congress called the upper Colorado River storage project to irrigate 580,000 new acres of arid mountain land in Colorado, Utah, New Mexico, and Wyoming at a cost to the Government, this means all of us, of $4 billion. And these lands would grow more surplus crops.

If you are confused, here is the answer: Defeat the upper Colorado project, which would create an additional $4 billion tax burden and also add to the huge pile of farm surpluses.

Tribute to Le Grand Skinner

EXTENSION OF REMARKS
OF

HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1956

Mr. KEARNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following tribute to Le Grand Skinner, of the Skinner Engine Co., in Erie, Pa., and two articles entitled "Building Steam Engines Exclusively for 82 Years" and "Steam Engines and the Birth of the Nation."

Mr. Speaker, today the farsighted men of the American maritime industry are properly turning their thoughts to atomic-powered surface vessels for the American merchant marine. Already our maritime industry engineers and draftsmen have plans drawn for surface vessels that will carry the American flag to the four corners of the globe under the power of the atom. Also, such vessels can be used for our Great Lakes and the inland waterway system.

It is only fitting that the Congress pay tribute to Le Grand Skinner, of Skinner engine fame, whose ancestors, Commodore Matthew C. Perry, United States Navy, and Commodore Oliver H. Perry, United States Navy, commanded our Navy's first steam-driven war vessels and frigates—the *Fulton II*, the *Missouri*, and the *Mississippi*.

Le Grand Skinner was one of the foremost pioneers in American maritime history. His guiding genius was directly responsible for developing one of our Nation's most outstanding producers of marine engines. It was exactly 111 years ago that Le Grand Skinner was born, and 88 years have elapsed since he founded the Skinner Engine Co. in Erie, Pa. Since that time, Mr. Speaker, the Skinner Engine Co. has produced the most efficient marine engines in the world, and for the past 30 years has held the distinction of having constructed the largest marine engines ever used in steam vessels, and continues to build the largest marine engines in the world.

The Skinner Engine Co. is a small-business enterprise that has served our Nation both in war and peace. Its outstanding service to the Nation was officially recognized on December 8, 1941, less than 24 hours after the attack on Pearl Harbor, when the War Department presented the first high production flag to the Skinner Engine Co. together with the famous gold standard of the Quartermaster Department.

In its 88th year of service, this famous American small-business enterprise is now on the threshold of engaging in industrial atomic developments and the marine reactor field, and this step forward is a challenge that the great small-business enterprises of our Nation shall survive and meet with success.

As we stand at the dawn of the new and glorious age of atomic propulsion, our Nation is indeed fortunate to have a producer of marine engines and component parts such as the Skinner Engine Co. upon whom America can depend to rank among the pioneers in production of atomic products, reactors, and engines powered by the atom.

As a further tribute to Le Grand Skinner and the Skinner Engine Co. that he founded, Mr. Speaker, I would like to here insert in the CONGRESSIONAL RECORD two articles that appeared in the April 1950 edition of Marine News. These articles attest to the great service rendered our Nation by the Skinner Engine Co. and its founder, Le Grand Skinner.

CITED FOR SERVICE—POSTHUMOUSLY

Our first posthumous citation is to one of the great pioneers of American industry—Le Grand Skinner, to be accepted by his grandson, the present head of the Skinner Engine Co., J. Le Grand Skinner. Not only for his achievements in the development of steam engines, which have contributed so much to the welfare of our country, and the world, but to do honor, as well, to two great United States naval officers, Commodore Matthew Calbraith Perry, who opened up Japan to the Western World, and his older brother, Commodore Oliver Hazard Perry, hero of the Battle of Lake Erie, close relations of his grandmother. For, just as Le Grand Skinner was steeped in steam engines, Commodore Matthew Calbraith Perry commanded the first American steam war vessel, the *Fulton II*. He also planned the *Missouri* and the *Mississippi*, the first steam frigates of the United States Navy.

Le Grand Skinner, being an inventor of steam engines, naturally became intensely interested in the true inventor of the first steam boat, John Fitch.

Born in Pooleville, Madison County, N. Y., May 23, 1845, the son of Frank and Charlotte (Eaton) Skinner, Le Grand Skinner's boyhood days were spent in the little town of Eaton, N. Y., where he went to live with his uncle, the second manufacturer of portable engines in the United States. Besides learning about steam engines working for his uncle, young Skinner spent considerable time in the tool room of the Remington Arms Manufacturing Co. at Ilion, N. Y. In 1868 he constructed his first engine after his own design, his work being conducted in a little shop built on the site where stood the little log cabin which had been built by his maternal grandfather. He had 12 men working for him, and after going home for dinner would return to the shop and work until early the next morning. He also maintained a small shop in the basement of his house, where he perfected his inventions. However, his mind would find relaxation in music, which also soothed his weary body from hard work. In 1871 he began the manufacture of engines at Chittenango, N. Y., then in Chicago, and on July 3, 1873, established a small manufacturing plant in the Lilley Shop, Erie, Pennsylvania. In 1875 he formed a partnership with Thomas Wood and the firm of Skinner and Wood eventually built a large plant. Dissolving in 1883, Mr. Skinner conducted the business alone for 2 years, and then the Skinner Engine Co. was incorporated, with him as president. He, also, was one of the organizers of the Union Iron Works, manufacturing boilers.

Skinner engines played their part grandly in three wars—the Spanish-American War, and World War I, and World War II. During World War I, Le Grand Skinner was adviser to the Emergency Fleet Corporation, in Washington, D. C. Both during this war to make the world safe for democracy, and afterward he gave more and more time to his love for music, writing many musical compositions, including a descriptive nocturne, As Twilight Deepens Into Night, and a fantasy, Adrift on a Golden Sea, to mention but two fine works.

Having over 30 inventions to his credit, Le Grand Skinner had close association with the late Henry Ford, with whom he exchanged thoughts of mutual interest, Ford often visiting him in Erie. The founder of the largest plant in the United States devoted exclusively to the building of steam engines died in 1922, and his son, Allan David Skinner, succeeded him as president. Now the founder's grandson, J. Le Grand Skinner, is president of the Skinner Engine Co.

In World War II the Skinner Engine Co. was the first company to receive the Army Transport Service flag, but the flag was recalled because Congress did not make any financial appropriation. This company was the second plant in the United States to receive the Army-Navy E award, August 25, 1942.

In 1942, 40 percent of the employees of the Skinner Engine Co. had worked continuously for the company for over 40 years. They worked around the clock during both World War I and World War II.

So, to the heritage of the Skinner Engine Co., as manifested in its founder-inventor of the Skinner marine unaflow steam engine, the principle of which has for its object the elimination of one of the greatest losses in reciprocating steam engines—initial condensation—to Le Grand Skinner posthumously accepted by his grandson and the present head of the company, J. Le Grand Skinner, we are happy to give this citation for service to the marine industry.

BUILDING STEAM ENGINES EXCLUSIVELY FOR 82 YEARS—SPECIALIZING IN MARINE ENGINES—SKINNER ENGINE CO. SINCE ITS INCEPTION HEADED BY MEMBERS OF SAME FAMILY

Skinner Engine Co., Erie, Pa., has been building steam engines exclusively for the past 82 years. In that period it has advanced to the leading position in the industry, and continues to specialize in high-economy steam engines: stationary type, for the generation of power, and marine engines for ship propulsion.

This company is unique in that since its inception it has been headed by members of the same family. Its founder, Le Grand Skinner, was president until his death in 1922. His son, Allan D. Skinner, succeeded him as president, serving actively in that capacity until his death in 1942. The third generation, J. Le Grand Skinner, son of Allan D., became president in 1942.

At the end of the Civil War a growing Nation found increasing need of power to turn the wheels of its expanding industrialization. Until the advent of electricity, power was more commonly available through the mechanical use of a water wheel or a very small steam engine arranged to drive a given piece of production machinery. The use of lineshafting, though now outmoded, had not yet been fully accepted, and an individual power drive for each machine was common practice.

Being a young man of unusual mechanical ability, Le Grand Skinner decided to build a steam engine which would satisfy popular power requirements. He realized in those days that portability would be desirable, for one engine could then be used to operate any number of machines, simply by moving the engine from one to another, and by attaching a belt to the pulley of the machine to be driven.

Accordingly, he designed and built his first steam engine in 1868, in a small barn at the rear of his home. This double acting engine

was mounted on top of a small boiler, so that the combined unit could be moved to any location requiring power. The original engine-boiler unit was raised at 5 horsepower and is shown at the left.

This design proved to be highly marketable, with the result that Mr. Skinner, as an individual, was no longer able to take care of the demand. A partnership was then formed with Thomas C. Wood, and the business thrived under the name Skinner & Wood until 1885, when Mr. Skinner acquired his partner's interest and incorporated under the present name—Skinner Engine Co.

He realized that, no matter how well an engine was built, its economy was directly dependent upon how tight its slide valve could be made. He pioneered this theory, which is still the objective of the present company. As the result, he invented and developed the Skinner steam-tight valve which came into use on all of his slide-valve steam engines.

This valve expands to compensate for its own natural wear, with the result that it always remains steam-tight. The engine was sold on the basis of the value of the fuel it could save against other makes of steam engines whose valves were inherently leaky after only a few months' service. This method of selling became known as the Skinner guaranteed saving contract.

The unaflow type of steam engine was introduced in this country by Mr. Skinner in 1913, and, because of its unique features and high economy, it gradually replaced other types of counterflow steam engines, both slide valve and Corliss.

The unaflow principle has for its objective the elimination of one of the greatest losses in reciprocating steam engines, namely, initial condensation.

In the case of the counterflow engine, after the steam has expanded on the power stroke it returns and is exhausted from the same end of the cylinder at which it entered. Thus the comparatively cold expanded steam of considerable volume washes the hot cylinder walls on the return stroke, cooling them to such an extent that a portion of the incoming steam is chilled and condensed as it enters the cylinder.

In the unaflow engine, the steam enters the cylinder at the ends, after passing through steam-jacketed heads; and after cutoff and expansion have taken place, the steam is exhausted through ports arranged around the center of the cylinder which are uncovered by the elongated piston at the termination of the power stroke from each end of the cylinder. Consequently, the steam has a unidirectional flow—hence, the derivation of the name "unaflow." Initial condensation is almost completely eliminated.

Poppet-type valves were found to be most practical for the unaflow engine, and again Mr. Skinner developed the only known poppet valve which would remain steamtight indefintely. Like the steamtight valve on the slide-valve engine, the Skinner double-seat poppet valve has a telescopic seat which compensates for natural wear and for expansion and contraction due to temperature changes.

The success of this engine was so rapid that, notwithstanding its higher price, Skinner Engine Co. soon found it was producing more than twice as many unaflow steam engines as all other makes combined. Because of its steamtight valves and other patented refinements, the Skinner Universal Unaflow was replacing all other types of stationary engines on the basis of the savings it effected by reduced steam and fuel consumption.

Until the late twenties, all of the engines built by the company were of the single-cylinder horizontal type. Realizing the importance of reducing space, in 1928 the company developed its first multicylinder vertical Unaflow steam engine for stationary powerplant service, designed to drive generators, pumps, compressors, blowers, etc., at moderately high speeds, and with the same features for initial and maintained economy found in the horizontal type.

The success of the multicylinder vertical, stationary unaflow steam engine led to the development in 1932 of the first Skinner marine Unaflow steam engine. These are built in a variety of 7 lengths of stroke, each available with from 2 to 8 cylinders, resulting in a wide range of capacities at various speeds. The present ratings vary from 500 to 6,000 indicated horsepower. The largest of these engines yet built was shipped early in 1950.

These marine engines have been used to propel various classes of commercial vessels, such as luxury coastwise passenger ships, railroad car ferries, automobile and passenger ferries, express cargo ships, bulk ore carriers, tankers, hopper dredges, icebreakers, harbor and oceangoing tugs.

The Skinner marine Unaflow steam engine is fully enclosed, force-feed lubricated throughout, and all cylinders, valves, pistons, connecting rods, and other parts are exact duplicates. Operating on the simple condensing Unaflow cycle, each cylinder takes full throttle pressure twice per revolution and exhausts directly to the condenser.

Short cutoffs of steam in the cylinders are employed at normal full-load rating, averaging from 12 to 15 percent of stroke, but with 70 percent available for overload and maneuvering. Since the valve gear is so designed that control is entirely by cutoff, these engines provide unexcelled ship-maneuvering qualities. The time element for reversal of full power from ahead to astern is dependent only on the speed of the operator in moving the controls. Tests have proven this can be accomplished within 4 seconds.

Permanently steamtight, patented, expansion-compensating, poppet inlet valves, as originally developed for use in Skinner stationary Unaflow engines, are employed in the marine design. These valves, of forged steel, as well as the cylinders and heads, made of special alloy metal, permit the use of high pressures and temperatures.

The employment of the unaflow cycle, with the elimination of valve leakage and initial condensation, results in the distinct advantage of a flat water-rate curve. Therefore, economy is practically the same at fractional loads as it is at full load.

During World War II the Skinner Engine Co. was engaged in a very large production program involving the facilities of other plants as well as its own, in order to meet the requirements of the armed services. Skinner marine unaflow steam engines were used to propel escort aircraft carriers and landing ship docks (LSD's) for the United States Navy, as well as mine planters and oceangoing tugs for the Army.

These engines are manufactured in Canada under license. Since 1945 a considerable number of these engines have been produced by the licensee for various types of Canadian and foreign vessels.

Up to this time approximately 12,000 Skinner engines have been produced. These engines are in service in almost every known industry and in almost every part of the United States and in many foreign countries.

That the Skinner Engine Co. pioneered in creating and manufacturing marine steam engines is found in the early inventions of Le Grand Skinner, who had made a study of steam engines from the earliest times. He even went back to the Pneumatica of Hero of Alexandria, Egypt, 130 B. C., where is described the aeolipile, which is a primitive steam reaction turbine. From the time of Hero to the 17th century there is no progress on record. The next distinct step was the publication in 1601 of a treatise on pneumatics by Giovanni Battista della Porta. Then there was Thomas Savery's steam engine that first became commercially successful in 1698, and Dennis Papin's earliest cylinder-and-piston steam engine around 1690, leading up to Thomas Newcomen's atmospheric engine in 1705 that brought James Watt, an instrument maker in Glasgow, to the fore.

But undoubtedly Le Grand Skinner must have been intrigued by the fundamentals of the engine of the first practical steamboat devised and successfully demonstrated by the Connecticut Yankee, John Fitch, in 1796.

Imbued with United States history, Le Grand Skinner delved into the earliest records to be found in the archives of the Nutmeg State, where John Fitch was born in Windsor, January 21, 1743.

This American pioneer of steam navigation, son of a Connecticut farmer, went to sea at the age of 17. Discontinuing his sailor life after a few voyages, he became successively a clockmaker, a brass founder, and a silversmith. During the War of Independence he was a sutler to the American troops, and amassed in that way a considerable sum of money, with which he bought land in Virginia.

Following the Revolutionary War he began an exploration of the northwestern regions, with a view of preparing a map of the district. While sailing on the great western rivers the idea occurred to him that they might be navigated by steam. Settling down again he invented the first practical marine steam engine, which was favorably reported upon by the legislatures of several States, but he was unable to obtain any pecuniary assistance to build his engine. He did, however, form a company for the prosecution of his enterprise in 1786 and a steam packet of his invention was launched in the Delaware River.

Considering this date, and that of the first successful trials of a steamship in the city of New York as shown elsewhere on this page, it will be seen that steam navigation and the development of steam engines grew with our country. It may well be said that the marine steam engine was born with our Republic and developed along with it.

And here are two great States, Connecticut and Pennsylvania, jointly responsible for the world's first and largest marine steam engines. What is more appropriate than that these two States should do honor to the inventive genius of two outstanding developers of the marine steam engine, John Fitch and Le Grand Skinner.

It is a most interesting coincidence that when John Fitch went to sea, as mentioned, he sailed out of Mystic, Conn., April 19, 1760.

STEAM ENGINES AND THE BIRTH OF THE NATION—ORIGIN OF STEAM NAVIGATION

Six years before Robert Fulton made a trial of his boat upon the River Seine in France, and 10 years prior to his putting the *Clermont* into operation in New York, the first boat with paddle wheels or screw propellers propelled by steam was constructed by John Fitch, of East Windsor, Conn.

In the summer of 1796 he steered his steamboat several times around the old Collect Pond situated a short distance north of the present city hall in the city of New York. According to testimony of several prominent witnesses, Fitch explained his steam engine to Robert R. Livingston and Robert Fulton. The Fitch steamboat was a common yawl about 18 feet in length with a 6-foot beam, square stern and round bow. She was steered at the bow with a small oar when the propeller was used.

The boiler was a 10 or 12 gallon iron pot with a lid of thick plank, firmly fastened to it by an iron bar placed transversely. The cylinders were of wood, barrel-shaped on the outside and straight on the inside, strongly hooped. The main steampipe led directly from the boiler top into a copper box, about 6 inches square, receiving the cylinders, and each piston rod was attached to the ex-

tremities of the working beam. This beam was supported by an iron upright, the connecting rod so arranged as to turn the crank of the propelling shaft which passed horizontally through the stem of the boat and was made fast to the propeller or screw. The valves were worked by a simple contrivance attached likewise to the working beam.

The boat, together with a portion of its machinery, was abandoned by Fitch, and left to decay on the muddy shore of Collect Pound. John Fitch died in Kentucky in the year 1798.

Second Decade of the Jet Age

EXTENSION OF REMARKS
OF

HON. S. J. CRUMPACKER, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1956

Mr. CRUMPACKER. Mr. Speaker, at the jet age conference of the Air Force Association, held at the Sheraton Park Hotel in Washington a few days ago, the Commander in Chief of the Continental Air Defense Command made some pertinent remarks about problems confronting the Nation, and especially the Air Force, as we move into the second decade of the jet age. The speaker was Gen. Earl E. Partridge. His job is to coordinate the air defense of the United States, and the North American continent. His command is a joint command—made up of elements of the Army, Navy, and United States Air Force.

I suspect that some of my colleagues have already become so accustomed to the sound of jet aircraft that they fail to realize what an innovation jet propulsion is, from the joint of view of history.

The first American officer to fly a jet aircraft has only recently retired from active duty, and his retirement was not due to age. Far from it. It was ill health, not advancing years, that deprived the Air Force and the Nation of the further services of Gen. Laurence C. Craigie who only 13 years ago flew the United States' first jet aircraft.

The free world's first jet ace, Maj. James Jabara, won his distinction in May 1951. The first man to cross the sonic barrier, Maj. Charles Yeager, did so less than 9 years ago.

But already our Air Force is so nearly an all-jet air force that the noise of supersonic jet aircraft is considered a civic problem, and municipalities, thinking more of comfort than of defense, are seeking to have Air Force bases pushed farther and farther away from the communities they were built to serve, and to protect. The mere fact of the effort indicates a certain lack of understanding of the problem of defense. It is as if the American people themselves had been taken in by what General Partridge called the fast alternating diet of smile and bile whch is fed this globe by the Soviet Union from day to day. They think the threat to freedom less important than the occasional annoyance of the sonic boom.

The result of all this is that many Air Force commanders have to prepare defenses for the Air Force on the platform in almost equal ratio to the amount of time they give to preparation to defend America from air attack. The relative importance of their two duties seems not to have been weighed by the groups whose protests necessitate the defense of the Air Force buildup.

Mr. Speaker, there should be no need to defend the Air Force against our own citizens. The Air Force recognizes its obligations to the community, and is doing everything it can to abate the admitted nuisance of jet noise. But the problem is still a new one, and one that requires time for the solution. The problem of defense is an old one—but one that has taken on frightening new aspects as organized communism tightens its hold on the minds of masses, everywhere, and extends its control over an alarmingly large section of the globe.

This problem, the problem of defending America and the free world against organized communism in the second decade of the jet-age, is not solely an Air Force problem, or a community problem. It is a national problem requiring a national solution. It is one to be approached with a sense of immediacy, and largeness, and danger. Public education to the seriousness of the problem is mandatory; action is of primary importance.

Mr. Speaker, with the consent of my colleagues, I wish to extend my remarks and insert in the CONGRESSIONAL RECORD General Partridge's able address, which is a healthy, helpful review of the problem of jet noise in the jet age—and of the community's obligation to the Air Force.

General Partridge's remarks follow:

ADDRESS BY GEN. EARLE E. PARTRIDGE, COMMANDER IN CHIEF, CONTINENTAL AIR DEFENSE COMMAND, BEFORE THE JET AGE CONFERENCE OF THE AIR FORCE ASSOCIATION, WASHINGTON, D. C., FEBRUARY 3, 1956

General Doolittle, gentlemen, on this short film, you have just seen the United States Air Force first supersonic jet fighter—the F-100, the initial member of the so-called century series of aircraft which will be coming in great numbers into the Air Force and American consciousness in a few months.

The sonic boom is not just a raucous way for this new offspring of aeronautical science to make its grand entrance, but it is one aspect of a problem we will hear much of during the next two conference days.

Actually, I am not going to stress the problem of the sonic boom, but rather, the United States Air Force requirements in two areas during the second decade of the jet age—first, the jet air base from which flights originate and home, and second, in flight. Or, put another way, the base from which we operate and air-traffic control.

The United States Air Force has long recognized the difficulties of community relations at jet air bases, and in the Continental Air Defense Command we have worked on community relations with great energy near our bases. Later on the program here you will see the film, Twenty-four Hour Alert, which dramatizes this work and drew much of its material from our base commander's experience at Truaz Field, near Madison, Wis.

It is perhaps indicative of what must be done on an even grander scale, if we are ever to solve this problem. This film was the product of a motion-picture studio giving of its talents, an aircraft company putting up money, a motion-picture star contributing his prestige in public service, and, of course, the all-out cooperation of the United States Air Force. The result is a film editorial which has facts, substance, logic, and educational qualities which can hardly fail to move any viewer.

We have not been content with working around bases, although we do not discount the tremendous value of close contact with the citizen and the community. The Air Force does feel, however, that there must be a well-organized plan and program subscribed to not only by the Air Force, but which goes across-the-board in Government, industry, and science if we are to really make inroads on the difficulties in jet aircraft operation in the United States.

By now, it should be obvious to everyone that none of this flying is done just for the sake of thrill to the pilot, but for the sake of our existence as a Nation and a world power. The fast alternating diet of smile and bile which is fed this globe by the Soviet Union from day to day pits us against a ruthless international combination. While we recognize a world full of political and military booby traps, we can never afford to become the candidate for the booby prize.

About 2 years ago, the Air Force Chief of Staff appointed a committee of experts headed by General Thatcher, and this group worked for more than a year on the problems built into jet operations. At the outset, they agreed with the President's Airport Commission report of 1952 which stated:

"Recognizing that aeronautics is an essential element of our national economy, they (the public) asked only that all possible steps be taken to minimize nuisance and hazard."

The Air Force experience around its bases verifies this attitude on the part of communities alongside. The Thatcher committee summed up the problems of noise and hazard in such an excellent manner that I should like to quote further:

"The committee has been impressed throughout its study by the pervasiveness of two basic influencing considerations. First, the conflict between communities and airbase operations is not simply an Air Force problem. It is a problem affecting national politics and the national economy as well as national defense. It applies to the civil populace, to Congress, to the other Armed Forces and to industry, as well as the Air Force. United States Air Force airbase utilization is a national problem and there must be a national solution. Second, the answer to the problem must be effective in resolving present conflicts as well as effective in preventing future ones. An effective long-range solution will be cheaper and will give better defense and will be more acceptable than a series of temporary solutions."

The problems of the military airbase are not easily solved as long as one Air Force flying unit is located in or near a community, and at no time can solutions be more than temporary or relegated to status of a routine staff function. Community growth, airbase mission changes, introductions of new weapons, as well as each new design or type of aircraft will bring up new local issues.

Noise and hazards can never be completely eliminated, but a nation is compelled to accept some inconveniences as a penalty for national security and advancement of the national economy. The magnitude of this inconvenience varies inversely as the distance between the source of the annoyance and those affected by it.

The Air Force has three broad courses of action which will lessen adverse operational effects.

At its existing bases, the Air Force may obtain public understanding of the necessity for the inconvenience of the disturbing fac-

tors in order to elicit community support of Air Force operations;

By scientific research, the Air Force can decrease noises and hazards at their source.

And, the Air Force can move its units an effective distance away from communities and properly orient its local traffic.

That last proposal—the moving of Air Force units away from communities—is the one which is generally brought forward by the communities themselves.

And this is not one of those problems which will die of old age, or like an old soldier will just fade away. The truth has to be told to the citizen, told quickly, and told in detail—told in terms of what it means in national defense, and in terms of what it means economically, or financially to him.

Since the end of World War II, we have quit-claimed to many municipalities airfields which were built with Air Force funds, and we have held onto such bases as skeleton requirements for the Air Force as our budget would permit. We have spent about $7 billion in worldwide air base construction.

And today, if various communities had their way, the Air Force would immediately have to start spending $3 billion for construction of new bases to house units which are faced with removal pleas and petitions. And such is the way of the real-estate operator, or subdivider we have encountered, any such removal is only momentary as he begins to cut up land adjacent to the base into lots and starts selling them to householders who will be newer champions of eviction in time to come.

We have had considerable Air Force experience with nuisances both ways, the effects of our own, and those who commit them against us. We have the man who acquires land at runway ends, shrewdly guessing that runways will have to be lengthened eventually to take the newer, more powerful military and civilian planes. We have known city commissioners who resist runway improvements required for jets at municipal airports, yet take as much money as the improvements would cost to build monuments and fountains out in front of the terminal where a suitable plaque can be mounted extolling the virtues of the commissioner. We have had newspapers who dredged up a dozen military aircraft accidents over a 7-year period as an excuse to move an airfield, yet found no reason to remember there were more than 3,000 accidents on the highways in that same area in the same 7-year period.

Meantime, the Air Force has gone scientifically about doing something to help. We have put barriers around the tailpipes to corral and enclose the sounds of run-up. We have also moved this phase of ground operations to the most isolated part of the airfield. And we have had our base or unit commanders on speaking engagements, making local and logical explanations to the people beside whom they live, and the people their unit defends. We have found that many of our commanders have to prepare defenses for the Air Force on the platform in almost equal ratio to the amount of time they give to preparations to defend America from air attack. Personally, I'd feel safer if he spent all his time on the latter.

Unfortunately, we have to start from where we are now, and in my Continental Air Defense Command alone, we live on 18 civil airports—that's about one-third of our operational bases. Now, what is an air base requirement? A distinguished group of people, experts assembled by the office of the Secretary of Defense, have submitted a very complete report on the types of airfield operations we should have for jets. For single-engined aircraft, there should be a 10,000-foot runway 200 feet wide. For multi-engined jets, 11,000 feet long, 300 feet wide. Taxiways and parking area must be in proportion and heavy duty pavement.

In the Continental Air Defense Command, we want at least 9,000 feet, but we do not have this on the majority of our stations. We are paying in manpower and busted airplanes because of the short fields from which we operate. An airfield which can barely take an aircraft in cool, dry weather of northern United States, comes up dangerous and short in ice and snow, or rainy periods.

In our landing patterns and approaches, wer are now using speeds of 225 miles an hour and up, and in the last stages, aircraft go over the airfield fence at 175 miles an hour or more. This requires long runway overruns, giving the pilot a chance to make a slight error in judgment without paying with his life.

We are trying to get all our new airfields at least 15 miles from the nearest major community, and we want the approach and takeoff corridors 7 miles long and 4 miles wide. This means 2 miles on either side of the center line of the runway, since we have found by experience that about 60 percent of all the takeoff and landing accidents occur in these corridors. The reasons for our concern about this is that the air defense missions are short, but we make about 400,000 landings in the Continental Air Defense Command every year after a corresponding number of takeoffs. Since 1921, when the Air Force began keeping an accident count, we have been beating the rate down steadily. It was 467 per 100,000 hours flown in 1921, and it was 20 per 100,000 in the last annual compilation. In my command, we cut the rate in half over the past 2 years. Any accident is unacceptable, but we're making flying safer as speed increases, a feat of some proportion.

As we bring down the number of hazards, noise, unfortunately, is going up and up in decibal measurements. Between 40 and 86 decibels, only a Rip Van Winkle can sleep; from 86 to 98, no man can yell loud enough over it to be heard; from 98 to 140, there is physical discomfort; and from there on, it's painful to the ears.

Some examples of this:

Tape recordings of B–25, the high noise-maker of prop-driven types; a T–33; F–86D, as examples in the present inventory.

Film clip of 102 showing not only sound attributes but peculiar high-angle takeoff characteristics.

You may have guessed that the F–86D was just 2 points short of the ear-paining decibel count, but the F–102 goes 1 point over the minimum without earplugs. This plane, which comes into our inventory in a few months, has to get up 2 miles to get out of the speech-interference range. The blessing is that it gets there quickly.

Before leaving the matter of the airfield itself it would be wrong to leave you feeling that all the problem ends with flying the aircraft. All the Continental Air Defense Command planes are fighter-interceptors of all-weather varieties, and they are always loaded when on missions. The smallest rocket-load capacity is twenty-four 2.75-inch projectiles, each the equivalent of 3-inch artillery shells in blast power, while the F–89D Scorpion carries 104 of these in tactical scrambles.

We have built all manner of control sequences into these weapons systems to save them, and we are putting more safety features into the controls for the future. The reason is that the present weapons are only midgets in comparison to what we are going to have.

There are high-explosive storage facilities on our airbases now, and the day is not far off when we shall have atomic weapons at the various stations in storage and on the planes in flight. Even with all the safety factors we can understand the uneasiness of civilian pilots taxiing around where we have armed fighters. This contributes to our determination to remove military flying from municipal or civil airports as soon as possible, but that $3-billion cost of relocation has to go along with our ability to pay over a period of years.

The other problem of size is air traffic control. Once most of our jets get off the ground, they turn into projectiles themselves, streaking along just this side of the speed of sound, and at least as fast as a pistol bullet. We now ask for the pilot to come under the air traffic controls of the Civil Aeronautics Authority, this projectile, or bullet, if you like, by asking the man aboard to tell where he is and what his intentions are.

Remember now, the pilot is going 10 miles a minute, and he is being asked where he is so he can be provided with a track for clearance. In the first place, the pilot doesn't know where he is—exactly— and he's changing that uncertainty as he goes along. By the time he finishes reporting his fix by radio, he's miles from here. In our Air Force opinion, the CAA traffic control system is completely outmoded. Bear in mind we have no quarrel with CAA. The CAA makes the Continental Air Defense Command business possible, and we work in closest harmony with CAA. They are trying to do something about it, because they know they cannot do the job which has to be done.

The second decade of the jet age will be featuring high rates of climb and descent, fighters being expected to climb at 40,000 to 50,000 feet per minute. The fighters just around the corner are going to climb at supersonic speeds, and once they get off they'll go immediately to high altitudes always where they will cruise at terrific speeds and have equal fuel consumption. It takes no particular imagination to know that this is going to make wide loop landing patterns, and have its effect on air traffic control when these lightning-like objects begin mingling with slower varieties.

We require an air traffic control system capable not only of riding herd on military jets, but jet civilian aircraft of the supersonic variety. The herding must take them off the ground, up to altitude, down to their destination, and into final approach without ever letting go.

Remember, it's not solely an Air Force problem, or a community one, it is a national one requiring a national solution. Public education and action along all lines is mandatory, like the sample I want to close with which is indicative to civilian airport operators of the noises jet airlines will be making for them to defend—that equivalent being the Strategic Air Command's 8-engined B–52 jet bomber.

Thank you.

The School Bill

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. MULTER. Mr. Speaker, the following editorial from the New York Times for January 26, 1956, points up plainly the major differences between the proposals in the House and Senate on Federal aid to the public schools. I commend the editorial to the attention of our colleagues:

THE SCHOOL BILL

The first major piece of legislation to be taken up in the House this year is the pro-

posal to give substantial Federal aid to the public schools. The Kelley bill, reported by the Education and Labor Committee last July, is now being considered for clearance to the House floor by the Rules Committee. On the other side of the Capitol Senator SMITH of New Jersey has introduced a bill embodying the revised program put forward early this month by President Eisenhower.

The two measures differ in scope, but only to a limited degree in philosophy. The Kelley bill would provide a total of $1.6 billion in grants-in-aid to the States for school construction over a 4-year period. This compares with $1.25 billion over 5 years under the Eisenhower plan. Both proposals wisely require matching appropriations by the States. The difference in amounts is considerable, but it is not so great that a compromise could not be reached; and in fact both sums, huge though they are, would provide only a fraction of the construction necessary to meet the present classroom shortage. Both measures allocate $750 million in Federal credits for the purchase of bonds of school districts that are unable to sell them at reasonable rates.

The major philosophical difference between the two bills is in the method of distributing the Federal grants among the various States. The Kelley bill would make a flat grant, based on the number of school-age children in each State. The Eisenhower method of apportioning Federal aid is more complicated and, in our view, more equable. It would distribute the funds according to a formula that takes into consideration the relative wealth of the respective States, the number of pupils, and also, to some extent, the degree to which they have done their part to support public education out of their own resources.

The practical difference between the "flat-grant" principle in the Kelley bill and the "equalization" principle in the Eisenhower program is illustrated by figures showing, very roughly, what would happen in New York. Under the former measure New York State would receive over $32 million per annum from the Federal Government; under the Eisenhower plan New York would get only some $12 million. We favor the latter program in principle, for the simple reason that it seems far more sensible to give Federal aid roughly according to need than merely to redistribute tax money on a per capita basis without any reference to the financial ability of the respective States to meet their own school construction problems. It must never be forgotten—and the Eisenhower program emphasizes the point—that school matters are essentially and primarily a local responsibility; but the present crisis is so great that the Federal Government must step in for temporary help.

Honest disagreement over questions such as this can be ironed out. But what we fear cannot be ironed out in conjunction with a Federal school-aid bill is dispute over the segregation issue. While one can sympathize with the desire to deny Federal aid to school districts that fail to integrate their schools in accordance with the decision of the Supreme Court, it is basically irrelevant to the fundamental purpose of the pending legislation. Furthermore, it is so charged with emotion that once an antisegregation amendment becomes attached to any school-aid bill. We fear that school aid in general will be doomed to defeat.

President Eisenhower was perfectly right yesterday in stating that "the need of the American children for schools is right now, immediately, today," and for suggesting that the segregation issue would delay passage of any such measure. It would not only delay it; it would very probably kill it. The Supreme Court has prescribed its own wise method for ridding this country of the curse of segregated education. That is one problem; Federal aid to education is another. If we want the latter, let us get it without amendments that—no matter how sincere and praiseworthy their purpose—would in all probability kill it.

Export of Tanks to Saudi Arabia

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. WIDNALL. Mr. Speaker, our Nation is in a very difficult dilemma as a result of halting and then approving the export of 18 tanks to Saudi Arabia. This situation points up a need for clarification of our position in the tug of war in the Middle East.

The State Department should review its entire foreign policy with a view to reducing the cold war tensions that have been aggravating the Middle East for several years.

Far more caution would appear to be indicated. Certainly the evidence points to employment of such arms shipments in this struggle for power.

Even granting that we have made certain commitments to Saudi Arabia for assistance in return for permitting us to utilize an air base at Dhahran on Saudi Arabia's east coast, and granting that this base is of great strategic importance to the free world's maintenance of its security, it seems to me we are endangering the world's security by shipments of arms to nations which have openly demonstrated their readiness to go to war with each other.

War in any form must be avoided. Within our own lifetime we should have learned the bitter lesson that little wars grow inevitably into big wars.

Certainly there must be some other form of compensation we can make to Saudi Arabia than actual shipment of relatively modern armed tanks. These to a nation engaged in a grim struggle for power within an orbit that is patently in a powder-keg state.

In addition, the protests from Israel and other nations in the Middle East make it amply clear that concessions, such as this shipment of tanks, only place us in a position where other concessions must be made to nations adversely affected by the shipment.

The arms race between the Arab States and Israel already has resulted in armed clashes. Shipment of materials that could be converted to wartime use and outright assistance both from the Soviet Union and the United States have seemed to encourage these skirmishes.

History repeatedly has demonstrated the folly of such arms competition. In fairness, it must be admitted that we are today facing the uncomfortable fact that if we do not assist the Arab States, the Soviet Union will. In fact, the Soviet Union is now supplying some Arab States regardless of what action we may take.

Most of us are aware that the East-West rivalry has resulted from the simple fact that 75 percent of the Free World's proven oil reserves are held by Saudia Arabia, Iraq, Iran, Kuwait, Bahrein, and Qatar. Western Europe receives most of its oil supplies from this area.

The benefits to the Soviet bloc from curtailing or disrupting this flow of oil from the Middle East are all to obvious. Most of these countries, while under the complete domination of hereditary rulers, are subject from day to day to Communist pressures .

In the face of this background of great riches and unrest, the United States has on the high seas a shipment of tanks. These 18 war machines undoubtedly will make a big difference in the balance of power between Israel and the Arab States.

We must consider carefully the consequences of such shipments.

I am not trying to hold any brief for or against the quarrels that have created this situation between the Arab States and Israel.

It is my conviction that we are courting world conflict if we continue a policy of shipping arms to nations, which in fact already are fighting each other.

The Attack on Veterans' Medical Benefits

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following radio address I delivered over WMEX, Boston, Mass., on Saturday, February 18, 1956.

My remarks follow:

There is a move underway to cut down medical services for veterans under the cloak of economy.

Memory and gratitude can be very short when some people see the opportunity of saving on taxes by forgetting human obligations.

The Hoover Commission has made excellent recommendations on other phases of Government operations, but on the question of reducing medical services to veterans, many of us believe that it is going too far.

The Commission advises the cancellation of all present outstanding authorizations and appropriations for construction of additional veterans' general hospitals, except for those now under construction or under contract.

And that the Veterans' Administration dispose of by sale or otherwise, any hospital which, in its judgment can no longer be operated effectively and economically.

The VA replies that this would present a question for legislative consideration, since the Congress has authorized the construction of two proposed 500-bed general medical hospitals as replacements, one at Washington, D. C., and the other at Cleveland, Ohio. In both instances, these hospitals are necessary and are located in areas of large patient demand.

Insofar as the closing of existing hospitals is concerned, the VA believes that any determinations which are made along this line should be followed by notice to the appropriate committees of the Congress well in

advance of the proposed closing dates. This appears to be a proper and advisable step, in view of the fact that the acquisition and construction of hospitals operated by the VA was pursuant to congressional authority. In commenting on this proposal by the Commission, may I say that it vests too much power in government by directive. In recent years there has been a tendency for the executive branch to take over powers that properly belong to the Congress, thus upsetting the balance upon which a free and representative government depends. Committees and administrators without any direct mandate from the people, are assuming authority that was vested in duly elected Senators and Representatives. As the Federal Government becomes larger and more complex, power must be delegated but supervised. Administrators can never be a law unto themselves. The VA is correct in reminding the Hoover Commission that the Congress must have the final say in these matters. The living veterans of the Korean war number 4,346,000, and their average age is 27 years.

A PASSING THOUGHT

The Commission further recommends "that the statement of a veteran of his inability to pay for hospitalization for non-service-connected disabilities, should be subject to verification; and that the Veterans' Administration be authorized to collect in case such a statement is not substantiated."

For one thing, this would require changes in the existing law. The present law provides that the statement of the veteran "shall be accepted as sufficient evidence of inability to defray necessary expenses." No other verification is required and the statute does not permit the conditioning of free hospitalization upon verification thereof, pursuant to investigation.

In 1953, after hearings conducted by the Committee on Veterans' Affairs of the House of Representatives, it was decided to require a veteran to state his assets on the hospital application form (VA form 10–P–10.). But, irrespective of the facts reflected by the statement of assets, hospitalization may not be denied if the applicant makes the required statement under oath of his inability to defray the expenses of hospitalization. It was felt that this additional procedure would serve as a deterrent to abuses.

Since that time, out of more than one-half million applications that have been forwarded to central office up to December 1955, only 200 cases revealed that the applicant could have paid for his necessary hospital and medical care. This is only one twenty-fifth of 1 percent, a trifling percentage of the whole. It is believed that the relatively insignificant number of questionable cases which have been turned up by this procedure does not justify the apparent views of the Commission that the present system is subject to widespread abuses.

The VA seriously questions the wisdom and practicability of a verification procedure such as that contemplated by the Hoover Commission.

The second part of the recommendation, to the effect that collection should be made where the statement is not substantiated, is inconsistent with the first part. If the oath were subject to verification, the applicant would not be admitted to the hospital in the first place. This also brings up a serious question of policy. Neither the VA, nor any other governmental agency should enter into the business of providing hospital care for pay, in competition with private, public, or charitable institutions.

Remember, there are 15,391,000 living veterans of World War II, whose average age is 36½ years.

Another Hoover recommendation would provide, and I quote: "That the veteran should assume a liability to pay for care of his non-service-connected disability if he can do so at some reasonable time in the future. Such a debt should be without interest. Congress should pass appropriate laws for the collection of such obligations."

Hospitalization for non-service-conected disabilities was authorized as far back as 1933. This basic law contemplates the furnishing of hospital care and treatment on a free basis, to veterans who are eligible under its provisions. In this respect, the program of hospitalization, both for service-connected and non-service-connected cases, is part of the overall pattern of benefits, including compensation, pensions, and readjustment aids for veterans, which has been established for the assistance and relief of eligible veterans as a measure of the Government's obligation and therefore at the expense of the Government.

It may be mentioned also, that the proposal to pay back in the future, would be administratively expensive and unwieldy. The follow-up procedures, both with respect to determination of when the veteran might have attained an economic position enabling him to make payment and with respect to collection procedures, could be most cumbersome. It would tend to emphasize the commercial aspects of a governmental activity in behalf of a large group of persons hitherto regarded as having a special claim on the Government by reason of their service in time of war in the Armed Forces.

How about this fact? There are 68,000 living veterans of the Spanish-American War whose average age is 78½ years.

It should be noted that the Commission's comments with respect to collecting from insurance companies, are rather misleading and unrealistic. The insurance companies have very largely written their policies to exclude reimbursement for hospital care afforded at public expense. The Commission's recommendation would not affect this nonassumption of liability, and it is beyond the power of the Congress to require change of these insurance policies on this matter, or to prohibit private persons from entering into such contracts.

The Hoover Commission also recommends:

"A. That the responsibility and authority to establish and maintain medical criteria for disability, both initial and continuing, should be transferred from the Compensation and Pension Branch of the Department of Veterans' Benefits, to the Department of Medicine and Surgery.

"B. That the Department of Medicine and Surgery should also develop and maintain a mechanism for review of disability allowances based on the possibility of increase or decrease in disabilities."

The law provides that ratings shall be based, as far as practicable, upon the average impairments of earning capacity resulting from such injuries in civil occupations. Thus, the impairment of earning capacity is not that of the individual, but rather "average impairment" as related to a large class of individuals. This, therefore, does not permit the reduction of percentage rating in an individual case where the veteran has been successful in overcoming the handicap.

It may also be noted that the one example used by the Commission of an excessive disability rating in the lower brackets is described in such a way as to reflect a misunderstanding. It stated that amputation of a great toe is rated at 30 percent, for which the veteran is entitled to a minimum of $50 per month, regardless of his other income. In fact, the uncomplicated amputation of the great toe entitles to a rating of only 10 percent. When it is associated with removal of the metatarsal head, and consequently with the loss of muscle tone of both arches of the foot, it entitles to 30 percent. This is not high in relation to 10 percent for the simple loss of the toe, or 40 percent for the loss of the foot. The question of whether such a rating is realistic can be determined only by a survey of the resultant average impairment in earning capacity, and not solely on the basis of medical opinion, no matter how well informed.

As to section B of the recommendation, the Hoover Commission states that there is a tendency to regard disabilities as continuing and progressive, and to avoid re-examinations.

The fact is, that unless examinations by medical personnel of the Department of Medicine and Surgery indicates that the disability is static, re-examinations are required until the disability has remained at the same level as shown by examination over a period of 5 years.

In my opinion, the Veterans' Administration has effectively answered these implied criticisms by the Hoover Commission.

It appears that the Commission is probing for an opening in the defenses we have established to protect the rights of veterans.

Under the guise of saving money, the economy skirmishers would undermine the whole program of veterans' benefits.

By emphasizing the few abuses, they would try to void the Nation's obligations to the men and women whose health was impaired in service to our country.

Behind the quiet words and the dull legalism is the intent to reduce veterans' benefits to the minimum.

Educational, and on-the-job-training programs for the veterans of World War II have already expired, insofar as beginning such courses is concerned.

The men of World War I never had such opportunities.

Now we must concentrate on maintaining suitable programs for the sick and aging veterans.

This is no time to economize at their expense.

I hope that the American public will insist on continuing medical care for all deserving veterans.

Remember this fact, there are 3,105,000 living veterans of World War I, whose average age is 62 years.

The Powell Amendment

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. MULTER. Mr. Speaker, I desire to call to the attention of our colleagues the following statement issued on February 18, 1956, by the board of directors of the National Education Association in opposition to the Powell amendment:

TEXT OF STATEMENT BY BOARD OF DIRECTORS OF NATIONAL EDUCATION ASSOCIATION FEBRUARY 18, 1956

In a special action taken at its regular midwinter meeting, the board of directors of the National Education Association today voted to oppose strongly the Powell amendment which now imperils urgently needed school construction legislation. The board feels that this amendment would serve no useful purpose, that its inclusion in a school construction bill would contradict the intent of the Supreme Court in its decrees which provide for gradual compliance, and furthermore, that it would not hasten the integration of a single school system.

Almost 1 year ago during Senate hearings, the National Education Association board of directors went on record opposing any so-

called antisegregation amendment to school construction legislation. Such legislation (H. R. 7535) now awaits a decision by the House Rules Committee, and has reached a crucial stage in its progress.

President Eisenhower has twice within the past year spoken clearly and firmly in opposition to extraneous and unnecessary amendments such as the one proposed by Representative ADAM C. POWELL, of New York. In June 1955 the President warned of the dangers of such amendments not only to school construction legislation, but also to other comparable Federal legislative proposals. He pointed out that the two separate issues of emergency school building aid and civil rights should not be confused, and stated that now the problem of ending segregation in the public schools lies clearly within the jurisdiction of the courts, not the Congress. Recently, leaders of both political parties have spoken out against the attempts to defeat school construction legislation by attaching an alleged antisegregation amendment.

The Board believes with the President and many leaders in both parties that school construction aid must be enacted this session of Congress to help relieve the critical school building shortages throughout the country. A recent public opinion poll showed nationwide support of more than 2 to 1 favoring Federal assistance for school construction; this is in the same ratio expressed by the White House Conference. The welfare and security of the country and the future education of children of all races are involved. It is our sincere hope that attempts to cloud and complicate the basic issue will not result in denying educational opportunity to American children.

Upper Colorado River Project—Weather Control Makes It a White Elephant

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. HOSMER. Mr. Speaker, there has been an important scientific development since the upper Colorado River project was conceived which makes such project, if possible, even less economic and more unfeasible than ever before.

The development is weather modification or control, commonly known as rainmaking.

The President's Advisory Committee on Weather Control has just made its report to the President. Additional precipitation of water through cloud seeding and similar weather modification methods has been proven, and acceptable methods of measurement of the degree of success of obtaining precipitation over normal have been found.

The President's Advisory Committee has studied the possibilities of additional water for the Colorado River through weather control operations in the upper Colorado watershed and has stated that if the precipitation can be brought to 20 percent above the normal—that is, what it would be for a given year without such weather control—the upper river basin runoff for dry years would be increased by approximately 3 million acre-feet; for normal years by approximately 4,500,000 acre-feet; and for wet years by approximately 5,700,000 acre-feet.

Dr. Irving Krick, meteorologist of Denver, Colo., who has carried out many such weather modification projects including studies and test work in the Upper Colorado watershed, states that a 20 percent increase in precipitation is an exceedingly conservative estimate and that the average increase of precipitation over normal in other projects has approximated 50 percent. If the 50 percent figure were used for the upper Colorado Basin, the additional runoff in dry seasons would be about 7 million acre-feet and for normal seasons would be more than 11 million acre-feet.

The upper Colorado River project now before Congress creates no additional water. It merely impounds water that is in the river anyway. It actually causes the available water to be decreased because it is admitted even by the proponents of the project that close to 1 million acre-feet would be evaporated into the air annually from the proposed reservoirs.

The water that would be brought to the Colorado River by weather control—rain-making—in the upper Colorado River watershed is more than the needs of the upper basin area. It can be used on its way down to the main river from the snowpacks, rainfalls, and so forth, to give moisture to pasture lands. It can be impounded here and there near its sources in small reservoirs to take care of the needs of present or proposed irrigation projects in the upper basin and then it can go down to the river for use below Lees Ferry.

The cost of such small impounding dams above various points of use would be small compared with the nearly $1 million for the project as proposed in the bill.

The cost of obtaining this added runoff would approximate—according to the President's Advisory Committee—less than 50 cents per acre-foot or about $1 million per year. On Dr. Krick's estimate of a greater precipitation the annual cost per acre-foot would be much less than 50 cents.

This added water, as it passes into Lake Mead and through the Hoover power plant, would be worth at least 50 cents per acre-foot for electric generation alone. But it then goes down the river where it can be used by various irrigation districts and water districts such as the Imperial and Coachella irrigation districts and the Metropolitan and San Diego water districts. The water for these purposes is worth more than $2 per acre-foot.

Thus, on a more than self-sustaining basis from the start and with an expenditure of approximately $1 million per year, all the nonpower objectives of the upper Colorado River project are met without the expenditure of nearly a billion dollars.

Furthermore, this increased precipitation will cause the water as it reaches points of use in the lower Colorado areas to have less salt content, whereas the evaporation of 1 million cubic feet a year resulting from the carrying through of the upper Colorado River project would admittedly cause the salt content of the water to increase materially. The water already carries about a ton of salt per acre-foot of water. Any increase of this salt content would require more water by the irrigator for leeching purposes and if the salt content increases greatly it would render such irrigator's soil worthless for purposes for which now used.

Weather modification in the upper Colorado Basin, in view of the findings of the President's Advisory Committee, should be tested for a few years before commitment is made for a billion-dollar project. The billion-dollar project will merely impound water already in the river and destroy part of its usefulness through evaporation. Weather modification at almost insignificant expense—which will be self-sustaining from the start—will create additional available water through increased precipitation and increased runoff.

The potential deficit of water in the Colorado River Basin is indicated by the President's Advisory Committee to be 9 or 10 million acre-feet per year. This cannot be produced by the project covered by the bill because no water is created. It can be produced without such project by simple and inexpensive weather control by cloud seeding, and so forth.

Dr. Krick has indicated his willingness to undertake such weather modification at actual out-of-pocket cost estimated at not to exceed $1 million per year and to take his fee for services on a contingent basis at the rate of a certain number of cents per acre-foot of water produced over normal for the year in question.

From the above it is clear, based on the findings of the President's Advisory Committee, that the Colorado River project cannot be justified from the standpoint of irrigation and domestic needs in either the upper or lower river basins.

Few who have considered in Congress the bill for the upper Colorado River project have known much about weather modification—rainmaking—and its possibilities in the upper Colorado Basin. What has been accomplished in this new field has been known only by a few. But the recent findings of the President's Advisory Committee change all this.

The upper Colorado River project bill should be sent back to the Interior Committee and carefully restudied in the light of this new development. It points the way to greater benefits for the areas and populations involved at far less cost.

American Aid to Southeast Asia

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 21, 1956

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the concluding

installment of a report on Asia, written by Mr. John Cowles, the editor of the Minneapolis Star and Tribune. The article appeared in the Minneapolis Sunday Tribune of February 19. This article, like its predecessors, deserves the closest attention of the Senate and the country.

Mr. President, I also ask unanimous consent to have printed in the Appendix of the RECORD an editorial on the same subject, which appeared in the Washington Post on February 19, 1956. It is entitled "Standing Pat in Asia."

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Minneapolis Tribune of February 19, 1956]

COWLES SEES ASIA SLIPPING—ONLY AMERICAN AID CAN SAVE SOUTHEAST ASIA

(By John Cowles)

"Why," I asked one of the most distinguished editors in India, "are the Indian people, who are so violently opposed to colonialism in Asia, apparently indifferent to Soviet Russia's colonialism in Eastern Europe?"

"Because Asians think of colonialism as being the rule by white people of colored people," the editor answered, "and the people who live in Russia's European satellites aren't colored."

"But then, why don't Indians regard Communist Russia's occupation of Czechoslovakia and Poland as being, if not colonialism, at least imperialism?" I asked.

"Because Russia does not have an emperor," was the reply. "To Asians imperialism means exploitation by a foreign country that has an emperior. You will recall that the British formerly called their king the Emperor of India. Russia today has no emperor, no czar. The Communists liquidated him. Therefore, what Russia may be doing in Eastern Europe is not by our definition imperialism."

Americans may think this is a silly, hair-splitting exercise in semantics, but a few days later after another distinguished Indian editor in another city had answered my same questions in almost the same way, I began to realize why many of our propaganda broadcasts and appeals to Asia apparently have so little effect.

Some of the Asian leaders are, like Prime Minister Nehru, pure Aryan in their racial ancestry, but the bulk of the people of Asia, constituting over half the total population of the globe, have brown or yellow or black skins, and they are extremely sensitive to what they suspect are white people's assumptions of racial superiority.

They, the peoples of Asia, irrespective of nationality, have many things in common, which we must understand if we are to comprehend why they act and react as they do.

Most of them have just recently won their national freedom from European colonial powers, and have what one might call a psychosis on the subject of colonialism and foreign interference.

They all want their dignity as free and sovereign nations respected. They all want to raise their standards of living. They all want peace.

Although President Eisenhower has enormous personal prestige in Asia, largely because of his emphasis on peace at the Geneva summit meeting, Communist propaganda is nevertheless highly effective in presenting the United States as a nation which wants war in Asia so that Americans can subsequently exploit the Asians.

Whenever we press an Asian country to sign any kind of a military-assistance agreement, or even indirectly try to encourage Asian nations to join such things as the Baghdad Pact, of which Great Britain rather than the United States is the nominal sponsor, we provide the Communists with rich propaganda material. One important effect is that some of the other Asian neutral countries become suspicious, fantastic as we may know it to be, of our motives.

A few days ago some 7,000 American soldiers, sailors, airmen, and marines descended on Thailand from sea and air to demonstrate to the Thais in a much-ballyhooed operation that the Southeast Asia Treaty Organization has real teeth in it, and is not just a paper tiger.

Undoubtedly we convinced the Thais that American armed might is real, but the fact of highest significance is that no other Asian mainland nation participated in these military maneuvers.

Philippine military forces took part, but all the rest were white non-Asians, Americans, British, Australians, and New Zealanders.

Even the Pakistanis, with whom we have a military pact and to whom we have given much military equipment, were conspicuously absent! This was despite the fact that Pakistan is the sole Asian mainland nation other than Thailand which is a member of SEATO.

While we are conducting a military demonstration near Bangkok, the Russians continue such things as operating a free medical clinic and hospital in Teheran, Iran.

Undoubtedly this free clinic is also a center for Communist espionage, but is an example of how clever the Russians are in dressing up their activities so as to appeal to the Asians, while we, in the minds of the neutralists, appear to be concentrating on preparations for war.

Even Pakistan is beginning to weigh the relative value of its military pact with the United States in comparison with the benefits it might get from Russia and China if it terminated its agrement with us, "went neutral," and signed peace and good will treaties with the Communists.

The prime minister of Pakistan volunteered to me a few weeks ago, for example, that he was planning a good will mission to China shortly after the conclusion of Secretary of State Dulles' much publicized visit to Karachi next month.

The American position is progressively deteriorating throughout most of Asia. If we want to be realistic we must recognize that before long we will probably face 1 of 2 alternatives:

1. Either the free world must be prepared to accept the loss to the Communist orbit of most of what remains of free Asia, and with it the tin, and tungsten, and manganese, and other natural resources on which a substantial part of our own national security depends: or

2. We must rapidly adopt a bold, imaginative and appealing policy in Asia.

It seems perfectly clear to me what our policy toward southeast Asia should be. It is to adopt a partnership approach toward the 600 million people in the 10 new countries there that have won their independence since the end of World War II, a partnership in the cause of world peace and freedom. They have much to give. We have much to give.

Those nations in alphabetical order are Burma, Cambodia, Ceylon, India, Indonesia, Laos, Pakistan, the Philippines, South Korea, and South Vietnam. Perhaps Iran should also be included in this group. Perhaps Iran should be part of another program for the Middle East area.

Most of these countries are economically and politically extremely weak, but most genuinely want to establish themselves as independent, free, self-sufficient democracies.

The United States, incomparably the strongest and richest democracy in the world, ought to regard it both as a necessity in connection with our own long-term national security and as a tangible affirmation of our own basic philosophical faith to help these struggling nations raise their living standards and maintain their liberties from totalitarianism.

These nations are all children of revolution. So is America. They all want to escape war, stay neutral and avoid entangling military alliances just as George Washington in his farewell address urged a then weak United States to do.

Should we criticize these politically immature and unstable countries for desiring to remain neutral as between the two colossal power blocs, the Communist world which abuts many of them on the north, and the free world, consisting primarily of the United States and Great Britain, plus a part of northwestern Europe, which is thousands of miles away?

Our own country stayed neutral for nearly a century and a half after its creation. We have learned to respect and esteem other nations which also have wished to remain neutral. Sweden and Switzerland are examples.

Instead of criticizing these new southeast Asian countries for their wish for peace through neutrality, we should give them understanding encouragement and financial aid, not solely for reasons of our own national security, but also because of our honest desire to see them suceed as independent democracies, and because of our deep, almost religious, American conviction that all men should be free.

Fortunately, the chance is good that if we act promptly and imaginatively and sympathetically, we can save this vital quarter of the world's population, and probably at only a small fraction of the financial cost of our Marshall plan aid to Western Europe.

But Asia is overwhelmingly worth saving even if the cost should prove commensurate with that of the Marshall plan. Our own eventual freedom may be at stake.

Nor, in increasing our expenditures for foreign economic aid, should we reduce our expenditures to intensify our own military strength, particularly in the field of scientific research and development.

But those Americans who regard foreign economic aid simply as giveaway programs and glibly profess ambitions to liquidate them, should be wary that in the process they do not liquidate the whole free world.

[From the Washington Post of February 19, 1956]

STANDING PAT IN ASIA

There is a disturbing complacency among American policymakers about the Soviet inroads in Asia. Let the Russians make their promises, the argument goes, and then let us see whether they can carry them out. No particular change in American policy is needed to counter them.

This, we submit, is the way to lose the race. For by the time there is evidence as to whether the Russians will redeem their promises, Asia may well have been captured intellectually, if not economically. In the first place, it is by no means improbable that the Russians will produce on their promises. Certainly they can absorb agricultural surpluses such as Burmese rice; certainly, too, they can divert their resources to carry out foreign economic objectives merely by depriving the people at home. In the second place, even if the Soviet promises turn out in the end to be false, the Russians in the meantime are enjoying a propaganda field day—and at our expense. They are able to do this in large part because they talk, not in terms of arms and military alliances, but in terms of "peace" and cultural values that the individual can understand.

Surely it is not enough for us to stand pat, to be content with the record. Granted, we have done a great deal in Asia. In India, for example, we have extended some $500 million in loans and grants. But we seem to lack the sense of psychological nicety to follow through. Only through the stubborn intervention of Ambassador Cooper were the aid funds for this year restored to the authorized level. Too often we do not do an adequate job of explaining what we have done. We seem to boast of the well-being of the American worker instead of suggesting practical steps by which local populations may improve their own lot. We seem to expect political agreement and military support as the only indication of gratitude—ignoring the fact that the strengthening of local independence is our best reward. As J. D. Zellerbach, chairman of the board of the Committee for Economic Development, pointed out here the other day, "The loss to communism of a so-called neutralist country in the underdeveloped world could be just as damaging to our security as the loss of a military ally. * * * The Communist threat in the underdeveloped world is not solely—not even primarily—military."

Frequently it is not so much a matter of dollars as of attitude. Dollars will not "save" Asia, though a moderate increase in our aid employed imaginatively could do a very great deal to spread technical assistance, support essential public works and stimulate investment. Even more important than money, however, would be a positive declaration that we are interested in the welfare of the independent peoples of Asia, not primarily as allies in the cold war, but for their own sake as human beings.

Paul Hoffman has proposed a Marshall plan concept to meet the individual economic needs of the newly independent nations of Asia ranging from Pakistan and India to the Philippines and Korea—an area containing 800 million people. John Cowles has reported how we flubbed Burma's offer to pay for needed aid with rice which could have been stored as a famine reserve in the area. The American delegation to the United Nations General Assembly spoke eloquently of the need to make "newly independent and newly articulate peoples feel that they can best satisfy their wants by becoming and remaining part of the community of free nations." Virtually every perceptive traveler, beginning with Chester Bowles, has called for a combination of flexibility and imagination that will serve the real American interest in Asia.

Fortunately, there are signs of such flexibility in the present efforts to help Ceylon despite her shipments of rubber to Communist China (undertaken in the first place because we lacked either the authority or the ingenuity to engage in premptive buying). How much more meaningful it would be if this sort of flexibility could extend, say, to Burma and could bring recognition of the psychological value of a small atomic reactor to be located in Colombo!

Merely to wait out the Soviet promises would be to abandon the field, in wholly negative fashion, to the Russians. It has been a long time since any concept in foreign relations approached the boldness (not the magnitude) of the Marshall plan. Yet essentially what our interest requires is a galvanizing device for stirring the imagination of the peoples of Asia, for giving practical meaning to the values expressed in the Declaration of Independence. It would be encouraging if Secretary Dulles were enabled to give at least a hint of this sort of approach on his visit to Asia next month.

Religious Freedom

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following comment by Mr. Benjamin R. Epstein on the subject of religious training for children, which appears in the October 1955 publication of the Anti-Defamation League of B'nai B'rith:

WHAT TO DO ABOUT RELIGIOUS ILLITERACY IS A PROBLEM FOR THE HOME, NOT THE PUBLIC SCHOOL

The place of religion in the public schools is controversial. Differences of view are sharp and often so weighted by emotionalism that tension creeps in among otherwise friendly groups. We have first, the strict interpreters of the principle of separation of church and State. They say that any recognition of religion within the school program violates the Constitution and is as harmful to religion as it is to the State.

Next are those who believe that sectarianism violates the constitutional principle, yet they feel that schools have a responsibility not to ignore religion.

Finally, those who go further; separation of church and state does not mean public schools may take no cognizance of religion, they say. Indeed, it must include religious teaching in order to foster basic concepts essential to the growth of American ideals. There are no villains in this piece. The disparate views are honestly held by men concerned with the commonweal. If there are villains, they are found on the fringes of our society, taking advantage of these honest differences to attack the public-school system.

Jews on the whole have been among the strict interpreters, believing, however, that religion is essential in the lives of all children. The question is: Who is responsible for a child's religious education? The church and family—not the public school, has been the traditional Jewish answer. And, traditionally, Jews provide for the religious training of their children in the home and synagogue. They wonder, too, whether the efforts of some groups to use the public schools for religious indoctrination are not dictated by failure of the home. To look to the public schools for this kind of rescue action is a dangerous gamble that can only pay off in all sorts of intergroup problems.

The American democratic system is founded upon ethical and moral concepts derived in large part from the great religions of mankind. In turn, the unique vitality of our religious institutions stems in good part from our country's tradition of separation of church and state. The public-school system is also a bulwark of American democracy, a unifying medium through which different racial, ethnic, and religious groups are given the common impress of Americanism. It follows, therefore, that the public school must recognize the realities of religious differences in the American community—as indeed it does. We believe our schools have properly taught acceptance of and respect for religious differences.

Some very practical problems on religion in the public schools are confronting many communities throughout the country. Among the points of contention are the reading and distribution of Bibles in public schools; the recitation of prayer in such schools; the use of released time and dismissed time programs and similar aid to religious groups; classroom observances of religious holidays, and recurring proposals for teaching about religion as a secular subject.

Christians and Jews accept the Old Testament as the word of God. But each major religious denomination has its own version of the Bible and believes that those used by other groups are not the true writ. It follows, then, that the Bible in its varying versions, is a sectarian book. Reading from it as a public-school exercise, or the distribution of Bibles to pupils by religious organizations, or teaching a Bible course in a public-school class, all involve sectarian religious indoctrination, violating the first amendment. For this reason, ADL opposes these practices.

It is ADL's belief that the use of prayer in a public school can serve only to place pressure upon a child to engage in religious practices which may be contrary to those he has been taught by his religious leaders and his family. Such a situation also emphasizes religious differences to the child without, at the same time, teaching acceptance of those differences.

Since neither the time, facilities, personnel or funds of the public school system may, under the first amendment, be used for purposes of sectarian religious instruction, it is ADL's judgment that "released time" programs are improper.

The practice here is to excuse from class earlier than usual at the end of one school day each week, those pupils who agree to attend religious instruction in their own faith. Parents' consent is necessary. Children who do not participate in the program remain in class.

There is a variation of released time called "dismissed time' 'in which the entire class is dismissed and school authorities take no account of which children attend religious classes and which do not. ADL does not encourage dismissed time, but regards it as preferable to released time.

Some persons have advanced proposals for teaching a "common core of religious belief" based on concepts common to and represented in all religions. ADL believes that this is impossible. The isolation of such a body of religious principles, we believe, would do violence to every denomination. Might it not—to show one of its dangers—result in the creation of a new religion sponsored and taught in the public schools?

It is customary in public school courses in history, literature, social science, art and music to teach children what religion and religious institutions have contributed to these fields. Now, there are proposals that public schools establish separate courses to teach about religious practices and beliefs.

In considering such proposals, ADL has noted that teachers today are not properly trained to teach such courses. We also doubt that children in elementary grades are qualified to discuss such matters of faith in objective terms. Yet, ADL is not opposed to further study of specific plans and curricula for use in separate classes about religion. Such studies must determine whether courses can be formulated that would teach only the objective facts about religion, and what effect they might have on children.

Another proposition is that courses be instituted in public schools to instill in the children the moral and spiritual values based upon religious law.

It is ADL's opinion that our public schools have always imparted to children moral and spiritual values. No good teacher can operate without infusing into all her teaching the basic moral laws. The question is whether the public school should undertake to stress the religious sources of moral law.

We think not. We believe that in the public school such values should be taught without reliance on religious approval, though nothing the teacher says on this subject should negate what the child learns at home or in his church or synagogue.

ADL does not favor the observance of religious holidays in public schools. But we recognize that such celebrations are imbedded in current practice. Wherever religious holidays are programed in the schools, ADL is prepared to make available, upon request, its facilities and material dealing with the Jewish cultural aspects of such programs.

Religion has always been and continues to be the central core of Jewish life. We believe, too, that religion is of vital importance to most Americans, even those who do not adhere to any organized church. We believe that religious training, as an essential aspect of every child's education, is the prerogative and responsibility of the home and church.

We believe it is unwise to burden the school with this responsibility. Sound policy, it seems to us, dictates that we strengthen our religious institutions so that they may successfully perform their educational work, rather than invoke the power of the State, through the public schools, to achieve that goal.

BENJAMIN R. EPSTEIN,
ADL National Director.

The Winter Olympics

EXTENSION OF REMARKS
OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, February 21, 1956

Mr. BUTLER. Mr. President, on the subject of the Olympic games, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the February 7, 1956, edition of the New York Herald Tribune, and an article from the February 10, 1956, issue of U. S. News & World Report magazine.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of February 7, 1956]

THE WINTER OLYMPICS

The seventh winter Olympic games have passed into history. The outstanding feature of the performances at Cortina d'Ampezzo was the appearance, and the success, of the teams from the Soviet Union. The fact, apparent long before the Russian athletes appeared, that sport has become an instrument of Soviet policy, was a reminder that the competitive ideal handed down from antiquity through the Olympic games has not survived wholly untarnished. The contest of individuals, on equal terms, for the sheer glory of a winner's wreath, has become infected with national pride and ideological rivalry. Yet enough of the tradition remains to keep the Olympic torch a symbol of sportsmanship and gallant effort.

The United States, in the face of the brilliant showing of many nations (notably Austria), as well as the organized Soviet onslaught, did not do as well as at Oslo in 1952. But the American figure skaters were well out in front and the skiers, bobsledders, and hockey players performed creditably indeed.

If the young people of America come to realize that they face increasing competition in sports abroad, and that this does affect the Nation's prestige, the results at Cortina may well have a beneficial effect. Broader and keener participation in sports may be stimulated. There should be no attempt to "nationalize" athletics, but there are ways in which the existing skills of American athletes can be made to show to better advantage in international events than at present.

Meanwhile, congratulations and gratitude are due all the Americans who entered the contest at Cortina, and all their countrymen will wish good luck to those who represent them in the major Olympics at Melbourne this fall.

[From U. S. News & World Report of February 10, 1956]

IF RUSSIA WINS OLYMPIC GAMES—RED ATHLETES WILL BECOME BIGGER WEAPON IN COLD WAR

Soviet sport champions are turning out to be effective propagandists for communism. They have won the winter Olympics. It looks as if they will win at Melbourne, too.

Their victories are boosting Soviet prestige around the world.

But the Russians never used to be so good. The Olympics have been dominated for years by Americans.

How did the Russians get so good so fast?

Here is the explanation: The Kremlin has taken over Soviet sports, mobilized an army of 12 million athletes. State money finances their training, rewards their victories.

The newest Soviet offensive in the cold war is being waged by Russian athletes. And the objectives of that offensive are now becoming clear:

The Russians are out to dominate the world—and beat the United States—in Olympic sports.

Then they intend to turn their athletic victories into powerful propaganda for communism.

Russia, in this drive, already has scored an important victory. Its snow-and-ice athletes outscored every other nation in the winter Olympics at Cortina d'Ampezzo, Italy.

Ahead lies the big Russian goal—the summer Olympic games at Melbourne, Australia. The way it looks now to a lot of sport experts in the West, the Russian are very likely to win at Melbourne, too.

Soviet tactics leave no doubt about the Kremlin's determination to win the Melbourne Olympics. The Russians have been aiming deliberately at this goal for years. The whole force and financial backing of the Soviet Government have been thrown into the campaign. They've gone about it with the large-scale efficiency of a nation preparing for war.

An army of 12 million sturdy youths has been assembled for this athletic offensive. Training camps resembling military posts have been set up throughout the vast area of the Soviet Union.

Athelets have been awarded ranks like soldiers, and are promoted up through the ranks as their skill increases.

Highly paid jobs go to athletic winners.

All this has been done at Government expense and under Government direction.

Some sport officials in the West have questioned the amateurism of the athletes this Soviet system has produced. But none can question the system's effectiveness. No nation has ever risen so fast as a sport power—from nowhere to the top in a few years.

First-try winner: Russia never before had even competed in the winter Olympics. Yet Russians won the unofficial team championship at Cortina on their first attempt. Since the Communist Revolution, the Russians had never completed in the summer Olympics, either, until 1952. Then they almost beat the United States on the first try.

If the Russians win at Melbourne, Western officials now are beginning to realize, the Kremlin will have achieved one of its greatest propaganda successes since World War II. And the victory would be at the expense of Russia's greatest rival, the United States.

American athletes for decades have dominated the Olympic games. Only once since 1920 has any nation outscored the United States in the summer Olympics, and that also was a dictatorship, Nazi Germany, in 1936. A Soviet triumph over the United States at Melbourne would surely be hailed by Communists everywhere as proof of American "decadence" and the superiority of the Communist system.

To winner, world prestige: What Westerners now are realizing is that Communists are not the only ones who would be impressed. Among millions of people throughout the world, athletic skill carries enormous prestige. It is regarded by many as an indication of national health and vigor.

Not only that, athletes are proving to be powerful propaganda agents, effective ambassadors of good will. A champion athlete can open doors that diplomats cannot unlock.

Russia, already engaged in a world-wide campaign of exchanging delegations, undoubtedly would find greater opportunities to get Russians into other countries and lure foreigners into Russia if it could hold out the bait of an Olympic championship team.

Soviet chances of achieving this goal appear good. At Helsinki in 1952, Americans saved their team championship only by swamping the Russian men in track and field. But, since then, Russian men have set half a dozen world records in track and field. Distance runners such as Vladimir Kuc, hurdlers such as Jurii Lituev and hammer throwers such as Mikhail Krivonosov are considered likely to crack the United States track and field monopoly at Melbourne.

In women's events, Russians are rated supreme. Their Amazonian women hold at least 10 world track and field records, including the shotput, and discus and javelin throws.

Gymnastics, a big part of the Olympic programs, are a Russian monopoly, Russian soccer teams are the scourge of Europe. Russians are strong in boxing and weight lifting. Russians have won world titles in shooting.

Soviet athletes even have challenged western nations at their own traditional national sports—and won. They have beaten the British at rowing, the Canadians at ice hocky, the Scandinavians at skiing. And at Helsinki in 1952 they threw a real scare into the United States in its own game of basketball.

It was not until the closing days of the 1952 Olympics that the United States team passed Russia in the unofficial point totals. The final score was United States 614, Russia 553½. With the rapid improvement Russians have been showing since 1952, American sportsmen fear the 1956 positions may very well be reversed.

Soviet Government's role: How has Russia improved so fast? The answer: Russia has turned sports into a big state business. Like nearly everything else in Communist life, athletics have been taken over by the Government.

An All-Union Committee on Physical Culture and Sports was created with the status of a Cabinet ministry.

Physical training is compulsory for every schoolchild. Any child who shows athletic

promise is singled out for special training in one of several hundred sport schools. The best of those athletes, in turn, are graduated into higher sport schools where specialized skills are taught by expert, state-paid instructors.

Trade unions operate additional training centers and sponsor countless athletic teams of all kinds. So do universities.

Financial rewards go with athletic success in the Soviet Union. If an athlete shows championship promise, a good job is provided—one sure to leave him plenty of time and opportunity to train. And the pay has been known to go up after an athlete wins an important international contest.

Best among 12 million: To single out the best in Russia's army of athletes, local, regional, and national meets and contests are held periodically throughout the Soviet Union. Nikolai Romanov, chairman of the All-Union Committee on Physical Culture and Sports, recently reported to the U. S. S. R. Council of Ministers that more than 9 million school youngsters and 3 million trade-union athletes took part in such contests.

Avery Brundage, American sports leader who is currently president of the International Olympic Committee, reported after a tour of Russia last year that Soviet officials told him the U. S. S. R. has in training 4 million track and field athletes alone, with 800,000 other athletes being trained in gymnastics.

Money in plenty is provided for this enormous program. The Soviet Government's budget in 1954 allowed 29 billion rubles more than $7 billion at the official exchange rate—for health measures and physical culture. In the same year, the All-Union Trade Congress announced that 600 million rubles—$150 million—was spent from that organization's funds on athletic training.

When Soviet teams go abroad, as to the Olympics, or when foreign athletes visit the Soviet Union, the Government or one of its agencies picks up the check for all expenses.

By contrast, no Government money is provided for American Olympic teams. Funds are raised by contributions of individual sportsmen—and sometimes fall short of the amount needed.

Russia's motives in this big sport offensive are made unquestionably clear by such official Communist pronouncements as these two:

"The superiority of Stalinist Socialist athletes over capitalist athletes must be continually demonstrated."

"Physical culture and sports are not a matter of amusement but a matter of state importance."

Here to win: A Russian official who accompanied the U. S. S. R. rowers to the Henley regatta in England, in 1954, summed it all up.

"This is sport to you," he told the British. "But we are here to win."

A Must Among Magazines

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. METCALF. Mr. Speaker, through the courtesy of Mr. Norman J. Holter, of Helena, Mont., I have been receiving the Bulletin of Atomic Scientists. Mr. Holter is an outstanding scientist in his own right and the contributions of his research laboratory and the Holter Foundation are nationally recognized. Since reading the Bulletin of the Atomic Scientists I agree with the following editorial from the St. Louis Post-Dispatch, February 13, 1956, that this is a "must among magazines." The editorial follows:

A MUST AMONG MAGAZINES

The 10th anniversary of the Bulletin of the Atomic Scientists is an occasion which we hail warmly. Editor Eugene Rabinowitch and his associates can look back on a decade of achievement that has been solid and distinguished. They mean to celebrate it by publishing this year a series of special symposia discussing the changes in society brought about by the spectacular growth of science during these 10 years.

When the atomic age broke in 1945, the scientist generally was hardly a political animal. This was especially true of scientists in the fields that make up nuclear physics. But the mushroom cloud over Hiroshima was a galvanizing force for them even more than for all the rest of the world. Deeply moved by a growing sense of their responsibility as citizens in a democratic society, they sought to participate in it as never before. The Bulletin is one of the finest manifestations of that phenomenon. Its first issue appeared on December 15, 1945.

Since then, working in an unfamiliar field, the atomic scientists have done a job that would be a credit to veterans. Their Bulletin has striven ceaselessly to keep the public informed of nuclear facts and, more important still, of what those facts mean. The magazine has spoken out courageously against secrecy and security restrictions which retarded the nuclear program or persecuted scientists. It has been worldminded—significantly, the lead article in the current issue, by Mr. Rabinowitch, is on International Cooperation of Atomic Scientists. Technically one of its most remarkable accomplishments has been its high degree of readability for laymen.

At 10 the Bulletin of the Atomic Scientists has already earned the right to be called one of the most important magazines in today's world.

The President's Committee on Government Contracts

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Harold Fellows at the National Conference of Christians and Jews brotherhood dinner on February 20, 1956:

In this strife-torn world the most precious property that can be owned by mankind is brotherhood, founded upon faith and belief in God. The work of the National Conference of Christians and Jews stands out as a true labor of love. That groups within our Nation voluntarily have acknowledged the high principles of the NCCJ and with unusual initiative undertaken the challenging task of living up to those principles—sometimes even in the face of adversity and criticism—is one of the most encouraging and hopeful signs on the horizon.

I am particularly pleased tonight to have the honor to represent the National Conference of Christians and Jews in presenting to Ivan L. Willis, vice president of the International Harvester Co., representing the President's Committee on Government Contracts, this modest recognition of the committee's fine work on behalf of brotherhood. This is but a parchment, and perhaps—in the time of man—perishable; but, the sentiment behind it is not perishable nor are the admiration and high regard in which NCCJ holds the members of this committee. Mr. Willis will you please step forward—sir, it is my pleasure now to read the citation to you and, again to thank the committee for its wonderful work:

"The National Conference of Christians and Jews presents this Brotherhood Award to the President's Committee on Government Contracts for 'commencement' for outstanding contributions promoting the cause and goodwill and understanding among all the people of our Nation—thereby fostering amity, justice, and cooperation among Protestants, Catholics, and Jews; helping to eliminate intergroup prejudices which disfigure and distort religious, business, social, and political relations; materially aiding the work of the National Conference of Christians and Jews and bringing us nearer the goal of the brotherhood of man under the fatherhood of God.

"EVERETT R. CLINCHY,
"President.
"HAROLD FELLOWS,
"Chairman, Mass Communications Commission.
"TAYLOR M. MILLS,
"Chairman, Media Awards Committee.
"Date: Brotherhood Week 1956."

Anniversary of Marines Landing on Iwo Jima February 19, 1945

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. CANFIELD. Mr. Speaker, amid the pressures and selfish concerns of daily living an important anniversary in this Nation's history slipped by almost unnoticed yesterday.

But the marines of the 7th Fleet, now engaged in peacetime maneuvers on the scarred beaches of Iwo Jima, remembered and kept faith with their comrades whose blood once crimsoned the blackened sands and rocky slopes of that lonely island.

With bared heads and reverent hearts they gathered at the crest of Mount Suribachi. It was just 11 years earlier, on February 19, 1945, that other valiant marines had first raised the flag of freedom with aching battle-weary hands.

Navy jets whined a requiem and Old Glory billowed against a bright blue sky while Maj. Gen. Thomas A. Wornham delivered an unforgettable memorial tribute.

Those who fought here would want no eulogy.

He said:

These men were not martyrs. They represented all races and creeds. Each had a job to do.

To those who died, may you rest in peace. To those who were maimed, may your pain be eased. To those who survived, may we never forget.

And to the newcomers in the corps, he had this to say:

May you be as worthy if put to the test.

General Wornham's words were wrung from his own experience. As a marine colonel 11 years before he had led his men in the bloody assault on Iwo Jima, and had seen 6,000 die before victory was attained.

Less than a year after that historic hour, I traveled the tortuous road to the top of Mount Suribachi. Below me the sun glistened on the marked graves of those who, in the proud tradition of the Marine Corps, had given uncomplainingly and willingly of that "last full measure of devotion." I felt both humbled and proud to be part of a nation whose ideals and principles could inspire her children to such dedication, such sacrifice. It is a moment I shall never forget and never want to forget.

May those blood-drenched sands of Iwo Jima and wherever brave men have fought and died for freedom be forever held sacred in our hearts. May we be inspired by such sacrifices to hold evermore dearly those things for which so great a price was paid.

Shore Erosion

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. MULTER. Mr. Speaker, on February 21, 1956, Representative EMANUEL CELLER and I submitted a statement to the House Committee on Public Works, which is presently holding hearings on the bills H. R. 3093 and H. R. 6205, which would amend the act entitled "An act authorizing Federal participation in the cost of protecting the shores of publicly owned property" so as to extend such aid to privately-owned property as well. The statement follows:

Mr. Chairman, the problem of the erosion of our beaches is not new. Some of our shores have been subject to continuous erosion throughout the period of recorded history. State and local governments have attempted to deal with the problem of erosion control. In the past years, however, it became abundantly clear that help from the Federal Government was necessary, and in 1946, a law was passed authorizing Federal participation in the cost of protecting the shores of publicly owned property. H. R. 3093 and H. R. 6205 would extend this aid to privately owned property as well.

Many of us remember the hurricane of 1938 and the storm of September 1944, but all of us well recall the storm of November 1953 and that veritable holocaust of hurricanes in 1954 and 1955—Carol, Edna, Hazel, Connie, and Diane. In each year following 1938, a substantial part of the budget of each of the villages that make up the Great South Bay of Long Island, had to be devoted to hurricane and erosion protection projects. Experience has demonstrated, however, that no community has the resources to furnish complete protection against the ravages of the ocean and the destruction of storms. The exposed condition of these communities demonstrates beyond question the imperative, compelling necessity of immediate short-term protective measures, as well as a long-term program to preserve the existence of the beaches involved. The extremely short intervals between the hurricanes of 1954, caused shattering losses to public and private property. Before the debris of one storm could be cleared away, another followed, and successive evacuations from the communities had to be ordered by the Coast Guard. In computing losses, it was found to be impossible to distinguish between the damage caused by one storm as differentiated from another. Similar experiences were encountered during hurricanes Connie and Diane of 1955.

The problem continues inexorably. On Janauary 27, 1956, in the wake of the January storms, the Fire Island Erosion Control Committee stated as follows in a letter to the Suffolk County Board of Supervisors: "In view of the severe damage caused by recent storms, we wish to reiterate to the board the immediacy of our need for beach feeding and dune rebuilding if we are to prevent a catastrophe. Houses in several communities are now undermined and these properties, together with the houses behind them, are in danger of being destroyed in the next storm tide. There are several places where breakthroughs are imminent."

In any discussion of this area, it is important to consider the need for improvement of Fire Island Inlet. This inlet provides the only means for boats of reasonable draft to enter the Great South Bay. Commercial fishing vessels must make daily trips to and from the Atlantic Ocean via the inlet, and the skippers of these vessels have had to contend with the hazardous conditions encountered in the inlet as a result of the constant shoaling which has taken place during the last few years. It is difficult to tell the number of fishing men actually affected by Fire Island Inlet. A fair estimate of persons wholly or partially dependent upon fish and fish only, which are transported through the inlet, is well over 3,000 persons. While we are on the subject of these fishing vessels, it is well to remember that this fishing fleet was used in the defense of our country, as demonstrated during World War II. Because the Navy felt that these vessels could be advantageously used as an advance guard against enemy submarines, it supplied each vessel with sealed radio-telephones to be used if and when suspicious craft were sighted. In this manner the fishermen gave important information to the Coast Guard and the Navy, and in 1 case, 1 such ship saved some 20 persons from a watery grave when their cargo ship was torpedoed by the enemy.

Although we are not now involved in a shooting war and our hopes are pledged to continued peace, one look at the world situation and the menace posed by the Soviet Union, brings immediately to mind the problem of civil defense. If there were to be an attack on the metropolitan area of New York City, the Great South Bay area could care for evacuees by the thousands and give them shelter. But, if motor transportation were disrupted and railroads rendered impotent, it would be waterborne vehicles to which we would have to turn for supplies; medical, food, clothing, fuel, etc., and Fire Island Inlet is the entrance to the Great South Bay.

The south shore of Long Island is the only coastline enjoyed by the State of New York. Its natural advantages should be maintained, and it should be the responsibility of both the State and Federal Government to maintain all natural channels that can accommodate craft of any reasonable size, for the protection of life and property.

When speaking of Long Island, most people are inclined to overlook the fact that while the counties of Queens and Kings (coterminous with the Boroughs of Queens and Brooklyn) are wholly within the City of New York, they nevertheless geographically are also wholly within Long Island.

The same storms and the same ocean waters that cause damage along the southern shores of Long Island, which are part of Nassau-Suffolk Counties, also cause tremendous damage to Manhattan Beach, Brighton Beach, Coney Island, and Sea Gate. All of those places also are part of Long Island.

During World War II the United States Government maintained important military installations in Manhattan Beach and in Sea Gate. Large training stations were maintained in Manhattan Beach.

The United States Coast Guard maintained very important installations at Manhattan Beach.

Land based military installations, coast artillery gun emplacements and antisubmarine installations were maintained in Sea Gate because it is directly at the mouth of the entrance to New York Harbor. It provided military and defensive installations in aid of Fort Hamilton and Fort Wadsworth. It is a convenient line of direct communication with Fort Hamilton, which is across from it on Gravesend Bay, and with Fort Wadsworth, which is opposite it on the Narrows. The United States still maintains a radar and fire-control station in Sea Gate, as well as a lighthouse at Norton's Point in Sea Gate. All of these areas require the protection which this bill would help provide.

As is obvious from the above, it is impossible to separate, in consideration of the problem of erosion control, the losses incurred by publicly owned or privately owned property. Both are involved equally in the same storms. H. R. 3093 and H. R. 6205, and many other similar bills, recognized this fact in their provisions. Passage of this legislation is vital to our own national interest.

We appreciate the opportunity afforded to us by the committee to submit this statement in support of these bills.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Lead Time and Military Strength

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Wednesday, February 22, 1956

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Rear Adm. H. G. Rickover, Chief Naval Reactors Branch, Division of Reactor Development, United States Atomic Energy Commission, and Assistant Chief of the Bureau of Ships for Nuclear Propulsion of the Navy Department.

This address was delivered at the January 12, 1956, dinner sponsored by the Society of Business Magazine Editors, at the Mayflower Hotel here in Washington, D. C.

In this address Admiral Rickover discusses brilliantly and effectively the problem of "lead time" which is so important in the matter of our preparation for national defense. It should be a must reading by all Members of Congress.

I have a letter from the Government Printing Office estimating that it will cost approximately $214 to print this article, and I ask unanimous consent that it be printed in the Appendix of the RECORD in its entirety, in view of the extreme timeliness of Admiral Rickover's comments entitled "Lead Time and Military Strength."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LEAD TIME AND MILITARY STRENGTH

(Remarks prepared by Rear Adm. H. G. Rickover, U. S. Navy, Chief, Naval Reactors Branch, Division of Reactor Development, U. S. Atomic Energy Commission, and Assistant Chief of the Bureau of Ships for Nuclear Propulsion, Navy Department)

I thank you for giving me this opportunity to speak to you. Perhaps you expect me to address you on the subject with which I am most familiar—development of atomic power to propel naval vessels. However, I asked your chairman to permit me to speak on a broader subject, and one which I consider more important than atomic power—the effect of lead time on military strength.

It is my contention that lead time—the time which elapses between conception of a new idea, its development, and finally its fruition in the completed new article rolling from the production lines—is the factor which more than any other is likely to win the next war for the nation which succeeds in reducing it significantly below that of its competitor.

I have chosen this subject because I feel that, for the good of all of us, some things we presently assume must be reexamined, even if they are unpleasant. None of us can afford, for our own or for the national interest, to wrap ourselves too tightly around our present assumptions and habits.

Assumption No. 1 is that a world war has become so deadly to both sides that men are not likely to start another one.

Assumption No. 2 is that our great edge in productive capacity will prove decisive in the next world war, as it did in the first two.

Assumption No. 3 is that our system of capitalist democracy will prevail because it offers mankind the best hope for freedom and for spiritual and material gain.

Assumption No. 4 is that our superior inventive genius will guarantee us a good technological margin over an enemy.

Let us examine these assumptions:

Assumption No. 1, the deadliness of war.

It is true that there has been a revolutionary change in the nature of war. It is conceivable that this change may have ended the danger of war. I pray to God this may be so, but all the evidence of history says otherwise. It certainly is a dangerous belief and one which we have not based, and cannot base, our national policy.

Wars have often been started by weak states and by reckless men. Such men, corrupted by power, may fight us again even though they should know that they themselves will be destroyed in the process. We can hope that this will not happen, but we must not allow this hope to influence our judgments or our actions.

Now let us examine the second assumption, our advantage in productive capacity.

The production of the free world far exceeds that of Russia and her satellites and allies. The free world, for example, last year produced more than three times as much steel as the Soviet-dominated world. The United States alone produced 40 percent of the world total, compared to Russia's 17 percent. Other statistics for heavy industry—nonferrous metals, electric power, petroleum, rail transportation, and the rest—are comparable.

Our productive superiority was the decisive factor in both World Wars. In 1941–45, for example, we produced as much armament as all the other nations combined, on both sides.

But several factors are present today which were not present in 1917 and 1941, and which lessen the military effectiveness of our productive superiority.

First, there is the time margin. In both World Wars we had the preparation time which comes from not being directly involved in the early fighting. While others fought, we were able to convert to war. Second—and this is really another facet of the same fact—wars moved more slowly then; years were required to work sufficient destruction to subdue an enemy. In the interim, a buildup of military strength was possible.

I think it highly improbable we shall be as fortunate in a future war, for in the next all-out war the side which moves fastest will most likely destroy the other's capacity to wage war. There may be no time to convert industrial plants.

There is also the vast difference today in the manner in which production is utilized in the Soviet Union and in the United States.

We use our production to sustain the highest standard of living in history for all of our people. The Russians concern themselves very little with the standard of living of the broad masses of their people. In effect, they maintain two standards of living; one, a relatively high one, for the small privileged class; another, very low, for the rest of the population. The first priority of their production goes where their leaders want it to go—to armaments, to capital expansion, to selected development projects, and to the small group chosen by the leaders for a privileged position. The general consumer gets what is left over after these first-priority needs are met. It does not matter much that he lives crowded, many to a single room, that he is poorly clothed, that he lives amid constant shortages of the most elementary consumer goods, from buttons to matches. Few Russians have ever known anything better.

We should not fall into the easy error of confusing this low standard of overall Russian living with their high standard of military production; there is ample evidence of the quality of the latter, and of the high priority the Russian leaders give it.

The net result of this is that our margin of industrial production is substantially reduced, and in certain circumstances it could be completely nullified. There is no longer any guaranty that the side which has the greatest productive capacity has a built-in survival capacity.

The third assumption, that the democracies must win simply because they are right, could be the major fallacy of our time. It is very much the same as saying "Virtue will triumph." There have been occasions in the past where virtue has not triumphed. Furthermore, since history is generally written by the victorious side, it is the winner who most frequently stands out as virtuous.

The Russians have a long-range plan which clearly calls for technical, political, and military domination of the world. They have announced that the 20th century will be the century of communism. And recently Mr. Khrushchev said: "We don't have to fight. Let us have peaceful competition and we will show you where the truth lies. * * * Victory is ours." Having such a plan goes far to counteract the weaknesses and internal contradictions of the Russian system.

We, of course, being a democracy, and dedicated to the belief that government exists for the welfare of its citizens, cannot have such a plan.

But the last of our assumptions that we will be protected by our superior technical skill is, perhaps, the most dangerous one of the four. This assumption is compounded by the comfortable belief many of us have, that whatever anyone else can do we can do better. Besides which we do not like to look at facts which are unpleasant. This assumption is also bolstered by statements such as one that appeared in a January 1 newspaper, "Our greatest asset in 1956 will be the continued prosperity of the United States."

It is important that we spend some time discussing this fourth assumption.

A review of Soviet textbooks and scientific papers available in the United States on mathematics and related areas, such as aerodynamics, will show that in some of the most advanced areas of these sciences they are on a par with the best work being done in the West. They are excellent in the use of large-scale electronic computers, both for solving mathematical problems and for formulating broad attacks on major scientific

tasks. American experts who recently examined Soviet calculators stated that these machines matched the most advanced American units of this type. In fact, Mr. Albert C. Hall, research director of the Bendix Corp., said he saw one Russian calculator of a type unknown in the United States.

The Russians are very attentive to fundamental research—to research for its own sake, without any special reference to a particular problem. Witness the considerable number of their young people who are studying astronomy—a number we do not equal.

You have read what kind of job the Russians have done on jet engines, on radar, on long-range weapons, and on atomic weapons. Look how frequently the American public is surprised by Soviet displays of ultramodern aircraft, naval vessels, and by their work in atomic weapons. Any competent United States aeronautical engineer who examines published photographs of modern Soviet aircraft can readily deduce that they are doing absolutely first-class work in the aeronautical sciences.

The Russians apply the best capitalist incentives to top people to get them to do a good job—and to this they add the whip of individual responsibility for failure. The concept of nearly complete personal responsibility for a project—somewhat like the responsibility vested in the commanding officer of a naval vessel—can sometimes produce rapid results, as the Russians have shown. The leading scientists, educators, top designers, and development engineers in this so-called classless society are millionaires compared to their other workers. For example, the pay spread in Russia between an Army private and a leading writer, artist, or scientist is more than 300 to 1. And in addition to this high pay there are large bonuses; a top aeronautical engineer may have received a number of Stalin prizes and Orders of Lenin; these can raise his pay to a million rubles.

In addition to their own abilities, the Russians are expert at exploiting the knowledge of others. Our atomic scientists learned at Geneva last summer that the Russians have great respect for American technical literature. They know well the technical publications of the western nations, and they make special efforts to publish the best articles rapidly and to disperse them widely.

Our people also learned that in certain areas important to the Russians, such as electric power and key military technology, they permit considerable latitude to the man in charge. Nor are the top people in research and development penalized quite as promptly or as harshly for failures as are top men in other work. Someone seems to have put across the idea that chances must be taken in these fields, though it is true that a top man will not stay on top very long if he is wrong too many times.

The Russians do penalize severely at the production level. In fact, a considerable percentage of their plant managers are fired every year. They pay a price for this, of course. A plant manager who anticipates a short tenure will not go out of his way for long-range-improvement programs. But this system does force to the top a class of managers who are able to achieve production of selected urgent items in low lead times.

Let us look at a couple of examples: It is reported that for 2 years they have had in operation the most powerful nuclear-particle accelerator in the world, and that sometime this year they may be operating a 10-billion-volt accelerator. We will have nothing to surpass that until 1959.

On December 15, three engineers from major American corporations toured a large ball-bearing plant in Moscow. One of them, a man from the automatic transmission division of the Ford Motor Co., stated, "I have never seen a better example of automation in my life." The other two agreed.

The second point I would make regarding Soviet industrial capability concerns the rate of progress they are making. Former Senator Benton returned from a tour of Russia last month with the statement that their rate of industrial production is increasing 6 percent a year, in contrast to a rate of increase of 3 percent in this country.

The present annual increase in our industrial production is about 3 percent as compared with 2 percent which we experienced for many years. This difference of 1 percent means a very large increase in national production. Now consider the difference between our 3 percent and the 6 percent of the Soviet.

The Russians have also undertaken a vast educational program to train their people. It began a long time ago and it is now being accelerated.

I will not elaborate on this subject tonight, for it has been covered thoroughly in many articles and addresses, and the statistics are both voluminous and convincing. They all agree that the Russians are increasing their engineering and scientific talent faster than we are. Enrollment in their engineering schools is about one-third larger than ours. Mr. Allen Dulles, Director of our Central Intelligence Agency, has stated that between 1950 and 1960 Soviet Russia will have graduated 1,200,000 scientists and engineers, compared with 900,000 in the United States. And by 1960 it is estimated they will have more scientists and engineers than we.

These statistics do not tell the entire story. We know that the Russian student spends more hours in the classroom. We have evidence that his curriculum may be better suited to producing the kind of scientist or engineer the Soviet Union is looking for. And we know that the technical schools of Russia are turning out, by the hundreds of thousands, the second-level technicians whose work releases the first-level men for more important duties.

In a speech he made on December 4, the Chairman of the Atomic Energy Commission, Lewis L. Strauss, disclosed these facts:

Fifty-three percent of our high schools do not teach physics at all.

Half of our high schools do not teach chemistry.

Between 250,000 and 400,000 of our high-school students are learning their mathematics and science from teachers who are not trained to teach these subjects. Part-time science teachers now outnumber full-time science teachers.

It is also a fact that the percentage of high-school pupils who today study chemistry, physics, and mathematics is far lower than it was in 1900. We could not have chosen a worse time to reduce the intensity of our secondary school training in scientific subjects.

Other factors make this statistical picture even worse for us. The rate of attrition of Russian engineers and scientists is lower than ours because they are younger. And also we run into the basic difference in the utilization which is being made of our manpower resources as compared with those in Russia. There the government assigns every engineer to the job where he is most useful to the State. He has no choice. Here we compete for our engineers of whom we have too few: one corporation against another, one industry against another, private enterprise against the Government.

The third point I would make is this: Great inventions and revolutionary discoveries in the industrial field today are no longer the work of 1 man working in 1 laboratory in 1 country.

Inventions today are the product of groups of men working as a team, backed by great resources, using the ideas of many other men, perhaps in other countries. The day of the single creative genius is over. Thomas Edison closed an era.

To prove this I ask: How many of you can name the man chiefly responsible for the development of nylon? Of radar? Of the automatic-gear shift? Of the electronic computer?

This now brings me to my second major thesis: The language of invention today is universal. An idea does not come singly to one nation. The same discoveries are being made simultaneously by the scientists of many nations, and they canont be hoarded to give any state or group of states an advantage. From now on no significant inventions are likely to be available to one country alone for more than a very brief period of time.

A discussion I had a few days ago with an official of a research and development organization exemplifies this. He told me that they had been working for several years on a new metallurgical process which they believed was unknown to anyone else. Recently they learned that three other laboratories had simultaneously been working on the same development—but no one of them was familiar with the work the others were doing.

Sooner or later all theoretical knowledge becomes universal. It follows that what counts today is not so much inventive genius as the practical ability to translate inventions into items rolling off the production line. This is a field in which Americans have always shown particular aptitude. We have it still; witness all the marvelous things which make life pleasant and easy. But we have not fully applied this aptitude to the cutting of lead time on important items. The Russians on the other hand have concentrated all they have in this field—which is why they have been able to improve so rapidly.

Lead time, of course, has always been a key factor in warfare, from the days when a man equipped his army with stone hatchets faster than his enemy. There has been a tremendous increase in technological complications in modern warfare, and lead time is now measured in years. In 1940, for example, about 17,000 man-hours were required to build a military fighter. Today the time for the same category of plane is 1,380,000 hours. In 1960 according to estimates, it will be 2,150,000 hours, and that in spite of greatly increased productiveness of each man-hour.

We pride ourselves that a man-hour now produces much more than before World War II. A fraction of a man-hour now produces many items which a decade ago required several man-hours. So, to get a true picture of the increased complexity of modern war machines, you must factor into the above figures the increased effectiveness of the present-day man-hour.

Here are some typical examples of lead time:

Our armed services have needed 3 years to design, develop, test, and construct a landing ship for tanks; more than 4 years for the 57-millimeter recoilless rifle, or for a medium tank; 5 years for a destroyer; 7 years for a jet fighter plane; 6 years for a bomber. It even takes us nearly 3 years lead time to effect a change in a uniform. And every United States plane used in World War II was on the drawing boards before December 7, 1941. No plane whose design was started after that date saw action in that war.

Let me illustrate the importance of lead time for military power by citing some examples from recent history where the side which was inferior in industrial capacity might nevertheless have won a war by recognizing the potential of a new weapon or by reducing the lead time to bring it into use.

POISON GAS

The Germans used gas shells in a local attack in Poland in January 1915. The experiment failed because of the intense cold. They next used gas 3 months later in France in April 1915. But this time the gas had to

be discharged from cylinders because the military authorities refused to provide the necessary shells which the inventor had asked for. Even so, a wide breech was made in the French line. However, since the German high command had been disappointed with the results of the initial attempt in Poland, there was neither enough gas nor were there reserves to pour through the 4-mile gap where no living defender remained. Two French divisions had completely disappeared. For 8 days after this discharge of gas there were large openings in the Allied line, but the Germans did not take advantage of this favorable situation.

This was the most complete surprise of the entire war. By failing to have a suitable supply of gas on hand and by not exploiting the opportunity offered, the Germans perhaps missed the chance to win the war in France in 1915. Once forfeited, the opportunity was lost.

SUBMARINE WARFARE IN THE FIRST WORLD WAR

It is well known how close the German submarines came to winning the war. At one time in 1917 the British forces in France had only 4 days' supplies left. Had the German authorities realized the significance of the submarine, begun construction sooner, and authorized its unrestricted use in 1915 instead of 1917, they would have won the war.

In this use of poison gas or submarines I am not touching on the moral or legal aspects of their use; I am simply discussing their military use.

USE OF TANKS IN THE FIRST WORLD WAR

The idea of the tank was conceived in 1914. It was backed by Winston Churchill, then First Lord of the Admiralty, over official opposition. In September 1915 the British made a surprise attack with tanks against the Germans on the Somme. This premature employment, before large numbers of tanks were ready, was a great mistake and was contrary to the advice of the tank people. The chance of a great strategic surprise was missed. The British military authorities then lost faith in tanks. Some urged their abandonment, and 1,000 which had just been ordered were canceled by the War Office. But the officer in charge of contracting for the tanks was a reserve officer who was not concerned about his career in the Army. He went to Lloyd George, the War Minister, and the order for the tanks was reinstated. In 1918 the German military headquarters, in reporting to the German Government that there was no longer any prospect of winning, listed the tank as the primary reason.

USE OF THE V–2 LONG-RANGE ROCKET IN THE SECOND WORLD WAR

The first flying bombs crossed the English Channel in June 1944. They carried 1 ton of explosive, but because of their straight-line flight and relatively low speed the British were able to cope with them.

Then, in September 1944 the Germans fired the V–2, the long-range rocket. But by that time the V–2 could no longer, of itself, win the war. The story could have been different if, starting 18 months earlier, long-range rockets with increased range, accuracy, and effect had been developed at top priority.

When Hitler finally realized the effect of this delay on the outcome of the war he said to Walter Dornberger, who headed the German rocket work: "I have had to apologize to only two men in my life. The first is Field Marshal von Brauchitsch. I did not listen to him when he told me again and again how important your research was. The second man is yourself."

These few examples show the importance of exploiting new ideas rapidly, and that it is not necessarily the most productive nation or the most powerful which will win but the one which can develop new ideas fastest, which gets new items into hardware first.

It should be carefully noted, however, that although the timely use of poison gas, the submarine, the tank, or the V–2 rocket might have caused the loss of Europe to the Germans or Asia to the Japanese, the United States would still have remained unconquered. Not only unconquered but protected by friendly oceans. And with this protection, time would have been available to develop countermeasures for the new weapons and to bring our industrial strength to bear against the enemy.

The situation today is quite different. There are only two major military powers. If a world war breaks out these two will be engaged, and there will probably not be time to develop countermeasures against a new potent weapon.

This is the reason why lead time is of such great importance today—why the nation with the lowest lead time has the advantage.

It seems that the Russians have been able to cut their lead time considerably on important items; this is borne out from public displays in the annual air shows over Moscow.

This reduced lead time under the conditions of present day invention and technology constitutes one of the gravest long-range threats to the security of the Western world. And this is why this problem should be of great concern to all of us.

There are doubtless many reasons for Russian success in this field even though these may be different for Americans to understand. One of these reasons is that the totalitarian rulers are not answerable to their people. The Soviets constitute a state that, for nearly 40 years, has been organized for permanent and total conflict. In light of this, their accomplishments become more understandable.

Let me make myself clear: I know the evils and the weaknesses of the Russian system but, in spite of these evils and weaknesses, we have reason to fear their results. Russian engineering and scientific development challenges our military power. We cannot allow this challenge to stand and I, for one, do not believe that a democracy must of necessity be less efficient than a total state. We can meet this challenge but we may have to revise some assumptions which have comforted us up to now, and take action to analyze and improve, as necessary, our present methods of producing important items.

Our scientific discoveries will no longer be of particular advantage to us if the enemy develops them faster than we do. We have known for several years that our scientific training has been deteriorating and have done little about it.

The first step we must take is to improve the technical and scientific training of our young people. We are faced with a national problem of the first order, and nothing less than an over-riding effort by all of us will meet it. There is no lack of knowledge of what must be done. Profound studies have been made on the subject and much has been said about it. But so far little has been done.

In a talk on November 22, 1955, I suggested that industry, at its own expense, lend its engineers for a year's teaching service in our schools—as an emergency measure to offset the present critical shortage of teachers, especially in mathematics and science. I also suggested that a clearinghouse be set up to receive and channel all contributions by industry to colleges and universities and that industry recognize the need to increase such contributions substantially and consider this as part of the expense of running the business; that the length of the school year be extended from 180 to 210 days to bring it more in line with the school year in Europe and Russia; that extraordinary pains be taken from now on to seek out and cultivate our gifted children; that two different kinds of high schools be set up, one having higher standards, to enable our gifted youth to advance as rapidly as they are able to, unhampered by the slower rate of the children whose abilities lie in other fields than the academic.

The second step which we must take is to speed up design and development of military goods. This may have to be done by cutting down the delays which stem from too much review, too much coordination, or too many overhead people. This is not a problem peculiar to the Federal Government. Private industry is also plagued with it, and knows that it is. Fortune commented on the subject last September in an article called The Vice-President Problem. Time magazine wrote about it on December 26 in an article called Company Conferences—The Perils of Table-Sitting. A manager of an eastern manufacturing plant estimated that he spends 65 percent of his working time in conferences, and that little of this time is usefully spent.

Important work can be streamlined and the lead time cut down.

The money we try to save by checking and counterchecking, by being too careful not to make mistakes, is frequently offset by the lengthening of our lead time. Time, after all, is money; but time today is more than money; it is our margin for survival.

We shall undoubtedly discover other ways to improve our technical and scientific development and to cut our lead time, once we put our minds to work on the problem.

As individuals and as a Nation we have to ask ourselves this question: Is the Soviet Union a serious threat to our survival? If the answer to that is "Yes," then we must ask ourselves this second question: Is the Nation doing all that it can and all that it should to turn back that threat? If the answer to that is "No," then I submit that something is wrong with us and that we are in trouble.

One final thought: You know that there can be no second place in a contest with Russia and that there will be no second chance if we lose. But if we lose, it will be largely by default. It will be because we have acted without vision, because we will have wasted the marvelous ingenuity and fine spirit of the American people in providing us with things which make life more pleasant but which really do not matter much if they are bought at too high a cost.

Upper Colorado Project's Financial Scheme Wholly Unsound

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. HOLIFIELD. Mr. Speaker, the proposed upper Colorado River project's financial scheme is wholly unsound. None of the irrigation reclamation projects are financially sound. The irrigation water users on the average would be able to repay only about 12 percent of the direct irrigation investment, which, including storage costs, would range from $750 to $900 per acre varying with the number of projects included. The power dams are supposed to provide the

revenues to pay for themselves as well as 88 percent of the irrigation investment.

The project repayment provisions contemplate an overall repayment period of at least 100 years. This is unrealistic and economically indefensible. The hearings make it clear that the repayment plan might work for only a minimum number of projects and that with additional projects there would be no possibility of payment within 100 years unless the power rate were increased substantially above the 6-mill rate contemplated in the Bureau's report. Furthermore, it is extremely doubtful that a market for the power even at the 6-mill rate would continue for 100 years. The approaching availability of atomic electric power will make 6-mill power competitively obsolete. In fact, the market area is not now in need of the power which would be provided. The power dams are in the bill because they are the only hope of making the overall project appear feasible.

The project is not self-liquidating as claimed by the Bureau of Reclamation. Studies show that simple interest alone on the investment would be greater than the estimated net revenues.

The upper Colorado project as now proposed deserves a "no" vote.

Cradle of Liberty

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following interesting editorial from the Christian Science Monitor of February 20, 1956:

BOSTON'S CRADLE OF LIBERTY

(By Emilie Tavel)

"They call it a cradle
But it doesn't rock.
A grasshopper weathervane
Twirls on top.
Name rhymes with "flannel"—
For some, but not all.
Answer to the riddle:
Faneuil Hall."

It has always been like this. Some Americans can't seem to get their tongues around French words. Like the colonists, people here today still can't agree on how to pronounce the name of Peter Faneuil, donor to Boston of the now famous hall.

Some say "Fannel," some "Funnel," and others insist on "Fan-y-el." Peter's tombstone in Granary burying ground only complicates matters with "P. Funel."

However it comes out, the name is one increasingly heard today.

The 214-year-old brick building in Boston's downtown market district has been known as the Cradle of Liberty since fiery orators of Revolutionary days won it that name.

The newest "cradle" noises being heard, however, are not concerned with the mighty issues of freedom and tyranny but with the three-story structure itself.

More and more people are beginning to think that the time has come to tidy up the whole area around Faneuil Hall, even tear down buildings if necessary, to give this architectural and historic gem a more suitable setting. City officials recently made this proposal.

The immediate plea most often heard is to banish the meat markets and produce stores with their variety of signs and smells, which occupy the first floor of the hall.

The basic trouble with a market is that it is practically impossible to keep its environs clean

Advocates of a change don't favor altering the original commercial character of the ground floor. To add dignity, they would simply rip away the disfiguring modern metal awning that runs around the building and replace the food stalls with stores selling replicas of the 18th century wares.

Cabinetmakers, silversmiths, printers, and sellers of chocolate and mustard, they say, could market Faneuil Hall-labeled goods that would be eyecatchers and strong tourist attractions.

These enterprises should draw many more than the 40,000 visitors that come each year, proponents say.

Countering these arguments is the claim that to take away the food stalls would be to rob Faneuil Hall of the very element that gave it cause for existence.

The 1742 building, designed by portrait-painter John Smibert and later enlarged by Charles Bulfinch, was given to the city by Faneuil, an opulent merchant of French Huguenot descent.

But even in those days the market idea wasn't thoroughly popular. Due to a controversy over the market-house system versus door-to-door peddling, agitated Bostonians voted to accept the munificent gift only by a 7-vote margin.

What may be a trend away from the marketing district where Faneuil Hall is located has already begun. The first break from the 200-year tradition came in 1935 when some distributors moved to Cambridge. Recently all the big wholesale meat dealers have transferred to a modern distribution center in the South End.

The fascinating part about the meeting hall is that it is still fulfilling its original purpose as a gathering place for all people. Protected by the city against sale or lease, the hall is available to any group willing to pay the slight honorarium and to obey the regulation not to charge admission fees.

The same well-kept interior that witnessed the Stamp Act speeches, plays by British troops, orations by Daniel Webster and Wendell Phillips, and a banquet for America's first President, is now, among various other things, a balloting place for longshoremen.

One recent Sunday night the Friends of McCARTHY held forth here. Women's patriotic groups gather regularly, and children give concerts. The 2 weeks preceding each primary and election are reserved for political rallies.

But the fact is that public gatherings are dwindling. Hector Campbell, custodian for 20 years, says the customary 130 events during a year have dropped to only about 50. The ban on admission fees and the availability now of other auditoriums is cutting into the hall's usefulness.

Under these circumstances, a switch in tenants, calculated to heighten public interest in the building, should be a welcome improvement.

One tenant, dating from 1746, which doubtless never will be disturbed, is the Ancient and Honorable Artillery Company of Massachusetts, whose spacious and beautifully maintained armory on the third floor is a treasury of military Americana for the public to see.

Back to the Thinking of America's First Leaders

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. COUDERT. Mr. Speaker, I include an editorial appearing in the Murray Hill News of February 1956, by Miss Dorothy Frooks, publisher. The Murray Hill News is a nonpolitical, nonsectarian, neighborhood paper circulating in the heart of Manhattan, and I am informed is winner of the Freedoms Foundation award at Valley Forge for promoting the American way of life through editorials encouraging respect for the Constitution and the Bill of Rights.

The editorial follows:

BACK TO THE THINKING OF AMERICA'S FIRST LEADERS

(By Dorothy Frooks)

"Books are wastepaper," once wrote George Washington, "unless we spend in action the wisdom we get from them."

Washington's epigram applies more to the reading of books than to the books one reads. When buying books for your library it is a capital thought. One cannot gain wisdom from books that contain no wisdom. Individual tastes and needs differ so widely that books which are useful and constructive to one will often be of no value to another of equal intelligence. Your library would be deficient if it does not contain a good history of your own country. The histories of other countries should follow.

One can understand situations much better if one knows the historical backrgound and geographical position of places and people.

It is interesting to note that the Founding Father of our country, George Washington, whose birthday we celebrate on the 22d of this month, has been in the same situation as our President Dwight D. Eisenhower. Very few people have read that phase of the life of George Washington, as we look upon him as a strong man of great physic and indefatigable strength. But an article in American Heritage written by Dr. Rudolph Marx, discloses that as stalwart as the general was, he was often ill and required medical care. Reported to have been 6 feet and 3½ inches tall, at the age of 67, he still carried on with his duties although he was subjected to numerous diseases. We have conquered them by medical science and research. Scarlet fever, diphtheria, smallpox, malaria, were common at the time, and doctors during Washington's time were incapable of giving a scientific explanation of most disease phenomena.

Men today, with 1 or 2 of the diseases that Washington had contracted, would have been found physically unfit for any branch of service and any occupation. At the time that Washington was graduated from William and Mary College in Virginia as a public surveyor, a profession that he practiced for many years, the great stretches of Virginia swamps gave him a malaria infection. He had previously suffered smallpox, and on 1 calamitous trip not only failed to cure his brother of consumption, who died subsequently, but the germs weakened George's body.

Regardless of his physical handicap, he went into military service, and during that

period was often on his back in a weakened condition. His political life was not disabling, for even when he was sick and suffered, he carried on with full force and effect. There is no record that he was ever incapacitated all during the Revolutionary War. The continuous strain evidently raised his normal powers of endurance, resistance and immunity. He alone was destined to keep alive so that Revolutionary War was successfully won. Of his 9 brothers, half brothers and sisters, 2 died in infancy, the other 7 between 13 and 64. George, the most sickly of all, survived them as well as his 2 adopted children.

The doctors in those days had little to work with, yet this sick man lived to serve 2 terms as President. He could have had a third term if he had not thought of precedent for the future, as he well knew that the longer the term, the greater the power and the greater the power, the easier a dictatorship. It was that reason alone, not his illness, that made him feel that 2 terms were enough.

Today we have a man in the White House with a far less hazardous health condition who should carry on. Health is something for God, and a weak heart can outlive many healthy people. Washington without modern medical care withstood sickness. Eisenhower with modern medical care will live to a ripe old age. Both Washington and Eisenhower, spiritual men were alike in the spirit of determination.

The Upper Colorado River Storage Project—A Patchwork Proposal

EXTENSION OF REMARKS
OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. LIPSCOMB. Mr. Speaker, the upper Colorado River storage project is scheduled to be brought before this Chamber for consideration next week. Before any such serious consideration can be deserved, many inherent inconsistencies and fatal defects in the proposal should be eliminated.

The House should not be expected to further patch this patchwork proposal on the floor of this Chamber in final debate. At the least the bill should be recommitted to the House Interior and Insular Affairs Committee for further study and hearings upon reports from the Secretary of the Interior and the Bureau of the Budget. The projects proposed to be authorized, the repayment provisions of the bill, and the economic and financial aspects thereof have never been fully reported upon by the Secretary of the Interior or the Bureau of the Budget.

There are many unresolved questions as to engineering, economic, and financial feasibility of the proposed projects which demand further study and report before Congress acts on this proposal. These unresolved questions affecting the engineering, economic and financial feasibility of the projects proposed in the upper Colorado River storage project bill should be reviewed by an impartial board of qualified engineers and experts and reported upon before Congress takes any further action. Such a board of review and procedure is recommended by the Presidential Advisory Committee on Water Resources Policy for all water resources projects. The proposed upper Colorado River storage project, with its intricate web of engineering and financial arrangements, cries out for such a review.

The haste and pressure under which this whole project has been presented to the Congress has already resulted in a strange piece of legislative history. In a rather unusual step, a majority of the House Interior and Insular Affairs Committee, on February 8, 1956, considered and approved amendments to H. R. 3383, a bill to authorize the Secretary of the Interior to construct, operate, and maintain the Colorado River storage project and participating projects, some 7 months after a rule had been obtained on a bill which had been vigorously put forward as being a measure which would satisfy all interests and endanger none.

A principal amendment carves up excess revenues expected to be produced from the power dams and apportions them among Colorado, New Mexico, Utah, and Wyoming to be used in repaying construction costs of participating projects within those States. This totally new concept constitutes in effect a new bill. It and all the other amendments had less than 2 hours before the House Interior and Insular Affairs Committee. It had no time at all before the Rules Committee. There was no executive department comment at all, with the exception of a brief letter from the Reclamation Bureau, which gave no substantiating information. This action is contrary to the orderly processes of the House. It should not be permitted.

The new H. R. 3383 contains all of the vices of the original, and more, such as the direct apportionment of project revenues. In addition, geological material has come to light since the end of the first session of this Congress which requires most urgent consideration by qualified people. It has received none. Furthermore, the administration's soil-bank proposal now before the Congress would require taking presently cultivated land out of production to cut down surpluses. H. R. 3383 would put new lands into cultivation and provide more water for lands already in crops—some of which may well be placed in soil-bank reserve—to grow more surpluses. It simply does not make sense.

Save for the extraordinary provision apportioning power revenues among the four States in which the projects will be built, the bill remains substantially the same. The only change in projects enumerated has been the substitution of San Miguel and Yellow Jacket for Woody Creek, all in Colorado.

PRINCIPAL OBJECTIONS

Principal objections to the bill which call for answer and revisions in the bill before any serious consideration by the Congress are the following, which have been outlined by members of the House Committee on Interior and Insular Affairs in House Report No. 1087, 84th Congress, 1st session, issued on July 8, 1955, and supplemented by part 2 of this report issued on February 14, 1956:

First. The $1½ billion upper Colorado storage project approved by the Senate, and the ostensibly smaller House bill, are one and the same thing. In actuality the project is the nondivisible $1½ billion entity described in House Document No. 364 of the 83d Congress. Only segments of that entity are contained in the House bill. Although such expensive and controversial integral parts of the whole project as Echo Park have been deleted from the House bill to make it appear palatable, they cannot be deleted from the project. Authorization of the initial segments will make mandatory later authorization of the remainder so that power revenues can be obtained to help repay the investment.

Second. Invasion of Dinosaur National Monument by Echo Park Dam and power facilities will be unavoidable if the bill passes. The effort to delete Echo Park is misleading. Echo Park is an integral part of the project which will be required for inclusion at some future time in the effort to rescue vast expenditures on an infeasible project. As the bill now stands, the committee is sending to the House a bill which the Commissioner of Reclamation has conceded is economically infeasible.

Third. The project will damage the Nation's agricultural economy. The project would grow crops already in agricultural surplus. The project will service, for the most part, only marginal agricultural land. When needed, there exists at least 20 million acres of undeveloped land which can be placed in production at a fraction of the cost of acreage serviced by the project.

Fourth. The ultimate direct and hidden costs of the project total at least $5 billion. This figure is probably low because it is based on Bureau of Reclamation cost estimates which have proved notoriously short of actual construction costs.

Fifth. Ninety-eight percent of the project's cost would be borne by the taxpayers of the 44 States in which the project is not located.

Sixth. The appropriation authorization of $760 million is misleading. It actually amounts to $933,468,300 based on Bureau of Reclamation estimates. It should be $1.6 billion to reflect actual direct construction costs.

Seventh. The huge concealed Federal subsidy to the States of Colorado, Wyoming, Utah, and New Mexico flowing from the project are unwarranted and unconscionable.

Eighth. The project's financial scheme is wholly unsound and will burden taxpayers for generations to come. Irrigation projects are financially infeasible, requiring an average subsidy of 88 percent of their cost. Project repayment provisions are unrealistic and economically indefensible. The project's financial scheme is based on the impossible assumption that 6-mill power will be marketable for the next 100 years. Low cost nuclear electric power developments and potentialities have been disregarded and ignored. The project is not self-liquidating. The project's power dams

are unneeded for power and are included only to subsidize irrigation components.

Ninth. Central Utah—initial phase—the project's largest irrigation segment, is the most infeasible of all. The estimated cost of this project for the irrigation features alone is $127 million to irrigate 160,000 acres at a cost of $794 per acre, exclusive of hidden interest subsidy by the taxpayers. The Bureau of Reclamation studies show that the water users could repay only $94 per acre, or 12 percent of the construction cost, over a period of 70 years.

Tenth. Water rights upon which the project depends for power revenues are now in litigation before the Supreme Court and may never become available.

Eleventh. Three physical and geological difficulties in addition to Echo Park make the project unreasonable and impractical: (a) There is doubt whether Glen Canyon can support a 700-foot dam; (b) the construction at Glen Canyon will endanger Rainbow Natural Bridge; (c) large quantities of water may be forever lost by absorption into the sandstone walls of Glen Canyon Reservoir.

Twelfth. The benefit-cost ratio has been distorted contrary to reclamation law in an attempt to justify the project's unsound economics.

Thirteenth. Fifty years of reclamation law, precedent, and experience are jettisoned by the project.

Fourteenth. The project wholly ignores the Hoover Commission report.

Fifteenth. The bill includes projects which have been disapproved by the Bureau of the Budget.

Sixteenth. The bill varies substantially and materially from the administration-approved project. The bill's projects are different. A reexamination of economic justification of the project, called for by the administration, is missing. Financial repayment features are basically contrary from those approved and recommended by the administration.

Seventeenth. The project should not be authorized at this time because the economic, engineering, and financial surveys prerequisite to its proper evaluation are still inadequate and incomplete.

Eighteenth. The project would critically impair the quantity and quality of water to which the lower Colorado Basin States, particularly southern California, have prior rights.

Nineteenth. The project would critically impair operations at Hoover Dam and lose $187 million in revenues to the Federal Treasury.

Twentieth. The assistance to the Navajo Indians in the bill is negligible. Cost of the project's benefits is $200,000 for each and every Navajo farm.

Twenty-first. The project would forever tie the future of the intermountain West to a horse-and-buggy farm economy and forestall development of its rich industrial potential.

RECENT DEVELOPMENTS

Recent material affecting this project and the new committee amendments have not been given any serious consideration.

There are physical and geological difficulties in connection with the Glen Canyon storage unit which cast doubt on its engineering and financial feasibility.

The bill is wholly incompatible with the recommendations of the Presidential Advisory Committee on Water Resources Policy which issued its report on December 22, 1955.

The project would seriously impair water rights in the lower basin of the Colorado River. H. R. 3383 is planned on interpretations of the Colorado River compact which are the exact opposite of those involved in the planning and operation of Hoover Dam. These interpretations are at issue in Arizona versus California, now before the Supreme Court. Arizona, California, Nevada, New Mexico, Utah, and the United States are parties to this litigation and will be bound by the result. The Court recently denied a motion to join the upper basin States as such, at this stage of the proceedings, by a 5-to-3 vote, without opinion. The important thing, however, is that the United States will be bound by the final decision and will be required to operate its projects, whether in the upper States or the lower, in accordance with that decision. That decision will determine which set of assumptions, those on which lower-basin projects have been built and are operating or those on which the upper-basin project is planned, is correct. Both cannot be. While this litigation is pending and while the water rights remain in doubt, Congress should not authorize H. R. 3383.

There are no justifiable reasons for rushing through the Congress, without adequate opportunity for vitally necessary revisions, a project as obviously questionable as the upper Colorado River storage project.

Go After 'Em, Senator

EXTENSION OF REMARKS
OF
HON. EARLE C. CLEMENTS
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Wednesday, February 22, 1956

Mr. CLEMENTS. Mr. President, our beloved colleague, the senior Senator from Arkansas [Mr. McCLELLAN] has justly earned for himself a reputation as the Senate's watchdog. He has presided with fairness, with dignity, and integrity over the Senate Investigations Subcommittee, and deserves the plaudits of Americans everywhere.

I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial concerning our distinguished colleague which appeared recently in the New York Daily News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GO AFTER 'EM, SENATOR

Yesterday in Washington, Senator JOHN L. McCLELLAN, Democrat, Arkansas, began some public hearings which we hope will be productive.

As chairman of a Senate Investigations subcommittee, McCLELLAN wants to find out how much trading in startegic items is going on between non-Communist nations and the Red Slave Empire.

The United States agreed about 2 years ago to a loosening of other countries' restrictions on sales of such goods to Red Russia and Red China. We thought that was a mistake at the time.

Now, Senator McCLELLAN says, the volume of business in things which may be useful some day in killing United States fighting men and civilians has become "very dsturbing." He mentions such items as heavy metal-working machinery, electric generators, and British wire made from copper mined with United States financial aid.

Up to now, McCLELLAN is getting no help from the State Department in his effort to paint the full picture of these dealings with the enemy, pinpoint blame, and recommend ways to halt them.

State objects to public hearings, on the ground that some of our alleged allies' feelings might be wounded.

We hope McCLELLAN will go ahead at full speed. The object would be, not only to shrink Russia's takings of war gear from the West, but also to head off any deal that may be cooking to shoot some holes in the United States refusal to trade with Red China.

Any statesman who tries, as Senator McCLELLAN is trying, to make war preparation tougher for the Red slave empire, deserves the support of all patriotic Americans.

American Military Personnel in Foreign Courts

EXTENSION OF REMARKS
OF
HON. HERMAN WELKER
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Wednesday, February 22, 1956

Mr. WELKER. Mr. President, for some time the Congress has been considering the modification of the status of forces agreements which give to foreign courts criminal jurisdiction over American military personnel.

This is a matter of great moment, for it not only deals with United States prestige abroad but also with the very lives and futures of the young men and women who are serving our country in the armed services.

The press has understandably given this matter wide attention. I was also happy to note that among those who have been strongly advocating a modification of the status of forces agreements so that American citizens in uniform may receive American, not alien, justice, is a distinguished citizen-soldier, Maj. Gen. Julius Klein, retired, Illinois National Guard. General Klein, in addition to combat service in the Pacific under General MacArthur and Admiral Halsey, was a close friend and adviser of our late colleague, Senator Taft. More recently, as special consultant to the Senate Armed Services Committee, during the 83d Congress, his report on his study mission to Europe received the approbation of Members from both sides of the aisle.

I should like to have printed in the RECORD General Klein's recent testimony before the House Foreign Affairs Committee on the status of forces agreements, supplemental material from an

American Broadcasting Co. network broadcast interview with Commentator Bryson Rash and several pertinent newspaper stories.

There being no objection, the statement and supplemental material were ordered to be printed in the RECORD, as follows:

STATEMENT OF MAJ. GEN. JULIUS KLEIN, ILLINOIS NATIONAL GUARD, RETIRED, HOUSE COMMITTEE ON FOREIGN AFFAIRS HEARINGS ON HOUSE JOINT RESOLUTION 309

Mr. Chairman, to identify myself, I am from Chicago, a retired major general in the Illinois National Guard, and have served in the Army abroad during both World Wars and commanded troops in the Pacific theater. After the last war, as special assistant to Secretary of War Robert P. Patterson, I worked on the unification program. During the 80th Congress, it was my privilege to be consultant on national defense to the Republican members of the Armed Forces Committee of the United States Senate. During the 83d Congress, I was honored to be a special consultant to the Senate Committee on Appropriations in which capacity I made a several months' survey of the nations of Western Europe at which time, among other topics, my studies included the problem now before this committee. Last year, I again spent several months in Europe and had the opportunity to further this study. I have been a newspaperman, a motion picture executive, a soldier and am now the head of an international public relations company.

In the spring of 1946 I participated in the deliberations of the so-called Doolittle committee which was constituted under the direction of Gen. James Doolittle to explore the changes necessary to the system of military justice. It is not my intention to give a detailed review of my testimony at that time; it is a matter of public record. I might add that I have also studied the distinguished evidence already presented and do not wish to impose by repetition. However, I do wish to point out the basic concept that underlined my testimony—and the testimony of others similarly familiar with the situation—before the Doolittle committee: The American soldier feels that he has a right to the same justice and the same personal constitutional guaranties as a soldier that he enjoyed as a civilian. How much more important is this concept when it applies to American service people abroad who must face a foreign court, using a strange language and unfamiliar procedures under a system of justice altogether alien to our own.

We have fought several wars to resist the imposition of these foreign ideologies upon our citizens here; why should we acquiesce to the imposition of foreign concepts of justice upon our American service people abroad who go there not of their own free will and not for a selfish purpose. It is too often forgotten that our military forces in foreign lands are there to protect the country in which they are stationed just as much as they are there to protect our own shores.

An American soldier tried in a military court has the right of appeal to the highest military authority, the Commander in Chief—the President—and also, in certain instances, can appeal to the Supreme Court of the United States. This was done successfully recently where the jurisdiction of the Army in the case of a discharged soldier was questioned. But can the decision of a foreign court be challenged where it is believed fundamental American rights are violated—the answer of course is in the negative. This recourse should be supplied.

May I say that in common with many Americans, I have been deeply disturbed by the fact that American servicemen stationed on foreign soil are subject to the jurisdiction of foreign courts under circumstances which deprive them of the protection of the United States Constitution, which they are sworn to defend and preserve.

The core of the dilemma that confronts us is that the urgencies of the struggle between East and West have compelled us to commit many thousands of our young men to areas of the world where the individual soldier finds himself under systems of justice and local conditions absolutely foreign to him. It must be said at the very outset that in his adherence to the laws of man and God, the American serviceman does us great credit as a Nation. It cannot be emphasized too strongly that what we are dealing with here is not even a minute fraction of our mililtary services but an individual here or there who falls into error or wrongdoing. Yet I wonder whether those who negotiated the agreements between the United States and foreign powers on the problem before this committee took into account the unique value our Government places on the right of an individual to full protection of the law, whether the wrong-doing assessed against him is justified or not. It is in this area, it seems to me, that we have failed to take account of the differences that obtain between the legal and judicial concepts of the United States and those of foreign states in which our servicemen are stationed.

It will surely come as no surprise to this committee that the American doctrine which holds that a defendant is presumed innocent until he is proved guilty does not prevail in a number of foreign countries. Nor is it any secret that because of the variations between American and foreign laws, what might be a misdemeanor under our codes can be subject to definition as a felony in a foreign court. And conviction for a felony by a foreign court can expose a United States national to loss of his American citizenship.

I am sure this committee is aware of the painstaking and conscientious efforts made by our armed services to inculcate in the young men inducted into the Armed Forces a high sense of responsibility and a recognition that when they are called upon to serve on foreign shores, they are expected to comport themselves in a manner that will reflect the utmost credit on the country whose uniform they wear. Some very practical considerations have entered into the orientation programs of our armed services. We have made a careful effort to bring our young people to understand that their behavior in foreign countries can have a direct effect on how foreign populations think and feel about the United States. We have tried—and I believe, successfully—to convey to our young men the capacity of our Communist enemies for availing themselves of every opportunity that comes to hand to defame and revile the United States in round-the-clock propaganda attacks.

But I wonder whether we realize that in failing to extend the full protection of American legal and constitutional guaranties to our servicemen overseas, we have given the Communists a weapon that no amount of troop education and orientation can overcome.

I have here a clipping from the German picture magazine Quick, which enjoys a circulation in Germany comparable to the distribution in our own country of such publications as Life and Look. This clipping deals with an American airman, Jose Montijo. There is a picture which shows Airman Montijo in shackles and wearing his United States Air Force uniform.

I should like to read into the record the caption under the photograph in this German news story. It says:

"The pastor performed the wedding. The policeman did not trust him. Tied, on one side, by the loveliness of his young bride, on the other side by the handcuffs of a policeman, the American Airman Jose Montijo is being married in the St. Antoine Church of Fontainebleau by a priest to the pretty French girl, Madeline Thomas. Right after that he had to return to the prison of Melum where he is facing his indictment for manslaughter. As a wedding gift he gave his bride a golden chain."

May I point out to this committee that the alleged crime, and the wedding, took place in France. Yet the episode was found sufficiently newsworthy to get widespread circulation in Germany. It is not likely that this, and similar incidents, will escape the attention of Communist propagandists whose dedicated task it is to drive our forces out of Europe by whatever means this objective can be accomplished.

We most assuredly have confidence in our own American system of military justice; we most assuredly can enforce discipline among our own servicemen without reliance on alien courts. This self-assurance should fortify our determination not to abandon American servicemen to foreign systems of justice.

Only yesterday the press carried a story which quoted those who defend the present system as saying: "After all, in general, these men found guilty get off with lighter sentences from foreign courts than they would have received from an American courtmartial." The same story pointed out that in some of the lands the United States forces are now protecting, "petty larceny is punished by the amputation of the offending, thieving hand." I shudder to think of the public indignation such punishment for an American soldier would arouse.

I realize full well that the present situation is the result of agreements made between the United States and foreign sovereign powers. But these agreements should be amended as provided by House Joint Resolution 309 to obliterate this blot on the American conscience. I urge that our Government should no longer endure the members of its uniformed armed services being the victims of unfamiliar foreign laws, judicial systems, customs, and courts without the constitutional safeguards and methods of judicial and executive appeals which are the birthright of all Americans. The status of forces agreements should be modified so as to include these safeguards.

STATEMENT OF GENERAL KLEIN IN AN INTERVIEW WITH BRYSON RASH, OF THE AMERICAN BROADCASTING CO.

I do feel that the American soldier has a right to the same justice and the same personal constitutional guaranties that he enjoyed as a civilian. How much more important is this concept when it applies to the American serviceman abroad. He must face a foreign court, using a strange language and unfamiliar procedures and a system of justice altogether alien to our own. In the American court and courts-martial—and I have presided over many courts-martial myself—a person is presumed innocent in the eyes of the court until proven guilty. In many foreign countries the system of justice is the other way around.

I believe that our commanding generals and commanding admirals have the responsibility of enforcing discipline in their commands and I would hate to admit that any American general or admiral is not in a position to enforce this order in a foreign country. I think it is a disgrace to see American soldiers handcuffed to foreign policemen. I could never picture Gen. Douglas MacArthur, my old commander in the Pacific, turning over a single GI to a Japanese court or Adm. William F. Halsey, who was also my commander in the South Pacific, turning over a single sailor to a Japanese court for trial of any violations of domestic laws. We are in these foreign countries not only to protect the security of the

United States but more so, the security of these foreign soils. We ought to continue to give the American soldier the privileges and rights as American citizens and not yield that sacred heritage before foreign courts.

I have made several trips to Europe and have spoken to many GI's. They all feel terribly embarrassed when they see one of their own buddies being tried in a foreign court. They do not want clemency. They want the soldier to be punished when he commits a crime but they feel humiliated when they see an American soldier with all his decorations and ribbons handcuffed to a foreign policeman.

[From the New York Daily News of February 3, 1956]

COURT ALLOWS JAPAN TO TRY FOUR OF OUR GI's

(By Paul Healy)

WASHINGTON, February 2.—Federal Judge Joseph C. McGarraghy today held that under the status-of-forces treaty four United States soldiers must stand trial in a Japanese court on a charge of inciting a riot in Japan.

The judge rejected defense attorneys' claims that the treaty is unconstitutional. He then turned down a request for an injunction forbidding United States authorities in Japan to surrender the four for trial.

The attorneys said they will appeal to higher courts in the hope of obtaining a temporary order holding up the trials until their arguments can be heard here.

TO NATO COUNTRIES ALSO

Under the various status treaties, the United States gives Japan and NATO countries the right to try United States servicemen for crimes committed off their bases.

Maj. Gen. Julius Klein, retired, and Representative FRANK BOW, Republican, Ohio, appealed to the House Foreign Affairs Committee to seek revision of the treaties. Bow charged that many foreign courts empowered to try our GI's do not recognize the basic ideas of American justice.

PROPAGANDA FOR RUSSIA

Klein, a former consultant to Republicans on the Senate Armed Services Committee, submitted a photograph of an American in an Air Force uniform shackled to a French policeman while being married to a French girl in France. Klein explained that the airman had been released from a French jail for the wedding, but kept in chains because "the policeman did not trust him."

"It is not likely that this, and similar incidents, will escape the attention of Communist propagandists whose dedicated task it is to drive our forces out of Europe by whatever means this objective can be accomplished," Klein said.

[From the Chicago American of February 3, 1956]

FOREIGN GI TRIALS RIPPED BY GENERAL KLEIN

(By David Sentner)

WASHINGTON, February 3.—Maj. Gen. Julius Klein, retired, of Chicago, says Communist propagandists are making hay out of inequities resulting from status of forces agreements.

Under this agreement GI's can be judged by foreign countries for violations of their laws.

Klein testifying before a House committee, presented a photograph of a uniformed American GI chained to a French policeman which Communist propagandists circulated throughout Europe.

Klein called for congressional modification of the status of forces agreements so American soldiers serving abroad would have the same rights and safeguards they enjoy in the United States. He declared:

"We have fought several wars to resist the imposition of those foreign ideologies upon our citizens here. Why should we acquiesce to the imposition of foreign concepts of justice upon our American service people abroad, who go there not of their own free will and not for a selfish purpose?

"An American soldier tried in a military court has the right of appeal to the highest military authority, the President, and in certain instances can appeal to the United States Supreme Court.

"But the decision of a foreign court cannot be challenged even where it is believed fundamental American rights are violated."

[From the Chicago Daily Tribune of February 3, 1956]

GENERAL KLEIN HITS UNITED STATES SURRENDER OF RIGHTS OF GI'S—PROPAGANDA WEAPON FOR REDS, HE SAYS

(By Philip Dodd)

WASHINGTON, February 2.—By failing to extend the protection of American legal and constitutional guaranties to its soldiers, sailors, and airmen serving overseas, the United States has given the Communists a potent propaganda weapon, retired Maj. Gen. Julius Klein, of Chicago, told Congress today.

Klein, former Illinois National Guard officer and a veteran of both wars, testified before the House Foreign Affairs Committee. He urged modification of the Status of Forces Treaty, under which the United States surrenders criminal jurisdiction over servicemen overseas to foreign courts.

"We have tried, and I believe successfully," Klein said, "to convey to our young men the capacity of our Communist enemies for availing themselves of every opportunity to defame and revile the United States in round-the-clock propaganda attacks.

"GIVE REDS A WEAPON

"But I wonder whether we realize that in failing to extend the full protection of American legal and constitutional guaranties to our servicemen overseas, we have given the Communits a weapon no amount of troop education and orientation can overcome."

Klein showed the committee a photograph from the German magazine Quick, showing a uniformed American airman chained to a French policeman during a wedding ceremony in France. The airman was Cpl. Jose Montijo, who was awaiting trial in a French court for manslaughter.

Klein said it was "not likely" that the Montijo and similar incidents will escape the attention of Communist propagandists intent on driving American forces out of Europe.

American servicemen, Klein said, have a right to expect the same justice and constitutional guaranties they enjoyed as civilians. But when they are sent overseas, often against their will, the status of forces treaty denies them those rights, Klein told the subcommittee.

HOUSE MEMBERS TESTIFY

Other witnesses today were Representative Bow, Republican, of Ohio, author of a resolution which would direct the President to revise or denounce the treaty, and Representative ADAIR, Republican, of Indiana, who told of visiting a Japanese prison where American servicemen are held.

Bow said public hearings on this resolution had "engendered a lot of activity" in the Defense Department, including studies of foreign laws and court practices, steps to improve the treatment of servicemen jailed overseas, and closer observation of Americans' trials.

But Bow said there could be no justification for the "selling of American soldiers" under the status of forces treaty with nations of the North Atlantic Treaty organization or a similar agreement with the Japanese Government.

Bow said the publicity of last year's hearings brought VIP—very important person—treatment to Airman Montijo, of whom Klein spoke. He was tried last November 25 and given a 5-year sentence, which later was suspended. He was then released.

But Montijo was fined an equivalent of $10,000, Bow said. The Congressman said he believed three-quarters of the fine would be paid by the United States, under treaty provisions.

Zealotry and the School Issue

EXTENSION OF REMARKS

OF

HON. JOHN STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Wednesday, February 22, 1956

Mr. STENNIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Zealotry and the School Issue," written by Dorothy Thompson, and published in a recent issue of the Washington Evening Star. The article is intelligently written, and from an understanding viewpoint. It is of great value.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ZEALOTRY AND THE SCHOOL ISSUE—ADVOCATES OF COERCION ARE LIKENED TO THOSE WHO LOSE SIGHT OF AIMS

(By Dorothy Thompson)

The great issues of life seldom are struggles between right and wrong but between two conceptions of right. Democracy can only be sustained by the compromise that takes this fact into account.

In the greatest present national issue, that of abolishing all separate State-supported educational institutions for colored citizens and integrating them into white schools, more than the issue of mixed schools is involved.

The Southern States believe that the Supreme Court ruling, which reversed numerous previous rulings from years back, is an unconstitutional violation of the 10th amendment, which specifically reserves to the States "all powers not delegated to the United States nor prohibited by it to the States." They argue that nothing in the Constitution empowers the Federal Government to control the State school systems, and that the Supreme Court has in its recent decision usurped legislative powers.

To test this they have invoked interposition.

Their doing so is neither unlawful nor unprecedented. Recently in the Wall Street Journal, the eminent Felix Morley reviewed the history.

Interposition, he recalls, first was invoked by Thomas Jefferson against the Alien and Sedition Acts that set our new Nation on its first witch-hunting crusade. These acts made it a crime to print, utter, or publish anything that might bring the President or Congress into contempt or disgrace. Jefferson knew that the Federalists who sponsored the acts exercised a dominant influence in the Supreme Court, and, on the suggestion of a Kentucky delegation, he drafted the first resolution of interposition. The Virginia Legislature followed, calling on the other States to concur with them in declaring the acts to be unconstitutional.

In 1859, Wisconsin interposed against the Supreme Court's Dred Scott decision, on behalf of a Negro slave, arrested by a United

States marshal to be returned to his owner, as the Supreme Court had decreed. The slave was forcibly freed; the Wisconsin Legislature denounced the Supreme Court for assumption of power over the reserved rights of the States, and upheld its decision until the Civil War settled the issue.

Jefferson advocated that where an issue involved the authority of the Federal Government and that of the States the matter should be settled by a clearcut constitutional amendment, as now advocated by the State of Virginia.

Vice President RICHARD NIXON has unwittingly given 10th amendment pleaders some excellent ammunition by attributing the Supreme Court's decision to a "great Republican Chief Justice." Thus, according to Mr. NIXON, it was not a constitutional but a political decision—as Jefferson feared a ruling on the Alien and Sedition Acts would be.

Secondly, there is the problem of enforcement. The question involves every school district and family in 17 States, among which 3 have taken no action on integration and 8 are fully resisting. Does Governor Harriman want the Federal police to move into homes and marshal children into desegregated schools under the protection of tommy guns?

Do those who advocate suspending Federal aid to segregated schools (white and colored alike) wish to break or increase southern intransigence?

What is the purpose of these contemporary Thaddeus Stevenses?

Is it to improve race relations or inflame them past the boiling point?

Do they think to improve the educational climate? Do they not realize that what they advocate would produce the opposite of an educational situation?

The Government cannot force citizens to send their children to any public school. Some of those who can only think of punishing, not of reconciling, have never sent their own children to public school. They have segregated them with money.

Already the patient, courageous work of southerners who have contributed to the remarkable improvement of race relations during recent years is being nullified.

Editors who have championed Negro rights are losing their influence, as extremism breeds counterextremism on both sides.

Those who now think of coercion are examples of that zealotry that "redoubles its zeal as it loses sight of its aims."

Segregation in Public Education—A Study in Constitutional Law

---

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 22, 1956

Mr. ROBERTSON. Mr. President, southern States have been making a serious effort in recent years to provide schools for the colored race equal to those provided for the white, despite the fact that in many areas the whites must carry 90 percent of the burden of cost. This effort has been in accord with a long line of State and Federal court decisions holding that separate but equal schools met requirements of the 14th amendment.

Since the school case decisions of the Supreme Court in 1954 not only abandoned and reversed all of these previous decisions but also completely reversed the intent of the Congress that proposed the 14th amendment and of all the States that ratified it, several of the southern States have felt fully justified in adopting resolutions of interposition.

The soundness of their ground in taking that action is convincingly demonstrated in an article by Mr. Clarence O. Amonette, a distinguished member of the California bar and for many years a member of the American Bar Association, which presents historical evidence to show that the Supreme Court attempted to write into the Constitution something which never has been a part of the organic law of our Nation.

I ask unanimous consent that the article by Mr. Amonette be printed in the Appendix of the RECORD. I am informed by the Public Printer that it is estimated to make four and a quarter pages of the RECORD, at a cost of $340.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEGREGATION IN PUBLIC EDUCATION—A STUDY IN CONSTITUTIONAL LAW

(The writer is concerned only with the constitutional question presented and not with the question whether segregation is or is not desirable as a matter of policy.)

On May 17, 1954, the Supreme Court of the United States in *Brown* v. *Board of Education* and three other cases (347 U. S. 483). The three other cases are: *Briggs et al.* v. *Elliott et al.*, on appeal from the the United District for the Eastern District of South Carolina; *Davis et al.* v. *County School Board of Prince Edward County, Virginia, et al.*, on appeal from the United States District Court for the Eastern District of Virginia; and *Gebhart et al.* v. *Belton et al.*, on certiorari to the Supreme Court of Delaware. The Brown case was on appeal from the United States District Court for the District of Kansas, in a consolidated opinion, concluded "that in the field of public education the doctrine of 'separate but equal' has no place," and held unconstitutional segregation statutes of four States (Kansas, South Carolina, Virginia, and Delaware), on the ground that the plaintiffs, minors of the Negro race, "are, by reason of the segregation complained of, deprived of the equal protection of the laws guaranteed by the 14th amendment" to the Constitution of the United States. The question presented, as stated by the Court, was:

"Does segregation of children in public schools solely on the basis of race, even though the physical facilities and other tangible factors may be equal, deprive the children of the minority group of equal educational opportunities?"

More properly stated, the question presented was:

"Does segregation of children in public schools solely on the basis of race, even though the physical facilities and other tangible factors may be equal, deprive the children of the minority group of the equal protection of the laws guaranteed by the 14th amendment to the Constitution of the United States?"

And the Court concluded:

"We conclude that in the field of public education the doctrine of 'separate but equal' has no place. Separate educational facilities are inherently unequal. Therefore, we hold that the plaintiffs and others similarly situated for whom the actions have been brought are, by reason of the segregation complained of, deprived of the equal protection of the laws guaranteed by the 14th amendment.

In its opinion, delivered by Mr. Chief Justice Warren, the Court stated that the reargument (argument was heard in the 1952 term on December 9, 1952, and the reargument on December 8, 1953) "was devoted largely to the circumstances surrounding the adoption of the 14th amendment in 1868" and that it "covered exhaustively the amendment in Congress, ratification by the States, then existing practices in racial segregation, and the views of proponents and opponents of the amendment." The Court, while admitting that this discussion and its own investigation cast some light, was of the opinion that they are, at best, inconclusive and not enough to solve the problem. Thus, the Court in these cases of such great importance, constitutionally and otherwise, summarily disposes of the historical context of the 14th amendment.

One of the objects of the 14th amendment was to secure to the Negro race equality of civil rights with the white race. (*Virginia* v. *Rives* (100 U. S. 313, 318); *Ex parte Virginia* (100 U. S. 339, 344, 345).) In ascertaining the intention of Congress, in this respect, in proposing the 14th amendment, and that of the States in ratifying it, its historical context should not be forgotten. (*Shelley* v. *Kraemer* (334 U. S. 1, 23).) Likewise, legislative exposition of what constituted equality of civil rights in the field of public education immediately prior to, at the time of, and subsequently to the proposal by Congress and the ratification by the States, of the amendment, the generally accepted understanding by the States and by the courts after ratification that the amendment did not proscribe segregation of the races in the field of public education, and the long acquiescence by the Congress, by the States, and by the courts that such segregation of the races does not constitute a denial of equal civil rights, should not be overlooked or ignored. (*Stuart* v. *Laird* (1 Cranch 299, 309); *Martin* v. *Hunter's Lessee* (1 Wheat. 304, 351); *Cohens* v. *Virginia* (6 Wheat. 264, 420); *Prigg* v. *Pennsylvania* (16 Peters 539, 621); *Cooley* v. *Board of Wardens, etc.* (12 How. 299, 315); *Burrow-Giles Lithographing Co.* v. *Sarony* (111 U. S. 53, 57); *Ames* v. *Kansas* (111 U. S. 449, 463–469); *The Laura* (114 U. S. 411, 416); *Wisconsin* v. *Pelican Insurance Co.* (127 U. S. 265, 297); *McPherson* v. *Blacker* (146 U. S. 1, 28–35); *Knowlton* v. *Moore* (178 U. S. 41, 56); *Fairbank* v. *United States* (281 U. S. 283, 308); *Ex Parte Grossman* (267 U. S. 87, 118); *Myers* v. *United States* (272 U. S. 52, 174, 175); *Hampton & Co.* v. *United States* (276 U. S. 394, 412); *United States* v. *Curtis-Wright Corp.* (299 U. S. 304, 322–329); *Ex part Quirin* (317 U. S. 1, 41).)

The doctrine of separate but equal apparently originated in 1849 in *Roberts* v. *City of Boston* (59 Mass. 198), which upheld school segregation, separate schools for the white and colored races, against attack as being violative of a State constitutional guarantee of equality. (See note 6 to the Court's opinion in the segregation cases. See also, *Gong Lum* v. *Rice* (275 U. S. 78, 86), in which the Court said that the case of *Roberts* v. *City of Boston, supra*, upheld the separation of colored and white schools under a State constitutional injunction of equal protection, the same as the 14th amendment. In the Roberts case, a colored child, 5 years of age, brought suit by her father and next friend to recover damages on the ground that she had been unlawfully excluded from public-school instruction in violation of the Constitution and laws of Massachusetts to the effect that all persons regardless of age, sex, birth, color, origin or condition, are equal before the law. In holding that the action could not be maintained, the Court said (p. 205):

"The plaintiff had access to a school set apart for colored children, as well conducted

in all respects, and as well fitted, in point of capacity and qualification of the instructors, to advance the education of children under 7 years old, as other primary schools."

By an act (12 Stat. 394) approved May 20, 1862, Congress provided for the public instruction of youth in primary schools throughout the County of Washington, in the District of Columbia, without the limits of the cities of Washington and Georgetown. Section 35 of tht act provided for initiating a system of education of colored children in said county. By an act (12 Stat 407) approved May 21, 1862, Congress made it the duty of the municipal authorities to initiate primary schools for the education of colored children in the cities of Washington and Georgetown, in the District of Columbia. By an act (12 Stat. 537, 538) approved July 11, 1862, Congress created a board of trustees of the schools for colored children in the cities of Washington and Georgetown. By an act (13 Stat. 187) approved June 25, 1864, Congress provided for the public instruction of youth in the city of Washington, D. C. Section 16 of that act provided:

"That any white resident of said county shall be privileged to place his or her child or ward at any one of the schools provided for the education of white children in said county he or she may think proper to select, with the consent of the trustees of both districts; and any colored resident shall have the same rights with respect to colored schools."

Section 17 of that act provided among other things:

"That it shall be the duty of said commissioners to provide suitable and convenient houses or rooms for holding schools for colored children, to employ and examine teachers therefor, and to appropriate a proportion of the school funds, to be determined by the numbers of white and colored children between the ages of 6 and 17 years, to the payment of teachers' wages, to the building or renting of schoolrooms, and other necessary expenses pertaining to said schools, to exercise a general supervision over them, to establish proper discipline, and to endeavor to promote a thorough, equitable, and practical education of colored children in said county."

Section 18 of that act made it the "duty of the municipal authorities of the cities of Washington and Georgetown, in the District of Columbia, to set apart each year, from the whole fund, received from all sources, by such authorities, applicable, under existing provisions of law, to purposes of public education, such a proportionate part thereof as the number of colored children, between the ages of 6 and 17 years, in the respective cities bear to the whole number of the children thereof, for the purpose of establishing and sustaining public schools in said cities for the education of colored children; that the said proportion shall be ascertained by the last reported census of the population of said cities made prior to said apportionment, and shall be regulated at all times thereby."

With the background hereinbefore recited, on June 16, 1866 (14 Stat. 358), the Senate and House of Representatives of the United States, by joint resolution, proposed to the legislatures of the several States an amendment to the Constitution of the United States and this proposal was adopted as the 14th amendment. (When the proposal was submitted, Congress undoubtedly knew of the decision in *Roberts* v. *City of Boston, supra,* upholding the segregation of white and colored schools under a State constitutional injunction of equal protection like that of the 14th amendment, and also of the laws enacted by Congress providing for segregation in the District of Columbia. Charles Sumner, who had been counsel for plaintiff in *Roberts* v. *City of Boston, supra,* was a Senator from Massachusetts at the time the segregation legislation was enacted by Congress and also at the time the 14th amendment was proposed. He was most zealous in his efforts to secure equal civil and political rights for the Negro race. In History of the United States, by Charles Truslow Adams, volume 3, page 179, Mr. Sumner is referred to as a "negrophile." See also an article in volume 50, Columbia Law Review, page 131, entitled "The Original Understanding of 'Equal Protection of the Laws,'" by John P. Frank and Robert F. Munro, in which there are set forth (p. 156, et seq.) the unsuccessful efforts of Senator Sumner to have Congress eliminate segregation in the District of Columbia and to include schools in the measure which became the Civil Rights Act of 1875.)

Within less than 6 weeks after proposing the 14th amendment, Congress by an act (14 Stat. 216), approved July 23, 1866, provided that the 18th section of the act approved June 25, 1864 (supra, p. 4.), should be construed as requiring the cities of Washington and Georgetown, in the District of Columbia, "to pay over to the trustees of colored schools of said cities such a proportionate part of all moneys received or expended for school or educational purposes in said cities, including the cost of sites, buildings, improvements, furniture, and books, and all other expenditures on account of schools, as the colored children between the ages of 6 and 17 years, in the respective cities, bear to the whole number of children, white and colored, between the same ages," thereby authorizing and approving in effect separate but equal facilities. Also, by an act (14 Stat. 343), approved July 28, 1866, Congress authorized and required the commissioners of public buildings to grant and convey to the trustees of colored schools for the cities of Washington and Georgetown, in the District of Columbia, certain lots of land in the city of Washington for the sole use of schools for colored children.

Thus, when the States ratified the 14th amendment Congress prior thereto, had established segregation with equal facilities in the field of public education in the District of Columbia. In contemporaneously establishing separate schools with equal facilities for the education of colored children in the District of Columbia, the Congress which proposed the 14th amendment set the standard for equal civil rights in the field of public education, and, in effect construed that amendment as not proscribing, but as permitting, segregation with equal facilities. This was the understanding of the effect of the amendment not only in the years immediately following its adoption when the events leading to and surrounding its adoption were undimmed by the passage of time, but also for over three-quarters of a century until the Supreme Court repudiated that understanding on May 17, 1954.

After the adoption of the 14th amendment, Congress, by its enactments, in effect approved segregation with equal facilities. By an act (17 Stat. 619), approved March 3, 1873, Congress fixed the number of the members of the board of trustees of schools for colored children in the cities of Washington and Georgetown, D. C., provided how they should be appointed, and also provided for the appointment of a superintendent of schools for colored children.

By an act (Revised Statutes of the United States, relating to the District of Columbia, 1873–74, pp. 1–149; 18 Stat., pt. 2), approved June 22, 1874, Congress revised and consolidated the statutes of the United States, general and permanent in their nature, relating to the District of Columbia, in force on December 1, 1873. Sections 276–293, both inclusive, dealt with primary schools without the limits of the cities of Washington and Georgetown. Section 281 embodied section 17 of the act of June 25, 1864, making provision for schools and teachers for colored children and the apportionment of funds (supra, p. 4), and this is now section 31–1110 of the 1951 edition of the District of Columbia Code. (The segregation provisions now contained in the 1951 District of Columbia Code are applicable to the schools in the District of Columbia without distinction between those within and those without the limits of the cities of Washington and Georgetown.) Section 282 embodied section 16 of that act, providing for the attendance of white children at white schools and colored children at colored schools (supra, p. 4), and this is now section 31–1111 of the 1951 District of Columbia Code.

Sections 294–311, both inclusive, of the Revised Statutes dealt with colored schools in Washington and Georgetown. Section 294 provided for a board of trustees of schools for colored children. (See act approved July 11, 1862, supra, p. 4.) Section 304 contained the provision for a superintendent of schools for colored children. (See act approved March 7, 1873, supra, p. 6.) Section 306 embodied the provisions of the act of July 23, 1866 (supra, p. 5), requiring the payment to the trustees of schools for colored children of a proportionate part of all moneys received or expended for educational purposes, and this is now section 31–1112 of the 1951 District of Columbia Code. Section 310, now section 31–1113 of the 1951 District of Columbia Code, provided:

"It is made the duty of the trustees to provide suitable rooms and teachers for such number of schools in Washington and Georgetown as, in their opinion, will best accommodate the colored children in the various portions of said cities."

The Congress has in other acts approved segregation in the field of public education, thus recognizing that segregation with equal facilities does not deprive the colored race of equal civil rights, and therefore, does not deprive the colored race of the equal protection of the laws contrary to the 14th amendment. By an act (34 Stat. 316), approved June 20, 1906, control of the public schools was vested in a board of education to consist of nine members. Section 3 of that act provided (p. 317) among other things:

"The board, upon the written recommendation of the superintendent of schools, shall also appoint 1 white assistant superintendent for the white schools and 1 colored assistant superintendent for the colored schools."

By an act (34 Stat. 267), approved June 16, 1906, Congress provided that the inhabitants of the Territory of Oklahoma and of Indian Territory might, under the conditions prescribed in the act, adopt a constitution and become the State of Oklahoma. Section 3 of that act provided among other things (p. 269):

"The constitution shall be republican in form, and make no distinction in civil or political rights on account of race or color, and shall not be repugnant to the Constitution of the United States and the principles of the Declaration of Independence."

The fifth condition of admission contained in the act was as follows (p. 270):

"That provision shall be made for the establishment and maintenance of a system of public schools, which shall be open to all the children of said State and free from sectarian control; and said schools shall always be conducted in English: *Provided*, That nothing herein shall preclude the teaching of other languages in said public schools: *And provided further*, That this shall not be construed to prevent the establishment and maintenance of separate schools for white and colored children.

In pursuance of the enabling act, on September 17, 1907, Oklahoma adopted a constitution in which section 3 of article XIII provided (Thorpe, American Charters, Constitutions and Organic Laws, 1492–1908, vol. 7, pp. 4271, 4321):

"Separate schools for white and colored children with like accommodations shall be provided by the legislature and impartially

maintained. The term 'colored children' as used in this section, shall be construed to mean children of African descent. The term 'white children' shall include all other children.'

On November 16, 1907, President Roosevelt, pursuant to section 4 of the Enabling Act, issued a proclamation (by the President, Elihu Root, Secretary of State (35 Stat., pt. 2, p. 2160)) that "the State of Oklahoma is to be deemed admitted by Congress into the Union under and by virtue of said act on an equal footing with the original States." The proclamation contained the following recital (35 Stat., pt. 2, p. 2161):

"And whereas, it appears that the said constitution and government of the proposed State of Oklahoma are republican in form and that the said constitution makes no distinction in civil or political rights on account of race or color, and is not repugnant to the Constitution of the United States or to the principles of the Declaration of Independence, and that it contains all of the six provisions expressly required by section 3 of said act to be therein contained."

Segregation of the races in the public schools of the District of Columbia has been before the Congress at other times. Section 12 of an act, (43 Stat. 367, 374), approved June 4, 1924, fixing the salaries of teachers, provided:

"There shall be two first assistant superintendents of schools, one white first assistant superintendent for the white schools who, under the direction of the superintendent of schools, shall have general supervision over the white schools; and one colored first assistant superintendent for the colored schools who, under the direction of the superintendent of schools, shall have sole charge of all employees, classes, and schools in which colored children are taught."

The quoted provisions are included as section 12, title 5, of the District of Columbia Teachers' Salary Act of 1945 (59 Stat. 488, 498), approved July 21, 1945, and as section 11 in the District of Columbia Teachers' Salary Act of 1947 (61 Stat. 248, 258), effective July 7, 1947. Also, they are included in section 31–669 of the 1951 edition of the District of Columbia Code.

The Congress which proposed the 14th amendment, having set the standard of equal civil rights for the races in the field of public education, which was concurred in a number of times thereafter by the Congress, under which the segregation of the races, with equal facilities does not constitute a denial of equal civil rights, and, therefore, not a denial of the equal protection of the laws under the 14th amendment, 14 States in the Union at the time of ratification followed the standard set by Congress and provided in their respective constitutions for the segregation of the races in the public schools. These States were: Tennessee (in sec. 12, art. XI, of its constitution of 1870; Thorpe, American Charters Constitutions and Organic Laws, 1492–1908, vol. 6, pp. 3448, 3469), West Virginia (in art. XI 8 of its constitution of 1872; Thorpe, vol. 7, pp. 4033, 4061), Alabama (in sec. 1, art. XII, of its constitution of 1875; Thorpe, vol. 1, pp. 153, 176), Missouri (in sec. 3, art XI, of its constitution of 1875; Thorpe, vol. 4, pp. 2229, 2263), North Carolina (in sec. 2, art. IX, of the constitution of 1876; Thorpe, vol. 5, pp. 2822, 2838), Texas (in sec. 7, art. VII, of its constitution of 1876; Thorpe, vol. 6, pp. 3621, 3644), Georgia (in par. I, sec. I, art. VIII, of its constitution of 1877; Thorpe, vol. 2, pp. 842, 868), Florida (in sec. 12, art. XII, of its constitution of 1885; Thorpe, vol. 2, pp. 732, 754), Kentucky (in sec. 187 of its constitution of 1890; Thorpe, vol. 3, p. 1316, 1345), Mississippi (in art. 8, Education, sec. 207, of its constitution of 1890; Thorpe, vol. 4, pp. 2090, 2115), South Carolina (in sec. 7, art. XI, of its constitution of 1895; Thorpe, vol. 6, pp. 3307, 3339), Delaware (in sec. 2, art. X, of its constitution of 1897; Thorpe, vol. 1, pp. 600, 628), Louisiana (in art. 248 of its constitution of 1898; Thorpe. vol. 3, pp. 1522, 1575), and Virginia (in art. IX, sec. 140, of its constitution of 1902; Thorpe, vol. 7, pp. 3904, 3934). All of these States, except Delaware, Kentucky, and Mississippi ratified the 14th amendment (U. S. C. A., constitution, pt. 3, p. 3). As above stated, Oklahoma provided for segregation in its constitution of 1907 (*supra*, pp. 8–9).

Some States authorized or required by statute segregation in the public schools. New York did this prior to the adoption of the 14th amendment, and the statute was upheld by the highest court of the State after the adoption of the amendment as not being violation of it. (See infra, p. 14.) The same situation obtained in Ohio. (See infra, p. 12.) Within less than a year after the adoption of the amendment, Indiana provided by statute for segregation, and the statute was upheld as constitutional by the highest court of the State. (See infra, p. 13.) California provided for separate schools for the white and colored races by a statute passed on April 4, 1870, and this statute was upheld in *Ward* v. *Flood* (48 Cal. 36; this statute was later repealed) as not being in violation of the 14th amendment. Other States have by statute either authorized or required segregation in the public schools, including the following: Arizona (Arizona Code Annotated, 1939, official edition, sec. 54–416–2), Arkansas (Arkansas Statutes 1947 Annotated, official edition, ch. 80–509 (c)), Kansas, in cities of the first class, including high schools in Kansas City (General Statutes of Kansas Annotated 1949, ch. 72, art. 17, sec. 1724), New Mexico (New Mexico Statutes 1941 Annotated, official edition, sec. 55–1201), and Maryland (Annotated Code of Maryland 1951, art. 77, sec. 124, 207, 208, 269). The States or Arkansas, Indiana, Kansas, New York, and Ohio ratified the 14th amendment, though in January 1868, the Legislature of the State of Ohio passed a resolution withdrawing its consent (U. S. C. A., constitution, pt. 3, p. 3), and the States of Arizona and New Mexico were not States at the time of the adoption of the amendment. (Other States may have enacted similar statutes and some of those referred to may have been repealed. Exhaustive research has not been made to determine this. The constitutional provisions and statutes are referred to for the purpose of showing the general understanding on the part of the States that the 14th amendment was not intended to prevent segregation in the field of public education. In this connection, the Court, in the segregation cases, referring to the elimination of segregation in the Boston public schools in 1855, said in note 6:

"But elsewhere in the North segregation in public education has persisted in some communities until recent years. It is apparent that such segregation has long been a nationwide problem, not merely one of sectional concern."

Prior to the decision of the Supreme Court of the United States on May 17, 1954, in the segregation cases, the courts, both State and Federal, conformed to the standard of equal civil rights in the field of public education set up by the Congress which proposed the 14th amendment, and concurred in by the Congress a number of times thereafter. Under that standard "separate but equal" facilities does have a place in the field of public education without depriving the colored race of the equal civil rights the 14th amendment was designed to secure, and without denying the colored race the equal protection of the laws required by that amendment.

One of the first segregation cases in the field of public education, after the adoption of the 14th amendment, was *The State ex rel. Garnes* v. *McCann et al.* (21 Ohio State 198, December term, 1871). In that case, the parent of three colored children sought a writ of mandamus against the local school director and teacher compelling the admission of his children to a specific school district for white children. In refusing the writ, the court held that the exclusion of colored children from schools provided for white children, when schools with equal facilities were provided for colored children, violated neither the constitution of the State nor the 14th amendment to the Federal Constitution. While plaintiff's argument was based primarily on the privileges and immunities clause of the 14th amendment, the court did not confine its attention to that clause. It upheld segregation under the amendment generally. The court said (p. 209):

"Unquestionably all doubts, wheresoever they existed, as to the citizenship of colored persons, and their rights to the equal protection of the laws, are settled by this amendment.

"But neither of these was denied to them in this State before the adoption of the amendment. At all events, the statutes classifying the youth of the State for school purposes on the basis of color, and the decisions of this court in relation thereto, were not at all based on a denial that colored persons were citizens, or that they are entitled to the equal protection of the laws. It would seem, then, that these provisions of the amendment contain nothing conflicting with the statute authorizing the classification in question, nor the decisions heretofore made touching the point in controversy in this case. Nor do we understand that the contrary is claimed by counsel in this case. But the clause relied on, in behalf of the plaintiff, is that which forbids any State to 'make or enforce any laws which shall abridge the privileges or immunities of the citizens of the United States'."

The State of Indiana ratified the 14th amendment on January 29, 1867. (U. S. C. A., constitution, pt. 3, p. 3). At the next session of its legislature after the adoption of that amendment the General Assembly of Indiana passed "an act to render taxation for common school purposes uniform, and to provide for the education of the colored children of the State," which was approved May 13,1869. Section 3 of that act provided that: "The trustee or trustees of each township, town, or city shall organize the colored children into separate schools, having all the rights and privileges of the other schools of the township." (*Corey et al.* v. *Carter* (48 Ind. 327, November term, 1874), the same year in which Congress consolidated the permanent statutes relating to the District of Columbia, including those providing for separate schools for the education of colored children, supra p. 7). In *Corey et al.* v. *Carter* (supra), a Negro father sought a writ of mandamus to compel the admission of his children into a school for white children. The court held that the statute of May 13, 1869, did not conflict with section 1 of article 8 of the State constitution which made it the duty of the general assembly "to provide by law for a general and uniform system of common schools, wherein tuition shall be without charge, and equally open to all"; that it was not in conflict with section 23 of article 1 of the State constitution which declared: "The general assembly shall not grant to any citizen, or class of citizens, privileges or immunities which, upon the same terms, shall not equally belong to all citizens"; and that it did not conflict with the 14th amendment to the Constitution of the United States. (The Court, after referring to the acts of Congress establishing separate schools for colored children in the District of Columbia, said (p. 366)):

"This legislation of Congress continues in force, at the present time, as a legislative construction of the 14th amendment, and as a legislative declaration of what was thought to be lawful, proper, and expedient under such amendment, by the same body that proposed such amendment to the States for their approval and ratification."

Another early leading case is *People ex rel. King* v. *Gallagher* (93 N. Y. 438, October 1883). In that case, the Common School Act of 1864 of the State of New York empowered the school authorities in cities and incorporated villages to establish schools for the exclusive use of colored children, when, in their opinion, the interests of education would be promoted thereby. Under this law, separate schools for white and colored children had been established in Brooklyn. A colored female applied for a writ of mandamus to compel her admission to a school provided for white children. Counsel for relator argued that the 14th amendment, under the laws of the State of New York, giving equal privileges in its common schools to every citizen, conferred upon relator not only the right to equal educational facilities with white children but also the right to have such education furnished at the same time and place with that afforded to any other child, otherwise she was denied the equal protection of the laws in violation of the 14th amendment. The court, referring to the legislative history of the amendment and to the legislation enacted by Congress establishing separate schools for colored children in the District of Columbia, held that the establishment of separate schools for colored children, with facilities equal to those for white children, was not a denial of the equal protection of the laws in violation of the 14th amendment. The court said (p. 450):

"The implication that the Congress of 1864, and the State legislature of the same year, sitting during the very throes of our Civil War, who were respectively the authors of legislation providing for the separate education of the two races, were thereby guilty of unfriendly discrimination against the colored race, will be received with surprise by most people and with conviction by none."

The Court also said (p. 452):

"The highest authority for the interpretation of this amendment is afforded by the action of those sessions of Congress which not only immediately preceded, but were also contemporaneous with, the adoption of the amendment in question."

There are other early cases, both State and Federal, which held that separate but equal facilities for the education of the colored race does not violate the 14th amendment, among which are the following: *Ward* v. *Flood* (48 Cal. 36 (1874)); *Bertonneau* v. *Board of Directors of City Schools et al.* (3 Fed. Cas. 294, No. 1, 361 (C. C. La. 1878)); *United States* v. *Buntin* (10 Fed. 730 (C. C. S. D. Ohio 1882)); *Lehew* v. *Brummell* (103 Mo. 546, 15 S. W. 765 (1891)); *Wong Him* v. *Callahan* (119 Fed. 381 (C. C. N. D. Cal. 1902)). In the *Wong Him* case, the Court said (p. 382):

"Concerning the authority of the State over matters pertaining to public schools within its limits, and the validity of legislation of the character of that under consideration, it is well settled that the State has the right to provide separate schools for the children of the different races, and such action is not forbidden by the 14th amendment to the Constitution, provided the schools so established make no discrimination in the educational facilities which they afford. When the schools are conducted under the same general rules, and the course of study is the same in one school as in the other, it cannot be said that the pupils in either are deprived of the equal protection of the law in the matter of receiving an education."

The Supreme Court of the United States has upheld separate but equal facilities for the education of the different races. In *Gong Lum* v. *Rice* (275 U. S. 78), the Court, in an opinion delivered by Mr. Chief Justice Taft, held that a child of Chinese birth, born in, and a citizen of, the United States, is not denied the equal protection of the laws contrary to the 14th amendment to the Constitution of the United States by being classed by the State among the colored races who are assigned to public schools separate from those for the whites, when equal facilities for education are afforded to both classes. The Court said (p. 85):

"The question here is whether a Chinese citizen of the United States is denied equal protection of the laws when he is classed among the colored races and furnished facilities for education equal to that offered to all, whether white, brown, yellow, or black. Were this a new question, it would call for very full argument and consideration, but we think that it is the same question which has been many times decided to be within the constitutional power of the State legislature to settle without intervention of the Federal courts under the Federal Constitution," citing the following cases: *Roberts* v. *City of Boston* (5 Cush. (Mass.) 198, 206, 208, 209); *State ex rel. Garnes* v. *McCann* (21 Oh. St. 198, 210); *People ex rel. King* v. *Gallagher* (93 N. Y. 438); *People ex rel. Cisco* v. *School Board* (161 N. Y. 598); *Ward* v. *Flood* (48 Cal. 36); *Wysinger* v. *Crookshank* (82 Cal. 588, 590); *Reynolds* v. *Board of Education* (66 Kans. 672); *McMillan* v. *School Committee* (107 N. C. 609); *Cory* v. *Carter* (48 Ind. 327); *Lehew* v. *Brummell* (103 Mo. 546); *Dameron* v. *Bayless* (14 Ariz. 180); *State ex rel. Stoutmeyer* v. *Duffy*, (7 Nev. 342, 348, 355); *Bertonneau* v. *Board* (3 Woods 177, S. C. 3 Fed. Cas. 294, Case No. 1, 361); *United States* v. *Buntin* (10 Fed. 730, 735); *Wong Him* v. *Callahan* (119 Fed 381).

In *Missouri ex rel. Gaines* v. *Canada* (305 U. S. 337), it was held that the action of the State of Missouri in furnishing legal education within the State to whites while not furnishing legal education within the State to negroes, was discrimination repugnant to the 14th amendment, but the Court reaffirmed the doctrine of separate but equal facilities. In reaching its conclusion, the Court, in an opinion delivered by Mr. Chief Justice Hughes, said (p. 351):

"Here, petitioner's right was a personal one. It was as an individual that he was entitled to the equal protection of the laws, and the State was bound to furnish him within its borders facilities for legal education substantially equal to those which the State there afforded for persons of the white race, whether or not other negroes sought the same opportunity."

There have been a number of other cases, both State and Federal, applying the doctrine of separate but equal facilities, including the four cases dealt with by the Supreme Court in its decision of May 17, 1954. (*Brown* v. *Board of Education* (U. S. D. C. Kans., 98 F. Supp. 797); *Briggs et al.* v. *Elliott et al.*, (U. S. D. C. S. C., 103 F. Supp. 920); *Davis et al.* v. *County School Board of Prince Edward County, Va.* (U. S. D. C. Va., 103 F. Supp. 337); and *Gebhart et al.* v. *Belton et al.* (Sup. Ct. Del., 91 A. 2d 137).)

In determining whether the children of the colored race are deprived of the equal protection of the laws contrary to the 14th amendment when they are furnished separate but equal facilities for their education, the following circumstances should properly be considered:

Prior to the time the 14th amendment was proposed, it had been decided (*Roberts* v. *City of Boston* (59 Mass. 198)) that separate schools for the white and colored races, with equal facilities, did not violate a State constitutional guaranty of equal protection, "the same as the 14th amendment" (*Gong Lum* v. *Rice, supra*). In 1862 and again in 1864, the Congress had provided for the education of white and colored children in separate schools in the District of Columbia. Within less than 6 weeks after proposing the 14th amendment, Congress approved separate but equal facilities for the education of colored children in the cities of Washington and Georgetown, in the District of Columbia, by providing for the apportionment of funds expended for educational purposes between the white and colored children in the proportion that "the colored children between the ages of 6 and 17 years, in the respective cities, bear to the whole number of children, white and colored, between the same ages" (supra, p. 5). Following the adoption of the 14th amendment, a number of States adopted constitutions providing for the education of white and colored children in separate schools, thus evidencing their understanding that the 14th amendment does not proscribe segregation in the field of public education. Some other States have evidenced a like understanding by providing by statute for such segregation. Since the adoption of the amendment, Congress has shown its approval of segregation in the District of Columbia by enacting legislation relating thereto. (While the 14th amendment is inapplicable to this legislation, Congress, by such legislation, has concurred with the Congress which proposed the amendment that segregation does not deprive the Negro race of equal civil rights in the field of public education, and the purpose of the amendment was to secure to the Negro race civil rights equal to those enjoyed by the white race.) Also, since the adoption of the amendment, the courts, both State and Federal, including the Supreme Court of the United States, prior to its decision on May 17, 1954, have upheld and applied the doctrine of separate but equal facilities in the field of public education as not being in violation of the 14th amendment. (These circumstances, rather than the views of writers on social science, are determinative of the question whether the doctrine of separate but equal facilities has a place in the field of public education and the question whether segregation is inherently unequal.)

The legislative construction by the Congress which proposed the 14th amendment that segregation with equal facilities in the field of public education does not deprive the colored race of equal civil rights, the long acquiescence in such construction by the Congress, by the States, and by the courts, both State and Federal, and the long acquiescence in the construction of the amendment as not proscribing, but permitting, such segregation, fixes the construction of the 14th amendment as permitting such segregation. (See the cases cited, supra, pp. 2–3.) In *Myers* v. *United States* (272 U. S. 52), the Court, in an opinion delivered by Mr. Chief Justice Taft, held (p. 175):

"This Court has repeatedly laid down the principle that a contemporaneous legislative exposition of the Contitution when the founders of our Government and framers of our Constitution were actively participating in public affairs, acquiesced in for a long term of years, fixes the construction to be given its provisions."

Certainly, the provisions of the 14th amendment furnish no such clear and definite support for the decision of the Supreme Court on May 17, 1954, as to justify disregard of a construction of the amendment which had been acquiesced in for over three-quarters of a century.

The 14th amendment does not in terms proscribe segregation with equal facilities in the field of public education. The Supreme Court, in the segregation cases, states

that the amendment's history, in respect of this question, is inconclusive. This finding by the Court affords, in itself, a basis upon which the segregation statutes properly should have been upheld as not being in violation of the amendment when equal facilities are afforded.

It is a "maxim of constitutional law that a legislature is presumed to have acted within constitutional limits, upon full knowledge of the facts, and with the purpose of promoting the interests of the people as a whole, and courts will not lightly hold that an act duly passed by the legislature was one in the enactment of which it has transcended its power." (*Atchison, Topeka, etc., Railroad* v. *Matthews* (174 U. S. 96, 104); *Salsburg* v. *Maryland* (346 U. S. 545, 553, note 9).) An infraction of the 14th amendment is not to be assumed. "On the contrary, it is to be presumed that the State in enforcing its local policies will conform its requirements to the Federal guaranties. Doubts on this point are to be resolved in favor of, and not against, the State." (*Corporation Commission* v. *Lowe* (281 U. S. 431, 438).) Also, "The presumption of validity which applies to legislation generally is fortified by acquiescence continued through the years." (*Life & Casualty Co.* v. *McCray* (291 U. S. 566, 572).)

The education of the youth of a State is a matter belonging to the State; and "the right and power of the State to regulate the method of providing for the education of its youth at public expense is clear." (*Gong Lum* v. *Rice* (275 U. S. 78, 85).) In that case, the Court, holding that a child of Chinese birth, a citizen of the United States, is not denied the equal protection of the laws contrary to the 14th amendment by being classed among the colored races who are assigned to public schools separate from those for the whites, when equal facilities for education are provided for both classes, said (p. 87):

"The decision is within the discretion of the State in regulating its public schools, and does not conflict with the 14th amendment."

As broad as the 14th amendment is, it was not designed to interfere with the power of the State to prescribe regulations to promote the education of its people. (*Barbier* v. *Connolly* (113 U. S. 27, 31); *Giozza* v. *Tiernan* (148 U. S. 657, 662); *In re Kemmler* (136 U. S. 436, 449).) "Any interference on the part of Federal authority with the management of such schools can be justified only in the case of a clear and unmistakable disregard of rights secured by the supreme law of the land." (*Cumming* v. *Board of Education* (175 U. S. 528, 545), in an opinion delivered by Mr. Justice Harlan.) In view of the Court's finding in the segregation cases that the history of the 14th amendment, in respect of this question, is inconclusive, and the long acquiescence in the doctrine of "separate but equal" facilities as not denying the equal protection of the laws guaranteed by the amendment, segregation with equal facilities does not constitute "a clear and unmistakable disregard of rights secured by the supreme law of the land," and is not a violation of the 14th amendment.

The equal protection clause of the 14th amendment is "a pledge of the protection of equal laws." (*Yick Wo* v. *Hopkins* (118 U. S. 356, 369); *Truax* v. *Corrigan* (257 U. S. 312, 333); *Power Co.* v. *Saunders* (274 U. S. 490, 493); *Missouri ex rel. Gaines* v. *Canada* (305 U. S. 337, 350).) In *Truax* v. *Corrigan*, the Court, in an opinion delivered by Mr. Chief Justice Taft, said (p. 334):

"The accuracy and comprehensive felicity of this description of the effect of the equality clause are shown by the frequency with which it has been quoted in the decisions of this Court."

A law which provides separate but equal facilities for the white and colored races in the field of public education is an equal law. (*Missouri ex rel Gaines* v. *Canada*, *supra*, in which case the Court held (p. 350) that the equal protection of the laws is "a pledge of the protection of equal laws," and also (p. 351), in respect of a Negro seeking a legal education, that "the State was bound to furnish him within its borders facilities for legal education substantially equal to those which the State there afforded for persons of the white race, whether or not other Negroes sought the same opportunity.")

The equal protection clause of the 14th amendment is not a pledge that all of those subject to equal laws shall fare alike or equally under such laws. How those subject to equal laws fare thereunder depends upon their respective capabilities, acts, and complexes.

In this connection, it should not be overlooked that the Court, in the segregation cases, said (p. 490): "Today • • • many Negroes have achieved outstanding success in the arts and sciences as well as in the business and professional world," notwithstanding the fact, as stated (note 6) by the Court, that segregation "has long been a nationwide problem, not merely one of sectional concern," and the 14th amendment does not require the States, in order to comply with its requirements, to fashion their laws so as to eliminate or prevent inequalities which result from differences in capabilities, acts, and complexes of those subject to equal laws. The 14th amendment does not require legislatures to reflect sociological insight (*Goesaert* v. *Cleary* (335 U. S. 464)), in which case the Court, in an opinion delivered by Mr. Justice Frankfurter, held (p. 466):

"The Constitution does not require legislatures to reflect sociological insight, or shifting social standards, any more than it requires them to keep abreast of the latest scientific standards."

And for the same reasons, the Constitution does not require legislatures to reflect psychological insight.

Construing the 14th amendment in the light of its historical context and in accordance with principles and rules of construction in effect and accepted for approximately a century and a half (see the cases cited supra, pp. 2–3) the doctrine of separate but equal does have a place in the field of public education, separate educational facilities are not inherently unequal under the amendment, and segregation with equal facilities does not deprive either the Negro race or the white race of the equal protection of the laws guaranteed by the 14th amendment to the Constitution of the United States.

CLARENCE O. AMONETTE.

The Next Step in History

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 22, 1956

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which has caused widespread comment in this country and abroad since it first appeared 4 years ago in Look magazine, on November 18, 1952. Its author is the distinguished British historian, Arnold J. Toynbee. He writes on the topic The Next Step in History.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE NEXT STEP IN HISTORY

(By Arnold J. Toynbee)

Let us suppose—and this seems quite a supposition—that the strain and anxiety under which we are living today are not a passing phase of history that is going to end tomorrow in a third world war that is now just round the corner. Let us suppose, instead, that this difficult and painful, but not intolerable, state of affairs is going to be with us for a lifetime, or perhaps for several generations or even centuries on end, without being wound up either by a last judgment or by a millennium.

This is a reasonable expectation, because most human beings, at most times and places, have lived and worked under conditions such as these. The normal texture of private life is neither catastrophic nor beatific; it is a humdrum tale of "just one damned thing after another"; and we have no reason for expecting our public life to be different. If we can bring ourselves to see our present troubles in that light, we shall be giving ourselves our best chance of coping with them.

Let us take stock of some of the troubles that, in our Western World, seem likely to be with us for as far as we can see ahead into the future. If we are right in reckoning that these troubles are likely to be perennial ones, the steps that are needed are not emergency measures but permanent arrangements for putting and keeping our western house in order in the straitened circumstances by which the Western World is now being overtaken.

Suppose that the West is not, after all, on the eve of having to conquer or die on the battlefield of Armageddon. Suppose, instead, that we have to provide, at a minimum cost in blood and treasure, for holding a number of military frontiers like the northwest frontier of British India from 1849 to 1947 or like the Roman Empire's frontiers across Britain and along the Rhine and the Danube during the first four centuries of the Christian Era.

The frontier across the Korean Peninsula—a modern Hadrian's Wall—will be the first one to spring to American minds; French minds will think first of Indochina, and the British minds of Malaya; each nation is naturally most conscious of the particular sector of our besieged western fortress' common perimeter in which, at present, that particular nation is bearing the brunt of the burden. We have to make joint provision for the probability that all these fronts will have to go on being defended for years and years.

There will be some fronts, like the Greek and the Turkish fronts today, where there may be no actual fighting but where there will none the less be a need for eternal vigilance—a military need which will impose the economic burden of a constant mobilization in force. There will be other fronts, like the Korean, Malayan, and Indochinese fronts today, on which blood will continue to be spilled. We have to provide for different calls upon us in different sectors, and surely it is bad housekeeping to go on handling these common western frontier problems piecemeal in a western world that is going to have to husband its resources; for, in holding a common perimenter, disunity spells waste of effort. And then we have to look behind the immediate military task of manning our besieged western city's walls to the underlying financial and economic task of providing the sinews of war for the perpetual demands of our common western frontier defense at a minimum cost to our common western economy.

Here, again, our western nations are still indulging in the extravagance of trying to live in about 40 separate watertight compartments, each sealed off from the rest by migration restrictions, by tariffs and quotas limiting the movement of goods and by ex-

change restrictions limiting the movement of money.

Why, our western community today is spending about three-quarters of its political energies and is depriving itself of about half of its potential economic resources in desperately struggling to go on keeping up these internal barriers that have now become not only useless but perilous for us. They are useless because they do not help us any longer to preserve the things that we value in our western way of life; they are perilous because they already handicap us in our efforts to preserve these western values against the mounting pressure of the present siege of the West by the great majority of mankind in the East—a siege which is going to last at least as long as our lifetime. We cannot afford any longer to keep up any internal barriers, inside our western world, that are found to be handicapping us in our joint defense and therefore to be endangering the survival of our common values.

There are times when we can see ahead of us an inevitable destination that we shall not be able to escape, do what we will. But, when we find ourselves in that situation, we do not then just give up the game and let our feet carry us at random. Even when we see before us one of these destinations at which we are bound to arrive, we may still have a choice between alternative roads for reaching it; and we know very well that this still open choice may make an enormous difference to our fortunes.

We may choose a rough, steep road which will bring us to the inevitable goal half dead from exhaustion, or we may choose a well-graded, well-paved road which, when it brings us to the same goal, will deliver us there with our energies unimpaired. It is well worth finding the best road, even when we know beforehand that all roads lead to Rome; and this is just as true in our public life—in politics and economics on the big scale—as it is in our private affairs.

On that big scale, are we headed today toward one of those inevitable destinations that can be approached by different roads but which cannot be bypassed? Personally, I believe that, in our generation, we are headed toward an inevitable union—in the nearer future, toward a union of the peoples of our Western community, and then, beyond that, sooner or later, toward a union of all mankind. This seems to be the destination toward which we are being carried willy-nilly by the progress of technology. We can see no end to this progress; it seems to be continually gathering speed and momentum; and, in this mighty march, we can see one persistent tendency. Each successive technological advance has the effect of enlarging the scale of all human operations for all purposes—good and bad, peaceful and warlike, constructive and destructive.

DISTANCE HAS BEEN ANNIHILATED

Why is western union inevitable? First, because the western nations, all told, are only a small minority—not much more than one-fifth—of the human race. Secondly, because technology has already annihilated distance, so that everybody in the world is now living within point-blank atom-bomb range of everyone else. Thirdly, because the know-how of a technology that has mostly been invented by us westerners is now rapidly being picked up by other people—not only by the Russians but by the Chinese, Indians, Africans, and, in fact, all mankind. Technological know-how gives power; and, as the great nonwestern majority of mankind is gaining this new power, its numbers are beginning to tell once more against our handful of westerners.

During the last four or five centuries we westerners, thanks to our temporary monopoly of a technological know-how, have been lords of creation in spite of the smallness of our numbers. We have taken for ourselves the choicest of the still empty quarters of the world (and they were not all entirely unoccupied); and we have imposed our economic, and even our political, ascendancy on most of Africa and on large parts of Asia. Today the tide is turning. It is right, as well as natural, that it should turn, and we western peoples certainly ought to give up trying to go on sitting on other people's heads. My own country, Great Britain, for example, has, I should say, done right in letting go of India, Pakistan, Burma, and Ceylon. But it is one thing to give up dominating other people and another thing to let other people turn the tables on us.

While we westerners may have no right to go on depriving Asian peoples of their independence, we certainly have a right to preserve our own independence; and the western union is the only way to preserve western independence in a world in which the nonwestern four-fifths of the human race is now drawing abreast of the western runners in mankind's technological marathon race.

In the days—now rapidly running out—in which we westerners were enjoying our decisive technological lead, we could indulge in the luxury of being disunited among ourselves. We could afford this, because, at that time, each single western nation by itself was more than a match for the whole of the non-Western World. But for us westerners those spacious days are now over, and the division of our western one-fifth of mankind into about 40 sovereign independent states would be suicidal if we were to allow it to linger on into an age in which we are losing our technological lead and are therefore being thrown, militarily and politically, onto the defense against the rest of mankind's formidably superior numbers.

When we can see ahead of us a destination that we cannot bypass commonsense will counsel us to find and take the best and quickest of the various roads leading to it. Suppose now that we westerners were to flinch, for the moment, from taking any steps toward meeting the undeniable change for the worse in our collective western position in the world. What would be our western prospects then? Well, the temptations which we should be dangling before our enemies' eyes in willfully refusing to repair the disunity that is our present great western weakness—those temptations might lead those enemies into action that would bring on a third world war; and then we should have unity with a vengeance.

The sole surviving power at the end of an atomic war to the death would find itself condemned to the hard labor of setting up a dictatorial world government over worldwide ruins, including the dictator power's own. This postwar world government would have to be dictatorial, because the postwar state of the world would be desperate.

UNION BY AGREEMENT OR FORCE

An atom-bombed world could not afford what would then be the luxury of preserving even a minimum of local variety and liberty. Uniformity and despotism would be the necessary penalties for our having allowed the world to come to this pass; and, even if the power on whose shoulders this grim task of imposing unity fell were to be the United States and not the Soviet Union, a unification of a devastated world on this dead level and at this high price is a prospect to which neither the Americans nor any other people could look forward with anything but dismay. If union is—as it surely is—our destiny, then clearly the best option, among the alternatives before us, is union today by agreement in preference to union tomorrow by force.

This idea is, of course, already sold to American minds; for it has been translated into fact long ago in the domestic life of countries with federal constitutions. The political pioneering job that America, Canada, and the nonfederal as well as the federal countries of our Western World have to take in hand together today is the planning and execution of a first practical step toward western union in a world which has now been through two world wars but has not yet condemned itself to having to fight a third of them that certainly would be by far the worst of all.

Of course, what form this step would take is being discussed all the time between statesmen and officials of our different western governments; but we all know that a mere cooperation between the agents of separate national governments is not enough to establish and maintain our political and economic unity. At any rate, this is not enough in democratic countries like ours in whose domestic political constitutions the last word lies with the electorates of elected legislative bodies. In western countries whose constitutions are federal as well as democratic, it is an axiom that a political unity at the governmental level will remain precarious, and perhaps illusory, unless and until it has been underpinned by unity at the deeper level of popular representative institutions. And here is a chance for our western community to recapture the initiative in the world by taking the next step in history.

WE CAN'T IGNORE DEMOCRACY

We western peoples claim to be democratic peoples. We claim that democratic self-government is one of the most distinctive and most valuable elements in our common western way of life. If we mean this seriously, we cannot intend to leave out democracy, as we understand it, in making our long-term provision for preserving the vital common interests of our western community. It would be not merely un-American but unwestern to leave the management of vital common affairs exclusively in the hands of officials and heads of states.

What, then, might be our first step toward bringing western democracy into action on behalf of western defense? If we start from national democratic institutions that are already going concerns, we shall put our finger on those committees for all manner of purposes through which the national legislatures of western countries have learned, by experience, to conduct their business.

A combination of standing committees with committees appointed ad hoc has been the organizational device through which our western national legislatures have made themselves effective for action. Most western national legislatures today have well-established standing committees for reporting to them on cardinal affairs such as foreign policy, defense, and finance, and they all deal with business for which no standing committee happens to exist. Why should not the legislatures of all the western states members of NATO instruct their standing committees on finance, defense, and foreign policy (or instruct committees appointed for these purposes ad hoc, where there do not happen to be any standing committees for them) to meet regularly in common session in order to consider, discuss, and recommend a common western policy, a common western system of defense, and common ways and means for financing these common western services?

If we were now to take this first step of convening delegations of national legislatures from all the NATO countries to deal, at this level, with NATO's common affairs, we might find that we had created a growing point from which a democratically governed western community could bring itself into being step by step.

The first business on the agenda of a convention of delegations of legislatures would be to agree upon rules of procedure. Should each delegation cast a single vote en bloc on behalf of the national legislature by which it had been elected? Or should each delegate

be as free in this joint convention as he would be in his national legislature at home to cast his own vote according to his own individual conscience and judgment?

The whole tradition and spirit of western constitutional history would tell in favor of the second of these two possible rulings. Who would dream of suggesting that, in the House of Representatives at Washington, all the Representatives from, say Pennsylvania, must always vote the same way or that, in the Senate, the pair of Senators from each State must always act as if they were Siamese twins? What would be unacceptable in a national legislature must be also unacceptable in a common legislature; and we might therefore expect that, if and when a common western legislative body had once been set up, the members would not vote by countries but would assert their individual responsibility by combining and dividing in parties distinguished by policies and not determined by State lines.

This, though, would be unlikely to be the end of the process of western constitutional development, for a western electorate would soon begin to ask itself why it should not elect this common western legislature as well as the local national legislatures. If democracy means the control of governments by legislative bodies that are elected and reelected by the people, then democracy would call for the direct election of a common legislative body charged with the supreme responsibility of controlling the western community's common executive services.

A STEP-BY-STEP ADVANCE

Here would be a way of putting an inevitable western union on a characteristically western democratic basis. One strong point in this approach would be that it would lead our western community toward the goal of common democratic self-government step by step, in response to a succession of practical demands. If the West could thus build itself together into a united democracy instead of remaining the pack of 40 separate sovereign independent States that it now is, then we westerners could begin to look the future in the face with a renewed confidence.

We may hope, then, that the next step in history will be the creation of a growing point for western union on a democratic basis; but, of course, this prospect raises further questions. In achieving western union, should we be throwing the U. N. onto the scrap heap? And, in bringing one-fifth of mankind under a single system of self-government, should we be prejudicing the chance of achieving union on a world scale? To these two questions, there is a single answer; and this answer is well known to Americans because it is a point that has had to be considered by every people that has a federal form of government.

The answer is that, in order to bring a number of peoples together into political union, it is not enough just to draw up a federal constitution and enact it. Federation will not work unless the peoples that it is intended to unite are close enough to one another already in their ways of life to be capable of cooperating effectively. We western peoples do seem to be like enough to one another to be capable of making common political institutions work, and there is no reason why the circle of states included in NATO should not be extended progressively, as the Original Thirteen States of the United States have been increased to 48 by the successive admission of territories to statehood.

We ought to go on the principle that the door stands ever open for the admission of states that have given practical evidence of a capacity for democracy. Turkey, for example, who is already within our western circle, clearly demonstrated her eligibility in 1950, when she performed the notable democratic feat of passing, without bloodshed or revolution, from a one-party to a two-party regime as the result of a genuinely free general election, which was neither manipulated nor overridden by the party then in power. Turkey will certainly not be the only once nondemocratic country to qualify for entry; Ceylon, for instance, might also soon be a strong candidate. Yet, though our western community could, and should, be an open one, it is unfortunately not yet possible today to foresee the time when parliamentary democratic countries and Communist countries will be able to federate with one another; and here we can see the abiding importance of the United Nations.

U. N. FORUM IS VALUABLE

The constitution of the U. N. is not federal or even confederal. The U. N. is not, in fact, a political community; it is a political forum, in which questions can be debated and opinions aired but in which no act of government can be performed. Yet we cannot do without this forum, however successful the development of NATO may be, so long as the U. N. remains the closest approach the United States and the Soviet Union can make to one another; for to meet—and even to quarrel—in a forum is far better than never to meet at all.

The constitution of the United Nations at least gives a chance for peoples that have been brought physically close together while remaining spiritually far apart to keep in touch with one another.

But would it be possible for a democratic western union and a group of Communist countries to go on living side by side in a shrinking world for an indefinite time to come without drifting into war with one another? Perhaps the most one can say about this is that, at least once in the past, something of this kind has been successfully accomplished. In the last generation before the beginning of the Christian era, a Graeco-Roman world stretching from the Atlantic coast of Europe to the shores of the Indian Ocean was divided, by peaceful agreement, between 2 powers, Rome and Parthia; and, for the next 250 years, these 2 did contrive to go on living side by side, in spite of local frontier incidents.

Why should not we Westerners and the Russians manage to get on with one another at least no worse than that? And, if, at the price of this minimum of mutual forbearance, we could purchase even as much as 50 years of coexistence without a third world war, the prospect of world unity, which seems so remote today, might perhaps by then have come within the range of practical politics.

Meanwhile, the next step is western union on a democratic basis; for this is practical politics now.

"That I Might Live as a Human Being Has a Right To Live"—Letter From Robert S. Marks to His Parents in Corpus Christi, Tex.

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, February 22, 1956

Mr. JOHNSON of Texas. Mr. President, a friend of mine in Texas recently sent me an excerpt from a letter written to his parents by an 18-year-old college student. It is a letter which states in moving fashion the patriotic thoughts of a youth in one stage of growing into maturity.

The letter was written by Robert S. Marks, a freshman at Princeton University, to his parents, Mr. and Mrs. Ben D. Marks, of Corpus Christi, Tex. I ask unanimous consent that the excerpt I have mentioned be printed in the Appendix of the RECORD, in order that all Senators may know why one young American is, in his words, "proud to be of a people such as we."

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

On the way from the train station to the house, we drove through Arlington National Cemetery. Colorado mountains impress the eye, a symphony or a soprano impress the ear, Plato impresses the mind, Arlington National Cemetery impresses the heart. I have never been quite so moved by anything as I was by the sight of acres of plain, unmarked graves. Row upon row of simple white crosses covered the tree-dotted hills, looking strangely like the very marching soldiers they represent. For every cross there was a soldier that died in pain, and a family who cared, and someone who loved him—a life unlived. Soon I began to wonder just what moved these men to sacrifice the things that seem so important to me—love, family, security, and indeed life itself. I became very morbid—the sunshine seemed futile as it danced off the white crosses, and the birds seemed only to mock those beneath the sod.

Later as I stood openmouthed in the Lincoln Memorial, I was reminded of what those unknown men had died for. The great rawboned figure of Abe Lincoln, the Gettysburg Address inscribed in marble; and off in the distance a gleaming white spire jutting up as a tribute to our first President. All these purged my disillusioned state of mind. I can see now that lives lost in battle transcend even sacrifice. It's rather like a holy bargain with some omnipotent being—their lives for mine, that I might live as a human being has a right to live. I had not really considered all this before; formerly it was all flag waving and little deep meaning. Somehow I feel little and inconspicuous and then again I'm proud to be of a people such as we. I think the general sentiment is aptly put on the Tomb of the Unknown Soldier: "Here lies in honored glory, an American soldier known but to God."

History of Interposition

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 22, 1956

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Mr. Felix Morley, entitled "Interposition: Its History Is a Study of American Political Philosophy."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal of February 16, 1956]

INTERPOSITION: ITS HISTORY IS A STUDY OF AMERICAN POLITICAL PHILOSOPHY

(By Felix Morley)

Alexis de Tocqueville, in his classic study Democracy in America, confessed himself "startled by the variety of information and

the amount of discernment" necessary to understand our Federal system. Its constitutional complexity, he predicted in 1832, would eventually subject the nominally sovereign States to "the yoke of a centralized administration."

The prophecy of this brilliant French observer is recalled by the general lack of information and discernment in regard to "interposition," a political device almost as old as the Republic.

After long obscurity, interposition is back in the news now because several Southern States are employing it in an effort to maintain segregation in their public schools. Yet it has been, and still could be, applied in issues devoid of racial content. The attorney general of Texas, for instance, was recently quoted as suggesting that it could be used in that State to prevent Federal regulation of gas and oil production.

Interposition is official action on the part of a State government to question the constitutionality of a policy approved by the Federal Government. This action literally interposes the sovereignty of the State between its citizens and the authority of Washington.

DEMAND FOR CLARIFICATION

It says, in effect, that the people of the interposing State should at least question, and perhaps even oppose, the Federal policy until or unless the moot question of its constitutionality is resolved. The device has been used both to demand that the Supreme Court rule on the constitutionality of an act of Congress and—as now—to demand that the Congress clarify the constitutionality of a Supreme Court decision.

The theory of interposition rests on the indisputable fact that the Union was formed by the States, on the terms of a contract, revisable by amendment, which we call the Constitution. While the States by this contract ceded certain powers, such as control of foreign policy, to the National Government, all undelegated powers, including control of education, were retained.

To make this crystal clear the 10th amendment was in 1792 written into the Constitution, saying: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

This amendment rounds off the so-called Bill of Rights—the first 10 amendments to the Constitution—which is a solemn assertion of the rights of the States as well as of the rights of individuals. But while the courts may be expected to uphold the latter there is no mechanism, other than interposition, available to a State which considers that its reserved powers are being usurped by the central Government. On this reasoning John C. Calhoun asserted that: "This right of interposition * * * I conceive to be the fundamental principle of our system, resting on facts as historically certain as our revolution itself."

THE FIRST TIME

That had also been the earlier opinion of Thomas Jefferson, who drafted the first resolution of interposition. The 5th Congress, disturbed by the effects of the French Revolution, in 1798 adopted 3 drastic laws, known as the Alien and Sedition Acts. The third of these made it a crime "to write, print, utter, or publish" anything that might bring the President or Congress "into contempt or disrepute." This was clearly in violation of the constitutional guaranties of free speech and a free press. But it was feared that the Supreme Court, under the influence of the Federalist Party, might not so rule.

Therefore, a delegation from the newly admitted State of Kentucky prevailed on Jefferson, who was then Vice President, to draft anonymously a resolution of interposition, questioning the constitutionality of these Federal laws. It was in this first Kentucky resolution, adopted November 16, 1798, that Jefferson used the famous slogan: "In questions of power, let no more be heard of confidence in man, but bind him down from mischief by the chains of the Constitution."

A month later the Virginia Legislature adopted a similar but somewhat milder resolution of interposition, drafted by James Madison. This, used as a model by the Virginia General Assembly in its resolution of February 1, 1956, called on the other States to "concur with this Commonwealth in declaring, as it does hereby declare, that the acts aforesaid are unconstitutional." Kentucky then responded with a second, more fiery, resolution, asserting "that a nullification, by those sovereignties (the States) of all unauthorized acts done under color of that instrument (the Constitution), is the rightful remedy."

These resolutions were directed against the Congress. An equally notable case of interposition, by Wisconsin in 1859, was directed against the Supreme Court, and on that occasion in behalf of a fugitive Negro slave. Under the then existing law, as confirmed by the Dred Scott decision, a runaway named Joshua Glover was arrested in Racine by a United States marshal. He would have been returned to slavery, as the law prescribed, but was forcefully freed from Federal custody by abolitionists, whom the Wisconsin courts refused to prosecute.

POSITIVE DEFIANCE

In support, the State legislature, on March 19, 1859, adopted a resolution of interposition denouncing the Supreme Court for "assumption of power" and declaring "that the several States * * * have the unquestionable right" to exercise "positive defiance" in behalf of their official interpretation of the powers reserved to the States by the Constitution.

No matter how carefully worded, a resolution of interposition must by its very nature be defiant of Federal authority, which means that 1 of 3 consequences will follow. Either the central Government will tacitly back down, or the resisting State will, or a mutually acceptable solution will be found by clear-cut constitutional amendment, which was the method advocated by Jefferson and now again by his State today.

In both of the cases cited here, however, the recalcitrant States made their point. Wisconsin maintained its position until the Civil War swept the whole issue of fugitive slaves. Earlier, Kentucky and Virginia opposed the Alien and Sedition Acts until their expiration, in 1801. Jefferson was elected President partly because he had led that opposition. The political effect of the present interposition resolutions cannot as yet be assessed. But, in an election year, it is likely to be considerable.

VIRGINIA PATTERN

Both the almost unanimous approval and the moderate phrasing of the Virginia interposition resolution voted this month insure that it will be a model for those Southern States that have not yet acted. Of the total of 17 States where compulsory segregation was in effect when the Supreme Court ruled against it, six have been moving cautiously toward integration, three have taken no action one way or the other and seven (besides Virginia) are following, or propose to follow, the Old Dominion's lead. There is no question that the movement will retard integration throughout the entire South. Indeed, that is its clear objective.

However one reacts to that prospect, the Virginia resolution is important for all who take constitutional government seriously. It expresses the certainly reasonable doubt that the 14th amendment ever contemplated compulsory integration. It points out that "the very Congress which proposed the 14th amendment for ratification established separate schools in the District of Columbia."

It further notes that for nearly 90 years the Supreme Court consistently upheld the constitutionality of "separate but substantially equal" schools and thereby implies that the single contrary opinion, of May 17, 1954, may well have been mistaken. Then it concludes that the only proper way to resolve the issue is to put it to the test of constitutional amendment. The fact that such an amendment can be blocked by the negative action of 13 States—one more than a quarter of this total—is not emphasized.

De Tocqueville, were he alive today, would certainly be fascinated by this developing issue of interposition. Its reincarnation, for the first time since the Civil War, will test the validity of his prediction. He may or may not have been right in thinking that in a showdown Americans will prefer authoritarian democracy to the complicated balance of a federal republic. But it is once again becoming clear that the two doctrines may be antagonistic.

Endorsement of Adlai Stevenson by Local 1145, Employees of Honeywell Regulator Co.

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 22, 1956

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Local 1145 Endorses Stevenson," published in the March issue of Local 1145, Honeywell News. This article contains very pertinent comment on the economic issues confronting the American people.

This particular publication serves and is brought to the attention of more than 8,000 members of this particular union and their families. The union has an outstanding record in labor-management relations with the Honeywell Regulator Co. Its record in labor statesmanship is second to none.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOCAL 1145 ENDORSES STEVENSON

At the last regular meeting of local 1145, the membership, on recommendation of the executive board of local 1145, endorsed Adlai E. Stevenson in the Democrat-Farmer-Labor primary.

Adlai Stevenson was endorsed on the basis of his outstanding record as Governor of Illinois and his programs and policies enunciated by him in the 1952 election, in which he drew more votes than any other candidate for President, outside of Eisenhower, up until that time, including the men who had been elected President.

It was pointed out that the endorsement of Adlai Stevenson was not meant as any slur or attack on any other candidate in the primary election of the Democrat-Farmer-Labor Party, including Senator ESTES KEFAUVER. ESTES KEFAUVER has been a good Senator.

Perhaps, more than anything else, it was the support and endorsement of Senator HUBERT H. HUMPHREY and Gov. Orville Free-

man which brings the endorsement of Adlai E. Stevenson for President of the United States.

Senator HUMPHREY and Governor Freeman are the heads of the Democrat-Farmer-Labor Party of the State of Minnesota, and they are, undoubtedly, more conversant with the abilities and attitudes of the two candidates than any other persons in the State of Minnesota.

Senator HUMPHREY, as Senator since 1948 and as mayor of Minneapolis from 1945 to 1948, has shown ability and has shown leadership and integrity, and, in particular, he has shown that he is a friend of working people and of local 1145. In 10 years of public service he has never once failed to support a policy which was favorable to the people, and particularly the working people of Minnesota.

This is likewise true of Governor Freeman. To oppose the man supported by Senator HUMPHREY and Governor Freeman is to undercut and undermine, for no good reason whatsoever, their leadership of the Democrat-Farmer-Labor Party of Minnesota.

MANY ECONOMIC ISSUES

Many economic issues face the people of America today. The farm problem, which has been badly mishandled and bungled by the present Republican administration, is one of the top problems that must be met. Economists in America realize that if the farm income continues to decline and deteriorate that it will undoubtedly have a drastic effect on the income and jobs of the working people in the larger cities.

Another problem is the fact that automobiles, which is the second largest industry in America, were overproduced to the tune of 700,000 to 800,000 cars in 1955. This could have a most adverse effect upon our entire economy.

A third major problem is the tremendous indebtedness of the American people as individuals. Home loans are at an alltime high; consumer credit on goods such as television sets and furniture are at a tremendous alltime peak; small bank loans are at an alltime high.

In other words, the people are in debt up to their necks, and this is a real danger signal, not only to the people who are in debt but to the American economy as a whole.

These are but a few examples of black clouds on the economic horizon. These are problems that a man of the caliber of Adlai Stevenson, together with Senator HUMPHREY, Governor Freeman, and others, can face up to and resolve.

"Follow Lincoln," Murphy Cautions

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. LANE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I wish to include a very interesting news story that appeared in the National Tribune Edition—the Stars and Stripes published February 23, 1956.

Included in this article was the stirring, enthusiastic, and forceful address of Timothy J. Murphy, national commander of the Veterans of Foreign Wars, who is an outstanding leader in all veterans' matters and a highly qualified attorney, and a former public official of high repute.

"FOLLOW LINCOLN," MURPHY CAUTIONS—VFW COMMANDER, AT TOMB OF EMANCIPATOR, ENJOINS CITIZENS TO RECALL VETS' SACRIFICES

The Veterans of Foreign Wars and all citizens of the Nation must accept the ideals of Abraham Lincoln with conviction, and practice them with sincerity, if we are to strengthen the country and make of it a better place in which to live, cautioned Timothy J. Murphy, of Boston, Mass., commander in chief of the overseas veterans' organization in a Lincoln Day address delivered in the shadow of the martyred President's tomb February 12 at Springfield, Ill.

In the presence of Gov. William G. Stratton, VFW State Commander Roy K. Lechner, of Chicago, his personal aide Matthew J. Kane, of Washington, D. C., and a large assembly of veterans and other citizens, Commander Murphy said that we must keep in mind as we struggle to gain the minds of men, and as we continue to make democracy live, Lincoln's injunction to nobly serve, or meanly lose, the last best hope of earth, if we are to win the struggle for human freedom.

Quoting liberally from words of the man who belongs to the ages, Murphy also contended that it is the job of the free world to live up to his democratic precepts in order to encourage 800 million people under the Communist yoke to break their mental and physical bonds, and he issued an implied warning to those who would violate Lincoln's ideal of caring for those who have borne the battle, when he quoted the words of the Emancipator that it was "something more than common that those men struggled for," and when he said that "these thoughts are brought to mind when we visit Arlington Cemetery or our other national cemeteries at home and abroad."

EPITOMIZED AMERICAN DREAM

The text of Commander Murphy's address follows:

"Today, we gather on hallowed ground to pay homage to one of the greatest of all Americans—one who, in the words of Stanton, truly 'belongs to the ages.'

"The privilege of rendering this tribute as the representative and commander in chief of the more than 1,250,000 members of the Veterans of Foreign Wars is deeply felt. Because of my lifelong reverence of his name and a belief in his democratic ideals, I deem it a personal honor that I shall never forget. We should all have a fierce pride in being citizens of a country that provides the opportunity for the full development of a Lincoln. Of all the great men in American history, the life of Lincoln most accurately portrays the example of a man who sacrificed himself in devotion to a cause.

"And in preserving the Union, Lincoln himself epitomized the American dream. His life, the success of his democratic philosophy, and his leadership of free people under the pressure of war, refute with compelling logic, the theory sometimes advanced, that we, the people, are incapable of governing ourselves. He also, by sheer accomplishment, fulfilled the fond hopes of the Founders—namely, that in the democratic system the poorest and the lowliest of the Republic are not barred by accident of birth from rising to the top. Of Lincoln it could be said, that it was not in spite of, but because of his struggle, labor, and grief, there emerged at the right time a strong and wise American who brought victory and unity to a divided land. Ever shall we call him great.

"He was superior in so many ways. Would that time permitted more detailed comment upon his nobility of character, his intellectual grasp of the important things in Government, and his understanding of human behavior. In the highest sense, Lincoln had what is called for the want of a better name—the common touch—the rare genius of talking plainly to plain people and making them understand. This quality has received much comment, but I do not think adequate mention is made in the average eulogy of his distinguished position and stature as a citizen of the world. Because he was a living example of the freedom of opportunity, it is not surprising that he became one of the most articulate of those whose actions have become milestones along civilization's rugged and often bloody road to freedom. He hoped and prayed that by freeing the slaves and preserving the Union, 'succeeding millions of free, happy people, the world over, shall call us blessed, to the latest generations.' And by the Emancipation Proclamation, Lincoln moved a step farther to establish Jefferson's principle in the Declaration of Independence that, 'all men are created free and equal'."

MUST FOLLOW PRECEPTS

"Americans should cherish, as never before, the priceless documents and expressions of the spirit that reach from the Beatitudes to the Emancipation Proclamation, all of which gave hope and freedom to large segments and races of men. It is the job of the free world to live up to those democratic precepts in order to encourage 800 million people under the Communist yoke to break their mental and physical bonds. Those today who are struggling and planning to break the yoke of the Red master must often be reminded of the words of Lincoln, who said: 'As I would not be a slave, so I would not be a master. This expresses my idea of democracy. Whatever differs from this to the extent of the difference is no democracy.' I ask you, is that not the antithesis, the direct opposite of the materialistic philosophy of communism?

"He said, 'As I would not be a slave, so I would not be a master.' This, from a man who in youth experienced great privations and disappointments; this from one whose face, it has been remarked, portrayed to his dying day a life of struggle—abject poverty in youth, repeated defeats for public office, and a domestic life that held much sorrow and tragedy. Lincoln never aspired to be a big shot, a tough boss, a master. In fact, he repeatedly accepted ruination of personal ambitions by sacrificing self in devotion to a cause because he respected the dignity of man.

"No one appreciated more than Lincoln the vicissitudes and hardships of the poor. When nominated for the presidency, he was asked to give some material for an account of his boyhood. 'Why,' he said, 'it is a great folly to make anything out of me or my early life. It can all be condensed into a single sentence, and that sentence you will find in Gray's Elegy—"The short and simple annals of the poor." That's my life, and that's all you can or anyone else can make out of it.' Lincoln, who came from the poor, helped the poor all that he could, but he believed in the freedom of opportunity and not in radical socialism. He would have been the last to even think of the dictatorship of the proletariat or a monstrous conspiracy to dominate the world. Slavery was abhorrent to him in any form or by any class. He loved freedom as a man loves his family and prayed and hoped that in time democracy would extend to the ends of the earth. His was a spirit that soared beyond the Nation he saved.

"It was a spirit that intuitively understood the mass. "The mass," as Carl Sandberg wrote, "the Napoleons and the Lincolns come from me. They die and then I send forth more Lincolns and Napoleons." No leader in the Civil War could more accurately than Lincoln fathom what the sol-

diers or sailors were thinking. He did what he could to alleviate their hardships and mitigate their courts-martial—a man of kind and compassionable heart. History's greatest commoner would have been shocked by knowledge of the regimentation of the masses and the official murders decreed by Stalin. Those who resist Red tyranny may find some comfort in what Lincoln said: 'Men will pass away—die; but the principle of democracy will live forever.'

"MORE THAN COMMON

"He knew full well how these principles were established by the American Revolution. In later life, Lincoln recalled that when a boy, by the light of an open fire, he had lain on the floor and read Parson Weems' 'Life of Washington.' The deeds and magnificent leadership of the Father of Our Country moved him greatly, but not more than the heroism of the soldiers of the revolution. He commented, 'Boy even though I was, I thought there must have been something more than common that those men struggled for.' And do we not think that thought today when we visit Arlington Cemetery or our other national cemeteries at home and abroad? Yes, it was 'something more than common that those men struggled for.' Lincoln knew the veterans. Did he not ask all to resolve 'that these dead shall not have died in vain' and 'to care for him who shall have borne the battle and his widows and orphans'?

"That should be kept in mind as we struggle to gain the minds of men, as we continue to fight to make democracy live. Few will disagree that the career, the writings, and the sayings of Lincoln comprise the most splendid exhibit in the showcase of our democracy. He is a shining example of the worth of the system and his life should be used more in our overseas information programs and literature. He did not appear in a blaze of glory, although vindicated by victory. He remembered the sufferings on both sides. He recognized the desolution and despair of the vanquished, and his feelings were of compassion and forgiveness so beautifully expressed in the immortal words. 'With malice towards none, with charity for all, with firmness in the right as God gives us to see the right, let us finish the work we are in, to bind up the Nation's wounds, to care for him who shall borne the battle, and to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations.'

"Those abroad who read the Lincoln papers and speeches will soon realize that in addition to his faith in the common man's capacity for self-government, that Lincoln also had an abiding faith in the mercy and goodness of Almighty God. His belief that 'righteousness exalteth a nation' inspired those around him. This again is the opposite of the Communist doctrine that 'religion is the opiate of the people.' In his Presidential candidacy, Lincoln said, 'I know that there is a God and that He hates injustice and slavery. I see a storm coming, and I know that His hand is in it. If He has a place and work for me, and I think He has, I believe I am ready. I am nothing, but truth is everything.'

"I ask, are we ready and willing to carry on this struggle for human freedom? We have seen many fail in the struggle. In our own time, many governments that were of the people, for the people, and by the people have perished from the earth. Many people have been put to death for resisting the Red octupus and many still resist by underground activities. If Lincoln could speak, he would say, 'Hold on. Your cause is worth fighting and dying for,' and for those who have died for the cause, he would say for them as he said to us, 'These dead shall not have died in vain.'"

LAST BEST HOPE OF EARTH

"Ah, these deathless words. How many people have looked at and pondered the Gettysburg Address graven upon the south wall of the Lincoln Memorial at Washington will never be known, but the total is millions. There, day after day, people come by the hundreds to look at that incomparable memorial and to gaze at the heroic statute of a brooding Lincoln in a majestic location, within the walls of a temple of Greek design like those once consecrated to the gods. Of those who come, one will note there are many young people—school boys and girls. Lincoln would have liked it that way, for he had a way with the young. It is reported that he was down on his knees with a group of boys playing marbles when the news came that he was elected President of the United States. Youth would do well to remember that never did words of malice, hatred or unforgiveness fall from his lips. We should remember also as veterans that Lincoln gave 'the last full measure of devotion' as did our own good comrades who did not return.

"Yes, this man of the people gave his all for us. His 'malice toward none' philosophy, his unswerving fidelity to the Constitution, his emancipation of the Negro, and his preservation of the Republic inspired his people to have graven high in stone over the statue in his memorial: 'In this temple, as in the hearts of his people for whom he saved the Union, the memory of Abraham Lincoln is enshrined.'

"We gather here today near his mortal remains to pay tribute because he is deeply enshrined in our hearts. Our few words of reflection on his consecrated life were also from the heart. But unless we of the Veterans of Foreign Wars and our fellow citizens accept his ideals with conviction and practice them with deep sincerity, our lipservice will do little good. If we follow his precepts and determine to make a better place for all, we are carrying on his great tradition, and that is to strengthen the Nation. He knew as do we, that a nation cannot escape history, and that is this grave problem in our time. No one phrased it more eloquently than Lincoln—it is whether 'we shall nobly save—or meanly lose—the last best hope of earth.'"

House Joint Resolution 433—Joint Committee on United States Information Programs

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. FEIGHAN. Mr. Speaker, on numerous occasions I have underscored the urgent need for a Joint Committee on United States International Information Programs. As every careful observer in the field knows, we are not winning the cold war, we are making slow progress in winning the minds and hearts of millions to our side in the struggle against the colonial and imperialist forces of Russian communism. In this struggle we face the basic peril of defeat. Joint congressional action is desperately needed to bolster and expand our informational media in every possible way in order to meet and expose the lies of the heavily subsidized propaganda machine of Moscow.

To satisfy this need, I have submitted House Joint Resolution 433, calling for the creation of such a committee. The tasks and functions of this proposed committee would be as specialized and purposeful in character as those of the Joint Committee on Atomic Energy. Situated in the realm of ideas and spirituality, they are even more essential and fundamental, and thus deserve specialized attention and care.

It is my earnest hope that Congress in this session will give its most serious consideration to this measure and authorize a rapid implementation of its provisions. I am happy to see a growing popular support for House Joint Resolution 433. In this connection, I wish to place in the RECORD a statement of support issued by the national chairman of the Ukrainian Congress Committee of America, Dr. Lev E. Dobriansky, who is also a professor of economics at Georgetown University. Appearing in the issue of the Ukrainian Bulletin, January 1–15, 1956, one of the two organs of this national organization, this statement commits the support of 1½ million Americans behind House Joint Resolution 433:

CONGRESSMAN FEIGHAN PROPOSES ESTABLISHMENT OF JOINT COMMITTEE ON UNITED STATES INTERNATIONAL INFORMATION PROGRAMS

In connection with the Honorable MICHAEL A. FEIGHAN'S sponsorship of House Joint Resolution 433, Ukrainian Congress Committee of America chairman sent the following communication to Congressman FEIGHAN on December 29, 1955:

"It is my happy privilege to inform you that the Ukrainian Congress Committee of America, by the unanimous vote of its executive council, extends its full support to your remarkable measure, House Joint Resolution 433, calling for the establishment of a joint congressional committee to be known as the Joint Committee on United States International Information Programs.

"We take pride in offering the support of our national organization with complete certitude as to the urgency and utter necessity of the passage of this vitally important measure by Congress. And you may be assured that this committee will do everything within its power to advance your measure toward this end.

"It should be quite evident to all Americans that as a Nation we are now, more than ever before, in a phase of the cold war which presents the greatest challenge to our ability to prepare and disseminate skillfully truthful and pointed information aimed at the most vulnerable parts of the Russian Communist enemy. It is nothing short of incredible that Moscow is capable of making considerable and dangerous inroads in Asia and Africa on the theme of colonialism and imperialism, while it is itself the basic center of widespread Russian Communist colonialism and imperialism, ruling an empire that in geographical area and predatory exploit surpasses all in the pages of human history. The non-Russian nations of Central and Eastern Europe and those in Central and Eastern Asia are the captive states of imperialist Moscow, totaling a number that far exceeds the ambitions of its Czarist Russian predecessors.

"The overwhelming fact is in itself an adequate reason for the establishment of this active joint committee. If we are to win the hearts and minds of men everywhere and to counteract Moscow's obvious intention to iso-

late us by misleading but heavily financed progaganda, Congress must begin to view our informational programs as being in many respects even more important than our atomic enterprises. The formation of a joint committee as you propose is the best possible means for meeting this urgent need.

"In closing, we should like to take this opportunity to express our warmest congratulations on your excellent Report of Inspection of the Administration of the Refugee Relief Act of 1953, as Amended, and Related Programs in the Countries of Southeast Asia and North Asia. It is by all measures a solid contribution to the strengthening of our security in tests.

"With warmest personal regards and best wishes for the continuance of your noble patriotic services to our Nation, I am

"Sincerely yours,

"LEV E. DOBRIANSKY."

Mr. Fischer Emotes

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to revise and extend my remarks, I wish to insert an editorial from the Galesville Republican of February 9, 1956, written by Mr. Bert Gipple. Mr. Gipple's editorial, which follows, comments on the article written by Mr. John Fischer in a recent issue of Harper's magazine:

It is strange but nonetheless true, that in what is oft termed the effete east of these United States there are many, including some listed among the intelligentsia, who picture anything west of the New York State line as still in the raw, with painted Indians lurking about with scalping knives, denizens of the forest ready to seize upon Little Red Riding Hoods, and even an occasional buffalo stirring up the dust.

One of such, seemingly, is John Fischer, editor in chief of Harper's, a magazine founded 101 years ago, and which for more than half a century was rated as tops of monthly publications.

Mr. Fischer now occupies that "easy chair" once occupied by writers of fame. One might well say, "How the mighty have fallen."

In the December issue of Harper's, over his own signature, Mr. Fischer discusses the farm problem. According to his mass of gray matter, there just ain't any such thing, aside from there being too many farmers—an idea that seems to possess other easterners in high places.

Mr. Fischer vizualizes the American farmer (the little ones with two or three hundred acres or less) as an individual of low intellect, with the legs of his baggy jeans thrust into his boot-tops, sucking on a straw as the hayseed trickles down from beneath his battered hat, and standing with outstretched hand to Uncle Sam, saying, "Gimme, gimme."

The Fischer article in Harper's is headed, "The Country Slickers Take Us Again." In the first paragraph he alludes to the farmer as "Our Pampered Tyrant." He follows this by saying, "The record of recent elections indicates that the farmer is generally eager to sell his vote to the highest bidder," and that "City people are too indifferent (or benumbed) to resent this legalized corruption."

That for a starter. Then he goes on with this: "Everybody knows that it is the taxpayer who keeps the farmer (or rather a favorite group of them) living in clover and Cadillacs, but the taxpayer seldom realizes how much it is costing him." To which he adds, "When any hog keeps his jowls in the trough long enough, he gets to thinking he owns the trough."

Does he let it go at that? He does not. His next blurb is "At least 40 million of our 350 million acres of crop land should be taken out of production," and that "One million farm families ought to be nudged gradually off the land, and helped to find some useful occupation." In conclusion, he quotes a "respected" economist who asserts. "It is not inconceivable that 5 percent of the work force could produce all the farm products which the United States and part of the rest of the world would take at profitable prices."

Having finished his diatribe, Editor in Chief Fischer sits back in whis swivel chair and reads his manuscript with a smile of satisfaction. So pleased is he with it that a copy goes to the Secretary of Agriculture. Somebody there sends to Harper's a note, which reads:

"I have read the article by John Fischer in the December issue of Harper's with a good deal of interest. It is excellent.

"EZRA T. BENSON."

Weeks later, the Farmers Union heard of this, and there was an explosion. Reporters for the daily press seized upon it and broadcast it the length and breadth of the land. Secretary Benson said he was amazed; that he had not read the article, nor signed the note sent to Harper's. Somebody in the Department of Agriculture did. That is admitted.

However that may be, Fischer's picture of the American farmer as a "country slicker and living off legalized corruption," has gone around the world. Russia could not have sent out propaganda of life in America more to our disadvantage.

Echoes From Capitol Hill

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1956

Mr. HAGEN. Mr. Speaker, as one who is interested in the current distress of the American farmer and desirous of effecting a solution, I offer a commentary on the plight of the poor pumpkin. I refer to a humorous article prepared by Mr. Edward H. Dickson, Washington correspondent for the McClatchy newspapers of California, one of the great independent newspaper organizations in this Nation. Under leave to extend my remarks, I include the article herewith for the benefit of my colleagues:

ECHOES FROM CAPITOL HILL

(By Edward H. Dickson)

No matter which political party is in power, a small, willful group of Washington bureaucrats seems determined to strangle the Nation's pumpkin industry with a lot of regulations.

The whole ugly business started back in 1934 during the New Deal of Franklin D. Roosevelt when standards were set up for canned pumpkin with the power-greedy bureaucrats, including squash, too.

No relief was to be expected, of course, during the administration of Harry S. Truman and his Fair Deal regimentation but everybody thought that when the Republicans took over in 1953 business was going to get a breather and there would be an end to this interference from Washington.

But the brutal fact is Secretary of Agriculture Ezra Taft Benson's Department has issued an order, effective just 2 weeks from today, not, mind you, doing away with the old regulations but imposing sterner new ones.

Wake up, citizens.

There are only 14 more days in which to save America.

Benson, of course, may not have seen this pumpkin order, just as he did not see the slick-cover magazine article he endorsed without reading and which got him into a lot of trouble because it implied farmers are a bunch of mendicants.

In all justice it must be pointed out the order actually was signed by Roy W. Lennartson, Deputy Administrator of Marketing Services. But Marketing Services is an important agency in the Agricultural Department and you would imagine Benson would know what was going on around there.

The regulations set up a point system for scoring pumpkin for canning on the basis of color, consistency, finish, and lack of defects.

And they are so rigid that even a pumpkin like the one in which Whittaker Chambers hid the Alger Hiss data scarcely could qualify as a 100-percent American pumpkin.

Take the matter of consistency in pumpkins, for instance, which often is sadly lacking both in pumpkin and politicians.

A housewife getting ready to bake a pie for Thanksgiving or Christmas has this formula to follow as to whether her product will be consistent:

" 'Good consistency' means that the canned pumpkin or canned squash, after emptying from the container to a dry, flat surface, retains the approximate shape of the container, or holds a high mound formation, and at the end of 2 minutes after emptying on such surface the highest point of the mound is not less than 60 percent of the top of the container, except with respect to No. 3 size can or larger the highest point of the mound is not less than 50 percent of the height of the container, and irrespective of can size not more than 10 cubic centimeters of free liquor separates for each 30 ounces of net contents."

Looking back on it now, it is amazing how grandma turned out those delicious pies without ever bothering to use a stopwatch or micrometer.

The Department says it is none of its business how much pumpkin is put in the can because quality and not fill is the basis for regulation.

It does offer this helpful advice, however:

"It is recommended that each container be filled as full as practicable with pumpkin or squash."

The Department does not wish to take jurisdiction in cases involving irate housewives who might feel they got shortchanged.

One of the bright things about the new regulations is that they come years after the writing of the famous fairy tales and nursery rhymes.

Imagine the strain which would be put now on the author of Cinderella in the scene where the good fairy turns white mice into horses and a pumpkin into a coach so Cinderella can go first cabin to the prince's ball.

Even fairies have their limitations and by the time she and Cinderella found a pumpkin which would pass the standards, it would be past midnight before Cinderella even got started, much less arrived home.

And at best you can bet the evil stepmother and Cinderella's ugly stepsisters would be around trying to influence the inspectors.

Or take the case of Peter, Peter, pumpkin eater.

The little rhyme goes like this:

"Peter, Peter, pumpkin eater
Had a wife and couldn't keep her;
Put her in a pumpkin shell
And there he kept her very well."

Peter would be in a nice fix with the Government unless he could show the pumpkin shell met the regulations promulgated pursuant to the authority contained in the Agricultural Marketing Act of 1946 (60 Stat. 1087, et seq. as amended: 7 U. S. C. 1621, et seq.)

Resolutions on 38th Anniversary of Lithuania's Independence

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks, I include the following letter from citizens of my congressional district of Lithuanian descent containing resolutions adopted by such on the observance of the 38th anniversary of Lithuania's declaration of independence:

LITHUANIAN INDEPENDENCE DAY
COMMITTEE,
Paterson, N. J., February 19, 1956.
Hon. GORDON CANFIELD,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN CANFIELD: On February 19, 1956, citizens of Lithuanian descent residing in Paterson, N. J., during their program in observance of the 38th anniversary of Lithuania's Declaration of Independence, unanimously adopted the following resolution:

"Whereas the people of Lithuania during 700 years have time and again fought aggression to defend her freedom, have shed their blood to prove to the world that Lithuania is worthy of independence; and

"Whereas Lithuania was an independent state for several hundred years before Russia's first occupation in 1795; and

"Whereas the yearning for self-rule and freedom existed throughout 123 years of Russian occupation, Lithuania severed its ties with Russia by announcing its independence on February 16, 1918; and

"Whereas Soviet Russia renounced for all time its rights to the territory of Lithuania, and recognized Lithuania as a sovereign and independent state; and

"Whereas the United States of America and other nations recognized and continue to recognize Lithuania's rightful independence and sovereignty; and

"Whereas almost 16 years ago the Baltic democratic republics slipped beneath the sea of misery and death that is Soviet communism; and

"Whereas because of the global and totalistic nature of the Kremlin's peaceful coexistence line is designed primarily to gain time in order to divide and destroy free world alliances and pave the way for world conquest: Therefore be it

"Resolved, That we, Americans of Lithuanian descent shall continue to support the efforts of Lithuanian people to regain freedom; and

"Resolved, That we respectfully urge the United States Government to develop an overall dynamic program against international Communist conspiracy; and

"Resolved, That we appeal to the Government of the United States to incorporate the liberation of Lithuania and other Soviet-enslaved countries as an integral part of United States foreign policy; be it further

"Resolved, That this meeting of Lithuanian Americans of Paterson, N. J., expresses their deepest gratitude to the Federal Government and the Congress of the United States for their keeping enslaved nations' hope of liberation alive and for their unwavering stand and attitude toward the eventual restoration of independence of Lithuania and other Baltic States; and be it finally

"Resolved, That this resolution be forwarded to the President of the United States, and copies thereof to the Secretary of the State, the Senate Committee on Foreign Relations, the Representative of the Eighth District of New Jersey, and the press."

Sincerely yours,
ANTHONY GUDONIS,
Chairman.
Rev. VYTAUTAS DEMIKIS,
Secretary.

JOHN JOSY,
VACLOVAS CIZIUNAS,
Commitee Members.

Failure of Integration in the District of Columbia

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 22, 1956

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Mr. A. H. Harrigan, and which appeared in the February 21, 1956, issue of the Charleston News and Courier, one of our Nation's oldest and most distinguished newspapers. The article spells out a few of the many complications being encountered in efforts to integrate the public schools in our Nation's Capital, which has been designated as the "pilot model" for others to follow. The article is entitled "Integration Hasn't Helped Either Race in Capital, Newsman Finds."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INTEGRATION HASN'T HELPED EITHER RACE IN CAPITAL, NEWSMAN FINDS

(By A. H. Harrigan)

The District of Columbia's year and a half of experience with integrated schools has been probed, analyzed, and summed up in a series of eight articles published in the Norfolk (Va.) Ledger-Star.

The overall situation, as seen by veteran Washington Newswriter Paul Harmon, is contained in the quoted comment of an educator who spent 25 years in the Washington system. He said that integration is "not benefiting the Negro pupils, and Lord knows it isn't helping the white pupils."

Norfolk, with a large transient population, is not a wholly typical southern city. Integration of Norfolk's public schools has been advocated by some Norfolkians. The afternoon Ledger-Star set out to get the facts on integrated schools in the major testing ground of Washington.

Harmon's series establishes two things: (1) That integration has meant a big drop in educational standards and (2) that whites who can do so are fleeing Washington.

Harmon pointed out that Washingtonians themselves are ill informed as to whether or not integration has been successful. He described the news blackout on how integration is working and the reluctance of school personnel to allow their names to be used in stories. When newsmen agree to withhold the names of sources, teachers, principals, and school-board members have plenty to say.

The educator quoted above said: "There isn't a shadow of a doubt in my mind that a greater number of white students have been irrevocably hurt (by integration)."

The effect integration has on student behavior is graphically described in the Harmon article headed "Washington Handles Negro Children With Kid Gloves."

"White teachers, principals, and school officials all along the line are so afraid of public opinion that they are reluctant to punish a Negro child for even the most serious offense," one principal told the Ledger-Star. He added that "Negro school-board members, NAACP leaders, and some white proponents of integration might be quick to pounce upon any incident which can be made to look like mistreatment of Negroes by white school people."

He added that Negroes "came into the schools in large numbers in September of 1954 with the feeling they had won a great victory in this decision on integration. They would not bow to any authority."

Harmon reported that numerous incidents (of student crime) were cited by parents, teachers, and pupils. Most of these were reported in the newspaper.

These reports included the flashing of knives by Negro boys, fist fights and hair-pulling contests between Negro and white girls, Negro boys approaching white girls asking them for dates, making remarks about their personal appearance, sometimes even putting their hands on them.

Harmon's reporting points clearly to an increasing exodus of whites from integrated Washington. He said in the series that a large segment of Washington's permanent citizenry, including top civic leaders and businessmen, are profoundly concerned with racial population trends.

A school principal said: "I am deeply concerned at what is happening to the white population of our city: I'm concerned what's happening to the tax structure; to the civic pride formerly displayed in residential sections all over the city."

Harmon said the moving out of white residents to nearby Maryland and Virginia and the influx of colored families has been a cause of major concern to real-estate men.

The Ledger-Star was told of one high-school district where the parents of more than 25 students continued to live in Washington, but sent their children across the city line to a Maryland school. The parents paid more than $200 per pupil per year to avoid sending their children to integrated Washington schools.

Integration is complicating tremendously the already vastly difficult problem of obtaining teachers. The latest count in Washington's integrated teachers college, Harmon was told, "is 489 white students and 814 colored students."

A school board member commented, saying, "And we expect only a few of those white teacher trainees who graduate will accept jobs in the Washington school system." Another school board member said, "In my opinion, you 'ain't seen nothing' yet. It will be interesting to observe the shift at the end of this year."

As to the cost of operating the integrated system, it has gone up, not down as integrationists forecast.

Dr. H. M. Corning, school superintendent, admitted to Harmon that little if any money has been saved so far due to integration.

"Actually, we hope to obtain an increased appropriation to correct some conditions," one school official said. He explained he referred to a large number of pupils who have an IQ of 70 or below, now attending classes with pupils of more normal development. The system hopes to obtain funds for special teachers for these students. They also want to teach simple shop skills to those who are incapable of absorbing an academic education.

Senator Paul Douglas Opposes Upper Colorado Boondoggle

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. HOSMER. Mr. Speaker, Senator PAUL DOUGLAS, of Illinois, has a considerable reputation as an economist. Of the "solid gold cadillac" upper Colorado River storage project he said this during debate on the issue in the other body last year:

This is a lavish, extravagant, unjustified program. It is about the worst program I have ever seen during the time I have been a Member of the United States Senate. It would be a waste of the taxpayers' money. * * * To my mind it is not justified on any basis whatsoever, and I hope the bill will be defeated.

Those who may as yet be undecided with respect to this issue should be considerably influenced by the words of Senator DOUGLAS.

I will quote further from his remarks made in the other body on April 20 of last year so that they may be before my colleagues for evaluation:

It is because I believe that this project is not good for the Nation that I oppose it.

The area covered by this bill is the worst place in the country at which to develop hydroelectric power. * * *

The cost of installing power capacity in the area covered by this bill will be over $500 per kilowatt, or 4 to 5 times the cost on the Tennessee River, and more than 5 times the cost of most dams on the Columbia River. * * *

If we were to pick out one of the worst places in the United States at which to erect a public-power project, we would pick out this one. * * *

I doubt that this sum—the appropriation for power—will be paid out, for power from coal oil and shale oil in this region can probably be produced at the same or a lower cost. Furthermore what about atomic energy? Will not that be ready for use in 60 years?

* * * so if we add the hidden interest costs, which will amount to more than $1,100,000,000, the cost of the irrigation features will come to more than $2 billion and the total cost of all features to probably close to $3 billion or more.

The average cost of construction, let alone interest, for the project as a whole would be $952 an acre * * * if we include interest, the cost per acre will be $2,142. The cost for the central Utah project with interest will be $3,953. These are fantastic figures. The most fertile land in the country * * * is not worth more than $600 or $700 an acre. Here we are proposing to spend more than $2,000 an acre for land which, when fully irrigated, will not be worth more than $150 an acre. On a big project, we will be spending approximately $4,000 an acre.

We must remember that these irrigation projects are not in low altitudes * * * (at which) the average temperature is high and the growing season long. They are, instead, in the mountains, at altitudes from 4,500 to 7,500 feet, where the growing season is short, where the winters are long, and where the crops produced will be, by the admission of the proponents of this bill, primarily alfalfa, hay, and some corn, for the feeding of livestock. These are costs which cannot be borne. Irrigation can better be used to put water on the more fertile land of the Midwest to raise the yields per acre there. This would be at a very low cost instead of at the astronomical costs of this project.

* * * who then will pay for this gigantic project? The interest is forgiven, and borne by the taxpayer. Eighty-five percent of the principal is not to be paid by those who own the land, but is supposedly to be saddled on the power revenues. If we examine the costs and the power revenues, we find that it would be almost impossible for the power system to earn the money necessary to meet the 85 percent of direct irrigation costs. * * *

This is a lavish, extravagant, unjustified program.

Lithuania's Independence

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. HILLINGS. Mr. Speaker, last February 16 the Lithuanian Americans, of whom there are almost 1 million in our country, celebrated the 38th anniversary of Lithuania's independence.

Lithuania is a country with a rich, historical background. It was an independent state as far back as the 12th century and at one time comprised a vast area of Eastern Europe. Since 1940, however, the valiant people of Lithuania have been under the domination of the Soviet Union. The legal government of Lithuania as well as those of its neighbors, Latvia and Estonia, was deposed by the masters of the Kremlin and Lithuania is now incorporated as part of the Soviet Union with attendant terror and loss of freedom. Since the Reds have taken over Lithuania, hundreds of thousands of these brave people have been deported to slave labor camps.

On Saturday night, February 18, 1956, I had the honor to address a group of fine, patriotic Americans of Lithuanian extraction who belong to the Lithuanian-American Society of Los Angeles. The president of the society is Mr. Anthony F. Skirius.

Mr. Speaker, I believe that our country can well be proud of the patriotism of the Lithuanian Americans and their devotion to our principles of freedom and justice. It is my hope that once again Lithuania may be free and throw off the yoke of Soviet slavery.

Responsibilities of Operators of Radio and Television Stations

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 22, 1956

Mr. THURMOND. Mr. President, television is a wonderful educational medium. Those who have been trusted with licenses to operate television and radio stations should never take lightly their responsibilities to the public in presenting educational programs, especially those which are designed to portray history.

In this connection, I desire to have printed in the Appendix of the RECORD, an article by a distinguished writer, Mr. Arthur Krock, which appeared in the New York Times of February 21, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN THE NATION
(By Arthur Krock)

MORE PORTRAYAL OF HISTORY BY TELEVISION

WASHINGTON, February 20.—In its second TV dramatization of the history of the Constitution the Ford Foundation, through its Omnibus program yesterday, again in several respects conquered the sharp limitation of the medium. Also again, it was faithful to the facts it presented and the casting and performance of the actors were excellent.

But in this second of the programs, which dealt with the strains on the Union and the Constitution after 1789, once more an important balancing fact was omitted, and another was only half told. That same flaw was noted in this space on February 8 with respect to the opening program when, in accurately allotting to the actor who played Thomas Jefferson the lines in which he said the Constitution should continuously be interpreted according to the changing concepts of following generations, the playwrights failed to add Jefferson's vital reservation. This was that the changes should come through constitutional amendments submitted by Congress and ratified by the States, not through judicial amendments by the Supreme Court.

In that previous dispatch it was estimated that more than 7 million view Omnibus. Its management responded that the viewers number at least 17 million, which stresses its importance as a vehicle of historical reporting.

LINCOLN AND DOUGLAS

There were two episodes yesterday which, being truncated history, could have left on most of the viewers a deeply mistaken impression. No suggestion is intended here that the slanting was deliberate; the time is short in which the long story has to be told; and the distinguished consultant for the script, Professor Hofstadter, of Columbia University, encountered complex problems of selection. But:

Among the passages chosen from the celebrated debates between Lincoln and Douglas in Illinois in 1858 was this from Douglas: "The Negro ought never to be a citizen of the United States." Since Lincoln was faithfully presented on the program as a statesman who loathed slavery, and the issue between him and Douglas in their senatorial contest was over Negro citizenship and the extension of slavery to the Territories, that may explain the choice. But the passage

left the impression that one of the issues between the candidates was the award of equal political rights to free Negroes and those thereafter to be free.

Yet in these same debates Lincoln took a stand on that subject even more adverse than Douglas, a vital fact in the context. At Charleston, September 18, 1858, Lincoln said: "I am not, nor ever have been, in favor of bringing about in any way the social and political equality of the black and white races. * * * I am not, and never have been, in favor of making voters or jurors of Negroes, nor of qualifying them to hold office, nor to intermarry with white people. * * * There is a physical difference * * * which I believe will forever forbid the two races living together on terms of social and political equality." No viewer of Omnibus yesterday was informed than Lincoln made this response to the passage excerpted from Douglas.

The program's narrator, Joseph N. Welch, who doubtless was chosen because of the acting skill he displayed on TV in the Army-McCarthy hearings, very fully and correctly recited Lincoln's views on slavery: that he looked forward to the day when all men would be free; that the Nation could not endure half slave and half free; but that, if the only way he could preserve the Union would be to continue slavery for a time, he would do that, etc. Continuing, Welch announced that in the Emancipation Proclamation, a few years after 1858, Lincoln achieved his purpose and that most of the slaves were free. But an essential part of the truth, not conveyed by Welch, was that the proclamation was a wartime military, not a sociological, measure, and that the only slaves it freed (on paper) were those behind the Confederate lines.

Since Douglas' stand on Negro political rights and the Emancipation Proclamation were both brought into the script, surely a round portrayal of history required the balancing factors listed above. They are facts, not just somebody's interpretations or opinions.

Nevertheless, the subject of American history, much neglected in the schools, was usefully illuminated by Omnibus. Those who did not already know learned that:

New York and New Jersey merchants, opposed to the War of 1812, brazenly supplied the British Army and Navy. South Carolina had an acute economic reason in the tariff law of the Jackson period for proposing nullification and secession. But its object was "disunion" and Jackson denounced the South Carolina doctrine as "treason," elements conspicuously missing from the current southern stand against the Supreme Court's desegregation decision. Lincoln was never an interpositionist: it was a northern as well as a southern doctrine; but Lincoln, too, sought to reverse Supreme Court decisions (the difference being that the agency he would employ was Congress). From 1789 to 1861 "the Union," in the TV script's true words, "subsisted on a series of compromises."

That is something the extremists in the North and South should bear in mind now.

Seven of Greatest Americans Appraise George Washington

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I wish to present a few excerpts from the many tributes paid to George Washington by seven of the outstanding Presidents of the United States. On this, his birthday, it is highly appropriate that we reappraise George Washington in the light of the considered opinion of 4 deceased Presidents of the United States as well as in the light of 3 living Presidents of our great Nation.

These appraisements follow:

"His integrity was most pure, his justice the most inflexible I have ever known; no motives of interest or consanguinity of friendship or hatred being able to bias his decision. He was, indeed, in every sense of the word, a wise, a good, and a great man." (Thomas Jefferson.)

"Washington is the mightiest name of earth, long since mightiest in the cause of civil liberty, still mightiest in moral reformation. On that name no eulogy is expected." (Abraham Lincoln.)

"No American should ever forget Washington's insistence upon the absolute necessity of preserving the Union; his appeals to our people that they should cherish the American nationality as something indestructible from within." (Theodore Roosevelt.)

"The greatest political leader of his time and also the greatest intellectual and moral force of the revolutionary period. * * * His principles of government have had more influence on the development of the American commonwealth than those of any other man." (Herbert Hoover.)

"This absence of sectionalism, together with his interest in the means of knitting the scattered people of the new Nation together, was the imperishable contribution of Washington." (Franklin Delano Roosevelt.)

"Washington's efforts for freedom were twofold. He was concerned first with making the ideal of democratic government work. He was also concerned with the defense of that ideal against the forces opposed to it." (Harry S. Truman.)

"We remember the picture of the father of our country, on his knees at Valley Forge seeking divine guidance in the cold gloom of a bitter winter. Thus Washington gained strength to lead to independence a Nation dedicated to the belief that each of us is divinely endowed with indestructible rights." (Dwight D. Eisenhower.)

Interposition and Freedom of Choice in the Public School System

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. DAVIS of Georgia. Mr. Speaker, at a recent meeting of the Atlanta Rotary Club, Hon. Robert B. Troutman, Sr., spoke to the club on the subject Interposition and Freedom of Choice in the Public School System.

Mr. Troutman is a prominent attorney of Atlanta, and a recognized leader of the bar. During his career at the bar his fellow members of the legal profession have elected him to serve as president of the Atlanta Bar Association, and as president of the Georgia Bar Association. He has also been active in the affairs of the American Bar Association, where the influence of his personality, his abilty, and integrity have been widely felt and appreciated.

When I learned of Mr. Troutman's address to the Atlanta Rotary Club, I requested and obtained a copy of it. I was profoundly impressed with the logic and soundness of the manner in which he dealt with this serious and important question which now faces us. His views and suggestions deserve the thoughtful attention and consideration of all those who are now devoting attention to the problem which the Supreme Court, through its unwarranted action, has thrust upon us.

Under unanimous consent previously obtained, I insert the address of Mr. Troutman herewith:

Interposition means the interposing of the State's sovereignty between the unauthorized exercise of power by the Federal Government and the citizens of the State. Jefferson was called upon by some friends in Virginia to assist in that State's protest against the sedition law, enacted during John Adams' administration. He drafted a series of resolutions of interposition which were submitted to Virginia and actually passed by Kentucky also. They not only declared the Federal Act to be beyond the Federal Government's powers, but called upon other States to join in similar declarations. Few other States gave encouragement. They did not follow. Kentucky, nevertheless, redeclared the act to be invalid.

In the early 1800's Pennsylvania passed a similar resolution of nullification of a decision of the Supreme Court. The Governor called out the militia to prevent the carrying out of the Court's mandate. The State appealed to President Madison, who refused to interfere (notwithstanding the fact that he had helped Jefferson prepare the original resolutions for Virginia and Kentucky mentioned above). The upshot of it all was that the Federal Government won and the State capitulated. There will be found an elaborate discussion of this case and others wherein Pennsylvania resisted the encroachmen of Federal power for 25 years in Warren's History of the Supreme Court, volume I, pages 267, et seq. The State even resorted to armed resistance. In the end, some of its military officers suffered imprisonment for their resistance of Federal process in the enforcement of the Court's decree.

John C. Calhoun advocated nullification of certain acts of Congress which he deemed to be violative of the Constitution. Although President Jackson threatened his hanging, Calhoun's methods resulted in some modification in the laws.

Other States resisted what they deemed to be unlawful exercise of power by the Federal Government, speaking through the Supreme Court. They include Connecticut, Massachusetts, Georgia, and Wisconsin (over the fugitive slave law).

Jefferson, Theodore Roosevelt, and Franklin Roosevelt were thoroughly and violently in disagreement with the Court's decisions. Franklin Roosevelt, in our lifetime, tried to get Congress to help him pack the Court with men who would interpret the Constitution the way he thought it ought to be interpreted. His attack succeeded. Finally, because of death and retirement he was enabled to appoint Judges who shared his views. He literally remade the Supreme Court by changing the Judges.

The Southern States' position, as I understand it, may be summarized as follows:

When the Thirteen Original Colonies gained their independence from England, they became separate, independent sovereign nations. They occupied the same status as England, France, Russia, and other sovereign nations.

By mutual consent these nations delegated certain of their sovereign powers to the

Federal Government. The extent of the grant is expressed in the Constitution of the United States, which became a compact between them and the Federal Government. All other powers were retained by the States. To make this clear, they brought into being the 10th amendment, which declares that all powers not delegated in the Constitution and not prohibited to the States, are reserved to the States.

It must be recalled that the agreement—the Constitution—expressly provides that it and the laws enacted thereunder are the supreme law of the land.

The Federal Supreme Court has for more than 150 years asserted that it possesses the power to interpret the Constitution and to declare whether a power asserted by any branch of the Federal Government falls within the delegated powers or not, and whether a State law or constitution violates the Federal Constitution. Thus one party to the compact, by its court which is one of its coequal branches, declares what the contract between the parties means and the other party, the State, has nothing to say about it.

The States contend further that the 14th amendment, adopted in 1868, following the War of Secession, was not intended by its framers to vest in the Federal Government, acting through its courts, power to control the operation of the public schools of the States. In fact, the Supreme Court, itself, in previous decisions had in effect held that the 14th amendment did not prevent segregation of the children between the two races, if both were given equal facilities.

The language of the 14th amendment has not been changed since those decisions were rendered. It remains the same general language. No other relevant language in the Constitution has changed. But under succeeding Presidents the personnel of the Court has been changed. The words of the agreement—the compact—are the same, but the judges are different.

The States say that in reliance upon the "separate but equal" doctrine laid down by the Court in its earlier decisions they have spent billions of dollars in their public education systems. And since the term "education" is not mentioned in the contract, the Court is in effect amending the Constitution by interpretation. In so doing the Federal Government through one of its branches is violating the agreement (the Constitution) of the parties. It is changing the contract.

Personally, I agree with their position. It is evident to me that the framers of the 14th amendment did not intend it to be a limitation upon the State's power to segregate the pupils in their schools on the basis of race. Otherwise the same Congress which framed the amendment and submitted it to the States would not have passed a segregation law for the public-school system of the District of Columbia. Nor would several of the States which ratified it have retained the segregation school laws on their books. Several States had such laws.

If conditions have changed since 1868 so as to write into the Constitution this restriction on State power to operate public schools, let the Constitution be amended in the manner provided. No court of nine men has power to amend the Constitution by interpretation.

The decision in the segregation cases is but one of many instances in recent years in which Federal powers have been expanded by construction. More and more the Court is taking from the States their sovereignty and delegating same to the Federal Government, all without any change in language of the Constitution.

So the States reiterate that the Federal Government by use of its courts is not adhering to the contract between the parties.

Several means of redress have been suggested.

Secession is not available. No state can withdraw from the contract. The war of 1861–65 settled that.

Amendment to the Constitution is another. Such an amendment has been proposed in Congress by Judge VINSON, of Georgia. However, in the light of its own previous decisions laying down the "separate but equal" doctrine, it does not seem that the States should be relegated to the imponderable method of amendment. Rather it should be left to the proponents of this further expansion of Federal power to amend the agreement so as to include control over public education. The Constitution is now silent on the subject.

In addition, in the present state of party politics, I don't see much chance of the amendment receiving the required two-thirds of Congress and three-fourths of the States. I hope that I am in error. Curb on Federal expanding powers is needed, if our liberty is to be preserved. Only by local self-government may we retain our freedom. Centralized power has always been destructive of liberty.

Nullification is another remedy and so is interposition. But mere declaratory resolutions of protest or opposition are ineffective. It is for that reason that Virginia, North Carolina, and South Carolina, and even Mississippi, would not go as far as Georgia's Governor Griffin urged at the recent conference in Richmond, Va. Alabama, without Governor Folsom's approval did pass a nullification resolution.

The questions which these sister Southern States ask are: What means will be adopted to effectuate the resolution? Will the State resort to armed resistance? I think the answer is "No."

How many States will join in the resolutions? No one knows.

The Southern States might well adopt the solution which has been suggested by Senator ROBERTSON, of Virginia, in a proposed resolution to be introduced in Congress. Alabama is now considering a constitutional amendment embracing the same plan. It should receive the support of all people in the country. Even the Federal Constitution might be amended to authorize it if necessary. I do not believe it is necessary.

It is a simple plan, giving the parents a freedom of choice in the matter.

The Southern States are contending that, no matter what the future may hold, the present view of the best thinking on the part of both races is that white and colored children should not be compelled to attend the same schools. Certainly, the overwhelming majority of the parents of the white children in the South hold that conviction. While we deplore the disorder on the campus at the University of Alabama, it shows how deeply the white people feel on the subject.

We believe that among our most valued freedoms is the right to choose one's associates. It is as basic as the right of free speech, free worship, and free press. No government has the power to compel us to associate with anyone else.

Furthermore, in this age, where juvenile delinquency is on every tongue, every day, parents have a definite responsibility to select, as best they can, the associates of their children.

Every southern State has compulsory school attendance laws. The parents, under threat of punishment by fine and imprisonment, must send their children to school. In most communities no private schools exist. Most parents are financially unable to send their children to private schools, even if such schools are available. So only the public schools can be available to meet these compulsory education laws. Unless, therefore, there can be separate schools for the races, children are forced to associate with those of another race contrary to the fundamental constitutional right of freedom of choice in selecting one's associates.

The Supreme Court's decision in the segregation cases did not hold that children could not be separated on a voluntary basis. It held only that a Negro child could not be denied admission to a school merely on the grounds of race.

The States, therefore, should be permitted to establish three types of schools. First, a school to which children of both or all races are admitted, if they desire to attend school together. Second, a school where only white children are admitted, for those who desire to attend such a school. Third, a school where only Negro children are admitted, for those who desire to attend such a school. It could apply to all races. It gives to the parents a reasonable choice in selecting the associates for their children.

I believe it will be within the boundaries of the Constitution, even as interpreted by the Court as now constituted. It is reasonable. Recent surveys in the schools of the District of Columbia reveal that since integration has been ordered, the children have fallen below the national average in grading their qualifications to be in their respective classes. The Negro children are now far below the whites in intelligence and culture. Obviously, white parents should have a choice to avoid the holding back of their children in their school work due to inferior equipped associates.

The choice of associates among members of the races is in practice throughout the entire country. There is practically no mixing of the races in the churches, in offices, or in clubs, or social gatherings, or in the homes, in any place in America. So by voluntary choice the right of selection of associates is being practiced by both races in America. The same process makes it desirable in the schools.

For this reason, I believe that in the South the number of mixed schools on this voluntary plan will be negligible. The majority of both races, on a voluntary basis, will choose segregation.

I believe it is a sensible way out. It may be more expensive. However, so deep is the conviction of our people on the desirability of separation of the races, I think they will pay the price, if necessary. I believe it will save our public-school system.

In the meantime, all of the delaying tactics to which the States are resorting will be followed. There will be disorder, and in some cases, there will be bloodshed. Innocent people will be hurt. Emotions and feelings are running high. But we must live under law. To do so we must have courts. We must have independent judges. Without them our rights are nil. So we won't solve our problems by defying either the Federal Government or the courts of the land. They must be solved according to law or we will have anarchy. We cannot get support on any emotional plea of "down with the court" or the Federal Government. We may incite riots and bloodshed for a while, but ultimately law and order will triumph. That is what happened thus far in every nullification case. The Federal Government won out in the final test of strength.

The "freedom of choice" plan is legal and within any reasonable interpretation which can be placed on the language of the Constitution. No one can complain if he is allowed to choose whether he wishes his child to go to a school solely with members of his own race or with members of both races.

The plan would give the parents some choice in the selection of the school associates for their children, at least to the extent of selection of one race of children as schoolmates.

If the courts of the United States strike down such a plan, then, indeed, they will establish themselves as superboards of education. They will confirm what the Southern States say they have already assumed in the school cases, by holding in this highly emotional area of race relations, the States and the local school boards are not authorized to segregate the races, although in their private lives and occupations the members of both races now practice voluntary segregation throughout the Nation.

I am aware that freedom of choice of associates in a public school system must be confined to reasonable limits. It cannot go to the extent of letting parents draw lines among social or economic groups. But differences in race are substantial. The voluntary segregation now being practiced by our people and by the surveys of the mixed-school system in the District of Columbia prove these differences. So race can well be a reasonable dividing line of freedom of choice by the parents of America.

It is a serious problem and an old problem. It is honeycombed in politics. It is filled with emotions. It has resulted in crises for our people. It calls for statesmanship at a high level.

Upper Colorado Scheme's Revenue Apportioning Provisions Unprecedented and Unsound

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. DOYLE. Mr. Speaker, the new provision of the upper Colorado River storage project scheme for apportioning revenues to each of the States of Colorado, New Mexico, Utah, and Wyoming is unprecedented and unsound.

The revised bill H. R. 3383 contains in section 5 (e) an unprecedented proposal of apportioning by arbitrary percentages all of the net revenues from power to the four States of the upper Colorado River Basin. These apportioned revenues are to be reserved for use to subsidize uneconomic irrigation projects solely in those States. This means on the one hand that the Federal Government and the taxpayers would be holding the bag in the probable event that the revenues available to certain of these States under the proposed inflexible proposal would prove insufficient to repay the irrigation costs as required, while on the other hand certain other States might have revenues available in excess of repayment requirements of initially authorized irrigation projects and would demand authorization of additional irrigation projects on the basis of avaliability of such funds, regardless of economic justification or need.

There has been no report by the Secretary of the Interior or the Bureau of the Budget on this unprecedented proposal which on its face is unsound and bad business for the Federal Government. It represents a total departure from existing law, which, under the Hayden-O'Mahoney amendment of 1938—43 United States Code Annotated, section 392a—requires that net revenues from power, after the power allocation has been repaid, be covered into the Treasury as miscellaneous receipts.

The huge concealed Federal subsidy to the States of Colorado, Wyoming, Utah, and New Mexico is unwarranted and unconscionable.

Under the proposed plans of financing the project, the concealed subsidy by way of accumulating interest on money borrowed to construct the project would be huge. Its burden would have to be borne by the Nation's taxpayers for generations to come.

Under the repayment provisions of the Senate approved project bill, the concealed Federal subsidy on only the projects recommended by the Secretary of the Interior—Glen Canyon and Echo Park storage units and 11 participating projects—as estimated and admitted by the Bureau of Reclamation would be $1,153,000,000 over the repayment period or $3,150 per acre on the 366,000 acres to be irrigated. If the four additional storage units and the Navaho, San Juan-Chama, and Gooseberry participating reclamation projects authorized by the Senate bill are included, the corresponding Federal subsidy, based upon equivalent methods of computation, would amount to $4 billion or over $5,000 per acre on the 745,000 acres to be irrigated.

Under the repayment provisions of House project bill, the concealed Federal subsidy on the minimum number of projects authorized by the bill—4 storage units and 11 participating projects—would amount to $1.6 billion at the end of the overall repayment period of 90 to 95 years, or $4,300 per acre on the 366,000 acres to be irrigated; but with the inclusion of additional projects contemplated for authorization, the subsidy would be substantially the same as under the Senate approved bill, namely $4 billion or $5,000 per acre.

As compared to Federal subsidies amounting to $3,000 to $5,000 per acre that would be involved in the project, the value of irrigated land in the area of the proposed reclamation projects averages only about $150 per acre.

In view of the fact that the crops that would be grown on the proposed project's high altitude marginal land would be largely hay, grain, and forage crops for livestock, and dairy products, which are now largely surplus and would in turn be resubsidized under the farm program, the huge Federal subsidy required for the proposed upper Colorado River project would be a totally unwarranted and unconscionable burden on the Nation's taxpayers for many generations hence.

The benefit-cost ratio has been distorted contrary to reclamation law in an attempt to justify the project's unsound economics.

The bill would, in effect, approve the use of the so-called benefit-cost ratio for testing the economic justification of irrigation projects. This has never been authorized by law. The testimony shows that, as now practiced, the benefit-cost ratio is simply a device used in attempting to justify projects which are both economically and financially infeasible, first, by use of fictitious and unrealistic values to inflate the benefits, while, second, at the same time, overlooking factors of cost to the Nation which would result from the project.

Example No. 1: On one participating project—the Hammond—the Reclamation Bureau would collect from the farmers only $2.02 per acre per year, but says the direct benefits are $41.50 per acre per year, or 2,000 percent of the amount it would require the farmer to pay. This contrast in benefits and repayment ability is simply not believable. Any formula achieving such a result obviously needs a drastic overhauling.

Example No. 2: The Government's revenues from firm power production at Hoover, Davis, and Parker Dams would be decreased as much as 25 percent during the time—which may be as long as 25 years—the storage dams of the proposed project are filling. This loss has been ignored by the Bureau.

In view of these major discrepancies, coupled with the fact that most of the projects named in the bill have a marginal benefit-cost ratio under the Bureau's own figures, there should be an independent review of the Bureau's computations by a group of impartial expert economists. On the Seedskadee project, for instance, the Bureau had to find $638,500 of "indirect benefits" and $313,100 of "public benefits" to add to the finding of $614,500 in "direct benefits"—all items over a 100-year period—to arrive at a final ratio of only 1.46 to 1. The "indirect benefit" category includes such nebulous factors as "the increase in profits of all business enterprises handling, processing, and marketing products from the project and profits of all enterprises supplying goods and services to the project farmers," while the "public benefits category is even more speculative, including dollar figures for Bureau guesses as to the "increase or improvement in settlement and investment opportunities, community facilities, and services and stabilization of the local and regional economy."

The only true criterion of economic justification of reclamation is reimbursability which has been the required basis of findings of feasibility since the inception of Federal reclamation in 1902. It should be maintained in the law without change. This the project utterly fails to do.

Trade With Red China

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. BYRD. Mr. Speaker, under previous leave to extend my remarks, I wish to include a letter addressed to me by Dr. Frank S. Wong, president, the American University Club of Hong Kong. Dr. Wong's correspondence indicates apprehension concerning the results which would be sure to follow in the wake of increased trade with Red China. Re-

laxation of opposition to trading with the Communists would be fatal to the West:

THE AMERICAN UNIVERSITY CLUB,
OF HONG KONG,
Kowloon, Hong Kong, February 17, 1956.

Hon. ROBERT BYRD,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE BYRD: May I congratulate you on your statesmanlike and friendly stand toward the embargo against Communist China in the course of Premier Eden's visit to your country. I am glad I had the opportunity of a chat with you during your brief sojourn here.

Red China is getting most of the strategic goods from Soviet Russia at higher prices and at longer time than those that would have obtained from the free world. As soon as the 5-year plan has become a success, Communist China will be in a position to fight the democratic nations, and she will be in a firm position. So Peiping is more eager to have the embargo lifted than to be admitted to the United Nations. The lifting of the embargo would be a great victory and a moral sanction for Peiping, for it would constitute a statement to the world that the U. N. and United States embargo was wrong and that the Chinese Communist aggression in Korea could be condoned. Such encouragement would be fatal to our cause.

I hope that you will interest a sufficient number of legislators to call for giving more ships and planes to Taiwan to strengthen the blockade against the China coast, because ships are carrying strategic goods from Southeast Asia and Europe to Red China. We have to fight communism in all fronts. The blockade has brought great results.

I shall be pleased to tell you more facts and views of the embargo and look forward to having the pleasure of hearing from you. With best wishes to you and all those who uphold justice and liberty.

Sincerely yours,

FRANK S. WONG,
President.

Interior Department Appropriation Bill

EXTENSION OF REMARKS
OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1956

Mr. WILLIAMS of Mississippi. Mr. Speaker, the Committee on Appropriations rendered a great public service in recommending $15 million for construction of physical facilities in our national park system. For several years many of our national parks have deteriorated because of lack of funds. This is particularly true with our smaller parks. The reason for this lack of funds in the past decade is due to our international commitments and not to a lack of interest in the Congress.

The Vicksburg National Military Park is one of the parks that has been neglected. It is of great historical significance and attracts hundreds of thousands of visitors each year. Several roads in the park need paving; drainage work needs to be done; seepage problems need correction. The National Park Service has done an excellent job with the liimted funds at their disposal, but additional funds are needed now to prevent a further deterioration of the Government's investment. Actually, the increased appropriations recommended by the committee is an economy move. If a restoration program is not undertaken within a short period of time, a replacement program at a much higher cost will have to be initiated to provide ample facilities to the increasingly large number of Americans who take advantage of our national parks.

On February 19, 1956, an excellent editorial appeared in the Vicksburg Post-Herald on the subject of the Vicksburg Park. I include this editorial as a part of my remarks and commend it to the House. It follows:

FUNDS FOR NATIONAL PARKS

According to an Associated Press dispatch, there will be a very sizable increase in funds for national parks. President Eisenhower at first requested $5,200,000 to increase facilities in the Nation's parks. This was followed by a second request for an additional $8,350,000. The Appropriations Committee of the House of Representatives exceeded the President's request and approved $15 million for the increase in physical facilities in national parks.

It is a source of interet to us in Vicksburg to note that Congress and the President are both cognizant of the needs of national parks. What is vitally important to us in Vicksburg is the extent to which our own national park will participate in these funds.

The Vicksburg National Military Park has not, in several decades, had sufficient appropriations to properly care for and operate this great battlefield shrine. Funds have been kept at a minimum and the physical aspects of the park have, necessarily, been neglected. The fact is that splendid use has been made of available funds by the local park authorities—we just haven't had enough funds to do our park justice.

Vicksburg should use every effort to support the requests for funds of our park authorities, and Vicksburg's civic bodies and her official bodies should see that their voices are heard in the Congress through our representatives. As we are undertaking our most ambitious tourist program, which will continue on a large scale each year, we should also see that our beautiful park is presented in its most beautiful aspects and we should goall out in our drive for additional funds which will be available should the report of the House Appropriations Committee be adopted.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Anderson, Eastland, Clements, Humphrey, Scott, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, Kilgore, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Johnson of Texas, Barkley, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Morse, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Thurmond, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Scott, Bible, Neuberger, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Thurmond, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Kilgore (chairman), Eastland, Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Neely, Pastore, Monroney, Hennings, Scott, Neuberger, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, Symington, Thurmond, McNamara, Neuberger, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 3701 Connecticut Ave.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Minton, of Indiana, the Methodist Building.
Mr. Justice Harlan, of New York, 1677 31st St.

OFFICERS OF THE SUPREME COURT

Clerk—Harold B. Willey, 3214 N. Wakefield St., Arlington, Va.
Deputy Clerk—Reginald C. Dill, 1329 Hemlock St.
Deputy Clerk—Hugh W. Barr, 4701 Connecticut Ave.
Marshal—T. Perry Lippitt, 6004 Corbin Road.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED

TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, New Hampshire, Massachusetts, Rhode Island, Puerto Rico.

Second judicial circuit: Mr. Justice Harlan. Vermont, Connecticut, New York.

Third judicial circuit: Mr. Justice Burton. Pennsylvania, New Jersey, Delaware, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, Virginia, West Virginia, North Carolina, South Carolina.

Fifth judicial circuit: Mr. Justice Black. Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Canal Zone.

Sixth judicial circuit: Mr. Justice Reed. Ohio, Michigan, Kentucky, Tennessee.

Seventh judicial circuit: Mr. Justice Minton. Indiana, Illinois, Wisconsin.

Eighth judicial circuit: Mr. Justice Clark. Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Missouri, Arkansas.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

STANDING COMMITTEES OF THE HOUSE

Committee on Agriculture

Messrs. Cooley (chairman), Poage, Grant, Gathings, McMillan, Abernethy, Albert, Abbitt, Polk, Thompson of Texas, Jones of Missouri, Watts, Hagen, Johnson of Wisconsin, Anfuso, Bass of Tennessee, Mrs. Knutson, Messrs. Jennings, Matthews, Hope, August H. Andresen, Hill, Hoeven, Simpson of Illinois, Dague, Harvey, Lovre, Belcher, McIntire, Williams of New York, King of Pennsylvania, Harrison of Nebraska, Laird, Dixon, Mrs. Farrington, Messrs. Bartlett, and Fernós-Isern.

Committee on Appropriations

Appendix

The Conservatism of George Washington

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES

Thursday, February 23, 1956

Mr. STENNIS. Mr. President, last evening the senior Senator from Ohio [Mr. BRICKER] delivered a very intelligent and informed address on the conservatism of George Washington. The Senator spoke in his usually fine, impressive manner. I think a reading of the address would be of value to Members of the Senate, and I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CONSERVATISM OF GEORGE WASHINGTON

(Address by Hon. JOHN W. BRICKER, of Ohio, before the American Good Government Society, Washington, D. C., February 22, 1956)

I am deeply honored to join with you in celebrating the birthday of our first President. The annual George Washington Day Dinner has become a splendid tradition in the Nation's Capital. These annual observances of the American Good Government Society will, I hope, become a tradition in communities all over the country.

Of all the great men in American history Washington is unique in that he is, and always has been, beyond responsible criticism. Jefferson, Lincoln, Jackson, Calhoun, Hamilton, and Marshall, to name only a few, continue to be somewhat controversial. Washington stands alone, universally acclaimed and unanimously accepted as the Father of his Country.

For Americans of all ages it was ever so. Take, for example, Henry Adams, grandson of the sixth President and great-grandson of the second. Even at the tender age of 12, Henry Adams was urbane, somewhat cynical, an ardent abolitionist, and completely unawed by the power and prestige of Presidents. Adams, in his famous autobiography, The Education of Henry Adams, gives these impressions of his first trip to Washington, made in 1850 at the age of 12:

"No sort of glory hedged Presidents as such, and in the whole country, one could hardly have met with an admission of respect for any office or name, unless it were George Washington. That was—to all appearance sincerely—respected. People made pilgrimages to Mount Vernon and made even an effort to build Washington a monument. The effort had failed, but one still went to Mount Vernon, although it was no easy trip."

* * * * *

"George Washington was a primary, or * * * an ultimate relation, like the Pole Star, and amid the endless restless motion of every other visible point in space, he alone remained steady, in the mind * * * to the end."

Then Henry Adams tells of his trip to Mount Vernon in a carriage and pair with his father, Charles Francis. On the way Henry was tempted to ask his abolitionist father how a slave state could produce such a man as Washington. He never put the question. He wrote in his Education the following words:

"Luckily Charles Francis Adams never preached and was singularly free from cant. He may have had views of his own, but he let his son Henry satisfy himself with the simple elementary fact that George Washington stood alone."

Daniel Webster expressed this feeling in a single sentence: "Washington is in the clear upper sky." To speak about a man of such great and unquestioned stature is a most difficult assignment. The task is further complicated by the fact that millions of words have been spoken and written about George Washington, the most important of which are familiar to an audience such as this.

Tonight, I shall talk about Washington's conservative political philosophy. Whether or not Jefferson and Lincoln were liberal or conservative, is still a topic of lively debate. To the best of my knowledge, however, nobody has tried to pin the neoliberal label on Washington. Again it is indicative of Washington's unique place in history that even the most militant of modern liberals do not seem disturbed by Washington's conservatism. They appear to assume that the conservative policies pursued by Washington were sound under the circumstances of time and place.

Only when we begin to apply Washington's conservative principles to current problems do we involve Washington in political debate. I have often thought what would happen if God should see fit to return Washington to us for a period of 30 days. Let us imagine that Washington is scheduled to arrive at the National Airport tomorrow in a celestial DC–7.

There would, of course, be a motorcade from the airport to the White House along the route reserved for visting celebrities. Government offices would be closed early. I suspect, however, that few Government employees would use this extra time off for shopping on F Street.

In touring this vicinity, three places would give Washington particular pleasure. First, he could not fail to be deeply moved by the monument erected to his memory and dominating the skyline of the Nation's Capital. No man could ask for more in the way of an official token of gratitude.

Washington would be more pleased, I think, to find that Mount Vernon had become a national shrine. Watching the steady stream of visitors to his beloved acres on the Potomac, Washington would know that he never really died; that he continues to live in the minds and hearts of the common people.

Washington would derive great satisfaction from a visit to the Fairfax County Courthouse. There he would find recorded in the office of the clerk his last will and testament. Dusty records in the clerk's office would convince him that we had taken seriously the advice in his Farewell Address: "To maintain all in the secure and tranquil enjoyment of the rights of person and property."

Shortly after his return there would be a nationwide TV appearance. Then the American people could judge with their own eyes whether history has been right in painting Washington as frigid and austere. I suspect they would see a simple dignity—a dignity regrettably lacking in many public officials. Our crackerbarrel philosopher, Charles F. Browne, better known as Artemus Ward, showed a keener insight than many historians when he said:

"The prevailin' weakness of most public men is to slop over. G. Washington never slopt over."

The revivified Washington could not wholly despair of America's future after meeting the leading figures in our Government. He would find in President Eisenhower a worthy successor. They have much in common—a military background, an unimpeachable personal integrity, and a deep disgust for those who would gamble with the Nation's security for the sake of political advantage.

Washington would be very proud to find his beloved Virginia so ably represented in the Senate of the United States. No man in public life has done more than HARRY BYRD to implement the conservative fiscal policies which Washington deemed so important. In his Farwell Address, Washington advised us to "cherish public credit" and to avoid "the accumulation of debt," while at the same time making those "timely disbursements, to prepare for danger which frequently prevent much greater disbursements to repel it." We are indeed fortunate in having as chairman of the Senate Finance Committee and as the ranking member of the Armed Services Committee a man so well qualified to strike this delicate balance.

Washington would also be gratified to find as Secretary of the Treasury a man who compares so favorably with his own great Secretary Alexander Hamilton. A greater compliment is not within my power to bestow. We shall, I hope, hear all about Secretary Hamilton's remarkable career in 1957 when we officially observe the bicentennial of his birth.

During his brief visit with us, Washington would certainly discover a close political kinship with Senator GEORGE. The theme of Washington's Farewell Address is the danger of factionalism and "the fury of party spirit," particularly in the conduct of the Nation's foreign affairs. No one has done more than Senator GEORGE to prevent partisan attacks on settled principles of American foreign policy.

Of course, Washington would make a triumphal tour of the United States, culminating, I suppose, in a mammoth ticker tape parade in New York. For Washington this adulation would be no new experience. He would be reminded, I think, of April 16, 1789, and the days immediately following.

George Washington was up before dawn on that eventful day. Martha did not go along with his ungodly hours, so he sneaked softly downstairs and headed for the kitchen. A subdued clatter of skillets assured him that the cook was already on the job, and his nose detected the promising aroma of corn meal hoe cakes.

The vast sweep of the Mount Vernon plantation was still wrapped in slumber, but we can well imagine that a fledgling cockerel was practicing an adolescent crow; that a hungry calf was complaining about the lack of service—and that a reckless foxhound puppy was teasing an irascible and noisy goose.

These were matinal sounds that were dear to the heart of the farmer-general—and he had thought that they would be his own forever. He felt that he had had enough of public life.

Eight years before—at Yorktown—he had said, "The work is done and well done."

Six years before, he had said goodbye to his officers, put away his uniform, hustled home to Mount Vernon and enthusiastically written to Lafayette that, "At length, my dear Marquis, I am become a private citizen on the banks of the Potomac; and under the shadow of my own vine and my own figtree, free from the bustle of a camp and the busy scenes of public life, I am solacing myself with those tranquil enjoyments of which the soldier * * * the statesman * * * and the courtier * * * can have very little conception."

The work was done for his muscular and triumphant little army. But the work was not done for Washington, and today, April 16, 1789, he was saying goodby once again—this time to Mount Vernon—as President-elect of the new United States.

He had his hoe cakes—with honey—and a pot of tea, and as he went outdoors, he found his horse, already saddled, full of oats and groomed to a glistening sheen. It nickered a welcome, and his dogs swarmed around his legs—a small and turbulent sea of waving tails and jealous clamorings for his personal attention. There were men in those days who said they could not understand this always dignified, austere and sometimes frosty man—but animals—and children—understood him very well indeed.

The President-elect of the new United States was in no hurry to get going on the long and muddy-roaded journey to the temporary capital in New York City. There was time enough to note that one of his mares had foaled the night before, and the oldest ewe sheep on the place was calling his attention to the charms of her new-born twin lambs. The Presidency could wait a little longer.

There would even be time for a second breakfast of fresh fish, ham and eggs, more corn cakes and more tea, and the President-elect was well aware that neither Col. David Humphreys, his aide, nor Charles Thomson, the Secretary of the Congress, who had brought him official word of his election, would be astir for at least another hour.

Those two men were to accompany him to New York, and it was 10 o'clock before the carriage wheels began to turn. We are given to understand that Washington rode in silence. Possibly he was oppressed by the fact that he had to borrow money to make the trip. As always, he was rich in land, and poor in cash. It is more likely that he was oppressed by the frightful responsibilities that had been thrust upon him by the unanimous vote of the presidential electors. As a commander in the field, he recognized his own abilities. As a military strategist, he had no lack of faith in himself, but his confidence in the future of George Washington as a statesman was almost nonexistent.

It was fortunate, perhaps, that he had little time to brood about it. His first stop was at Alexandria, Va.; there was a public dinner, and a large bouquet of flowery speeches. At Georgetown, there were parading troops in full dress; cannon belched salutes, and bells were tolled.

Baltimore was a mob scene of enthusiastic citizens, delirious with hero worship.

It was a triumphant march. The Governor of Pennsylvania met the carriage at the border with a uniformed escort, and at Trenton, N. J., 13 young girls who were dressed to represent the 13 States, recited a long and fulsome poem in unison.

New York wrapped both arms around him. It was before the days of ticker tape, but our modern parades through the heart of New York have nothing on Washington's reception at the temporary capital. New York had entered into the spirit of the occasion with a fervorous abandon. The city shook with the thunder of gunfire and the peals of bells. Flags and streamers fluttered in the breeze, and the rooftops were black with people—some of whom naively believed that Washington was about to be crowned as a king.

The inauguration took place on April 30, 1789. The Congress was in session. The Government of our infant federation was about to be launched. Three times in the course of his inaugural address Washington invoked the favor of God. Midway in his address he declared that, "no people can be bound to acknowledge and adore the Invisible Hand which conducts the affairs of men more than the people of the United States." If Washington were to speak to us today, he would ascribe to Providence the major credit for America's progress over the past 167 years. In all of his writings, Washington invariably recognized the creative acts of providence.

If Washington were to spend a month with us, the gulf separating him from contemporary liberals would soon be obvious to all. Washington constantly stressed the need for self-restraint and self-reform. He believed not only that men must act in conformity with ethical absolutes, but that their morality could not prevail in the absence of religious conviction. Washington regarded the Constitution primarily as a restraint on men in their collective capacity. He recognized as the two great constitutional pivots:

"[First] That the general government is not invested with more powers, than are indispensably necessary to perform the functions of a good government."

And secondly, "that these powers * * * are so distributed among the legislature, executive, and judicial branches, into which the General Government is arranged, that it can never be in danger of degenerating into a monarchy, an oligarchy, an aristocracy, or any other despotic or oppressive form, so long as there shall remain any virtue in the body of the people."

In other words, Washington felt that the struggle between good and evil is waged primarily in the individual rather than in society; that the individual's base instincts must be restrained by morality and religion; and that the popular will of the State must likewise be restrained by the immutable political truths of the Constitution.

Contrast Washington's political philosophy with the philosophy recently expounded by a leading Senate exponent of modern liberalism. This Senator recently wrote for publication:

"The one distinctive aim [of liberalism] was the liberation of man from traditional restraints."

This Senator also said:

"The liberal approach must be experimental, the solution tentative, the test pragmatic. Believing that no particular manifestation of our basic social institutions is sacrosanct or immutable, there should be a willingness to reexamine and reconstruct institutions in the light of new needs."

And the Senator concluded:

"We must release ourselves from the shackles of yesterday's traditions and let our minds be bold."

Here we have a difference of first principles—a difference which cannot be composed by mediation and compromise. As a result, we find Washington insisting, "We are not to expect perfection on this world." On the other hand, all traditional restraints are regarded by modern liberals as impediments to achieving paradise on earth.

As Washington went about the United States, he would probably not express himself on specific political issues. After his retirement from the Presidency, he was reluctant to intrude upon what he described as "the experiment intrusted to the hands of the American people." He did not even seek to buttress his place in history by writing his memoirs. He wrote to his personal physician, Dr. James Craik, who broached the subject that "any memoirs of my life, distinct and unconnected with the general history of the war, would rather hurt my feelings than tickle my pride whilst I lived. I had rather glide gently down the stream of life, leaving it to posterity to think and say what they please of me."

How refreshing.

However, Washington might not be wholly successful, if he were among us, in maintaining a posture of political neutrality. Suppose, for example, he were asked about current proposals to amend the Social Security Act. Could he resist repeating what he said in his Farewell Address about "not ungenerously throwing upon posterity the burden which we ourselves ought to bear?"

It would be improper for me to suggest what position Washington might take on my proposed treaty-control amendment. He would be keenly interested in this debate, for the Jay Treaty was the most controversial act of this administration. Alexander Hamilton, writing under the pen name Camillus, was his staunch defender in that fight. Hamilton pointed out that all treaties made under the authority of the United States shall be the supreme law of the land. He emphasized the power of the Senate to approve or to reject a treaty. And he emphasized the fact that the only constitutional exception to the power of making treaties is that it shall not change the Constitution. Hamilton wrote that "a treaty cannot transfer the legislative power to the executive department, nor the power of this last department to the judiciary; in other words, it cannot stipulate that the President, and not the Congress, shall make laws for the United States; that the judges and not the President shall command the national forces."

In sum and substance, the treaty power as defined by Hamilton was limited to those objects over which neither contracting nation had sovereign jurisdiction. My amendment would merely impose on the treaty-making power the restraints originally intended to govern its exercise.

Could Washington remain silent upon seeing with his own eyes the extent to which political power has been centralized in Washington? There would be those who would explain the altered Federal-State relationship on the ground that "times have changed," or that the "Constitution must evolve to meet new conditions." Washington might remind them of what he said in his Farewell Address:

"If, in the opinion of the people, the distribution or modification of the constitutional powers be in any particular wrong, let it be corrected by an amendment in the way which the Constitution designates. But let there be no change by usurpation."

During his brief visit with us, Washington would certainly be given a reception at the United Nations headquarters. Perhaps he would repeat his warning about "the policy and will of one country (being) subjected to the policy and will of another." He might refer again to the danger of "passionate attachments for others" in foreign affairs.

In many ways Washington was like the great British conservative, Edmund Burke. Both men sacrificed themselves for the masses, but not to them. As representatives of the people, both men insisted on the right to exercise their own best judgment. Like Burke, Washington distrusted the spirit of innovation, and respected custom and tradition. Washington's conservatism explains in considerable measure why the American Revolution bears such little resemblance to the French.

At the end of Washington's imaginary return, I like to think that he would make a second farewell address. However, I do not believe that its content would differ greatly from the one delivered on September 17, 1796. He might point out that his earlier statement in opposition to entangling alliances has been distorted by some. He would certainly say that nuclear weapons and intercontinental bombers have overcome America's "detached and distant situation" which existed in 1796. But now, as then, I believe that Washington would pin his hopes for America's survival on the indispensable supports of religion and morality.

Before Washington ended the visit which I have imagined, I am afraid that he would be a highly controversial figure. We might expect to read snide editorials attacking hero-worship; warning about "the dead hand of the past"; and scoring Washington for doubting both the inevitability of progress and the perfectibility of man. So, it is probably just as well, that Washington will not return to us in person. It is good to have one great American as a fixed and noncontroversial point of reference. So long as Washington remains "in the clear upper sky," the conservative principles for which he stood will never be wholly erased from our political conscience.

The Colorado River Storage Project

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1956

Mr. UTT. Mr. Speaker, I am today extending in the RECORD as a part of my remarks a list of the 34 participating projects which are a part of the Colorado River storage project. I am including the construction cost of the projects, the total area in acres each of the projects would serve, the irrigation allocation per acre, and the percentage of the irrigation allocation which would be repaid by the irrigators.

Mr. Speaker, not one single irrigation project in all of the 34 participating projects is financially sound.

If we consider the original 11 approved by the President and Secretary McKay, the cost for area served on the individual projects ranges from $200 to $800 per acre for construction alone. The water users can repay a weighted average of 17.5 percent. This average is that low because the largest of all the projects, central Utah, is the least feasible.

However, Mr. Speaker, these figures of cost per acre fail to represent a true measure of cost, because nearly two-thirds of the acres to be served are already in production and would receive only a supplemental water supply. In most cases this additional supply would be only a few inches in depth per annum, and thus only a small fraction of the amount of water necessary to put arid land into full production.

The real cost of putting enough water on an acre of land in this arid to semi-arid region would on the central Utah project be over $2,600 an acre.

It must be remembered that in these figures I am considering only construction costs. I am not considering interest charges on the Government's investment.

Nor do the figures I am presenting include another legitimate charge for irrigation. This is the proportion of the cost of building the storage reservoirs which should be borne by the irrigation projects.

As many an unlucky farmer has learned by bitter experience, the real value of his land is not what he has put into it in money and labor, but what he can get out for what he produces. The lands proposed to be irrigated in the Colorado River storage project lie at altitudes from 5,000 to 7,000 feet above sea level. They are not in tropical or semitropical latitudes. They have a short growing season and are generally capable of producing only forage crops and grains.

Land in the region, fully irrigated and improved, brings in the market an average of only about $150 an acre.

The list of projects follows:

Colorado River storage project participating projects

Project	Project construction cost	Total area served	Irrigation allocation per acre	Percentage of irrigation allocation to be repaid by irrigators
	Thousands	*Acres*		
1. La Barge	$1,673	7,970	210	29.6
2. Seedskadee	23,272	60,720	383	20.6
3. Lyman	10,564	40,600	260	21.3
4. Silt	3,356	7,300	450	31.1
5. Smith Fork	3,367	10,430	321	31.3
6. Paonia	6,944	17,040	399	35.5
7. Florida	6,942	18,950	343	26.3
8. Pine River extension	5,027	15,150	332	40.7
9. Emery County	9,865	24,080	400	38.6
10. Central Utah (initial phase)	231,044	160,380	794	11.9
11. Hammond	2,302	3,670	627	16.1
Total (11 projects)	304,356	366,290	[1] 545	[1] 17.5
12. Eden	7,287	20,200	361	20.6
Total (12 projects)	311,643	386,490	[1] 536	[1] 17.7
13. Navaho	211,237	137,250	1,530	14.6
14. San Juan-Chama	135,169	225,000	480	25.8
15. Gooseberry	5,761	16,400	350	41.5
Total (15 projects)	663,810	765,140	[1] 694	[1] 18.4
16. Savery-Pot Hook	10,814	31,610	340	12.9
17. Dolores	24,633	66,000	370	6.2
18. Sublette	37,099	84,000	430	3.7
19. Fruitgrowers Dam extension	1,690	3,850	440	27.8
20. Bostwick Park	2,634	6,870	380	26.4
21. Dallas Creek	10,330	21,940	470	9.2
22. East River	212	2,750	80	44.8
23. Fruitland Mesa	11,551	19,400	590	9.2
24. Grand Mesa	20,164	25,300	800	.1
25. Ohio Creek	3,402	16,910	200	1.0
26. Tomichi Creek	11,523	27,580	420	0
27. Battlement Mesa	5,854	6,830	860	11.0
28. Bluestone	3,330	10,875	310	11.1
29. Eagle Divide	3,412	10,875	310	8.9
30. Parshall	11,882	27,510	430	12.0
31. Rabbit Ear	4,733	19,190	250	16.1
32. Troublesome	5,243	13,640	380	13.8
33. West Divide	79,676	65,610	1,220	7.5
34. Woody Creek	178	2,965	60	100.0
Grand total (34 projects)	912,170	1,228,845	[1] 633	[1] 14.8

[1] Weighted average.

Methodists May Spend $37 Million To Fight Reds

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1956

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Hudson Dispatch, a newspaper which circulates in my district. This dispatch is entitled "Methodists May Spend $37 Million to Fight Reds." This is a heartening sign in the continuing battle against atheism, and the article is herewith set forth at length:

METHODISTS MAY SPEND $37 MILLION TO FIGHT REDS

With half the world already enslaved "Behind the Iron Curtain" and with Communist Russia avowedly bent upon bringing what is left of the free world down to its knees and made satellites of the Kremlin, every movement directed at combating this godless force for evil commands our appropriation.

Since communism is fundamentally atheistic and directed at undermining religion whenever and wherever it can, churches everywhere are a prime Red target and per se must and have alined themselves in the forefront of the battle to save Christian civilization. We think churches of the free world have generally and adequately demonstrated their awareness of an enemy that is communism. Pope Pius XII, as head of the Roman Catholic Church, has consistently fought against Red tenets and practices, and the great Protestant denominations and Jewish groups have lent their weight and influence in the battle to defeat Red aggression and reclaim the lands and people the Communists have enslaved.

Latest evidence of awareness on the part of our churches of the Communist menace is the agreement reached on Sunday by the 4 top-level administrative agencies for 40,000 Methodist churches with a membership of 9,300,000 to recommend that the church

spend $37 million in the next 4 years to combat communism and secularism.

The 4-year plan to be submitted to the general council of the church in April was drawn up at a meeting of council of bishops, council of secretaries of boards and agencies, council on world service and finance and coordinating council. General council, which meets every 4 years and which represents 40 different countries, is the supreme law and policymaking body. It usually accepts the recommendations of its administrative units.

Coordinating council, which has the responsibility for preparing the quadrennial program of the church, declared communism and secularism "must be seen for what they are—attempts to master the mind." Bishop Charles Brashers, of Chicago, chairman of the council, observed that "communism exploits the mind, regiments the person, tyrannizes the soul. It lacks the cohesive power of love that is essential to social unity."

The plan to be recommended to general council proposes that the $37 million be raised on a regional level by a contribution of a dollar a year from each of the church's 9,300,000 members. The sum would be distributed among the 116 colleges and universities associated with the church.

Integration of Common Supply and Service Areas Among the Military Departments

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1956

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I insert two letters concerning plans for the Department of Defense to integrate the handling of certain common supplies and services. These two letters relate to those which I placed in the RECORD on January 16, 1956.

The step which Secretary Wilson has now taken, though belated, is important. It is hoped that he will insure that his directive to integrate these common use items will receive diligent followup lest it suffers the fate of other directives of similar purport. I also hope that this is but one of several steps that will be taken to carry out the full intent of the National Security Act and the O'Mahoney amendment of 1952.

As I have previously stated, the large savings through integration of the common supply and service areas among the military departments will go a long way toward financing some of the things which we so desperately need at this time.

The letters follow:

ASSISTANT SECRETARY OF DEFENSE,
Washington, D. C., February 8, 1956.

Hon. JOHN W. McCORMACK,
House of Representatives.

DEAR MR. McCORMACK: Secretary of Defense Wilson advised you by letter dated January 27, 1956, that I would furnish you complete information regarding our efforts toward improvements in the logistics field. The purpose of this letter is to reply to your letter of December 13, 1955, and to outline our program for supply of common-use items and common services.

The position of the Department of Defense with respect to supply, as discussed in the references cited in the second paragraph of your letter, was based on the supply techniques known to be available and developed as of that time. While it is true that our present plans may seem to change the previous concept, at the same time they reflect our never-ending effort to improve supply management as practical methods for doing so are developed. It is a seemingly simple task to designate that "supply support will be accomplished by single-service assignment." On the other hand, the tools and organizational arrangements to do so and insure adequate support in time of both peace and war must be carefully developed and considered, else we create a situation more objectionable than the one we endeavor to correct. We have vigorously worked on the problem and, among other actions, have developed what we feel is a sound solution—the single manager plan.

A significant factor affecting the previous efforts to solve the supply system problem was unquestionably the lack of the Federal Catalog, and hence, a common identification of items. Despite the sincerity of efforts to develop and further the concept of cross-servicing or making single-service assignments for supply, they cannot be effective without the common language of the Federal Catalog program. In this regard I wish to point out that all catalog identification is scheduled for completion by September 1956, but it will not be until 1957 that a few more classes will be converted and the balance in 1958. In addition to the necessity of being able to use the common language of the Federal Catalog, we had to await the extension of the principle of stock fund financing in the departments to effect a sound financial basis for furthering our concepts. The military departments have vigorously pursued programs for refinements and improvements in their own military supply systems in a commendable manner, which has further assisted us. At this point I would like to explain briefly what we mean by conversion so that you will appreciate the time required after catalog identification has been completed. Conversion involves the renumbering of all items that are physically in inventories in all warehouses, the reprinting of all stock lists and reference material for procurement, and the revision of operating and maintenance manuals so that new numbers will be used when parts are requisitioned.

At the present time only subsistence, medical, clothing, and petroleum items are completely converted. Following the completion of conversion, the potentialities for cross-servicing become a reality and a major step completed in our efforts to develop single-service supply responsibility.

During the winter and spring of 1954–55, my staff completed the detail analysis of the single manager plan for supply of common-use items. As you know this culminated in the assignment of subsistence to the Army on November 4, 1955. Concurrently, we pursued a very active effort to analyze and develop assignments in other commodity categories. Our actions culminated on January 31, 1956, by Secretary Wilson's decision that the single manager plan be extended in the supply field to petroleum, medical-dental, clothing-textile, photographic equipment, and in the service field to traffic management. A copy of his memorandum to the military service secretaries, together with Department of Defense Directive 5160.12, also dated January 31, 1956, is inclosed. This directive sets forth the policies and implementations of single manager assignments.

I would like to point out the reasons why we selected subsistence before medical supply for the application of the single manager plan. Subsistence represented the commodity that had the greatest degree of single service (Army) integration and the fewest complications with respect to technical aspects of the inventory and the magnitude of mobilization reserves to be repositioned under the distribution policies of the plan. The Army already bought for all services and stored and distributed for the Air Force. Since only approximately 10 percent of the inventory is for mobilization reserve and complicated by many very technical items. A complication regarding distribution of medical supplies, emphasized by Operation Alert in June 1955, is that the need for medical supplies by the civilian population might take precedence over military requirements in the event of attack on continental United States. The need to provide dispersion even at some sacrifice in basic supply economy became apparent. These factors were all considered. As I have indicated, we now are assigning medical and dental supplies under the single manager concept to the Navy.

In our study of the single manager plan for common-use items, it also became quite evident that the same concept could be applied for common services such as Traffic Management, Military Sea Transportation Service, and Military Air Transportation Service. As indicated in the inclosure, this procedure has been approved by Secretary Wilson.

I trust that this answers your question as to our policies and programs. If further information is desired, I shall be pleased to provide it.

Sincerely,

T. P. PIKE.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
OFFICE OF THE MAJORITY LEADER,
Washington, D. C., February 16, 1956.

Hon. CHARLES E. WILSON,
Secretary of Defense, Department of Defense, Washington, D. C.

DEAR SECRETARY WILSON: I am in receipt of Assistant Secretary T. P. Pike's letter of February 8 in response to my letter to you dated December 13, 1955.

I am pleased to learn that you have embarked upon a relatively broad program for the supply of common-use items and services as contemplated by the O'Mahoney Act of 1952. Respecting Mr. Pike's explanations as to the reasons for a change in policy involving the handling of medical and subsistence supplies respectively during the past year and a half, I want to state that my concern is not upon what is past, but what may be done to insure the success of the program that has now been charted. I am not unmindful of the difficulties which confront you in accomplishing this program, which I am sure can bring about tremendous savings.

In order that I may keep abreast of development, will you please send me copies of implementing documents which are issued from time to time? When available, I should like to learn by categories of supply (subsistence, medical, etc.) where the depots will be located and their respective missions, the locations of supply-demand-control points for each category of supply, the prescribed stock levels, what the interval of stock status reporting will be (i. e., monthly or quarterly, etc.), and whether standard forms, procedures, accounting, etc., are planned.

You are to be highly complimented for the action you have taken in this matter, and as stated in my letter of December 13, 1955, I am sending copies of pertinent correspondence to other interested Members in both Houses, and will also insert same in the CONGRESSIONAL RECORD.

Sincerely yours,

JOHN W. McCORMACK.

Pray for a Leader

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. McDOWELL. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD the address of Hiram W. Warder, attorney at law and register of wills of New Castle County, Del., before the Delaware Congress of Polish-American Societies at Washington-Lincoln-Kosciuszko celebration at Wilmington, Del., February 12, 1956:

We are gathered here today to pay tribute to three of the greatest men in the history of the world.

Mankind reveres George Washington as the father of our country. Abraham Lincoln is enshrined in the hearts of humanity as the Great Emancipator. Tadeusz Kosciuszko earned a debt of universal gratitude not only because he was the father of American artillery and a leading engineer and strategist of the American Revolution. Kosciuszko is endeared to lovers of freedom everywhere as the father of Polish independence.

What were the qualities which made Washington, Lincoln and Kosciuszko great benefactors of mankind and great builders of free civilization? Was it their intellect alone? By all means, no. Was it simply their zeal for profit or the compulsion of personal ambition? Most certainly not.

The magnificent achievements of the three great leaders whom we honor today displayed the workings of their great souls.

Before tackling the problems of their times, each of these three leaders unequivocally accepted two great truths. Then each of these men dedicated his life to making these truths the solid foundation of our free civilization.

The two great truths which Washington, Lincoln and Kosciuszko accepted and made the guiding beacons of their lives are these: First, God is our Supreme Ruler; second, all men are created equal.

These fundamental truths are the very life of the document which founded our Nation, the Declaration of Independence.

These great truths are the guiding principles which we must reaffirm today. These great truths are the guiding principles which our leaders must inject into the solution of the problem of our time—the problem which overshadows all other problems.

The threat of Communist enslavement is unique in world history.

We find the people of Poland and of 11 other nations, 800 million souls in all, pinned under the heel of a despotism and an inhuman tyranny such as the world has never before known.

We have seen the story of 14,000 men, the flower of Polish leadership, massacred in the Katyn Forest. We have learned the story of 42 million Russians murdered by order of Joe Stalin during his 29 years of godless misrule.

From pronouncements of our Federal Bureau of Investigation, we learn of the existence within our own borders of no less than 25,000 key Soviet agents, who are supported in their subversion by hundreds of thousands of dupes.

We have seen the heroic military victories of GI's and their allies in Korea upset by diplomatic and political treachery.

One assistant member of the Presidential Cabinet has served a prison term for committing perjury when questioned about his treason. Another assistant member of the same Cabinet has also been exposed as a traitor who, among other staggering crimes, gave Soviet Russia the engraving plates to print American guaranteed money without restriction, whereby billions of American tax dollars were thrown down the Communist rathole.

We have seen the Senate of the United States, upon signal of the Kremlin, tied up in weeks of inconsequential censorship debate. We have seen the executive leaders of our country follow the Kremlin signal to the Geneva Conference, which was convened for the sole purpose of manufacturing Communist propaganda.

We find our leaders cringing and cowering before the bluff of Soviet military power. We see before us men who lack the vision and the courage to realize and to know that Soviet Russia, in her conquests, has never fired a shot simply because she has no real ability to fight. Besides lacking the economic capacity to wage major war, Soviet Russia is utterly lacking in the moral capacity to wage major war. Past and present Russian history show that Russia never has been and is not now a real military threat to a first-class power. Without the help of God-fearing America in World War II Russia would have been crushed as she has always been crushed before real military strength.

We find ourselves with leaders who will not face up squarely to the reality of the Soviet plan—the plan which is to crush this country after she has been paralyzed by subversion from within.

The American people detest communism and all its designs. The overwhelming majority of people everywhere in the world despise communism and all that it stands for.

Our people and free people in all parts of the world somehow seem to sense the phony ring of Communist propaganda and the falsity of Communist tactics.

In the face of anguishing and continuous threats of war—in the face of persisting high and ruinous taxes—in the face of the trickling stories of horror that reach us from behind the Iron Curtain—in the face of American surrender on the installment plan to the forces of evil, American hearts cry out. The hearts of the American people cry out in compassion for enslaved peoples. The hearts of the American people cry out to be saved themselves. The hearts of the American people cry out for a leader.

We need a real leader. We need to pray for a leader. We need to conduct a crusade of prayer for a leader.

We need a leader who will have the vision and the understanding to know that the problem we face at home and abroad is basically moral. We need a leader who will have the vision and the understanding to know that the practical remedy we need for this great problem is political and not military.

We need a man who will adopt and execute a plan that will end forever the menace of communism, both here and abroad. We need a man who will know and understand that the task can be accomplished.

We need a man who will be dedicated and consecrated to the application of the two fundamental truths upon which this nation was founded and upon which it has flourished.

We need a man who will know and understand that all we really have to fear is God.

My friends, we may ask ourselves what we, the ordinary people, can do to obtain such a leader as we need today.

In this year of presidential elections, let us remember every minute this, the greatest problem which is before our nation and the world. Let us remember that the complete power to defeat communism forever lies in the hands of one man—the President of the United States of America.

While the Reds labor, endlessly year after year to place thousands of agents to destroy us, we, the people have to pray and to labor only a few months this year to place one man in the Presidency to save us and to save the world.

Yes; the right man in the Presidency of the United States can and will save the world.

Let us resolve to make the fullest possible use of the greatest power that was ever given to man—the power of prayer. Let us pray for a leader. Let us crusade among all people who believe in prayer to pray for a leader, another Washington, another Lincoln, another Kosciusko. Pray for a leader.

We will get one. Through prayer we will get a leader.

My friends, I thank you.

Deserved Tribute to Dr. Evans, His Hospital, His Life

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks, I include an article from the Hudson Dispatch, a distinguished newspaper of the 14th Congressional District entitled "Deserved Tribute to Dr. Evans, His Hospital, His Life." Dr. J. Lawrence Evans has had a distinguished career in North Hudson, N. J. He has been truly devoted to the cause of humanity. His work has brought happiness and surcease of pain to many who are commended to his care. We in the 14th District are proud of him. This editorial sets forth in a brief way some of the mileposts in a distinguished life dedicated to mercy:

DESERVED TRIBUTE TO DR. EVANS, HIS HOSPITAL, HIS LIFE

Outstanding and unsurpasesd service to North Hudson Hospital in a wide variety of capacities over a span of more than a half century were fittingly marked on January 18 when Dr. J. Lawrence Evans, administrator and medical director of the hospital, was honored at a surprise party on his 77th birthday.

Few men have ever displayed more zeal and devotion to a cause than has Dr. Evans. Ever since early in the present century, this highly capable physician and administrator has given everything he possessed in energy, talent, know-how and unremitting stick-to-itiveness to promoting the services and expansion of North Hudson Hospital. He truly has devoted his life to this cause and it has been a hard, uphill struggle beset by no end of difficulties, particularly the economic phases of keeping a private institution of this kind in the black.

Undoubtedly, much of the credit for what has been accomplished over the years at this hospital which serves the six communities of the northern end of Hudson County belongs to Dr. Evans. His diplomacy and resourcefulness has been a major factor in overcoming countless obstacles which would have defeated many men of lesser determination and purpose.

Dr. Evans served as staff president of the hospital from 1912 to 1925, except during World War I, when he was surgeon of 115th

Machine Gun Battalion and later sanitary inspector of the 30th Division, comprising the National Guard of the two Carolinas and Tennessee, which was among the combatant forces of the British Army.

The recent annual meeting of the hospital board of governors marked the 24th consecutive year in which Dr. Evans has been chosen medical director of the institution. In addition, he has served as hospital administrator for some years.

Despite his 77 years, Dr. Evans continues to handle his manifold duties with vigor and zest that belie his age. He seems to be wellnigh indefatigable and we wish him many more years in professional harness, a desire, we are sure, he himself entertains for he'd surely be lost without his beloved hospital to guide and serve.

We recall back in February of 1938 when the redoubtable doctor, who had been on the go day and night in his hospital duties, private practice and personal matters, suffered an attack of gastritis, which had been brought on by irregular diet, lack of sleep and overwork. At first, it had been reported, Dr. Evans had suffered a heart attack. With characteristic reaction, he underwent examination by a heart specialist, got a pronouncement after a thorough examination that his heart was perfect and then issued a denial of a reoprt that he would discontinue his activities at North Hudson Hospital. He did consent to take it easy for a short time and then plunged full-tilt into his work there, which has continued without let-up another 18 years.

At his surprise party the other night, he was surrounded by members of the hospital board and staff, relatives and friends, including 3 sons, 2 of whom are also physicians, Dr. J. Lawrence Evans, Jr. and Dr. Robert Evans.

In his annual report for 1955, Dr. Evans said that cases at the hospital increased approximately 15 percent over 1954. Emergency cases treated at the hospital increased to 10,600, with more than 5,000 ambulance cases being treated. Approximately half were handled by the hospital ambulance.

Don't Let the House Be Fooled

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. ROOSEVELT. Mr. Speaker, the impression seems to have been growing that there is a vast difference between the upper Colorado storage project bill passed by the Senate (S. 500) and the measure soon to be considered by the House, H. R. 3383. The following table is taken from the committee report which clearly indicates the falsity of this impression:

	S. 500 (Senate)	S. 500 (House) and H. R. 3383
Power and storage dams	Glen Canyon, Echo Park, Flaming Gorge, Curecanti, Juniper, Navaho.	Glen Canyon, Flaming Gorge, Curecanti, Navaho.
Participating irrigation projects (authorized).	Central Utah, Emery County, Florida, Gooseberry, Hammond, La Barge, Lyman, Paonia, Pine River extension, Seedskadee, Silt, Smith Fork.	Central Utah, Emery County, Florida, Hammond, La Barge, Lyman, Paonia, Pine River extension, Seedskadee, Silt, Smith Fork.
Participating irrigation projects (conditionally authorized).	San Juan-Chama, Navaho, Parshall, Troublesome, Rabbit Ear, Eagle Divide, Woody Creek, West Divide, Bluestone, Battlement Mesa, Tomichi Creek, East River, Ohio Creek, Fruitland Mesa, Bostwick Park, Grand Mesa, Dallas Creek, Savery-Pot Hook, Dolores, Fruit Growers extension, Sublette.	Gooseberry, San Juan-Chama, Navaho, Parshall, Troublesome, Rabbit Ear, Eagle Divide, Woody Creek, West Divide, Bluestone, Battlement Mesa, Tomichi Creek, East River, Ohio Creek, Fruitland Mesa, Bostwick Park, Grand Mesa, Dallas Creek, Savery-Pot Hook, Dolores, Fruit Growers extension, Sublette, Animas-La Plata.

This table clearly shows that as to projects, there is only this difference between the bills: The Senate has authorized the Echo Park and Juniper Dams and also the Gooseberry project, while the House version eliminates Echo Park and Juniper Dams and conditionally authorizes the Gooseberry project.

There are certain other minor details in which the bills differ but their objectives remain essentially the same and in particular the projects contemplated for the development of water and power in the upper Colorado Basin are exactly similar.

However, of the greatest importance, and I doubly emphasize, should the House pass the measure which will come before it, it is obvious that the principal matter for the conferees to settle will be the three projects—Echo Park and Juniper Dams and the Gooseberry project. Most important of these, of course, is Echo Park. The question I would pose is: Should the House act favorably on the pending bill? What assurance have we that Echo Park and the other projects authorized in the Senate bill will not be restored to the House bill in conference? This becomes especially important in view of the fact that the Senate refused to eliminate Echo Park by a vote of 52 to 30 and would therefore undoubtedly insist on its inclusion. It would therefore seem to be a complete delusion for any Member to feel that merely because Echo Park has been eliminated from the House version that this means that it will not be included ultimately in the legislation.

Surplus Food for Europe

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. McGREGOR. Mr. Speaker, I am most happy to see that President Eisenhower is making our surplus food available to western Europe, which has suffered from blizzards and floods in one of the worst winters in 20 or 30 years. I am particularly pleased with his statement, and I quote:

The United States stands ready to make surpluses of agricultural commodities, which we have in abundance, available for relieving the distress of the people in these areas.

Mr. Speaker, to me this is a great humanitarian deed, and I am one who has always felt that it was ridiculous for us to have surplus food when people in other parts of the world are hungry. I congratulate the President on his immediate action to relieve the distressed.

Statesmanlike Veto

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following editorial from the Memphis Commercial Appeal for Tuesday, February 21:

STATESMANLIKE VETO

Convinced that its enactment would not be for the best interest of Mississippi, Governor Coleman has vetoed a bill which would have restricted investigative activities of FBI agents in that State. The action was taken after consultation with members of the legislature.

In his veto message Governor Coleman pays tribute to the FBI and points out that the inquiries which prompted the measure were ordered by the Attorney General's office. He also points out that in numerous ways the FBI "has been of untold benefit" to the people of Mississippi and expresses belief that its agents will continue to enjoy their "admiration, cooperation and benefit."

The heart of the Governor's veto message lies in his assertion that "Mississippi has nothing to fear from any honest investigation." "Since we have nothing to hide, nothing of which we are ashamed, and therefore, nothing to fear," he says, "it is the better part of statesmanship, calculated to serve our best interest in the years to come" to withhold approval of the bill.

He serves notice that the veto is not to be construed as criticism of the legislature and points out to any who might be short-sighted enough "to taunt a change of mind" that he "is under no obligation to follow blind consistency" but conceives it to be his "duty to act at all times, in the light of conditions then prevailing for the best interest of our State." The message concludes:

"Let no man mistakenly interpret this action as evidencing any lack of unrelenting determination to preserve that which we know to be right."

Governor Coleman has been a distinguished leader in the law enforcement field. It was his fine record as Attorney General which so appealed to the voters and helped place him in the high office he occupies. The courage and statesmanship revealed in his veto action Monday are further justification of their faith.

Thinking Mississippians and the South as a whole will approve his action. Those who will be undone by it are the Communists who have long sought to destroy the FBI, and the NAACP, which with other agitating groups would have used approval of the now-vetoed measure for mean and selfish propaganda purposes.

Interview Between Prime Minister Nehru, of India, and Former Ambassador Chester Bowles

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 23, 1956

Mr. HUMPHREY. Mr. President, the editor of the Mankato Free Press has recently written an interesting review of a significant film television interview between Prime Minister Nehru, of India, and former Ambassador Chester Bowles. I think the editor's comments on Mr. Nehru's presentation are worth our attention, and I ask unanimous consent that they may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Seeing ourselves as others see us is always interesting, sometimes challenging. We should say that this latter term applies to the observations made about the United States in a filmed interview with Prime Minister Nehru, of India, released in this country last Sunday.

"America is a great and powerful country," said Nehru, "but for my part, if I may say so with all modesty, I do not attach much importance to America's bombs.

"I do attach importance to a great vitality and a great integrity, which sometimes, if I may say so, points in the wrong direction—gets excited—but essentially gives it strength."

That is one of the kindest, one of the most thoughtful, and as we have said, one of the most challenging observations made about us in a long time. An interesting question is whether we deserve it. Of course, we feel that we do, still it is a fair criticism that for a period of years we have been placing almost all of our emphasis on material and military power, with sounds largely muted which stress our integrity, our Christian principles, our idealism, and our unselfish generosity.

Nehru continued by saying that America's real strength is deeper than its financial, industrial or technological strength and "the more that comes into play the happier it will be for the world."

Here is the voice of the successor and heir to the great Gandhi; the voice of an idealist, it is true, but a voice that summons us to greater appreciation of the strength of those things which are spiritual as opposed to those which are almost wholly materialistic. The thought has been voiced on numerous occasions that we must fight communism with ideas rather than with military or materialistic force.

That is the point which Nehru is emphasizing, and he is giving us credit for having ideas, ideals, and character. No greater compliment could be paid a people than to credit them with integrity in an age when the world is combatting the crass opportunism, infidelity to professed principles, and sheer selfish power of Communist Russia.

Because so much of our strength and effort has been concentrated on fighting these materialistic forces of communism; because we have been compelled again and again to meet force with force, we may have lost sight for the moment of the greatest power we possess and can use—the power of national character, built upon Christian faith and Christian ideals.

Nehru has gently but firmly—and with great generosity and tolerance—pointed to this dereliction. For that he deserves our thanks. We should profit from his kindly and adroit suggestion.

International Security and Disarmament in the Light of Present Day Circumstances

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, February 23, 1956

Mr. WILEY. Mr. President, in August last it was my privilege to represent the United States Government at the meeting of the Interparliamentary Union in Helsinki, Finland. It was also my privilege to address the group there assembled on the subject International Security and Disarmament in the Light of Present-Day Circumstances.

I have received from Finland requests for copies of the address I then delivered, and inasmuch as the address was rather informative in view of events which have developed since, I ask that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, ladies, and gentlemen, as I listened to the brilliant report of the Rapporteur, the words of an American poet came to mind:

"Oft to every man and nation
Comes the moment to decide,
In the strife of truth with falsehood
For the good or evil side.
Some great cause, God's new Messiah,
Shows each the bloom or blight,
So can choice be made by all men
Twist the darkness and the light."

And as I thought on these words I remembered what Dante said: "Give light and the people will find the way." I paused and asked myself, what is the meaning of the word "light" to this age, and the answer came—freedom and opportunity of nations and people.

Then a second thought flashed across my mind. It was from an American philosopher, "What you are, speaks so loud I cannot hear what you say." I again paused and applied that maxim to the state of the world today. You all have done the same. We've heard time and again that the world needs deeds that reflect wisdom and understanding, not honey words. Right deeds by the rulers of certain nations would cast out fear and misunderstanding that is so prevalent and dangerous to the peace of the world.

Then the words came to me "Have that mind in you which was also in Christ Jesus." What did the Apostle mean? What is the meaning of that statement to this age? Was it not to build peace and faith in the minds of the peoples and rulers of earth? Was it not a mandate that men and nations should find the way to the light (spoken of by Dante) so that deeds instead of words would reflect the meaning of the brotherhood of man and the fatherhood of God. Otherwise nations will not "break their swords into ploughshares" and cease to war any more.

I have just come from Geneva and have seen the exchange in a friendly and peaceful manner of ideas about mankind's new servant for peace and war—nuclear power. Today as representatives of the free parliaments of the world, we discuss a related subject, international security and disarmament.

More than 10 years ago when the Allied and Associated Powers met at Dumbarton to consider the first draft of the United Nations Charter, one of the great powers put forth a bold suggestion. It proposed that the postwar international organization be given an international air force to help in the maintenance of international peace. The proposal was never spelled out in detail. But in the light of President Eisenhower's suggestion at Geneva a few weeks ago that mutual air inspection might be a basis for assurance against surprise attack, it would be most interesting if the authors of the international air force proposal—the Russians—were to look back through their files to examine the details of that 1945 proposal.

The years since 1945 have been most disappointing with respect to the control of conventional weapons and weapons of mass destruction. The United Nations has had commissions working on these problems constantly. While the United Nations has not had authority to impose any disarmament system on member states, there is nothing in the charter that has prevented that organization from considering any kind of disarmament proposal. And as a matter of fact, the U. N. has done a thorough job of studying, although the results have been nil.

As one looks back at those early years after the war, he cannot help but be amazed at the boldness of some of the proposals that were submitted to the United Nations.

It will be recalled, for example, that at the first meeting of the United Nations Atomic Energy Commission in New York in 1946, the United States proposed the creation of an International Atomic Development Authority. It suggested that this international agency be given managerial control or ownership of all atomic energy activities which might be dangerous to world security and that the United Nations be given powers of inspection, of licensing, as well as authority to foster peaceful development of atomic energy. The United States proposal went so far as to call for the relinquishment of the veto with respect to matters relating to the control of atomic weapons and called for the destruction of existing atomic weapons once an adequate system of international control had been established.

Although this proposal became the basis of a plan that was approved by the vast majority of the members of the United Nations, it was rejected by the Soviet Union. The Soviet Union for its part called for the immediate destruction of all atomic weapons as a condition precedent to the creation of any system of international control and inspection.

I need not labor the points of difference between the Soviet approach to the control of atomic and other weapons and the approach of most of the other members of the United Nations. Suffice it to say that the free world was not willing to destroy its stock of atomic weapons while the Soviet Union maintained its massed armies. The Soviet Union was not willing to reduce its armed forces in the race of the atomic stockpiles of the West. Hence it was that the production of and experimentation with atomic and hydrogen weapons went forward on both sides, uncontrolled.

And while this process of competitive arming went forward, it gradually became apparent to more and more of the people of

this earth, that a nuclear war might spell the death knell for mankind. It gradually became apparent that a small war anywhere might degenerate into a worldwide nuclear war. The atomic clock ticked faster and faster.

Thus it was that the armaments race went on unabated. Meanwhile, the demands of peoples throughout the world for a permanent and stable peace grew in strength. While tensions increased and armaments mounted, the nations of the world vied with each other in proposing peace plans. The Stockholm peace appeal was signed by millions—but international communism plotted the military conquest of Korea. The Soviet Union called for the abolition and destruction of atomic weapons—but it moved as rapidly as possible to develop those weapons.

The nations of the West united in NATO and perforce by their weakness in manpower, considered the use of atomic weapons should they be required to defend their lands from military attack. Atomic weapons have been included in that arsenal of the West as a substitute for manpower. No less than 175 divisions of soldiers have been mobilized in the Soviet Union. At the maximum, the nations of the West have had in the vicinity of 40 divisions at their service. There have been some who have objected to consideration of the use of atomic weapons in defense against attack. But in the absence of manpower, reliance has necessarily been placed on these weapons.

We know that the free world is spiritually and morally incapable of using such weapons against any people except in a defensive war. The United States never has been and never will be a party to aggression. But atomic weapons have necessarily been held in readiness to deter possible military aggression—a course of action which we know by experience the Communists are capable of following. It was Sir Winston Churchill who some years ago noted that it was the existence of atomic weapons that has prevented the Communists from attempting to capture Western Europe by force.

Fortunately for the state of the world, in recent weeks we have seen some relaxation of tensions. The about-face of the Soviet Union on the matter of the Austrian State Treaty, the relaxed affability of Soviet officials, an apparent willingness to take a fresh look at the disarmament problem, and the announced intention of Soviet reductions in her armed forces, have all been good signs.

But we must never, at our peril, forget the underlying questions. Why this about-face? Is the Kremlin sincere or trying a new tactic to achieve its old goal of domination? Is it sincerely motivated by a desire to coexist? Will the Soviet Union continue on its new course, or is this part of a military redeployment to put the free world into a position where a dagger may be plunged into the back of freemen?

I speak frankly because for 10 years the Soviet Union has given us reason to be suspicious. Our own interests require that we be skeptical of the motivation of a totalitarian regime famous for the agility of its diplomacy, and unrestrained by responsibility to a free and informed electorate.

There is no check in the Soviet system on the power of the officialdom of the Communist Party. Soviet officials have for years doomed the Soviet people to a distorted view of life. They have denied their people the truth that makes men free. Those in political bondage to the Soviet rulers have been told that Mr. Dulles started the Korean war and that the NATO alliance is designed to serve the purpose of warmongers. These lies have been repeated so often that even should the Soviet officials desire to change the course of their foreign policy, it will be years before they can undo the damage they have wreaked on their own people by denying them the truth.

I fervently hope in the months ahead that the leaders in the Kremlin will see the need for giving the facts to the common man—the man who must bear the burdens of war and whose needs for food and clothing and shelter cannot be satisfied during an armed peace. The common people deserve the truth. A stepped-up program of exchanges of persons and a greater willingness to print the facts in the daily press will help build understanding between the peoples of all nations.

It is essential I believe that in the months ahead we view Soviet proposals for disarmament with a healthy skepticism. The announcement a few days ago that the Soviet Union planned to reduce its armed forces by 640,000 men is indeed welcome. It may be the "earnest of good intentions" which is needed in the interests of the further reduction of international tension. But we must remember that during the last year the United States reduced its own armed forces by some 660,000 men without the flurry of propaganda that his accompanied the Soviet announcement. It must be remembered that the total strength of Soviet forces is not known but that it is estimated that there are still close to 5 million men in those forces and that they are augmented by some 1,250,000 men in the satellite nations. The number still largely exceeds those under arms in NATO.

It would be a fatal mistake at this time for the NATO nations to slacken their efforts to maintain and develop their defensive posture. We must remain strong while we seek in good faith a feasible, reliable, foolproof method of reducing the burden and the dangers of armament.

The heritage we guard is not our own. It is the heritage of individual freedom built on the sacrifices of our forebears and to be cherished and passed on to our children. We have a continuity of freedom to maintain if we are to be true to our trust.

Despite our deepest desires, it would be a most grievous mistake for us to accept without the most searching inquiry the sweetness and light that has exuded in the last few weeks from the Soviet Union. We must not without further proof accept it as an indication of a profound change of heart. As was remarked recently, it is toughness in deeds, not words, that counts. We must not hastily recast the very policies that have finally brought home to the Soviet leaders the dangerous ground they tread.

While Soviet foreign policy can be changed overnight, the policies of free nations based on the fundamental desire of their people to establish a world of peace and security in which individual freedom may thrive, cannot be a will-o'-the-wisp policy. A free nation cannot chart its course by the light of each passing ship. It must not confuse the light of the passing ship with a star. Its foreign policy must be based on the veritable truths that freedom is hard to achieve, and easy to lose—that actions speak louder than words—and that man must be master of the state, not its servant.

There can be no doubt that the United States in reversing the policy held by nations, "to the victor belongs the spoils," to the policy "to the victor belongs the obligation to reconstruct," was searching for a way to peace. The United States will continue to search for a method to reduce international tension, to reduce armament, to control atomic weapons, hoping that a way to peace will open up.

Last spring President Eisenhower created a post in the Cabinet of the United States charged with the one duty of developing practical disarmament proposals. He put in charge of that operation the man who for the past 3 years has been charged with full responsibility for our mutual assistance program.

Even earlier, the President proposed that steps be taken to break the stalemate in the control of atomic energy by his plan to proceed with the exchange of information on the peaceful uses of atomic energy. As evidence of our good faith we have offered to give fissionable material to an international atomic authority.

And most recently at Geneva, President Eisenhower in the utmost candor proposed a system of air inspection of air bases, ports, and rail centers, which might be used as bases for the launching of surprise attack. I have noted in the press of the last few days that General Twining, the highest ranking Air Force officer in the United States—a member of our joint chiefs of staff—has endorsed the proposal, thus indicating the seriousness with which we have entered upon implementing the President's proposal. I am sure that at the forthcoming meeting of the Disarmament Commission in New York we will see further elaboration of this plan.

Finally, the resolution before us recommends to the various parliaments that they keep themselves properly informed on the progress of disarmament negotiations and keep the public of their countries informed of progress in the field. The United States Senate this past session created a special Committee to study proposals for disarmament. That Committee, of which I am a member, will not only keep itself informed of developments in the field of disarmament, but it will actively and vigorously seek, in cooperation with the President, to develop fresh approaches to the control of these weapons which threaten mankind.

We are deadly in earnest in our search for a peaceful world. While, as I have indicated, the American people view recent Soviet turnabouts with a certain skepticism, we will spare no effort in trying to find ways to reduce armaments.

Fellow delegates, I would not want my candor in these remarks to be construed as indicating undue pessimism with the state of the world and the prospects for disarmament. Alexis de Tocqueville, the French philosopher of the last century who wrote so understandingly of democracy in America, said that without common beliefs no society can exist. Common beliefs are basic to a cohesive society.

I believe we may now be in the process of developing common understandings that can be the basis of the peaceful development of an international community. We now understand that modern war does not merely threaten mankind, it can destroy mankind. This is a situation comprehensible not only to good men, but to bad men. It is comprehensible to democracies and to dictatorships, to free men and to men in political bondage. Will the fear of destruction beget the wisdom to outlaw war? Will mankind broaden his horizon to see the grander view of peace?

President Eisenhower has stated that "there is no alternative to peace." It is the basis of Sir Winston Churcill's remarks that the terror of atomic weapons will force peace upon us.

Despite my admonitions and skepticism, we may be in the process of achieving what the scientists describe as a "breakthrough." As a result of the fear of war and mankind's search for a broader view, the way may open up. We must now seek to exploit every opportunity to reach a modus vivendi—an understanding—which will make it possible for mankind to resume his often interrupted climb toward the good life.

I believe I speak for the American people when I say that my country will never cease in its search for peace with freedom.

The words of a great common man of the people, Abraham Lincoln, come to mind: "The dogmas of the quiet past are inadequate for the stormy present."

God grant that the nations will breed leaders who will recognize the truth of this statement as applicable to the changed and changing world of today.

The same American poet that I quoted in the beginning wrote:

"New occasions teach new duties,
Time makes ancient creeds uncouth;
They must upward still and onward
Who would keep abreast of Truth,
And serenely down the future
See the thought of men incline
To the side of perfect justice
And to God's supreme design."
—*James Russell Lowell.*

What's Wrong With Our Propaganda?—Is USIA Adequately Answering the Voice of the Kremlin?

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, the New York Times of February 22, 1956, carried an article by one of its foreign correspondents, C. L. Sulzberger, which asks "What's Wrong With Western Propaganda?"

Writing from Berlin, Germany, Mr. Sulzberger states that F. Bowen Evans, in a study of Russian propaganda, concludes that the U. S. S. R. employs 375,000 full-time and 2,100,000 part-time propagandists. He says the Bolshevik Party maintains 6,000 special schools for training professional agents in that field. Former Senator William Benton, who recently visited the Soviet Union, prepared some observations on "the voice of the Kremlin" for the Encyclopedia Brittannica's 1956 Book of the Year. Benton writes:

At its most ambitious, the aim of Soviet propaganda is so daring that we in the West can hardly comprehend it; so to condition its citizens that they think of their personal freedom and their personal ambitions as identical with the purposes of Soviet society * * * in Russia the rulers seek to convert the total culture into a giant propaganda apparatus. * * *

This is a struggle of a new type, to be waged with new weapons. It is a struggle for which the Western World is little prepared. It boils down to an effort by two great opposing forces to win the faith and confidence of the world's peoples. * * * Russia cannot match us in the export of automobiles, tractors or business machines. She proposes to beat us with her ideas and her trained manpower.

A FAITH IN ULTIMATE VALUES

Having set forth this information for our consideration Mr. Sulzberger continues as follows:

But it is questionable whether our propaganda has successfully faced this challenge. The West German Government has published a commentary complaining that we emphasize material things too much. We have allowed the initiative in the realm of spiritual ideas to remain largely in the very materialistic hands of comunism. "Are we," asks Bonn, "ready for this spiritual competition? Do we understand the system of thought, belief and ideology of the East? Do we have any certitude about the basis of our lives and our faith? Ideological faith in the collectivist idea makes the Soviet man capable of achievements and sacrifices that surpass human strength. Only a faith that in no way is dependent on material events, that does not live in expectation of future well-being, can resist this ideology. This faith, this conviction must inspire Western man to risk his life for the ultimate values that cannot be abandoned—freedom, personal dignity, the lives of other men, the truth of religion.

There is no sign that the powers of the West have sought seriously to analyze the problem of their propaganda and to coordinate efforts in presenting their case abroad.

THE RUSSIAN CHALLENGE CAN BE MET

In his budget message on January 16 this year the President recommended a modest increase in appropriations for the educational-exchange programs of the Department of State which, he said, "constitute a basic element of our long-term effort to attain a better mutual understanding with other peoples of the world. These programs bring to this country leaders of public opinion and facilitate the mutual exchange of students, teachers, and research scholars. In addition to appropriated funds, part of the foreign currencies received from the sale of surplus agricultural commodities abroad will be used to meet certain overseas costs of educational exchange."

The President's budget request for these strategic and highly important educational-exchange programs of the Department of State which, in the President's own words, "constitute a basic element of our long-term effort to attain a better mutual understanding with other peoples of the world" is being considered by the Appropriations Committee of the House of Representatives.

In my statement to the House Appropriations Committee on Tuesday, February 21, 1956, I said that I could not personally attest to the exact amount of money needed for this important program. The President's budget request is for $20 million. I am sure that this is not enough, but I hope that the subcommittee will at least give the President every penny he requested.

The New York Times pointed out on December 12, 1955, that the United States Advisory Commission on Educational Exchange recommended $31 million for this program. The distinguished educators and businessmen, appointed by the President of the United States as an advisory body on this program, certainly know what they are talking about. They know the program from a professional as well as an operating standpoint so they are in a position to make an accurate recommendation.

I shudder to think what the Russians and Red Chinese are spending on this type of thing. From all reports I see on their activities it must be a tremendous amount.

We should not attempt to get into direct and blatant competition with the Communists in this field but we should be willing to invest whatever amount is necessary to demonstrate our willingness to carry on our international relations on the highest plane possible.

I do not know what prompted the Secretary of State to disregard the Advisory Commission's recommendation that $31 million be allocated to this important program. I would personally concur in that amount, or even a much larger amount, for these activities.

I hope that the House Appropriations Subcommittee will agree with my estimate of the value of this program to our international relations effort and that it will recommend a substantial increase over the $18 million which it approved last year.

While the President recommended only a modest increase of $2 million for activities which constitute a basic element of our long-term effort to attain a better mutual understanding with other peoples of the world he recommended that the $89,218,895 available to the United States Information Agency in fiscal year 1956 in appropriations and obligations be increased by $48 million.

The vast difference between these two recommendations which follow each other in the budget message typifies the Madison Avenue approach to the problems of the world, an approach to world problems which is the hallmark and the most distinguishing characteristic of the present Republican administration.

AN ANSWER TO THE VOICE OF THE KREMLIN

Concerned as I am with these exchange programs which include the Fulbright and Smith-Mundt Acts, the interchange of persons under the technical assistance programs carried on by the International Cooperation Administration, and the cultural presentations programs of the President's Emergency Fund for Participation in International Affairs, I have developed a measure which I am convinced will contribute importantly to the development of adequate answers to the voice of the Kremlin. This is a joint resolution, House Joint Resolution 474, "to establish a joint congressional committee to be known as the Joint Committee on United States International Exchange of Persons Programs."

It gives me great pleasure to be able to say that Senator J. W. FULBRIGHT, author of one of the great acts of Congress on exchange of persons, has introduced a companion measure in the Senate as Senate Joint Resolution 120, and that Senator HUBERT H. HUMPHREY has joined Senator FULBRIGHT as cosponsor of the measure.

In the House Members who have joined with me in sponsoring the joint resolution include Representatives HUGH J. ADDONIZIO, VICTOR L. ANFUSO, THOMAS L. ASHLEY, DON HAYWORTH, THADDEUS MACHROWICZ, GEORGE M. RHODES, PETER W. RODINO, JR., B. F. SISK, HARRISON A. WILLIAMS, JR., and HERBERT ZELENKO.

I include as part of my remarks two articles from the New York Times referred to earlier in my remarks:

[From the New York Times of December 9, 1955]

INCREASE SOUGHT IN EXCHANGE FUND—ADVISERS ASK $31 MILLION TO STEP UP PROGRAM AND OFFSET GENEVA FAILURE

WASHINGTON, December 8.—The Advisory Commission on Educational Exchange recommended today a $13 million increase next year in the State Department's exchange program.

This would bring the total appropriation asked of Congress to $31 million. The recommendation was prompted by the breakdown in cultural interchange negotiations with the Soviet Government at the Geneva conference of foreign ministers.

The Commission, appointed by the President, acts as an advisory body within the State Department.

Rufus H. Fitzgerald, commission chairman, said: "It is evident that the Soviets have not changed their major strategy but are practicing deliberate fraud as shown through their refusal to negotiate on major issues at Geneva.

"This continued attitude increases the challenge to the United States to cooperate with all free peoples in the free interchange of persons and ideas."

He said that by increasing the program the Government would stimulate private organizations and educational institutions to step up interchange programs.

Mrs. Anna L. Rose Hawkes, commission member who is also president of the American Association of University Women, said that the association would increase its efforts along this line. It spent $100,000 this year in bringing 39 women from 22 foreign countries to study in the United States. It also provided 10 graduate fellowships for specialized work by foreign women students.

Mrs. Hawkes said the proposed increase in funds should go largely to projects aimed at bringing to this country leaders of thought and opinion.

"That is the best way to convince them of our motives," she said. "They go back and say: 'The United States is not warmongering. I have been there and I know.'"

The other members of the commission, which has just finished a 2-day meeting, are Arthur H. Edens, president of Duke University; Arthur A. Hauck, president of the University of Maine, and Laird Bell, Chicago attorney.

[From the New York Times of February 22, 1956]

FOREIGN AFFAIRS—WHAT'S WRONG WITH WESTERN PROPAGANDA

(By C. L. Sulzberger)

BERLIN, February 21—The greatest proof of the fallacy of Marxism is, curiously enough, the existence of the Soviet Union. For Karl Marx foresaw the triumph of his theory first in highly industrial countries like Germany or England. Yet what we call communism came initially to power in underdeveloped Russia, where it assumed the form, not of socialism but of the most massive state capitalism known to history. And the next outstanding triumph of the Marxist legend was in backward China.

Despite such glaring inconsistencies, Marx' latter-day prophets extol the "scientific" immutability of their dialectical materialism and insist it must logically inherit the earth. But the Communists themselves continually modify this "proven" doctrine. Lenin, Stalin, Trotsky, Tito and Mao Tse-tung have each reinterpreted the credo. Now Khrushchev is the latest to amend accepted dogma.

Nevertheless, by blandly ignoring these constant fluctuations, Soviet propaganda seeks to convey the impression of a basic logic that progresses unalterably toward an inescapable end. Lenin, who brilliantly grasped what was helpful to him in Marx, taught that "propaganda is of crucial importance." Modern means of applying this dictum have been carefully coordinated by the Moscow monolith.

PROPAGANDA BUREAUCRACY

F. Bowen Evans, in a study of the subject, concludes that the U. S. S. R. employs 375,000 full-time and 2,100,000 part-time propagandists. He says the Bolshevik Party maintains 6,000 special schools for training professional agents in that field. Former Senator William Benton, who recently visited the Soviet Union, prepared some observations on "the voice of the Kremlin" for the Encyclopaedia Brittannica's 1956 Book of the Year. He writes:

At its most, ambition, the aim of Soviet propaganda is so daring that we in the West can hardly comprehend it; so to condition its citizens that they think of their personal freedom and their personal ambitions as identical with the purposes of Soviet society * * * in Russia the rulers seek to convert the total culture into a giant propaganda apparatus * * *.

"This is a struggle of a new type, to be waged with new weapons. It is a struggle for which the Western World is little prepared. It boils down to an effort by two great opposing forces to win the faith and confidence of the world's peoples * * * Russia cannot match us in the export of automobiles, tractors, or business machines. She proposes to beat us with her ideas and her trained manpower."

A FAITH IN ULTIMATE VALUES

But it is questionable whether our progaganda has succesesfully faced this challenge. The West German Government has published a commentary complaining that we emphasize material things too much. We have allowed the initiative in the realm of spiritual ideas to remain largely in the very materialistic hands of communism. "Are we," asks Bonn, "ready for this spiritual competition? Do we understand the system of thought, belief, and ideology of the East? Do we have any certitude about the basis of our lives and our faith? Ideological faith in the collectivist idea makes the Soviet man capable of achievements and sacrfices that surpass human strength. Only a faith that in no way is dependent on material events, that does not live in expectation of future wellbeing, can resist this ideology. This faith, this conviction must inspire Western man to risk his life for the ultimate values that cannot be abandoned—freedom, personal dignity, the lives of other men, the truth of religion."

There is no sign that the powers of the West have sought seriously to analyze the problem of their propaganda and to coordinate efforts in presenting their case abroad. We remain constantly on the defensive, permitting the Kremlin's experts to exploit the very evident chinks in our imperfect armor. Thus, the tragic convolutions of the United States attempt to obliterate segregation feature the front pages of the world where Autherine Lucy is now a well-known name. What has already been accomplished in the name of Jeffersonian democracy remains forgotten. Britain's embarrassing attitude on Cyprus erases from popular memory her deeds in India, Burma, and Ceylon.

Only when Moscow acts openly with brutal menace do the free powers respond in concert and remember that the essential contradictions of our time are those between themselves and communism. In periods of relaxation we tend to forget the need to constantly reassert the inner meaning of our ideology. This is a dangerous lack. Surely there are enough beneficial aspects in the democratic system, whatever imperfections it may have, to merit retelling to a redundant point.

Simple facts bear frequent repetition. As Pericles told Athens: "We are superior to our enemies * * * our city is open to the world * * * we live freely, and yet we face the same dangers as readily as they * * * those men surely should be deemed bravest who know most clearly what danger is and what pleasure is and are not made thereby to flinch."

Educational Television in Alabama

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, February 23, 1956

Mr. SPARKMAN. Mr. President, during the last 2 years Alabama has been making history in educational television with a State-supported network that soon will carry its programs to the entire State. The story of this development and the purposes behind it is told in an article appearing recently in the magazine State Government. The article was written by Raymond D. Hurlbert, who was the first president of the Alabama Educational Television Commission and now is its general manager. Mr. Hurlbert for many years was chairman of the public-relations committee of the Birmingham schools and is past president of the Alabama Education Association.

I ask unanimous consent that the article, entitled "Educational Television in Alabama," written by Mr. Hurlbert, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EDUCATIONAL TELEVISION IN ALABAMA

(By Raymond D. Hurlbert)

During the last 2 years Alabama has been making history in educational television, with a State-supported network that soon will carry its programs to the entire State. The story of its development and the purposes behind it are told in an article appearing recently in State Government by Raymond D. Hurlbert, who was the first president of the Alabama Educational Television Commission and now is its general manager. Mr. Hurlbert for many years was chairman of the public relations committee of the Birmingham schools. He is past president of the Alabama Education Association.

Alabama, with the Nation's most extensive State network in operation, is setting a pattern in educational television.

The Alabama Educational Television Commission has obtained three very high frequency channels from the Federal Communications Commission, a unique achievement. It has put two stations in operation, with programs coming from three studios, and it is almost ready to begin construction of the third station. When this station is completed the network will cover Alabama and sections of neighboring States.

This achievement represents hard work, cooperation and teamwork of many Alabama citizens who believe educational television to be of great potential importance to the people. To repeat a summary we made to the National Association of Educational Broadcasters in New York near the outset of our work:

"We believe that Alabama is a great State—rich in natural resources, but our great need is to raise the per capita income of her citizens through education. We believe that educational television is a providential medium for increasing the general knowledge and culture of our people. We believe that the differences in adequacy, between urban and rural education can be diminished * * * that the people in impoverished and remote areas of our State will now have educational advantages which will bring new meaning to 'equal opportunity' in

education. We believe that educational television will better our communities, increase our income, enhance our culture and strengthen our democracy."

Also, with the shortage of teachers and mounting costs of education an acute problem, many believe that our program may be instrumental in making education more economical for the people of Alabama.

The Alabama Educational Television Commission, selected by Former Gov. Gordon Persons in 1953, was given the authority and an appropriation by the legislature to set up its system in a manner deemed best to serve the State. The network has developed step by step on the basis of principles closely adhered to by the commission. The Birmingham News has summarized editorially:

"Alabamians are justified in feeling pride over the fact that their State is the first to obtain permission for statewide coverage by educational television. It means that the State is getting in on the ground floor of a technique whose potentialities we still can only guess at. But we are tackling the matter boldly and constructively and in time."

As one commissioner states, "We made big plans and kept high standards." At the outset, the commission obtained as consultants for its first 2 years the firm of Norton & Holt in order to have the best possible technical, business and professional advice; the law firm, Hogan & Hartson, for legal service; and A. D. Ring & Associates, television consulting engineers.

Topflight engineers, although expensive, were put in charge of station construction. Long before construction was completed, the commission began planning for programing. Rudy Bretz was employed as program consultant. Author of books on television and dean of a television training school in New York, he was well qualified to begin training personnel for programing. Mr. Bretz held studio classes and workshops for high school students and adults in various communities, for training in programing, and to acquaint them with television equipment and the duties of cameramen, floor managers, mike room operators, directors, switcher and performers.

The commission contracted with three agencies, each of which has its own studios, for the network programs: The University of Alabama, Alabama Polytechnic Institute, and the Greater Birmingham Area Educational Television Association, Inc.

The commission set up a program board and delegated to it the responsibility for programing policy. Its members are the heads of the three programing agencies and the State superintendent of education, all of them eminent in education. The board president, Dr. C. C. Carmichael, is president of the University of Alabama, the Carnegie Foundation and the Southern Association of Colleges and Secondary Schools. Other members are Dr. Frazer Banks, superintendent of Birmingham schools; Dr. Ralph Draughon, president of Alabama Polytechnic Institute; and Dr. Austin Meadows, State superintendent of schools.

It is the position of the commission that educational television is an extension of public education and that, therefore, the same general principles which govern teaching in the public schools also apply to television teaching. It is anxious to safeguard programs from political or propaganda purposes and wishes to have the agencies as autonomous as possible in programing and operation. With these ends in view, the commission believes that the establishment of the program board and the contracting for programs with the three agencies are the best possible arrangement for programing the network.

Since all stations of the network carry the same program, each agency is responsible for only one-third of programing time. The schedule varies, of course, according to conditions. Agreement on it is worked out by the directors of the three agencies in cooperation with the AETC program coordinator.

Within each programing agency there is a local executive committee. Dr. J. R. Morton, dean of the university's extension division, and Graydon Ausmus, director of the university's radio-television activities, represent the University of Alabama. Programing at Alabama Polytechnic Institute, at Auburn, is under the direction of Auburn's local committee, consisting of Dr. David Mullins, vice president of the school, and Ed Wegener, director of radio-television activities. For the Birmingham area programing is under a local committee consisting of Dr. J. W. Letson, superintendent of Bessemer City schools, and Mr. Bretz, the consultant to the network in its formative stages.

The director of each agency was chosen for outstanding ability. All are well known in television circles throughout the country. The commission's coordinator, Pat Smithdeal, a former member of the radio-television education department at Stephens College, and production manager of a commercial television station, works with the directors of the three agencies and assists with the organization of each day's programing schedule for the network.

State headquarters for the AETC are in the Protective Life Building, in Birmingham, where business is conducted by the president of the commission, Milton Cummings; the general manager; the chief engineer, Orbra Harrell; the program coordinator, Miss Pat Smithdeal; and the office manager, Mrs. Madge Law.

Five "levels of cooperation" have evolved in the commission's organization. There is the commission, the program board, the program board advisory committee, the three programing agencies, and finally the programing agency executive committee. Splendid cooperation within the organization, from the press, the State's commercial television and the citizens of Alabama, is making the project a success.

Our educational television, as indicated, has been developed as another facet of public education, entitled to support with public funds. Thus, it is protected from misuse by selfish interests, public or private. Public education is accustomed to steering clear of such influences and to operating in a democratic manner, answerable to the people. Educational television in Alabama, as a logical and normal development in educational history, will extend present school facilities, expedite learning, and disseminate hidden knowledge which represents an investment of millions of dollars in agencies, laboratories, museums, and libraries.

The commission believes that educational TV is economical public education in terms of capital outlay, operational cost, and number of people served. It says: "Compare the cost of building a television station to that of building a high school or a dormitory, and then think of the people educational television will serve, compared to the number who will use the high school or the dormitory."

Money is spent only after careful and long-range planning as well as expert technical and professional advice. The system is operated with very definite cost accounting, and equipment money is carefully spent, not for frills but for high quality. Programing is financed with appropriations by the legislature for that specific purpose as requested by the agency.

All of this has been a very rapid development, as a chronological summary will indicate.

The history of the commission began when the legislature on June 15, 1953, provided $500,000 to build and operate an educational television station atop Mount Cheaha, with an elevation of 2,407 feet, the highest point in Alabama. Within the month, Governor Persons appointed the Alabama commission and announced plans for the station. He staggered the terms of commission members from 2 to 10 years.

On March 19, 1954, the FCC approved the construction of channel 7 to be located on Mount Cheaha at Munford. In the same month, the AETC asked the FCC to assign channel 2 to Andalusia as a part of the State's educational network.

During this time, the Greater Birmingham Area Educational Television Association, composed of five public-school systems, was applying to the FCC for channel 10 in Birmingham. In May 1954, Dr. Banks, superintendent of the Birmingham schools and chairman of the Greater Birmingham Area Educational Television Association, withdrew their application and requested that the AETC be allocated channel 10. The State Television Commission in turn applied for channel 10, with the understanding that the greater Birmingham association would become a programing agency, contributing programs to the AETC network.

Things began to snowball at this point. In May 1954 the Storer Broadcasting Co., owners of WBRC–TV, Birmingham, donated telecasting equipment valued at $200,000 to the AETC. In addition to the equipment, it furnished housing for the transmitter and the use of studios atop Red Mountain in Birmingham. The commercial station WABT offered the use of its studios and installed a cable between its station and the educational station. The finest relationships and cooperation have been maintained by the AETC with commercial stations in the State. The commercial stations and the AETC have cooperated in various programs and expect to do more on programs of public interest in the future.

In September 1954 the FCC approved channel 2, Andalusia, which had been contested by a commercial organization. On October 13, 1954, channel 10 was approved for educational television in Birmingham.

In addition to the $500,000 appropriated by the legislature and the $200,000 in equipment from Storer Broadcasting Co., the Alabama State Building Commission appropriated $403,000 for construction of buildings and facilities for the educational network. The University of Alabama received $100,000 from the fund for adult education for additional studio equipment, supplementing that which the State was providing.

On January 7, 1955, channel 7, WTIQ–TV went on the air at 7 in the evening, completing the first link in the chain of stations that are to encompass the State. Its debut brought another $10,000 from the Emerson Radio & Phonograph Co., as 1 of the first 10 educational stations in the Nation.

Shortly after completion of channel 7, channel 10, WBIQ–TV, went on the air April 28, 1955. The two channels began carrying educational programs simultaneously. Channel 7 operates with a power of 316,000 watts visual, 191,000 watts aural; channel 10 with 18,600 watts aural and 30,900 watts visual. Plans are under way for construction of channel 2, to complete the third link, which will operate with 60,300 watts aural and 100,000 watts visual.

Programing on the Alabama network is now in high gear. It is gaining momentum all the time. Programs include inschool and afterschool viewing for children and features for teen-agers and adults. A great variety of programs are serving the citizens culturally, seeking to educate and inform through interesting and entertaining presentations.

The variety is very wide. For example, by viewing certain of the AETC programs one may study Macbeth, learn how to take a cow's temperature, have pertinent legal questions answered by a panel of attorneys, know the best food buys of the week, learn from a

physician the latest methods of child care, or study German. As a need is felt in a given area, a program is created that is felt to be capable of satisfying that need. New programs are constantly in rehearsal, then making their appearances in the living rooms of thousands.

The Greater Birmingham Area Educational Television Association, Inc., is doing systematic teaching in the primary classrooms with its program Learning Is Fun. Lessons follow the five phases of learning as prescribed in the Alabama State course of study. Handbooks have been published and distributed to all primary teachers in the State in order to coordinate classroom work with the program. The director-producer and series planner are very capable women, and the teachers on the program are some of the best primary teachers in Birmingham.

The Alabama Polytechnic Institute began contributing to the network on October 3, 1955, with 7 half hours of live programing a week. Its programs are in the areas of agriculture, home economics, veterinary medicine, books, and gardening. Auburn has excellent production facilities.

The University of Alabama joined the network October 31, 1955, with programs covering great literature, music, Government, small-business problems, home workshop, and special events. A recent live telecast from the university's studio of Puccini's opera, La Boheme, by the University Music Department and Opera Workshop, is believed to be the first live telecast of a complete opera on educational television. It was enthusiastically viewed by a large State audience.

On February 18, 1955, the educational network carried its first spectacular. Nearly 100 people, including a ballet company, 2 choirs and a dramatic group participated in a 90-minute show based on Birmingham's Festival of Arts. Prize winning works of Alabama artists, poets, writers, composers, architects, choreographers, flower arrangers and photographers were included in the show, produced by Fred Woodress, and directed by Rudy Bretz.

Besides a variety of live programs from the three agencies, the network also shows film from the Ann Arbor Center in Michigan—kinescopes of the best educational programs from other educational stations.

The University of Alabama has in its fine new studio one of the few kinescope recorders in the country, and Alabama plans to send kines of its best live programs to other educational stations.

Many civic and cultural organizations already are giving programs over the network, and still others are planning to do so. For example, the American Association of University Women has presented a series featuring cultural events and activities, and the Birmingham Bar Association has presented a popular weekly program, You're the Jury.

The 1955 session of the legislature continued the State's financial support, appropriating funds for operational costs in the current biennium.

Thus credit for the success of Alabama educational TV must go to many citizens of Alabama—former Governor Persons, Gov. James E. Folsom, the legislature, far-sighted citizens and educators, presidents of cultural and civic organizations mayors of many towns, our Congressmen and Senators in Washington, members of the AETC itself and of its State organization, volunteer workers, the Alabama press, and the commercial stations.

The philosophy behind the development of educational television in Alabama has been very important in shaping the whole program. If what we were already doing in public education is sound, then it is sound to use television to bring it to more people. On this basis, noncommercial educational television will live and grow, for there is a popular hunger today for general information, systematic learning, and intellectual and cultural entertainment.

Educational television is not intended to replace older methods, but merely to supplement them, and to give countless thousands educational opportunities who would not otherwise have them.

In our country and in our times, educational television is the best practicable means for informing the electorate and increasing public understanding. It should be a providential instrument for insuring the perpetuation of our democratic society.

Vice President Nixon's Lincoln Day Speech

SPEECH
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. McCARTHY. Mr. Speaker, Vice President NIXON's Lincoln Day speech in New York was a surprising performance in view of the recently initiated program to put over the new model RICHARD NIXON. The speech was delivered at the 70th annual Lincoln Day dinner of the National Republican Club. The new NIXON was to be a man of integrity, moderation, a man who was especially concerned with the accuracy of his statements. However, in his Lincoln Day speech, NIXON reverted to type.

He demonstrated, in this speech, his characteristic disregard for fact, his characteristic use of misrepresentation and misleading and distorted statements. This was a speech by the man who is said to bring new meaning to the office of Vice President. What this new meaning really and specifically is has never been fully explained. It is indicated that this Vice President has a greater part in the function of the executive offices and in the Cabinet than had other Vice Presidents.

Three explanations exist to his new vice-presidential activity: First, that he is ineffective in the Senate; second, that the President needs help; and, third, that something has to be done with NIXON.

After a few introductory remarks, the Vice President launched into a recital of the present state of affairs under the Republicans as compared to those under previous Democratic administrations. "Think back," he said, "to what we left behind. Three years ago there was a war in Korea." Yet, the Vice President forgot to mention that negotiations began at Kaesong on July 10, 1951, were transferred to Panmunjom on October 25, 1951, and continued there until the armistice on July 27, 1953.

"Federal controls," continued the Vice President, "stifled our economy." This statement is contrary to the facts in the President's Economic Report of 1956, which shows that corporate profits in the last 3 years under President Truman were $5 billion higher than in the 3 years under President Eisenhower. Gross investment was the same during the last 3 Truman years as it has been in the 3 Republican years. Under the Democratic administration, defense spending, a support to the economy, was $10 billion less than under the Republicans.

"Every day," stated Vice President NIXON, "the people's take-home pay, pensions, and insurance were buying less and less at the corner store." Presumably the Vice President is referring to the cost of living. Again, his statement is contradicted by reports issued by the present administration. The cost of living rose but slightly after the Democratic President was given emergency powers, and it had actually started to decrease in November 1952. Except for the first 3 months after the Republicans took over the administration, the cost of living has never dropped beneath its low point of January 1953, when the Democrats left office. One reason that the overall cost of living has not risen more drastically is that the price of food has been consistently declining, which fact partly compensates for the higher costs of other goods—in addition to medical care, housing, rent. Also, for those in our country engaged in agriculture, costs have steadily risen while prices have steadily declined.

From 1942 to 1946, a Democratic President, with emergency powers, and the Democratic Congresses kept the cost-of-living increase to only 23 points on the old consumer price index. On the other hand, the Republican 80th Congress refused to consider a rational abandonment of presidential emergency powers, and the cost of living jumped 32.4 points from 1946 to 1948. It is clear that it was in this period of 2 years under the Republican Congress that the main assault was made on the "people's take-home pay, pensions, and insurance." It was not in the early fifties.

The Vice President also stated that when the Republicans took over in 1953:

> All over Washington plans were underway to socialize and federalize America's farmers, the medical profession, housing, schools, and power, including the atom.

Yet he mentioned no evidence to support this sweeping generalization.

RICHARD NIXON continued, saying:

> Most distressing of all, a great majority of the American people—Democrats and Republicans alike—had lost faith in the honesty, the integrity, and the reliability of those who served them in Government.

But he makes no reference to the intensive campaign of the Republicans to create this very attitude.

Then, after describing the world situation under the Democrats, the Vice President dismissed the present situation by saying that "for the first time in 15 years the world is at peace." Perhaps he merely overlooked the facts that the French Premier has just been stoned in Morocco, that there is trouble in Algeria, that violent action has just occurred in Cyprus, that the Arabs and the Jews are feuding in the Middle East, that serious tension exists in Formosa, in Korea, and in Indochina. He also neglected to mention that the Democrats successful met similar difficult situations in Greece, Indonesia, Palestine, Kashmir, and Berlin between 1946 and 1950.

Returning to the domestic scene, Mr. NIXON asserted that "the American people have had the biggest tax cut in history." This is a misrepresentation that has been repeated so often in the last several years that the Republicans themselves are beginning to believe it. As a matter of fact, the Republican-claimed $7.4 billion tax reduction breaks down in this way: $3 billion reduction in individual income taxes; $2 billion reduction resulting from the repeal of the corporation excess-profits tax; $1 billion reduction in excise taxes; and $1.4 billion reduction resulting from the new codification of the tax laws.

This $3 billion reduction in individual income taxes resulted from the automatic expiration date fixed by the Democratic 82d Congress when they passed the Revenue Act of 1951. The Democratic 81st Congress had scheduled the expiration of the excess-profits tax, which the Republicans had extended for 6 months in the 83d Congress. The $1 billion reduction in excise taxes had been proposed as a relief measure by the Democrats, but had been opposed by the administration. The $1.4 billion revenue reduction occasioned by the codification of the tax laws in 1954 was, in a sense, accidental, since in debate over this bill the Republicans emphasized that the bill provided tax revision, not tax reduction. It is this last "accidental" reduction that the Republicans can justly claim as their own, plus the $2 billion reduction in excess-profits taxes on corporations which they had previously extended.

The Vice President continued his story:

For the first time since the Republican 80th Congress we not only have already achieved a balanced budget, but our Republican President has submitted a balanced budget for next year as well.

This statement is false. In fiscal year 1951, under the Democrats, the publication Economic Indicators shows that the net revenue was $47.6 billion and expenditures were $44.1 billion. In addition, the Vice President gives credit to the 80th Congress for a surplus in 1948, but this surplus was administered by a Democratic President. If the Vice President were consistent, he would have to give credit to the Democratic Congress now for any possible surplus in fiscal year 1957.

Mr. NIXON takes great credit for the administration's management of the budget in fiscal year 1956. But, in fact, the administration predicted a deficit of $2.4 billion for 1956, and their prediction was proved false by an unpredicted increase in revenue. Still this 1956 budget is not balanced, since the House has just had to pass an urgent deficiency appropriation bill. The Senate has yet to act on this measure. When fiscal year 1956 is finally closed, and all of the bills are paid, then it will be time to claim a balanced budget. At the present time, the Vice President is a little too quick to skip over the over 4 months remaining in fiscal 1956.

For Mr. NIXON to state that the President has submitted a balanced budget for fiscal year 1957 is again misleading. The President's budget is as yet no more than a "paper" budget, not one of fact. There is evidence to believe that some of the estimates in the President's budget proposals are somewhat unrealistic. His proposed expenditures fail to include those for an adequate farm program that has been promised or for the needed highway program. The expenses for the Tennessee Valley Authority are listed outside of the budget. The President assumes that there will be an increase in postal rates. He also assumes a fairly conservative level of revenue. Yet, if the budget is to be really balanced, this level of revenue will have to be increased by higher tax collections.

It is also strange that RICHARD NIXON, as well as other Republicans, should boast of a budget containing expenditures in excess of $65 billion, when they consistently criticized President Truman for budgets in the $30 billions before the Korean emergency. During the Truman administrations, including the years of the Korean emergency, the national debt was decreased $13.1 billion. Under the Republicans it has increased over $8 billion. The all-time high for the national debt was reached under the Republicans when the debt reached over $280 billion in 1955.

Vice President NIXON went on to say that as a result of the economic policies of the Republicans the Nation was enjoying the greatest prosperity in history. The only new economic policies of the Republicans were the "hard money" policy, which they were forced to abandon quickly at great cost to the Government; special tax treatment for persons owning business stocks; and consumer credit inflation.

The Vice President continued to say that "plans for socializing American institutions have been filed in the wastebasket." He then said that the Republicans were offering more social services than the Democrats ever dreamed of, and he listed them, but he failed to distinguish how these Republican social services differed from the Democratic "socialistic" services. He might have mentioned that the Republicans are offering more socialized schools, more socialized highways, more socialized hospitals, more socialized child welfare, more socialized health insurance, improved socialized working conditions, higher socialized 90-cent minimum wage standards, and more socialized homes. Under the Democrats, such programs would have been branded as "socialistic," but under the Republicans Mr. NIXON terms them "social services." A fine distinction.

He continued:

And, probably most important, we have restored dignity, honesty, integrity, and dependability in public service to our Government in Washington, D. C.

He failed to mention the civil servants outside of Washington. He overlooked the security "numbers game," which has gone far to demoralize the civil service. And, most of all, he forgot to mention such Republican influence dispensers as Roberts, Talbott, and Strobel.

But he continued:

On the basis of this record, I am going to make some categorical claims which I think cannot be questioned.

His first claim was that—

Never has an administration kept its promises more faithfuly than this administration.

A look at the 1952 Republican platform shows these promises. A look at the present record shows how faithfully they have been kept. The platform promises "the development of a sound farm program—a prosperous agriculture with free and independent farmers is fundamental to the national interest." Under this "sound" program, many farmers have left their farms, the costs of farming have risen while farm prices have steadily fallen. The platform "favors" statehood for Alaska and Hawaii. We still have but 48 States. The platform promises a "reduction of expenditures by the elimination of waste and extravagance so that the budget will be balanced and a general tax reduction can be made." The latest budget proposals ask for $65 billions in expenditures. No Eisenhower budget has yet been balanced in fact, only on paper and in press releases. The platform promises that "We will aid small business in every practicable way." Since the last half of 1952, small business profits are down 66 percent, while big business profits are up 46 percent. Small business investors' returns went down 57 percent, while big business investors' returns went up 36 percent. Small business failures are up 36 percent. The platform states: "Our goal is a reduced national debt." The debt is higher than any previous peacetime high. The platform looks "happily forward to the genuine independence of captive peoples." Austria has been released from Soviet domination, but John Foster Dulles paid tribute on the occasion of the Austrian independence to the work of his Democratic predecessor, Dean Acheson. The platform promises more. The record shows a similar record of achievement.

The Vice President made another claim:

Never has an administration done a better job for all the people than this administration.

The record shows that some of the poeple have done well under this administration, but others have not done so well, or have done very badly. Corporate profits are up 26 percent. Corporation take-home pay was up 115 percent for U. S. Steel, up 74 percent for Alcoa, up 49 percent for General Motors; up generally 10 percent for stockholders. The average worker's income was up only 7 percent. This take-home pay was up only 3 percent. The farmer's income is down 11 percent. Big business failures are down 15 percent; small business failures are up 21 percent. Mr. NIXON states that "There are, of course, some who do not share our enthusiasm for this record." This is a true statement, and the Vice President should have full credit for it.

Mr. NIXON next criticized Adlai Stevenson for his criticism of the Republican foreign policy:

We find Mr. Stevenson has trouble even agreeing with himself. I know what a difficult time he must be having to find any honest legitimate grounds on which to criticize President Eisenhower and his leadership.

Mr. NIXON complained of Adlai Stevenson's criticism of the results of the Geneva Conference, and his criticism of John Foster Dulles' "brink of war" philosophy. Mr. NIXON seems to have forgotten the glowing phrases he used in speaking of Geneva before it took place. And again he must have forgotten the considerably more sober statements made by President Eisenhower and Mr. Dulles after the Conference ended. The President, upon his return from Geneva, cautiously stated that we had only made a begining and a month later he warned against the "pottage of a false peace." The Wall Street Journal stated about Geneva that the Russians have won "victory for a smile." Roscoe Drummond in the New York Herald Tribune wrote that the Kremlin has "now got all it wants for nothing." No one ever termed either of these papers organs of the Democratic Party.

Mr. Stevenson was certainly not alone in deploring the "brink of war" philosophy enunciated by Secretary Dulles. The Senate was almost in uproar as they demanded an explanation from the Secretary; even the members of the Foreign Relations Committee had not been informed that we had been three times to the "brink" and back. And the Secretary considerably mollified his philosophy, admitting that in election years one makes statements that one does not ordinarily make. Then Henry Luce absolved the Secretary of all blame.

It is difficult certainly to be consistent in either appraising or criticizing the Republican foreign policy. The policy itself is too inconsistent and shifting for a balanced examination.

The Vice President then turned his attention to the Democratic Party:

We must always identify which Democratic Party we are referring to. For the moment, let us define the Democratic Party in terms of its ADA, big city boss clique which controls its national conventions.

He claimed that the Democratic Party has "lost track of individual," that it is the—

slave of doctrines of uniformity, mediocrity and regimentation. In its eyes our people have dissolved into a multitude to be politically manipulated and managed.

The party, said the Vice President, has maintained a "steady appeal to mass and class."

The speeches of Republican Cabinet members, such as Ezra Benson, Charles Wilson, and Douglas McKay, indicate which party believes in management of the people and their Government, which party believes in setting class against class—city dwellers against the rural people, consumer against producer, big-business man against the small-business man. In 1953 Secretary McKay told the chamber of commerce: "We're here in the saddle as an administration representing business, and industry." Secretary of the Treasury Humphrey has stated to the Committee on Ways and Means that there are no social implications to be considered in setting tax rates, and that America needs big business to do things in a big way. Benson talks to city groups and blames the farm problem on the farmers; he talks to farm groups and blames it on the high wages earned by city groups. Mr. NIXON seems to have overlooked these Republican officials and their words and deeds.

Civil rights are another area in which Mr. NIXON claims great Republican accomplishment. Where the Republicans have advanced the cause of civil rights, they are to be praised, but the case is not as clear as Mr. NIXON would have it be. He mentions that the promises and the performances of the Democrats show a great contrast in this area. He mentions the different stands on school integration taken by Adlai Stevenson and the other Democratic candidates for the presidential nomination. Mr. NIXON stated:

President Eisenhower's great Republican administration has registered the greatest advance for the rights of racial minorities since the Emancipation Proclamation itself.

He claimed that the Republicans abolished segregation in the armed services, in the District of Columbia, in Federal contracts, in the field of civilian employment. He seemed to forget that integration commenced in the Armed Forces under President Roosevelt in 1944, and has been continued ever since. It is not yet complete. Mr. NIXON has also lived in the District of Columbia long enough to know that integration has been progressing for over 10 years. It is not yet complete. During World War II, President Roosevelt established the Fair Employment Board, which was to see that no segregation occurred under Federal contracts. This Board is still in existence, and has continued to exist, although with modifications and changes in name. For Mr. NIXON to claim that the Republicans ended segregation in the civil service is a complete distortion. The Civil Service System has worked on a "merit" basis that has been continually improved since the last century. In addition, the Civil Service Commission is supposed to be an independent agency, not a wing of the Republican Party.

Mr. NIXON also claimed the order of the Supreme Court ending segregation in the schools on a progressive basis as a victory for the Republican Chief Justice Earl Warren. This statement has been uniformly condemned throughout the country as a slur upon the Supreme Court and the Chief Justice.

Mr. NIXON, in commenting upon Adlai Stevenson's position on integration in the schools, seems to be deliberately inconsistent, since Mr. Stevenson's position is one of careful balance and is in essential agreement with both the decision of the Court and the statements of the President.

Actually, had RICHARD NIXON chosen to speak honestly of the accomplishments of this administration, he could have made a presentable case. The record of the Republicans is not altogether a bad record. But it appears that even when he has a legitimate case, the Vice President hesitates to use it. He seems to prefer the methods which were successful for him in his campaign for public office at three different times: first, for the House of Representatives; second, for the Senate; and third, for the Vice Presidency. He then and now seems to prefer half truths and distortions.

He appears to have lost confidence in the truth.

A Kind Word for the Civil Jury

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. ZELENKO. Mr. Speaker, there has been agitation in some sections of this country to eliminate the constitutional bulwark of trial by jury in civil cases. This has alerted the bench and bar of the United States to the danger of encroachment of democratic processes.

On February 11, 1956, at the midwinter convention of the National Association of Claimants' Compensation Attorneys, one of the preeminent members of the Federal judiciary, Hon. David N. Edelstein, United States district judge for the southern district of New York, delivered the following significant address favoring the retention of jury trials in civil cases:

A KIND WORD FOR THE CIVIL JURY

"May it please the bar * * *" I open with a slight variation on the trial lawyer's speech reflex to the stimulus of arising to his feet before a judge and jury. And I do so for good and sufficient reason. For, while it is not unusual for me to be addressing myself to lawyers, there is some novelty in a situation where I am in no position to overrule their objections. It is, of course, a vain hope that there will be no objections. As a matter of fact, objection to what I have to say will not even be objectionable. Be that as it may, "may it please the bar." And to add a judicial reflex, "for whatever it's worth."

For whatever it's worth also, I have chosen to comment today upon a topic that is as timely as it is hoary. We are hearing and reading an abundance of words these days about the civil jury, and many of those words are unkind. The issue is not new, and almost everything that can be said has been said at least for a generation. Erudite scholars, eminent judges and renowned lawyers have stated the case exhaustively on both sides, and sometimes in the middle. It is not my purpose to present a detailed dissertation or argue a defense. It is my desire merely, on the basis of my relatively brief experience as a Federal trial judge, to go on record with a kind word or two for the civil jury.

By way of preliminary introduction, I should like to make the point that I do not conceive the issue of the merits or demerits of the civil jury to be one of adversary contention between plaintiff and defendant. There is perhaps, in the public mind, an impression that the jury is the plaintiff's or poor man's friend. I do not have the advantage of any good recent statistical studies of the problem, but there is certainly reason to doubt that judges are less favorable or less generous to plaintiffs than are juries.

It is undoubtedly true that the jury trial is normally demanded by the plaintiff rather than by the defendant, for the obvious reason that the plaintiff generally exercises first choice. But I am under the impression that defendants are not reluctant to demand jury trials when given the choice. The reasons may vary with the kind of case. For example, in a contract action, the defendant may be motivated by impulses similar to those of a plaintiff in a negligence case. And in a negligence case, a defendant may be motivated by reasons quite different from those of the plaintiff. The reasons and motives are myriad, and encompass the whole issue of the desirability of the civil jury. But they encompass also both sides of the aisle. Therefore I feel that I may address myself to the problem, as a judge should, without the slightest tinge of partisanship.

It seems to me that those who have had unkind things to say about the civil jury recently have approached the subject from two distinctly different points of view. One point of view emphasizes the contention that the civil jury is an anachronistic, unsound, and unworkable instrument for the determination of fact and the ascertainment of truth. The other point of view voices no disrespect for the functioning of the jury in its sphere, but emphasizes that it is responsible solely or in large measure for the law's delay and the frustration of the administration of justice.

The latter point of view is that of Judge Peck. In terms of the New York State courts, he presents a powerful case. My own recent experience has been with the Federal courts exclusively, and I am in no position to offer any comment on the practical situation existing in any other court. The problems differ in degree and in kind. But for the Federal courts, specifically for the United States District Court for the Southern District of New York, I am in a position to report that the civil jury does not represent an insuperable log jam in the stream of justice. A detailed analysis of that situation would require a whole afternoon, and I propose to devote myself today to the problem of the soundness of the concept of the civil jury as an instrument of justice. But in summary, this much can be said. We are one of the busier courts of the Nation. Even with the recent additions to the bench we have never been accused of being overstaffed. As a matter of fact, for some time now, we have not even had our full complement of authorized judges. But since the recent additions we have been enabled to inaugurate a new program and system of administration of our litigation. This program has already strikingly demonstrated, and shall in the very near future have conclusively demonstrated, that we can keep our litigation, including our civil jury trials, moving sufficiently rapidly so that there can be no ground for the classic complaint about the law's delay. Indispensable to the success of the demonstration is, of course, the wholehearted cooperation of a responsible bar. The ultimate summary conclusion which I present to you, on the basis of the experience of my court, is that the necessarily slower civil jury trial is not necessarily or inherently so slow as to be inconsistent with the true administration of justice.

It is the other point of view which I should like to discuss in some greater length, the point of view which emphasizes the inability and unsuitability of the civil jury to discharge the responsibilities assigned to it. But before proceeding further, the problem must be, from my point of view, narrowed by definition. Whether or not the jury is suitable for its assigned function, it must be borne in mind that the jury's function is not universally co-extensive with litigation. There are obviously many areas in the dispute settling machinery of our law in which the jury has no place, and in some of these areas it has had no place historically. There come immediately to mind, as examples, the courts of equity, other tribunals of specialized jurisdiction, quasi-judicial bodies and administrative agencies, to name only a few. A good deal of the discussion of civil juries does go into the substantial issues raised by this consideration, but the limitation of time prevents me from entering into that discussion this afternoon. I limit myself, therefore, to a discussion of the civil jury in the context of that area of the law where it does in fact customarily prevail. And even within that context, I make the preliminary concession, without discussion, that there are certainly cases not suitable for the decision of a jury.

But I address myself to the general indictment of the civil jury. It is not an indictment which is readily susceptible to practical proof, although there are those who talk as if the jury's inadequacy were a demonstrated fact. The point of departure in any discussion, I feel, must be an analysis of what the jury's primary functions are, and I think that there is no great dispute about the analysis. Broadly, the jury must make determinations of fact, and apply the facts as so determined to the law as given by the court, in order to reach a decision. But that "broadly" is enormously broad, the subject matter of comment without end and seemingly without beginning in legal literature. I trust that you will forgive me for adding briefly to the volume, if not the content, of that comment.

Litigation, and indeed the legal profession, would be of no consequence in the lives of men if there existed some mechanical or scientific method of determining objectively what in fact had occurred upon the occasion giving rise to a dispute between human beings. Even in the fields of pure science, the investigator's conclusions are not infallible, and the law is anything but a laboratory of pure science. By and large, in order to discover what has happened in a situation involving human beings, we must rely upon what human beings say. I needn't belabor, to a group of trial lawyers, the problem of the difference between the testimony of honest witnesses describing the same event. Honest variations in testimony arise from the difference in witnesses' sense perceptions, their memories, their abilities to articulate, and a host of other factors. In fact, so fundamental are these differences that identical testimony by two witnesses is frequently suspect. At the very best, the law is at the mercy of the lowest common denominator of human frailties in any attempt to get at the truth. And at the worst the law is at the mercy of falsehood, in its almost infinitely varying degrees. It is difficult enough to piece together a story on the basis of honest testimony, but it is indescribably more difficult to bear in addition the burden of determining credibility. The writer Stephen observed that "The natural and acquired shrewdness and experience by which an observant man forms an opinion as to whether a witness is or is not lying, is by far the most important of all a judge's qualifications, infinitely more important than any acquaintance with law or with rules of evidence. "* * * This preeminently important power for a judge," he continued, is not to be learned out of books. Insofar as it can be acquired at all, it is to be acquired only by experience, for the acquisition of which the position of a judge is by no means peculiarly favorable. "* * * Every one must learn matters of this sort of himself, and though no sort of knowledge is so important to a judge, no rules can be laid down for its acquisition. * * * No process is gone through, the correctness of which can be independently tested. The judge has nothing to trust but his own natural and acquired sagacity."

My own experience has been a verification of these wise words. The determination of what to believe is a problem that runs the whole gamut between witnesses who are honestly motivated and those who are deliberately lying, and it is one of infinite difficulty. Althought that determination is by far the most difficult problem in the law, it is not a legal problem. A view of witnesses from the bench affords no advantage over a view from the jury box. The view presented is a view of people, and the problem presented is one of judging people. This judgment, as Kent put it, "does not require a master's skill in the science of the law. It depends more on a knowledge of the passions and of the springs of human action and may be the lot of ordinary experience and sagacity."

But the determination of what to believe as a matter of fact must be followed by the making of a decision. As difficult as the process of factfinding is, the decision does not follow mechanically or automatically. Thayer and Holmes engaged in a memorable dispute about the nature of the jury function in a negligence case. The issue was what is involved in a jury's application of the reasonable-man standard to the facts as found. Thayer felt that this involved merely a further inference of fact, but Holmes held that each case involved a determination of the standard of conduct, and was thereby a temporary surrender of the judicial function. It is hardly to be doubted that this process is not one chained exclusively to the evidence. The juror selects from among his experiences those which he chooses to regard as normative. In applying the facts he has found to a rule of law he may, and indeed must, refer to a whole complex of additional concepts and attitudes, personal and impersonal, conscious and unconscious, articulate and inarticulate.

Thus we have the two main elements of the jury's job: The determination of what facts to believe and the making of a decision based on those facts. For neither job is there a determining rule, and for neither job is a judge peculiarly qualified by reason of his position and experience. And it is my opinion that 12 jurors can do these jobs better, in the long run, than 1 judge.

As G. K. Chesterton was quoted by Judge Peck recently, "I would trust 12 ordinary men, but I cannot trust 1 ordinary man." I suppose there is no spiritual significance to the number 12, although Lords Coke and Summers tell us that the number was chosen: "Like the prophets were 12 to foretell the truth; the apostles 12 to preach the truth, the discoverers 12, sent into Canaan to seek and report the truth; and the stones 12 that the Heavenly Hieruselam is built on." I would not go so far as to claim holy sanction for the number, but I do claim the sanction of reason and experience for a number substantially greater than one. Are not all appellate tribunals composed of several judges? And if we need a variety of minds to give us, in the long run, the most dependable judgments on supposedly definite rules of law, how much more do we need a variety of minds to give us dependable judgments on indefinite masses of facts? It cannot be denied that judicial opinions, from the lowest to the highest courts, represent in some measure the personal impulses of the judge, in relation to the situation before him, and that these impulses are determined by the judge's lifelong series of previous experiences, reflecting his temperament, personality, education, and environment. If that applies at all to the legal opinions of a judge, how much more it must apply to the decisions of a judge functioning as a jury. I do not mean to imply that judges are peculiarly subject to the influences of their backgrounds and value stand-

ards. But backgrounds and value standards are not altered when one puts on a judicial robe. Furthermore, a judge's personal values may be perpetuated and codified into a system. The ritualistic practices of our profession, leaning so heavily upon precedent and codification, render that a particularly likely danger. The occupational hazard of the judiciary is hardening of the categories, and when a judge sees similar situations before him, time and time again, year after year, they may, unconsciously on his part, merge into one. Certainly, all of you are familiar with the biases of some individual trial judges, and for all I know, with some of mine.

Obviously, I do not mean to imply that jurors are less subject to influence by personal idiosyncracies and value standards. But that, is precisely the point. With 12 of them, it seems to me, there is less likelihood that a verdict may be distorted by the personality factor of any 1 juror, and that there is more likelihood of a qualitatively better verdict based on the reconciliation of 12 varied temperaments and minds. Moreover, a jury of 12 brings a valuable array of experience in the problems of mankind and of acquaintance with the trials and obstacles that confront men in the pursuit of life, peace and security. No single judge, I venture to say, can bring to bear so varied and valuable an experience as can any jury. Wigmore suggested the experiment of inviting 12 intelligent friends, some evening, to your house, and asking them any question of opinion or fact, calling for serious thought—a question of politics, business, morals, health, science, recreation or what you like. "Will it ever happen," he asked, "that you do not glean from at least 2 or 3 of the 12 some argument or detail or judgment that the others (if they were agreed) had failed to mention?" And is not this precisely the virtue that is of supreme significance in the discharge of the two cardinal responsibilities of determining, in a trial, what facts are worthy of belief and the making of a decision based on those facts? The great Holmes did not think so. He wrote, in The Common Law, "A judge who has long sat at nisi prius ought gradually to acquire a fund of experience which enables him to represent the common sense of the community in the ordinary instances far better than the average jury. Furthermore, the sphere in which he is able to rule, without taking their opinion at all, should be continually growing." With the utmost of deference to that giant of our jurisprudence, that has not been my experience. Of course, I have not long sat on the trial bench, and perhaps when I shall have, I shall change my mind. But my present experience teaches me a greater respect for the jury's capacity than for my own in the performance of the functions I have described.

All of this, the antagonist of the civil jury may reply, is very interesting theoretical twaddle. For the jury's verdict has very little to do with the facts or the law or the judge or any of the virtues of mankind. It is said that the jury is a law unto itself, deciding by whim, chance or chicanery. A verdict may be returned by a juror who has slept through the testimony, as the result of the flip of a coin, or in order to get home quickly. Jurors consider matters prohibited by their oaths and they permit their verdicts to be rendered in obedience to their prejudices or sympathies, regardless of their duty; they discard the legal rules and the evidence and bring in a verdict out of their own heads or hearts. Even if they should try to follow the judge's instructions, they probably couldn't because they consist mostly, in Judge Jerome Frank's words, of "ineffective rigamaroles, incantations, or semimagical rituals which the judge utters to the jury's uncomprehending ears."

That is quite an indictment of the civil jury, and it is delivered in deadly earnest by highly respectable authorities in not inconsiderable numbers. Of course, it's a pretty difficult indictment to prove. I get the impression that the proof is presented in the vein of res ipsa loquitur, but it reaches me only in the vein of ipse dixit. My own experience with my juries has been satisfactory. I don't know what goes on in the jury room, and I shudder to think of the obvious suggestion to remedy that void. But until such a times coses, if it ever does, when we can know precisely how a jury behaves, I am convinced from my own experience with juries that they behave themselves very well indeed.

As a judge who takes great pains with his jury charges, I must concede reluctantly that they are not frequently models of clarity and conciseness. On the other hand, I fervently hope that they cannot, by and large, be characterized in the playwright Channing Pollock's words as "grand conglomerations of garbled verbiage and verbal garbage." In any event, I can report that juries listen intently. They seem to understand. By their questions, sent out from the jury room, they often indicate that they understand. And by their requests for repetitions of less admirably phrased portions, they also indicate what they don't understand and request clarification. Along with Judge Goodman of the United States District Court for the Northern District of California, I venture to be skeptical about whether there is any basis in fact for the flat statement, so often and positively repeated, that juries frequently pay no heed to what the judge tells them to do. And along with Judge Goodman, I am also quite curious about the kind of evidence the other charges are based upon: namely that verdicts are often arrived at by the flip of a coin or because the jurors want to get home. I wonder whether these statements are based upon actual investigation or whether they are made for dramatic value. Not ever having had a tap on any of my juries, I can't make any categorical denials, but I personally have never heard a reliable report of such an incident. In fact, to cite a personal experience, which proves obsolutely nothing, I was once the intermediary between a woman juror and her harrassed husband on the subject of what to do with the chicken in the oven so as to get it ready for his and the childrens' supper. I spoke to her afterward and she hadn't the slightest intention of shortchanging her jury responsibilities for the benefit of her domestic responsibilities.

Of course jurors, like other human beings, make mistakes. But their mistakes are in no different a category from the mistakes that may be made by legislators, administrators and judges which equally may affect the life and security of the individual citizen. I can only insist that I am well satisfied that the juries in my experience have acted responsibly, in accordance with the oaths they have taken.

But ascribing to the jury the most honorable of motivation and intention, it may be said that in cases which relate to such matter as commerce, mechanics, science and medicine, the issues are invariably beyond the comprehension of the average juror. How can a mere voter be expected to decide intelligently whether a steamship has been equipped with proper machinery? How can a mechanic, however well-intentioned, judge of the propriety of an unsuccessful surgical operation? Is a housewife capable of weighing the testimony of rival geologists? Those are fair questions, but I should like to put one more fair question. How can a mere judge, however well-intentioned, resolve all of those problems? If our trials present technical and scientific questions for resolution, I submit that a judge is not in enough of a better position to resolve them to make any substantial difference, if he is any better position at all. It seems to me that the issue is not one between judge and jury, but between adversary and neutral presentation of expert testimony. I am not convinced that the usual battle of the experts presents an undue challenge to the jury. If it does, it presents a quite similar challenge to the judge. And if this is thought to be a serious problem, then there appears to be no sufficiently strong reason against providing that experts in the various specialized fields should be chosen not by the parties litigant but by the court and not at random, but from a carefully compiled panel of properly qualified authorities approved beforehand by the respective scientific associations involved. I am not entirely convinced that this would be a wise solution to the problem. Nevertheless, as between judge and jury the problem is a standoff. If, as one scholar has noted, the data in our modern cases not infrequently assume aspects as far above the understanding of the everyday citizen as modern science is beyond the science of the 14th century, then I submit that the chances are that it is also well above the understanding of the judge; and if, as the same scholar has said, the average jury in such a case is about as helpful as it would be in solving a problem in higher mathematics, in industrial finance or in electrical engineering, then I submit that the average judge is not the proper stalwart to fill the bench. And if, as Prof. Leon Green opined, the mere voter can do the job no longer, but must stand by for one who knows more about the true interests of society, more about the determination of facts and more about handling the complex business of men, then I submit, the mere voter is no longer qualified to vote, but should stand by for one who knows more about the true interests of society. For ultimately, the fact determinations involved in voting for a mayor, a governor, a Congressman or a President are more complex and infinitely more significant than any fact determinations called for from the jury box.

I trust that I will not be charged with injecting politics into the jury box. But no lesser a commentator than deTocqueville said that the jury is a political institution because it places the direction of society into the hands of the people. It is a segment of the community representing the community. Legislative law, as well as the common law, gets enforced through the courts. It is imperative, therefore that the popular attitude toward the administration of justice should be one of respect and confidence. Purely official justice is not likely to receive such confidence. The way to secure it is to give the citizen-body itself a share in the administration of justice. As the novelist Forsyth commented, "Each man in judging his neighbor thinks that he may be also judged in his turn." The citizen's jury service serves also to spread among the community at large a respect for the decisions of law. An exclusive system of judge trials, I am convinced, would never do so.

However, it may be fairly argued that the jury is not regarded by the citizenry at large as a bastion of democracy. And it must certainly be conceded that if there is any crush of prospective jurors at the courthouse doors, it is a crush of those seeking to avoid service rather than those seeking to serve. But is it not also true that the polling places on registration day are sometimes the lonesomest places in town? And on primary day, yes, even on election day, the voting booth sometimes sees fewer customers than the telephone booth. The fact that the citizen is not always anxious to exercise is democratic rights and prerogatives is hardly an argument in favor of their

abolition, though it may certainly serve as the cause. But suppose we were to abolish the civil jury in favor of the judge-trial. I doubt that there would be a popular hue and cry for the restoration of the jury, at least as an immediate consequence. Nevertheless, Wigmore has suggested what we may well expect. He predicted that if we were to shift over to judge-trial, we would witness an extreme and irresistible demand for the popular election of short term judges. And it is no enemy of democracy who sees in this a dangerous and inadequate substitute for the direct participation of citizens in the administration of justice.

I trust that my kind words for the civil jury have been taken as they were intended—as a purely personal opinion based upon my own relatively brief experience as a Federal trial judge. And the opinion was ventured with deference and respect for those of my elders and betters who disagree. The problem is one of profound significance and must one day be resolved. I do not know how near the day of resolution is, nor do I profess a confident opinion on what the resolution will be. But, if the practical problems of administration can be solved, I would cast my vote for the civil jury.

Philadelphia's Economic Problems

EXTENSION OF REMARKS
OF
HON. EARL CHUDOFF
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. CHUDOFF. Mr. Speaker, as all the Members of the House know, the State of Pennsylvania is facing a serious economic situation which confronts the city of Philadelphia and its surrounding metropolitan area. In my opinion, we have a chronic problem of unemployment in Philadelphia which requires Federal, as well as State and local government assistance.

There is now pending before the Senate, S. 2663, which is known as the Depressed Areas Act. The Subcommittee on Labor of the Senate Committee on Labor and Public Welfare held public hearings on S. 2663 at Wilkes-Barre, Pa., on February 10, 1956. At these hearings there appeared the former mayor of Philadelphia, the Honorable Joseph S. Clark, Jr., and the present mayor, the Honorable Richardson Dilworth. Both these men made excellent statements in support of S. 2663, which I feel every Member of the House should read.

The statements follow:

STATEMENT OF FORMER MAYOR JOSEPH S. CLARK, JR., OF PHILADELPHIA, BEFORE THE SUBCOMMITTEE ON LABOR OF THE UNITED STATES SENATE COMMITTEE ON LABOR AND PUBLIC WELFARE, MEETING AT WILKES-BARRE, PA., ON FEBRUARY 10, 1956

First, may I express my wholehearted support of Senate bill S. 2663 on which these hearings are being held. I am happy that the subcommittee has come to Pennsylvania's anthracite coal area to see for itself economic conditions which cry out for governmental assistance. Assistance in which, I believe, the Federal Government must join, because the valiant and combined efforts of local and State governmental agencies together with private industry are not adequate to deal with the problem of economic blight and chronic unemployment.

Particularly I should like to endorse the splendid testimony given before your committee in Washington by Mrs. Min Lurye Mattieson of the International Ladies Garment Workers which portrayed so vividly the needs of this particular area and the assistance which the Federal Government could bring.

I also find myself in accord with the testimony presented to the committee on January 6, 1956, by Irvin F. O. Wingeard, of the Pennsylvania Bureau of Employment Security; on January 23, 1956, by Governor George M. Leader, and now today, by Pennsylvania Secretary of Commerce William L. Davlin.

It is heartening to know that at long last the Eisenhower administration, in this year of 1956, has finally espoused the cause for which Senator DOUGLAS, Senator NEELY, and the other joint sponsors of S. 2663 have long fought.

In the President's Economic Report to Congress he indicated a drastic shift in the philosophy of his administration. He said:

"We have also come to believe that progress need not proceed as irregularly as in the past, and that the Federal Government has the capacity to moderate economic fluctuations without becoming a dominant factor in our economy. * * *

"The Government can do a great deal to help people who have been left behind in the on-rush of progress by undertaking special programs for raising their productivity. * * *

"To cope with chronic unemployment which has persisted in some communities, despite the attainment of practically full employment in the Nation at large, a new area assistance program is recommended."

The specific recommendations of the President to help local communities reduce unemployment are stated as follows:

"(a) Establish an area assistance program for aiding communities experiencing substantial and persistent unemployment, and make technical assistance more broadly available to aid urban and rural communities in developing balanced and progressive economies.

"(b) Authorize the Housing and Home Finance Agency to give priority to applications for aid, in financing needed public facilities, from communities experiencing substantial and persistent unemployment.

"(c) Make benefits under the urban renewal program available for industrial redevelopment of business sections in such communities."

It can thus be hoped that the bill before your committee can receive bipartisan support and be enacted into law at an early date.

My principal purpose in appearing before you today is to urge you to extend the coverage of this bill to include the serious economic situation which confronts the city of Philadelphia and its surrounding metropolitan area. In my judgment we have in Philadelphia a chronic problem of unemployment and economic depression which requires Federal, as well as State and local, governmental assistance. Let me give you the facts:

1. We are, in Philadelphia today, supplying surplus food obtained from the Federal Government to 24,000 households containing approximately 67,000 people, or approximately 3.5 percent of our population. This is an increase of 14,000 households from the September figures. Moreover, the number of households is growing every month.

2. While unemployment in Philadelphia, expressed in terms of a percentage of the labor force, dropped during the fall of 4.9 percent it is rising again, and I am confident that the January figures will show the city as having an unemployment percentage of approximately 6.5 percent. The 1955 average percentage was 6.8.

3. The method of computing these statistics is undoubtedly conservative for Philadelphia. Approximately 20 percent of our labor force works in Philadelphia but lives outside the city limits. The method of computation determines the number of unemployed on an industry basis but the number of unemployed on a household basis. It therefore does not adequately reflect our unemployment. If the figures were adjusted to express the ratio of unemployed individuals formerly employed in Philadelphia the 1955 average would rise to 8.2 percent, the January 1955 adjusted average would be 10.2 percent, and the estimated January 1956 adjusted average, 7.5 percent.

4. In Mr. Wingeard's testimony he estimated there were in mid-December 241,000 Pennsylvania workers totally unemployed. In mid-November there were in the 8-county Philadelphia area (5 Pennsylvania and 3 New Jersey counties), 85,700 unemployed. We estimated that the January figures will show an increase to over 100,000. When it is remembered that the Philadelphia area labor force is around 1.7 million individuals, it can be seen that our employment situation is far from healthy.

The causes of this situation are chronic, not temporary. They can be removed only by combined governmental and private enterprise action which will cost substantial sums of money before positive results will appear.

Like most large metropolitan regions, Greater Philadelphia has a number of disintegrating and unhealthy pockets; neighborhoods where obsolete loft-type manufacturing buildings have been vacated for more spacious sites in the suburbs; areas where low-income families, many of them minority groups from the South, have moved in, headed by individuals with little of the training or skills required for modern industrial employment. We are afflicted with industrial, as well as residential, slums.

Moreover, because of the built-up area of our central city and our increasing traffic and transportation difficulties, it is difficult for private industry or chambers of commerce to find large enough sites with adequate off-street parking to make attractive locations for new industry.

The result is a spreading sore which threatens the prosperity and therefore the taxables of the city of Philadelphia at a time when we need desperately to rebuild and modernize our community in order to take advantage of the great opportunities provided by the industrial expansion of the Delaware Valley, and the Greater Philadelphia metropolitan area.

Our municipal government is aware of this challenge and is pressing forward with a public improvements program as heavy as our tax base will permit. Our 6-year public-improvements program calls for an expenditure of $573,162,461. Included in this huge sum are many millions of dollars for slum clearance, urban development, port and airport development, and such projects as the Food Distribution Center, sponsored by a civic-minded group, the Greater Philadelphia Movement, but requiring over $15 million of city funds to make the program economically feasible.

This Food Distribution Center project will not only redevelop a vast waste and open dump area in south Philadelphia into a thriving commercial center, but will permit the redevelopment of the present Dock Street area, now an unsanitary blight all too close to Independence Hall and the Mall project which the Federal Government is helping to finance.

Mayor Dilworth stated earlier this week that taxes in Philadelphia would have to be raised an additional $30 million in 1957 to provide the level of services necessary to give good government. This increase in taxes would be reflected in an increase in our capital improvement program because the tax base will then be able to support

many badly needed additional projects which had to be postponed to preserve the city's credit, based as it largely is, on the percentage of the tax dollar which goes for debt service. Our city's director of commerce, during my administration, Walter M. Phillips, and his successor, Fredric R. Mann, have completed industrial development plans which will provide the matching funds necessary to qualify for Philadelphia's share of the Commonwealth of Pennsylvania's industrial rehabilitation program outlined to your committee by Governor Leader on January 23. Specific acreage in the city, a great deal of which is already city owned, is being set aside for this program which we would hope to extend (if Federal funds are available) into the depressed industrial areas mentioned a moment ago.

Accordingly, I submit that Philadelphia comes before your committee having done everything reasonable to help itself in the difficulties I have been discussing.

I think you will agree that Governor Leader's program puts the Commonwealth of Pennsylvania on the line as doing its full share to bring economic prosperity to all of the presently depressed areas.

It remains to consider whether the Federal Government is pulling its oar in the boat. I submit that it is not.

As one example let me indicate what is happening to Government contracts in the Philadelphia area. In the year ending July 1, 1954, contracts negotiated by the Philadelpria Ordnance District within the city limits totaled $13,242,600. In the following year during which we were placed in the substantial unemployment category by the United States Department of Labor, and were therefore, in theory, entitled to special consideration, the contracts negotiated dropped to $5,684,700.

Defense contracts for the Commonwealth of Pennsylvania dropped from approximately $2 billion in fiscal 1952 to $280 million in fiscal 1954. Pennsylvania's share of total Federal spending declined from 5.1 percent in 1952 to 2.6 percent in 1954.

Just before Christmas the Naval Air Material Center announced a drastic cutback in employment at the Philadelphia Navy Yard. The best we could get out of the Navy was a promise that "every assistance will be afforded employees affected in the area to secure alternative employment."

We, in Philadelphia, have been the stepchildren of the Federal Government for almost 4 years.

I recommend that S. 2663 be expanded by appropriate language to include as a depressed area entitled to Federal assistance (upon a showing that the local and State governments involved are making fair contributions to the solution of their own difficulties) any metropolitan area which can show urban, industrial, and residential blight adequate to qualify it for Federal aid under present housing and urban redevelopment legislation. In other words, I recommend that S. 2663 be coordinated with the Housing Acts of 1954 and 1955 in such a way as to create a unified attack on the metropolitan area evils I have been discussing today.

STATEMENT OF MAYOR RICHARDSON DILWORTH, OF PHILADELPHIA, BEFORE THE SUBCOMMITTEE ON LABOR OF THE UNITED STATES SENATE COMMITTEE ON LABOR AND PUBLIC WELFARE, MEETING AT WILKES-BARRE, PA., FEBRUARY 10, 1956

The Senate bill under consideration states that "unemployment in certain areas of the Nation is jeopardizing the health, standard of living, and general welfare of the Nation." This was a great step forward, as only a short while before this bill was introduced, the President's Economic Report of 1955, blinded by the general prosperity, stated that "adjustment of depressed areas to new economic conditions both can and should be carried out by the local citizens themselves." Since then, of course, prodded by the Congress, the President has recognized the importance of the problem which the Governor of this Commonwealth, among others, had given a great deal of thought to when presenting his first program over a year ago.

It is only natural that this State's largest city should be most concerned about the unemployment and lowered standard of living which came in the wake of continued depressed economic conditions in a number of areas in the State. Quite aside from the element of sympathy, it directly affects the markets for Philadelphia's goods, and the burden on our citizens and our businesses increases with the increased need for State aid to those unfortunate communities.

But our concern is more direct. Although on the face of it Philadelphia is still prosperous, and though we do not suffer the hardships of Altoona, or Pottstown, or Wilkes-Barre, Philadelphia faces serious economic problems. This puts us in the "gray" area of facing a difficult economic situation without being sufficiently depressed to be at present considered for Federal aid. Philadelphia has many of these economic difficulties in common with some other congested metropolitan regions in the East, like Pittsburgh, or New York, or Boston, and while the city itself bears more of the burden of unemployment and loss of taxables than the surrounding counties, its problems are essentially those of the entire metropolitan area.

Philadelphia's economy has not really been able to fully recover from the 1954 recession. The great diversification of our business and industry kept us from going as deeply into recession, but by the same token, not enough of our industries have participated in the upswing. Unemployment has only dropped from a high of 96,000 in January 1955 in the city itself to an estimated figure of more than 70,000 this past month. In spite of a temporary seasonal improvement toward the end of last year, the 1955 average was about 80,000 or 6.8 percent of the labor force, as against 4 percent on the average in the United States as a whole. If the figure is calculated as a percentage of the city's resident labor force, it becomes an average of over 8 percent.

Nor is this all. Although our employment level has stayed about the same in the last 4 or 5 years (while national employment has increased by roughly 4 million), this even level hides a substantial decline in manufacturing of close of 45,000 workers, and an increase in trade and services by about the same amount. Part of this decline is due to higher productivity, brought about by automation. Part of it is due to the exodus of the textile and hoisery industries to the South—but that only accounts for about one-third of the decline. Given the fact that manufacturing for the national market is the basic economic activity which enables Philadelphians in turn to buy goods from the rest of the country; and that every dollar added to manufacturing generates about $3 income of Philadelphians, it is, indeed, a cause for concern that virtually none of Philadelphia's industries show a substantial recovery from the recession. The prospective increase in manufacturing capacity is not good either; the estimates of manufacturers of their expenditures for plant and equipment in 1956 are 6 percent less than they spent in 1955, the expected expenditures of manufacturers across the Nation is up by 13 percent.

It should be added in this connection that Pennsylvania's and Philadelphia's share of defense orders has recently been lagging in spite of Federal promises to give special consideration to substantial labor surplus areas. Only recently has the carrier contract awarded to the Camden yard of the New York Shipbuilding Corp. broke the persistent draught to a certain extent, but defense establishments located in the city keep laying off workers in spite of the city administration's protestations.

Some of the causes of this entire situation are typically urban problems which have not yet received the national attention they deserve. People in growing numbers have settled around our cities in concentric circles. The city itself has grown around its core in a completely unplanned way. The central city, which should furnish a variety of business, professional, and distributive services to an ever-increasing surrounding region, is hemmed in by obsolete industrial structures and the general congestion of the city with its growing traffic and transportation problem. Crowding and lack of space for expansion do not permit industries to grow as they should, nor services to be accessible as they must be. All this makes the ungainly metropolitan area even less attractive for businesses and for gracious living. The diversity and potentialities of a city make it harder to find single remedies, but for that very reason more imperative.

Philadelphia has done a great deal on various fronts to combat these ills over the last 4 years, as former Mayor Joseph S. Clark, Jr., points out in his testimony before this committee. My administration is committed to careful economic studies of the causes of and possible other remedies for our economic plight. Plans for economic and industrial renewal are being laid. But Philadelphia cannot accomplish the feat of pulling itself out of this precarious situation entirely by its own bootstraps. As economic problems continue, they become cumulative and harder to solve. Over most of the last 18 months we have been a substantial labor surplus area. It would not take too much more to push us the added step into becoming a depressed area.

You will, I am sure, permit me the suggestion that Senate bill S. 2663 should somewhat broaden its definition of "depressed area." The requirement of section 6 that at least 6 percent of its labor force have to be unemployed for at least 3 years is hard to meet. It is particularly difficult for areas which badly need the aid provided under this bill to help them out of a situation which in 3 years may be an almost insoluble major problem affecting, in Philadelphia's case, over 3 million people. It seems unfortunate to have to wait through 3 years of consistent misery before remedial action can be really effective. Also, an area with diversified industry might improve seasonably which is not too meaningful when the long run is considered. (In spite of the average unemployment percentages mentioned above, Philadelphia was taken off the substantial labor surplus area list by the Department of Labor at the end of last year and will now have to be put back.) It is therefore suggested that an average percentage of unemployment over the specified period be the prerequisite rather than a continuous one. And it may be that this committee will feel that for areas beset with peculiarly urban problems the specified time should be reduced to 18 months at 6 percent unemployment.

The specific remedies of bill S. 2663 would be an infinite help for Philadelphia if it could qualify for them. Section 9, which provides for the construction of public facilities, is particularly applicable. Philadelphia has a carefully worked out 6-year capital program of improvement projects which, if speeded up, could materially help the economic situation. Many of these projects create employment directly, as well as indirectly after completion. Yet the city does not have the funds to move them ahead of their schedule. If eligible under the bill under consideration, Philadelphia could present immediately detailed proposals to the Depressed Areas Administrator for consideration under section 9 (b). Likewise, the requirement of a local commitee in section 7 is in line with the way in which this has been handled in Philadelphia, as representative committees of prom-

inent citizens have been called in every time new problems are being approached; this was done, for instance, in connection with putting our urban renewal plans into effect. The city's plans, e. g., to use city-owned land for industrial development has been conceived in this fashion.

Not only the number of unemployed workers in the city, but their composition seems to require greatly increased training, rehabilitation and careful counselling. Many are unemployed because their skills have become obsolete. Others have never held jobs in modern industrial environments, and need a great deal of special advising, training, and vocational education as prescribed under section 15. Better coordination of and strengthening of the services of the State employment bureaus would be most beneficial, as would be the payment of supplementary unemployment compensation (sec. 16).

Beyond that, it may be suggested that some of the remedies proposed in the Report on Low Income Families of the Joint Congressional Committee on the Economic Report, published 6 months after the introduction of the bill under discussion, be incorporated in this bill. In particular, Philadelphias' small businesses have suffered badly and would need technical assistance, financial advice and credit aids. Failures of small businesses, and the inability of the city to attract sufficient struggling new ventures which eventually grow into large employers of labor, may be responsible for Philadelphia's long-range economic problems to a larger extent than is usually realized.

Philadelphia is struggling hard to get out of the squeeze between economic conditions which require financial help and substantially increased services, and a steadily decreasing tax base. Many metropolitan areas, in which millions of our people live, suffer the same kinds of problems. They are unable to furnish all the means to prevent their slipping deeper into economic difficulties. It is most encouraging that the Federal Government realizes its responsibilities with regard to deeply depressed areas. I am respectfully submitting that unless the urban economic problem is also recognized as a Federal responsibility today, Washington may be requested to help at a time when it will be much harder to improve the situation.

Compulsory Social Security for Farmers

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. McGREGOR. Mr. Speaker, I am today inserting in the CONGRESSIONAL RECORD petitions signed by many of my constituents of the 17th Congressional District of Ohio. You will note, Mr. Speaker, that these citizens are asking for the repeal of that portion of Public Law 761, or any other social-security law which contains compulsion for farmers, farmer-employer, or the farm-owner.

Regardless of the merits or demerits of this subject, I am one who firmly believes that all should be given an opportunity to be heard and their views brought to the attention of this Congress. I respectfully ask that the proper authorities, or committee, of this Congress give every consideration to the request contained in these petitions.

Are We Ready To Draw?

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. FISHER. Mr. Speaker, I wonder how many of us realize that the bloody war in the Pacific, fought in 1944 and 1945, was really a series of battles to win airbases so that we could eventually pound the heart of Japan?

That thought has occurred to me many times as this Congress has considered the question of overseas bases and appropriations for them. Although an invasion of Japan was planned, we never had to take the step which would have been so costly in American lives. From the bases that we won, we were able to bomb Japan into submission. From the bases that we have built since 1945, we could launch a counteroffensive that would go a long way toward insuring victory, should another war be forced upon us.

This thought was the central thought of a notable speech which Gen. Nathan F. Twining, Chief of Staff, United States Air Force, delivered before the Chamber of Commerce of Waco, Tex., on February 7. General Twining pointed out that the B–36 was not ready for combat during World War II, even though planning of it had begun in 1941, even before Pearl Harbor. In spite of the bases we won at such cost and at such sacrifice, we could have bombed Japan into submission from this continent if we had had the B–36 and had it in suitable numbers in 1944.

Even though we need overseas bases today to help us preserve the peace, we would not necessarily need them in another war if we had other means of delivering bomb power.

I say if we had other means. We do have other means in the B–52, which is replacing the B–36. We will have other means when an atomic reactor is developed to make nuclear powered bombers possible. We will have other means when the intercontinental ballistic missile—the ultimate weapon—is perfected.

The question is, Will we have these other means available by the time that we need them? Technological advances by the Soviets spur us to plan for the future. The question is, are we planning rapidly enough? Only if we have the means available to stop a war if one gets started can we hope to prevent a holocaust that might destroy our civilization.

General Twining pointed out in his Waco speech that during the Korean war the Communist air forces never attacked our naval forces in the Sea of Japan or the air bases so crowded with our planes that they were easy to spot from the air. The Communist Air Force never attacked us here at home. The reason in both cases was the same: our B–36's and B–47's in the States were ready to go. The question now is, are our B–52's ready to go? Will our ICBMs be ready for launching if they are needed?

Speaking to Texans in language Texans understand, General Twining said:

As long as * * * we can keep our earned reputation of a quick draw and a deadly aim * * * no one is likely to draw on us.

The challenge to this Congress, Mr. Speaker, is to make the appropriations that will be adequate to maintain this readiness.

For that reason, Mr. Speaker, under unanimous consent of my colleagues, I extend my remarks and insert in the RECORD the address delivered by General Twining before the Waco Chamber of Commerce on February 7, which follows:

ADDRESS BY GEN. NATHAN F. TWINING, CHIEF OF STAFF, UNITED STATES AIR FORCE, BEFORE THE CHAMBER OF COMMERCE, WACO, TEX., FEBRUARY 7, 1956

I always feel like I am coming home when I return to Texas, and I am mighty glad to be here with you tonight. I am not alone in this at-home-in-Texas feeling. I share it with a great part of the men in the Air Force who have also been stationed here.

Texas has always been considered an Air Force State. Out of a total of 153 major Air Force bases in the United States, 27 of them are located in Texas. From the beginning of military aviation during World War I, Texas has been a favorite location for air operations.

Its large percentage of fair weather days and its wide open spaces make Texas especially adapted to flying.

The fine relationship between Texas and the Air Force has been fostered by the people of Texas. Texans have always been forward looking, and are known for doing things in a big way. Your leaders have done much to help keep American airpower strong. Much of the credit for the national security we have gained through airpower must go to men like your Senators, LYNDON JOHNSON and PRICE DANIEL.

Today, the Air Force has some of its most important operations here in Texas at bases like Carswell, Kelly, Bergstrom, and Biggs. Lackland is one of our largest training bases. Randolph, first famous as the West Point of the Air, now is the home of the School of Aviation Medicine—an institution unique in the world.

Texas has added to the air strength of the Nation in another way. The Texas Air National Guard responded during our last emergency to go and fight in Korea. The 136th Fighter Bomber Wing was one of the outstanding air units in the entire Air Force during the Korean war.

Of course, this is nothing new for Texas. During World War II, Texas supplied more volunteers per capita than any other State, and there were more troops training in Texas than any other State.

Waco itself, although better known as the home of Baylor University, has a little publicized aviation heritage. According to local history, James Walker, a Waco lawyer, invented an airplane in 1890. Its design was far ahead of its time, and included fundamental elements which later guided aeronautical engineers. Unfortunately, he was too far ahead of his time. There was no engine, at that time, to propel his airplane.

So by a trick of fate—the lack of an engine, the first flight was at Kitty Hawk instead of Waco.

Nevertheless, Waco became a center for aviation and the development of airpower. Here we are training many young men in the skills that are needed for a modern Air Force. We have found that Waco is a wonderful location for this important work.

Here we have the space we need and the facilities we need. Here we have found friendly, hospitable, and helpful people. You provide a splendid human environment

for the young airmen and officers of the Air Force.

Your encouragement of Air Force activities was instrumental in the decision to reactivate Connally Air Force Base in 1948.

I want to tell you that you can be proud of Connally Air Force Base. I looked over the base yesterday and it is indeed in fine shape. Besides the important training going on here, Waco is also headquarters for General Disosway's Flying Training Air Force.

Thus Waco is the hub of flying training that goes on at 23 airfields which extend from California to Florida.

I mentioned earlier that I had been stationed in Texas. That was well over 20 years ago.

Flying was rather lighthearted then, and so were the pilots. It was hard for pilots to live with the pomp and ceremony typical of the Army in those days. I can remember the rebellion that was going on then against the wearing of cavalry boots and sabers. We were permitted to take off our boots and sabers to fly, but we had to solemnly buckle them back on again when we landed.

We enjoyed our flying in a little different way then. Flying low today means flying below 10,000 feet. Twenty years ago flying low in Texas meant flying about at an altitude of 15 or 20 feet. Texans grew used to the sight of a string of tiny airplanes hopping in sequence over telephone wires.

Once in a while a bewildered stranger would run his auto off the road to dodge approaching airplanes. His complaints were usually silenced by our Texas friends. They convinced the stranger that his fright would betray him as a non-Texan. He was told that to become alarmed at the sight of airplanes marked him as unfit for the new air age.

Texas may have believed in the air age, but in those days the rest of the country remained largely unaware that flying and fliers were important.

Those fliers were important in the same way that the early settlers in Texas were important. They were pioneers of a new age and a new way of doing things.

Many airmen of those days foresaw the true meaning of airpower. With no encouragement, in fact, in the face of deep-rooted opposition, they went ahead to forge new tactics and design new airplanes.

We are all grateful to those men, for they laid the groundwork upon which we eventually won World War II. Airpower came of age during those years of the early forties. Even Army and Navy leaders became convinced that the airplane could no longer be limited to its early functions. The airplane could not be confined to being merely the eyes of the Army and the Navy and longer-range guns for foot soldiers and flotillas.

Actually air forces became the decisive force in combat before we ever used atomic bombs. Atomic bombs did not make airpower dominant, but they magnified its importance and became convincing arguments to those who did not understand.

Even with the weapons of the past, airpower demonstrated its dominance again in Korea. Over there we had only a few hundred fighters and bombers. Most of them were obsolete. All of them were geographically restricted, so that we could not even hit the bases where the enemy had his planes and stockpiles. This was a most inefficient kind of combat operation. Yet with all these handicaps it is well known that the Allied air forces were all that kept us from being kicked clear off the Korean peninsula.

This limited use of limited airpower also enabled the Allied ground forces to push the Communists' armies back. This push was stopped and a line on the ground was stabilized for reasons which had little relation to our military capabilities.

All this is well known. What is not generally understood is that the B–47's and B–36's, like those at Carswell had even a greater effect than the planes actually in combat in Korea.

Consider that our naval forces were unopposed in the Sea of Japan, within easy MIG range. Our frontlines were always easy to identify from the air. Our side of the front looked like a series of busy ant hills. On the enemy side, nothing moved. Our limited number of airbases were so crowded with planes that they were easy to spot from the air.

Inviting as these targets must have been, the Communist Air Force did not attack them. Nor were we attacked here at home. The reason, in both cases, was the same. That reason was our B–36's and B–47's, here in the States, ready to go.

This further points up the fact that airpower is the most influential element in any war, large or small. The dreams of those early airpower pioneers have certainly come true.

Yet even more important than its influence in war is the influence that American airpower has against war. Air Forces are now the prime element necessary to protect our freedom and to guarantee continued national independence.

It is unfortunate that we must devote a large part of our national effort to protecting our freedom. Yet we must, for to the north of us, across the Arctic, lies the Soviet Union. It is the stronghold of the communism that threatens to cover the world.

The United States is the prinicipal obstacle to the Reds in their quest for world domination.

As long as we live in freedom, the Communists must live with failure.

So far, their fear of American airpower has discouraged them from major aggression. For this reason they seek to neutralize our strength in the air. The Reds evidently think that the way to do this is to build a bigger, more powerful Air Force. They are striving mightily to overtake us as the acknowledged champions in the development and employment of airpower.

However desirable it would be to stop this race while we are still ahead, it is impossible. The Communists show no signs of letting up.

For years they have had thousands more combat planes than we. This was, and is, bad, if for no other reason than that they are beating us at our own game—this is, production.

Nevertheless, we were so far ahead of the Communists in quality of our airplanes and equipment, that we felt we had a decisive edge to overcome any challenge.

They are now reducing our quality lead. This is cause for concern. To deter the Communists from brutal aggression, we must be strong.

Keeping strong costs money, in ever increasing amounts. But the cost is not nearly so high as the probable cost of weakness.

You are aware that this is budget time in Washington. The Air Force has again been impressed with the fact that it will not have unlimited funds to spend.

We accept this fact of life as reasonable. Hence, budget time is a time when we must choose between conflicting goals. For instance, should we buy more of today's weapons? Or should we spend more of our money to develop the weapons of the future?

Actually our choice is not that simple or clear cut. We must stay strong both now and in the future. Nevertheless, technological advances by potential enemies always spur us to plan for the future.

To illustrate how this pays off, let us look at the B–36. This airplane is a good example of an early decision that affected our future. Since in its early days it was such a controversial subject, the decision to go ahead on the B–36 was difficult to make.

We started planning the B–36 in 1941, even before Pearl Harbor. At that time, the big question was: Why did we need a bomber that could fly six or eight thousand miles? Not everyone was used to great distances like you are here in Texas.

The Pacific campaign proved the need for an intercontinental bomber. Actually, war in the Pacific was a series of battles to win airbases so that we could eventually pound the heart of Japan. Although an invasion was planned, we never had to take that step which would have been so costly in American lives. From China, Guam, and Okinawa, we bombed Japan into submission.

Right then this became clear. With large numbers of bombers capable of reaching Japan from the continent, the same end could have been achieved without the costly island campaigns.

So we were determined to develop the B–36, even in the face of drastic budget limitations in 1948. To do this required a sacrifice of some of the other forms of airpower.

Eventually what some called the billion-dollar blunder became the backbone of the Strategic Air Command.

The B–36 has justified our faith in it. More than any other one factor, it has dampened the Soviet taste for aggression.

The B–36 is making yet another contribution to the Air Force. As you are well aware, it has for months been carrying an atomic reactor in the Texas sky above you. These experimental flights will speed the day when nuclear powered bombers will add to the deterrent effect of American airpower.

Looking back then, we can see that it was a wise decision to build the B–36. They are now being gradually replaced with a much better airplane, the all-jet B–52. We all hope that the B–52 can do its job just as the B–36 did, that is, without dropping a bomb.

This ability of American airpower to discourage war recalls the Waco nickname during Civil War days. As you know, Waco was called Six-Shooter Junction.

In those days, even peaceful men carried a gun. If a man was known to have a quick draw, and a deadly aim, he seldom was called upon to defend himself in a fight.

Only better men dared to challenge him.

Airpower has replaced the six-shooter and today all of us live in Air Power Junction. As long as we in the Air Force make the right decision and get the support of our Nation's citizens, we can keep our earned reputation of a quick draw and a deadly aim. If we keep our Air Force superior, no one is likely to draw on us.

Irrigation and Power Projects in Foreign Countries

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1956

Mr. MILLER of Nebraska. Mr. Speaker, the following tables, which I ask leave to insert in the Appendix of the RECORD, have been prepared at my request by the International Cooperation Administration, which is the successor to the FOA, which in turn succeeded another alphabetical agency created to slough away American dollars.

These tables purport to show the extent to which our country has been obligated for a total of 139 irrigation, reclamation, flood control, and power projects in some 32 foreign countries, over a 7-year period from April 3, 1948, to March 31, 1955.

Let me emphasize that these tables show only the amounts of money obligated during these 7 years. They do not reflect the totals that will be required to complete many of the projects, and they do not indicate any of the amounts that might be contemplated by our State Department in the giant Nile development project, which we are told is essential if we are to maintain our places in the Near East, or any other works that might be on the drawing boards of the internationalists.

Every American should be astonished by the fact that foreign countries have dipped $288.6 million out of our Treasury to build generating plants, dams, irrigation and flood controls works that enable them to beat our producers in the international markets. Since 1902 when the Reclamation Act became law, the Congress has appropriated less than $2.8 billion for irrigation and power projects in the United States, an average of approximately $50 million per year. In the past 7 years, however, Congress has seen fit to appropriate over $40 million each year for the same projects in many countries with unpronounceable names in faraway places.

These tables should be particularly interesting to Members of Congress who, with sincerity and great ability, oppose reclamation projects that would bring wealth and security to people and communities of the United States.

The tables follow:

TABLE II.—*European industrial projects*[1]*—FOA or predecessor agency obligations for irrigation, reclamation, and power projects by country and project, Apr. 3, 1948–Mar. 31, 1955*

[Thousands of dollars]

Country and project	Cumulative total through Mar. 31	Fiscal year 1955 through Mar. 31	Prior to fiscal year 1955
Europe, total	99,155	−1,168	100,323
Denmark: Steam electric station (60,000 kilowatts) at Kynby	3,317		3,317
France	18,025	−4	18,029
Extension of the Office du Niger irrigation project in French West Africa	1,191		1,191
Thermal electric power plant at Dechy (120,000 kilowatts)	12,048		12,048
Boiler for steam electric station at Arrighi (100,000 kilowatts)	2,444		2,444
Boiler equipment for steam electric unit at Nantes Chevire (100,000 kilowatts)	1,801	−4	1,805
Boiler equipment for second steam electric station at Arrighi (100,000 kilowatts)	541		541
Iceland	4,861		4,861
Expansion of hydroelectric plant on Sog River	3,891		3,891
Expansion of hydroelectric plant on Laxa River	970		970
Italy	60,946	−1,164	62,110
Steam electric station (50,000 kilowatts) at Genoa	5,510	−159	5,669
Steam electric station (60,000 kilowatts) at Palermo	5,730	−336	6,066
Turbo generator with 60,000 kilowatts capacity to serve northern Italy	6,230		6,230
Italy—Continued			
Turbo generator (50,000 kilowatts) at Genoa for Societa Edison, Milan	6,169		6,169
Turbo generator (50,000 kilowatts) near Turin for Societa Idroelettrica Piemonte	6,096		6,096
Steam electric station (60,000 kilowatts) at Civitavecchia, Rome	5,608	−502	6,110
Steam electric station (60,000 kilowatts) at Naples	6,097		6,097
Steam electric station (100,000 kilowatts) at Piacenza	10,519		10,519
Steam electric station (30,000 kilowatts) at Naples	3,307	−42	3,349
Steam electric plant (120,000 kilowatts) near Tavazzano for STEI	2,580		2,580
Addition to steam electric plant (30,000 kilowatts) at Turin	3,100	−125	3,225
Netherlands: Thermal powerplant (124,000 kilowatts) on the Amer River	3,092		3,092
Portugal: Irrigation and power development in the Sorraia Valley and Plains of Villa Franca	897		897
Spain	7,500		7,500
Thermal powerplant at Burcena	3,750		3,750
Thermal powerplant at Escatron	3,750		3,750
International: Austro-German hydroelectric powerplant at Braunau on Inn River	517		517

[1] FOA European industrial projects are projects which are approved for major construction, modification, rehabilitation, or equipping of plants, installations, or facilities where substantial amounts of integrated engineering or dollar procurement are required.

TABLE III.—*European overseas territories—FOA or predecessor agency obligations for irrigation, reclamation, and power projects as of Mar. 31, 1955*

[Thousands of dollars]

Area and project	Cumulative total as of Mar. 31	Fiscal year 1955 through Mar. 31	Prior to fiscal year 1955
Total	4,312		4,312
Belgian territories: Belgian Congo soil survey	38		38
French territories: French soil conservation program, Algeria	535		535
Netherlands territories: "Eysvoogel plan" land reclamation, Surinam	1,296		1,296
United Kingdom territories	2,443		2,443
Power station, Malta	2,219		2,219
Mid-Clarendon irrigation project, Jamaica	175		175
Construction of reservoirs, British Somaliland	32		32
Antierosion and Reclamation, Cyprus	17		17

GENERAL NOTE.—This program, in which ECA utilized European program funds to finance diredtly specific projects in the overseas territories of European countries, was active in fiscal years 1950 and 1951. This table shows the current status, as of Mar. 31, 1955, of the obligations originally entered into during that earlier period.

TABLE IV.—*Far East program—FOA or predecessor agency obligations for irrigation, reclamation, and power projects by country and project, June 5, 1950–Mar. 31, 1955*

[Thousands of dollars]

Country and project	Cumulative total through Mar. 31	Fiscal year 1955 through Mar. 31	Prior to fiscal year 1955
Far East total	77,728	8,558	69,170
Cambodia, Laos, and Vietnam	1,960	198	1,762
Irrigation and reclamation	1,364	198	1,166
Thermal power generation	596	----------	596
China (Formosa)	25,101	----------	25,101
Tien-lang hydro power station, Taichung	4,082	----------	4,082
Li-wu hydro power station, Hualien, and east-west tie line	1,478	----------	1,478
Tung-men hydro power station, near Hualien	1,200	----------	1,200
Tien-leng (peaking project) hydro power station	1,200	----------	1,200
Nan-pu steam powerplant, Kaohsiung	7,091	----------	7,091
Wu-lai hydro	457	----------	457
Wushch hydro	142	----------	142
Peipu thermal	844	----------	844
Sungshan thermal	78	----------	78

Lung Chien hydro	----------	----------	----------
Nan-pu thermal, 2d unit	----------	----------	----------
Irrigation and reclamation	259	----------	259
Power transmission and distribution	7,462	----------	7,462
Sun-Moon peaking hydroelectric project	750	----------	750
Korea	37,838	5,788	32,050
Thermal power developments (Seoul, Pusan, Sanchok)	30,000	----------	[1] 30,000
Hwachon hydro powerplant	1,110	[5] 110	1,000
Flood control [3]	748	748	----------
Irrigation and land reclamation [3]	2,930	2,930	----------
Hydro exploratory survey	450	----------	450
Power rehabilitation engineering services	600	----------	600
Thermal powerplant transmission line connection	2,000	2,000	----------
Philippines	7,097	2,402	4,695
Water resources planning development	240	240	----------
Irrigation, pump	1,468	313	1,155
Irrigation, gravity (rehabilitation)	948	948	----------
Irrigation, gravity (new systems)	4,429	901	3,528
Electric power survey	12	----------	12
Thailand	5,732	170	5,562
Irrigation and reclamation	3,683	[4] 170	3,513
Thermal power generation	1,100	----------	[5] 1,109
Power system survey and rural power	949	----------	949

[1] Includes $1.0 million technical assistance.
[2] Technical assistance.
[3] UNKRA field of responsibility prior to fiscal year 1955.
[4] Exclusive of budgetary support.
[5] Project later canceled, funds deobligated.

TABLE V.—*Near East, Africa, and South Asia—FOA or predecessor agency obligations or programs for irrigation, reclamation, and power projects by country and project July 1, 1951–Mar. 31, 1955*

[Thousands of dollars]

Country and project	Cumulative total through Mar. 31	Fiscal year 1955 through Mar. 31	Prior to fiscal year 1955
Total for region	107,387	4,446	102,941
Near East	40,670	55	40,615
Africa	5,043	489	4,554
South Asia	61,674	3,902	57,772
Total for Near East	40,670	55	40,615
Greece	12,538	−370	12,908
Thermal electric plant in Eubean Gulf territory (80,000 kilowatts)	7,043	−145	7,188
Electric transmission, transformation, and distribution from Eubean Gulf territory station	200	−93	293
Hydroelectric plant (40,000 kilowatts) at Agra on Vodas River	35	----------	35
Electric transmission, transformation, and distribution out of Agra plant	84	−37	121

Aid for Small Business

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, the backbone of the American economic system is without question, I think, the small-business man. Through the initiative and inventiveness of the small-business man America has grown into the great industrial giant that it is. Because we have had leaders in this field throughout our history, we are in a better position to inspire the free world in the struggle against communism. Without our industrial might, such things as the Marshall plan, point 4, and our other economic assistance programs would not be possible.

Yet, Mr. Speaker, the small-business man has his back to the wall today in the struggle to maintain his place against the large corporations. If there be any doubt of the truth of this statement, the statistics of business failures bear mute evidence of its accuracy. In 1945 there were only 809 failures. In 1953 there were approximately 8,862. In 1954 there were 11,086. The latest reports for 1955 indicate that there were almost as many in that year—10,969—as there were in 1954. And this was a year of great boom in the American economy—or at least this is what the economists tell us. Truly, the Nation's small-business men face at least as serious a problem as the American farmer.

Nor are the statistics of failure the only evidence of the threat to our traditional free-enterprise system. Many of us have become increasingly aware of the growth in the size of our already gigantic corporations. Much of this increase has come about through the merger of smaller corporations with larger ones. This merger activity has taken place even between companies in entirely unrelated fields as the larger corporations expand their operations into ever more diversified activities.

Statistics of the Federal Trade Commission show the following trend in the number of manufacturing and mining concerns acquired or merged during the last 30 years. Beginning in 1922, the number of mergers rose steadily from 297 to a peak of 1,216 in 1929. Thereafter the number of mergers leveled off at less than 200 in 1932, and varied within a range from 87 to 419 throughout the forties. However, mergers rose rapidly in 1951, reached 822 in 1952 and stayed at a high level in 1953 and 1954.

The question then arises as to why small business is having such a hard time in keeping its collective head above water in times of supposed prosperity. Put in its simplest terms, the answer lies quite obviously in the fact that small business is small and therefore a much more risky and uncertain affair than the large corporations. This has its most far-reaching effect in the ability of the small concern to secure capital for its operations. The large or giant business only needs to indicate its desires and the money flows in for investors know, or are at least quite certain, that there is little risk. Perhaps the best example of this activity in recent days was the stock issue by the Ford Motor Co. How many small-business men could expect the investing public to respond to a desire for funds in the way that stockbrokers scrambled for Ford stock?

Yet it is almost always the smaller businesses which need capital from outside sources in order to expand operations. Large outfits are able to plow back a certain percentage of the vast profits they make and therefore do not have to go outside their own company for expansion funds. If they want to undertake a really vast program banks are more than glad to loan money at low rates for the security is very good.

In addition, the large corporations are able to siphon off the best of management personnel because they are able to afford much higher salaries for their executive departments based on their ability to earn much greater profits. Under these circumstances, the management of small business becomes essentially unprofitable and these concerns either give up the struggle and go quietly into bankruptcy or, if they are lucky, they are able to persuade a larger concern to buy them out.

Under these circumstances, Mr. Speaker, it behooves the Government to take whatever action seems necessary to preserve the ability of the small corporations to compete with their larger neighbors. For this reason, I am introducing a bill designed to give some measure of tax relief to the small-business men of the United States. Under this bill, which has been introduced in the Senate by Senator WILLIAM FULBRIGHT and a distinguished list of cosponsors, the tax on net earnings would be reduced from 30 percent, as it presently is, to 22 percent, and the surtax on corporate income in excess of $25,000 would be increased from the present 22 percent to 31 percent.

This bill would have the following effect on corporate taxes: Corporations with incomes of $25,000 or less would have their tax burden reduced by 26.7 percent. A corporation with income of $100,000 would be given a tax relief of 2.7 percent. Corporations with incomes of $500,000 and over would have increased tax liabilities of from 1.1 percent, in the case of a corporation with that income, to 1.9 percent for a corporation with income of $100 million a year. This bill would result in a net gain in Government income of some $20 million. Its benefits to the small-business man would be much, much greater. With the funds which he formerly had to set aside for Government taxes, he would be able to finance many of the increased activities, enabling him to compete on a much more equitable basis with his large competitor. It would enable him to pay higher salaries to his executive personnel. It would enable him to undertake some of the research activities which are the lifeblood of the modern corporation.

The benefits to the Nation are, I think, quite as great. As I stated at the outset, we are a Nation built on the basis of a free competitive economy. Anything which strengthens this economy is to the benefit of all. In addition, we are today leaders of the free world and we advertise the success of our free-enterprise system. If we are to maintain the position and the strength of the free world in the struggle against the alien system of communism, we must maintain our own concepts. This bill is certainly no cure-all, but it is, at least, a step in the right direction.

When GI's Get in Trouble

EXTENSION OF REMARKS
OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1956

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following article from Newsweek magazine for February 20:

WHEN GI'S GET IN TROUBLE—WHAT IS HAPPENING UNDER FOREIGN JUSTICE?

(Based on latest reports, 81 United States servicemen are being confined in foreign jails after being convicted by foreign courts.

(Nothing like this has happened before in the history of the United States.

(Until recently, the Constitution has always followed the flag. Until now, United States servicemen accused of crimes have been tried by United States courts-martial and, if convicted under United States law, sentenced to serve time in United States jails.

(Why doesn't the Constitution still follow the flag? Were the 81 servicemen convicted after due process of law? Are they being treated humanely?

(These questions are now agitating Congress. To find the answers, Newsweek queried its correspondent in Washington, London, Paris, Rome, Bonn, Istanbul, and Tokyo. Here are their findings.)

There wasn't much doing in the small French city of Orléans that night. United States Army Pvts. Richard T. Keefe of Riverdale, Maryland, and Anthony Scaletti of Pittsburgh had been to a couple of bistros and downed a couple of bottles of wine (and maybe a cognac or 2 or 3), and they were feeling pretty good—but now what? The answer came readily enough: Paris. The two GI's didn't have passes for Paris, of course, but that didn't bother them because they already were AWOL.

And besides, it was a balmy July night (in 1953), and Paris was less than 100 miles away.

Scaletti sneaked back to his barracks and got civvies for himself and for Keefe. The GI's then hailed a cab and started off for the big town. Maybe it was Scaletti who suggested it first or maybe it was Keefe. Anyway, they suddenly asked the driver to stop. When he did, they grabbed him and pulled him from his seat. When he fought back, they knocked him down. They finally knocked him unconscious, climbed back into the cab, and roared away.

Fortunately for the driver, 65-year-old Fernand Henault, a passing motorist found him lying beside the road. He was taken to a hospital, his nose battered and bloody, his false teeth broken, his body a crazyquilt of cuts and bruises. He wasn't able to return to work for a month.

ARREST, TRIAL, AND PRISON

The gendarmes picked up Keefe and Scaletti at Nogent-le-Rotrou as they were hitchhiking back to Orleans. (They had abandoned the cab in Paris.) Sentenced to 5 years, they were sent to a prison at Fontevrault, built in the 12th century as a monastery. At last reports, they were still there, but 6 months had been cut from their sentence and both of the prisoners has been recommended for early parole.

At first glance, Keefe and Scaletti hardly look like martyrs. They committed a stupid, brutal crime, and the punishment they got for it was fairly light. Yet, last week Keefe and Scaletti were a cause célèbre. The reason: They were tried and sentenced by a French court under French law and not by a courtmartial under the Uniform Code of Military Justice.

The French courts got jurisdiction over Keefe and Scaletti under a treaty between the United States and France, authorized by the Senate on July 15, 1953—at President Eisenhower's request—by a vote of 72 to 15. Similar treaties (called status of forces treaties) had been signed with almost every nation in which United States servicemen are now stationed.

Under the Status of Forces Treaties, servicemen overseas are tried by courts martial for crimes they commit on duty, but for crimes they commit off duty, on leave, or when AWOL, they may be tried by a civilian court.

THE OPPOSITION SPEAKS

The American Legion, the Veterans of Foreign Wars, and various patriotic organizations have attacked the status of forces treaties, and Representative FRANK T. BOW, an Ohio Republican, has introduced a resolution calling on the President to revise or renounce the treaties. The House Foreign Affairs Committee has started hearings on Congressman Bow's resolution.

Opponents of the status of forces treaties insist that a United States serviceman is entitled to a trial by a United States court under United States laws no matter what he did or where he did it.

What is more, they say, some of the nations in which United States servicemen are now stationed have strange laws and strange ways of enforcing them, and jails which, by American standards, are little better than dungeons. In French courts, operating under the Napoleonic Code, a man is assumed guilty until he proves his innocence. In German courts, a police officer's word usually is taken as gospel, and hearsay evidence is permissible.

The Administration, in reply, argues that no sovereign nation can be expected to renounce the right to arrest, try, and punish people for crimes committed against its own nationals on its own soil. Suppose a group of sailors off a French warship in New York Harbor were to start a brawl in a Times Square saloon and knife a couple of people? ask Administration spokesmen. Would the New York police simply stand by? Or would they arrest the sailors and hold them for trial? The Administration argues further that, in plain fact, United States servicemen stationed overseas, accused of crimes, are not getting an inferior brand of justice or being subjected to cruel and unusual punishments.

WHY THE FUSS?

Overseas, many United States Army, Navy, and Air Force officers find it difficult to understand what the commotion is all about. In Japan, says Lt. Col. Kenneth J. Hodson, speaking for the Judge Advocate General's office, of thousands of United States servicemen accused of crimes while off duty since the Status of Forces agreement went into effect, Japanese authorities waived jurisdiction over all but 325. For the most part, these were men accused of really serious crimes, which had gotten a good deal of publicity in the Japanese press.

GI's arrested by the Japanese, says Colonel Hodson, get Japanese lawyers, the right to a prompt, speedy trial, and a copy of the charges against them. They have the right to cross-examine witnesses for the prosecution with the help of qualified interpreters, and they can communicate with the United States authorities in Japan whenever they feel like it. In addition, they can get a member of the United States Embassy to sit with them and observe whether they are being tried fairly.

Convicted GI's are sent to a prison in Yokosuka, near the United States naval base. There, they wear Japanese-made blue denims and shoes supplied by the United States Government. They occupy small individual cells or larger group cells of two or three. The furnishings include a bed and a chair for each man, a washbasin, a flush toilet, a desk, and a radio. (The Japanese have promised to supply television sets soon.)

BATH A WEEK

The Americans don't have to work unless they want to. They have a library of American books and they can take USAFI courses. (About 40 percent do.) They are permitted one bath a week.

The Japanese have two doctors and a dentist for them, but, if they wish, they can get a United States Navy doctor from the base. They can also be admitted to the naval hospital.

A team of United States officers inspects the jail once a month and listens to complaints, and the prisoners also are permitted to write as many letters as they wish to United States Government officials and to United States Congressmen.

Most of the complaints are about the food, and the United States inspection teams consider them unjustified. The GI's get a diet of 3,500 calories a day. For breakfast: Eggs, vegetables, bread, butter, and milk. For lunch: Ham or bacon, vegetables, bread and butter. For supper: Meat, vegetables, bread and butter. Coffee comes with each meal, courtesy of the United States taxpayer.

SPOTLESS

The British automatically waive jurisdiction over GI's accused of homosexual practices or taking narcotics, so that United States authorities can give them a general court-martial and discharge them from the service. And the British usually waive jurisdiction over servicemen accused of sexual offenses, if the girl involved doesn't have a spotless reputation. In a recent case, involving a girl who bet her virtue against £1 that the British heavyweight, Don Cockell, would beat World Champion Rocky Marciano, for example, the British decided to let the Air Force handle the case on the ground she obviously prized her virtue so little.

This was actually a bad break for the United States airman who bet on Marciano. For the girl was only 13, and under American law he was guilty of statutory rape, a serious offense. In a British court, the airman could have pleaded the doctrine of reasonable appearance, which holds that, if a girl looks old enough, a man is entitled to assume that she is old enough.

TOUGH ON DRUNKS

The British courts are not nearly as harsh toward sex offenders as American courts. On the other hand, they crack down hard on people who violate the traffic laws, and particularly on drunken drivers. They even have a law against being in the possession of a car while drunk. A drunken GI can be arrested just for sitting in a parked car.

The French are lenient toward GI's accused of breaking the law as a matter of Government policy. In a recent case, the French magistrate explained: "The law is one for all, but we could hardly guillotine a soldier whose duty may include dying for us."

The French Ministry of Justice now has an entire section to deal with Status of Forces Treaty cases. It maintains close contact with United States diplomatic and military authorities in Paris. Every court in France has been issued detailed instructions on how to deal with American servicemen. American officers work as a team with the juges d'instruction, the investigating magistrates, and assist them in providing and transporting witnesses both for the defense and the prosecution.

The sentence of 5 years meted out to Keefe and Scaletti, the soldiers who beat up the French cabdriver, was unusual. In most cases involving GI's, the penalties are so light they frighten United States authori-

ties. This is particularly true in crimes passionels. Airman (3c) José Montijo, for example, received only a 6-month sentence for stabbing a Frenchman in a Fontainebleau bistro, because they had been arguing over a girl. Before his trial, he was permitted to marry the girl.

LIGHT SENTENCES

The French can be easygoing even when a woman doesn't enter the case. Cpl. Samuel Brown took an Army truck one night and drove it into a passenger car in the Bois de Boulogne in Paris, killing all four occupants. The sentence: 6 months.

Last year, a total of 10,249 United States servicemen abroad were accused of crimes committed off duty. The foreign governments waived jurisdiction in 6,769 cases. Trials were held by the foreign governments in 3,142 cases, resulting in the acquittal of 225, reprimands for 50, fines for 2,595 (these were mostly GI's who violated traffic laws), and jail sentences for 266. The jail sentences were suspended in all but 120 cases.

By and large, the GI's abroad appear to agree with United States authorities in approving of the Status of Forces Treaties, but a good many don't. Two typical opinions:

An Army captain from Washington: "A man who is part of the military service is sent to foreign countries without his consent, so jurisdiction over him should remain with the service."

A marine sergeant from Iowa: "If you fool with the bull, you're bound to get the horn. And if you have the privilege of breaking the laws of Japan, the Japanese have the privilege to try you."

On Immigration, See G. Washington

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post, February 25, 1956, issue, entitlde "On Immigration, See G. Washington."

ON IMMIGRATION, SEE G. WASHINGTON

As in previous Congresses, the effort to breakdown our immigration barriers by amending the McCarran-Walter Immigration and Nationality Act is up for discussion. There are all sorts of arguments, the most usual one being that it is supposed to be unfair to keep anybody out of the United States, whatever the effect of indiscriminate admissions upon our demographic balance.

One could do worse than read what George Washintgon had to say about a selective immigration policy.

On January 1, 1788, Washington outlined the kind of immigrants he would permit to qualify as citizens of the United States:

"Under an energetic general government such regulations might be made, and such measures taken, as would render this country the asylum of pacific and industrious characters from all parts of Europe • • • and would draw the wealth and the wealthy men of other nations into our bosom by giving security to property and liberty to the holders."

On November 15, 1795, as President, Washington was more specific:

"My opinion with respect to immigration is that except for useful mechanics and some particular descriptions of men or professions, there is no need of encouragement; while the policy or advantage of its taking place in a body (I mean the settling of them in a body) may be much questioned, for, by so doing they retain the language, habits and principles (good or bad) which they bring with them.

"Whereas by intermixture with our people they, or their descendants, get assimilated to our customs, measures and laws; in a word, soon become one people."

To George Washington it seemed obvious that the country to which immigrants elect to flee should have an equal right to decide which to admit. And there was more room in the United States of America of 1795 than there is today.

Election Campaign Contributions: Representative Udall's Proposal

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, the recent intense publicity focused upon the role of lobbyists in making contributions to election-campaign funds has made some Members of Congress feel on the defensive. A distortion of this question in the public mind could do much harm to the prestige of the Congress. I hope that the full-scale investigation which the Senate now promises to undertake will ultimately permit both Houses of the Congress to feel proud of their positive response to the issue raised by the revelation of gas lobbying touching election funds.

Some Members of this body already have reason to be proud of the awareness of the problem which they have demonstrated long before the present furor. Thoughtful proposals have been introduced in the House for amendments to the Federal Corrupt Practices Act of 1925. Unfortunately, these bills have not received the attention they deserve, but if the present state of alarm induces the House to reexamine the suggestions of the past their authors should receive belated thanks for maintaining our reputation for foresightedness.

One of the neglected proposals which will be rediscovered as this self-examination proceeds is H. R. 7001, introduced by Mr. UDALL, of Arizona. This bill would amend Public Law 591 to allow individuals to deduct for Federal income-tax purposes up to $100 each year used in political contributions to candidates for Federal elective offices. The purpose of this amendment is to encourage more campaign donations from individuals, whose sense of responsibility in public affairs would thereby be heightened, and to discourage candidates from relying excessively upon a few very affluent contributors whose interest in specific issues might be overpowering.

The Udall-Hennings amendment to the election laws is but one step which may recommend itself to the House, but we can be proud that our colleague from Arizona has demonstrated forehanded concern in this matter by introducing this and related proposals during the first session. I should like to include with these remarks an editorial commenting on the Udall bill and other suggestions for dealing with this delicate but very basic problem. The editorial appeared in the Washington Post and Times Herald of February 20, 1956.

The editorial follows:

INFLUENCE ON CONGRESS

The emphatic language of President Eisenhower's veto of the gas bill should give the Senate additional incentive to press ahead with a thorough investigation. The honor and dignity of the Senate require that it expose every aspect of the efforts of the gas lobby to influence the vote through political contributions—both those made recently and those made before the bill was under active consideration.

At the same time, this newspaper hopes there will be widespread recognition that the primary purpose of such washing of dirty linen ought to be to remedy a general condition that cries for rectification. All of us are in a sense to blame for permitting a situation to arise in which the rules for political expenditures and campaign contributions are dangerously unrealistic. The activities of the gas lobby afford merely a flagrant and distasteful illustration of the dependence upon large contributions. Election to public office has become so expensive, and the means of evading the restrictions have become so complex, that honest efforts to campaign within the rules and render a complete accounting are all but impossible.

The Senate need not await a new investigation to know that this is a disgraceful condition that tends to produce a kind of moral corruption even in legislators of the highest probity. Point 1 in effecting a remedy, in our opinion, ought to be prompt passage of the Hennings bill to amend the Corrupt Practices Act and revise expenditure limitations. It may be necessary to make some concessions and changes in order to accomplish this. Senator HENNINGS' proposed allowance for campaign expenditures of up to 10 cents per vote in the last election, with a cutoff at $250,000 for senatorial candidates and $25,000 for contestants for House seats, would be an improvement over the present absurd limits of $25,000 and $5,000, respectively. But even the revised allowances would be far, far less than what now is actually spent.

Senatorial campaigns in large States are known to cost as much as $3 million, despite the legal limit. In the recent mayoralty race in Chicago the defeated candidate, who sought to give a forthright accounting, had expenditures of nearly half a million dollars. The $12 million allowed each of the national committees under the Hennings formula of 20 cents per vote in the last election probably would not meet more than a third or a quarter of the total expenditures in the 1956 presidential campaign.

If a satisfactory formula cannot be found for making the permissible limits correspond with actual expenditures, it might be wise instead to concentrate on stringent requirements for reporting contributions. We think it important that the Hennings bill cover primaries as well as general elections. Periodic reporting of actual amounts received and spent during campaigns is the essential thing. Despite the proposed requirement that all contributions of more than $100 be listed by the donors, there probably is no way in which to cover all private activities undertaken on behalf of candidates. But if candidates and their campaign managers could honestly report all direct contributions and the sources, this would do a great deal to eliminate unsavory influence. The public itself would be the best judge of when contributions were excessive.

Two practical additional steps are imperative, it seems to us, to accompany the amendment of the Corrupt Practices Act. One is to enact the separate Hennings-Udall bill permitting donors to deduct political contributions of up to $100 for income tax purposes. This would encourage Americans to respond to their privilege and duty of supporting candidates of their choice, and it should stimulate large numbers of small contributions. The more numerous such contributions, the less any candidate would be dependent on large gifts from firms or individuals seeking favors.

The second step is to amend section 315 of the Federal Communications Act so as to permit television and radio stations to extend free time to major candidates in presidential campaigns without being required to give equal time to fringe or frivolous candidates. With television bills in presidential campaigns now running into many millions of dollars, this amendment would make an enormous difference in the cost of campaigns—and dependence on illicit funds. Radio and TV stations are ready and willing to furnish such time provided that they can be relieved of the burden of giving time in equal amount to the Vegetarians and Prohibitionists. (There were only two real contenders for the Presidency in 1952, but technically there were 18 candidates.) A simple change permitting stations to make free time available to candidates of parties that polled, say, 1 million votes in the last election or could muster 200,000 signatures, would suffice to bring the law up to date.

None of this detracts in the slightest from the vital need for a full investigation by a Senate committee. Congress ought to recognize, however, that whatever recommendations the committee may have can be implemented and supplemented by beginning the chain of reforms now. The whole procedure will go more smoothly and will gain more cooperation if there is acknowledgment at the outset that the basic purpose is not punitive but corrective.

The Facts of Foreign Aid

EXTENSION OF REMARKS
OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1956

Mr. KELLEY of Pennsylvania. Mr. Speaker, this is so much misconception on this matter of foreign aid that I am requesting permission to insert in the RECORD an article from the Commonweal, the issue of February 17, dealing with this question.

It is very revealing and gives the history of the necessity for foreign aid as well as what should be done in the future. I can corroborate the facts as they existed in 1947 prior to the advent of the Marshall plan. I spent almost 3 months in Europe at that time, and it is unbelievable to those who have never seen it, that civilization could have fallen to such a low ebb. That there should be so much poverty, suffering, and distress is difficult to comprehend, and the danger that lurked behind it—Communism—was a disturbing factor then; and there was fear in every heart.

I enclose, therefore, this fine article from the Commonweal.

THE FACTS OF FOREIGN AID—ON THE QUESTION OF FOREIGN AID, THERE APPEARS TO BE A HAPPY CONCURRENCE BETWEEN NATIONAL INTEREST AND LARGER HUMAN VALUES

(By Robert C. Good [1])

Since the end of World War II, the United States has given or loaned (mostly given) $51 billion to the rest of the world. What have we received in return for the outlay, and should the program now be discontinued?

Overseas aid will be the hottest issue of foreign policy in the present session of Congress, but the battle will not be a partisan one. The line which divides big foreign-aid spenders from those who would cut back all foreign-aid programs runs through the middle of both parties. Senator GEORGE MALONE, a Republican, from Nevada, for example, has publicly and without qualification called all foreign aid Operation Rathole. On the other hand, Illinois' Republican Senator EVERETT DIRSKEN, in the most startling aboutface since the onset of Harry Cain's romance with liberalism, declared on the floor of the Senate last summer: "I remember * * * I used to attack this (foreign aid) program with a great deal of vigor. I take it back. Publicly and privately, I take it back." Among the Democrats, the fiscal conservatives from the South will square off against the more liberal spenders of the North. Southerners HARRY BYRD and WALTER GEORGE head respectively the strategically important Senate Appropriations and Foreign Relations Committees. Each is on record against the big giveaway.

As a matter of fact, this is the first item to straighten out. "Give-away" is not exactly apropos. Even the most casual look discloses that 10 years of foreign aid has not been given away so much as invested. Whether wisely or not can better be assesesd when the facts are set forth.

Our $51 billion has been spent in 3 sizable chunks. The first and largest purchased the rehabilitation of 17 nations in Europe following the war. The bill for this was about 27½ billion, including postwar relief, bilateral loans and Marshall plan aid. The second segment has been used to buy military strength for the free world at a cost thus far of about 14½ billion. The remainder, about 9 billion, has found its way to the poverty-stricken areas of our world. Though most of this amount has been tied closely to the military programs of a small number of countries, a portion has been used to bolster anemic economies and advance long-overdue economic and technical development.

No one familiar with conditions in Europe after the war could with equanimity question the wisdom of American aid. I spent 1946 and 1947 as a relief worker in Italy, France, and Germany. This was a frightening period when the most elementary supplies were unobtainable except in Switzerland and Sweden, when men counted their wealth in American cigarettes, when a man could sit on the ruins of his house and talk of the inevitability of world war III. Hopelessness was running quickly downhill to final and complete despair.

The war had taken a heavy toll. Low production, inflation, and vanishing bank reserves were producing a mortal illness. In early 1947, industrial output in Germany was only 27 percent of prewar levels. European agricultural production was generally only 80 percent of prewar volume. But during the same period, Europe's population had crept up eight percentage points, putting a further strain on available supplies. For the better part of 1947, the official ration allowed each German was only 1,500 calories a day. Catastrophe in gigantic proportions threatened an entire continent.

Attempts at digging out were stopped by an unprecedented freeze during the winter of 1946–47. The following summer, drought gripped the continent. The yield of grain crops in France fell by 30 percent, the worst crop on record. With each passing month, Europe sank farther into debt. By 1947, the United States was shipping to Europe goods in excess of Europe's ability to pay to the amount of $11½ billion per year. This was called the dollar gap. It was in fact a chasm, and growing rapidly wider.

Bilateral loans were arranged. Britain received over $3 billion from the United States; France, over $1 billion. This move helped momentarily, but the hemorrhage which was draining off Europe's financial reserves was not stopped. Nor could it be until Europe's productive plant had been retooled, the enervating customs restrictions on intra-European trade pried loose, and export levels sufficiently raised to permit Europe to pay her own way in the world. Dean Acheson, reflecting on these bleak years, once observed: "No one had a picture of the completeness of the disruption that had occurred. * * * We had operated on a theory of dealing with hunger, disease, and unrest until 1 or 2 good crops could come in. But the problems were more far reaching, and it grew upon us toward the end of 1946 that we were heading for very bad trouble."

One important source of this trouble was located in Moscow. The Russians were consolidating their gains in Eastern Europe with frightening efficiency. The social and economic chaos of Western Europe promised quick rewards for Communist agitators. Yet we could not afford to lose that area. Crippled though it was, it represented an industrial potential second only to that of the United States.

This is why, on June 5, 1947, Secretary of State George Marshall announced: "It is logical that the United States should do whatever it is able to do to assist in the return of normal economic healh in the world, without which there can be no political stability and no assured peace. * * * Any government that is willing to assist in the task of recovery will find full cooperation, I am sure, on the part of the United States Government." General Marshall also stressed that the initiative must be taken by the Europeans themselves, and that the program must be a cooperative effort agreed to by a number of European states.

Europe both initiated and cooperated with astonishing speed. The story has it that Britain's foreign minister, Ernest Bevin, heard of Marshall's speech while still in bed and got in touch with the Foreign Office immediately. Statesmen rushed to Paris to draw up estimates of funds needed for full recovery. Upon completion of their work, an emergency session of the United States Congress was called and interim funds were made available. Early in 1948, the legislators wrote and passed a bill which became known as the Marshall plan.

During the next 4 years, $13 billion worth of lifegiving plasma was pumped into the European economic system. The figure as such is probably meaningless to most people, but someone has estimated that at the height of the Marshall plan there were at any given moment an everage of 150 merchant ships either on the high seas with full cargoes of Marshall plan aid for Europe or unloading at European ports. By the plan's terminal date in 1952, industrial production had been increased 40 percent over 1948, agricultural output was above prewar levels, intra-European trade had jumped 86 percent, exports to the rest of the world were up 66 percent, inflation had been controlled and hope restored. In short, at a cost of $13 billion for Marshall aid and more than twice that amount for

[1] Mr. Good teaches international relations at the University of Denver, where he is a member of the staff of the Social Science Foundation.

all nonmilitary aid given since World War II, Western Europe had been saved for the free world. "The American people," observed an eminent British economist, "offered 'a new birth of freedom' not only to themselves but to all mankind."

Before the Marshall plan had completed its work, the Communists started an aggressive war in Korea. Overnight, the emphasis in foreign aid shifted from recovery to rearmament. ERP (the European Recovery Program) became MSA (the Mutual Security Agency).

The accomplishments of this program, though at many points still inadequate, have been impressive. American funds have purchased for our allies over 1,000 aircraft, close to that number of naval vessels, nearly 40,000 tanks and combat vehicles, and over 200,000 transport vehicles. With our help our allies are now bringing into being more than 180 divisions, nine times the size of our establishment, with air squadrons and combat vessels roughly equal to that of ours.

We have mustered for our mutual defense the combined strength of well over 30 nations. The price tag for military aid since World War II is in the neighborhood of $14½ billion, a gigantic sum but considerably less than 10 percent of our own military budget for the same period. It is important to point out that our allies themselves are absorbing the greater part of the cost. For example, the NATO governments put up $3 of their own for defense for every dollar received from the United States.

The remainder of our $51 billion investment, about $9 billion, has found its way to the underdeveloped areas of Asia, the Near East, Africa, and Latin America. These depressed areas contain two-thirds of the free world's population, raw materials crucial to the free world's economy, and possibly a decisive voice in determining the free world's fate. Their problems are simple and primordial. Health: life expectancy is fixed at an average 36 years, while in some localities every second baby dies in infancy. Food: diets for many are fully one-fifth below the minimum needed for normal activity. Illiteracy: 70 percent cannot read or write. Primitive techniques: the average income per year is 35 to 80 dollars—40 times less than that of an American.

New political currents are today penetrating the stagnant backwaters of the underdeveloped parts of the world. The past 10 years have seen the emergence of a dozen independent nations, all in Asia, the Near East, and Africa. Independence has shaken ancient lethargy. Levels of discontent and unrest are rising. It is no longer enough to maintain the status quo. Political unrest and the appeal to radical solutions can be allayed only by satisfying the demand for a better, more secure, more wholesome life. This is what President Eisenhower had in mind when he spoke of "a declared, total war * * * upon the brute forces of poverty and need."

So we have invested $9 billion in the underdeveloped areas. A very large share of this amount has been going recently to a very few states: South Korea, Formosa, free Indochina. It is being used to bolster the economies of these states, thus making it possible for them to support armies quite out of proportion to their size and economic potential. Over a billion dollars has been appropriated for the programs of international organizations dispensing relief and economic rehabilitation in the depressed areas. The remainder has financed economic-development and technical-assistance programs in some 60 nations around the globe.

It is difficult to know how to assess the results of these programs. Certain figures look encouraging: 2,700 technical-assistance experts at work overseas; over 40 American universities under contract for technical-assistance projects; some 5,000 leaders and future leaders from depressed areas brought to the United States during 1955 to observe techniques. But take these figures and divide them by 60 countries and the accumulated poverty of countless centuries and the result is but a fraction of the actual need. This is not exactly Mr. Eisenhower's declared total war; it is more like a backwoods skirmish.

However, pilot experiments indicate that limited battles can be won. "In Brazil," one report reads, "life expectancy in 17 cities of the Amazon Valley has been raised from 37 to 47.7 years in a decade." It is estimated that cooperative health programs have affected more than 25 million people in Latin America alone. In Iran, 20,000 teachers and potential teachers were trained under a cooperative educational program in just 2 years. In Libya, the encroaching desert was pushed back; in the Sudan, a locust plague was stopped; in Thailand, millions of dollars worth of roads and railways are under construction. But it is not the past accomplishments that count, so much as the future possibilities to which these limited successes point.

The entire question of foreign aid will soon be debated in Congress. The President has asked for $4,900,000,000 more to keep the program going for another year. Here are a few perspectives on this question which should inform the coming congressional debate.

The Administration has explained that if the foreign aid program is to be maintained at its present level, considerably more money must be appropriated this year than was last. This is because the foreign aid program for the past 3 years has been living off the fat accumulated from 1951 through 1953 when expenditures were considerably less than appropriations. This excess has now been greatly reduced. In actual fact, since 1953 the Government has spent $3.3 billion more for foreign aid than was appropriated for these same years. Last summer, for example, Congress voted $2.7 billion for fiscal year 1956. But by the end of fiscal 1956 we probably shall have spent $4.2 billon.

The Administration has been something less than prudent to have allowed this situation to develop. Nevertheless, the fact remains that with the pipelines now beginning to run dry, Congress will have to appropriate this year about $2 billion more than it budgeted last year simply to maintain our programs at present strength. In the light of this, Senator George's recent statement that "sentiment has been growing in Congress to trim economic aid way down" is hardly encouraging. Nor is the past record of Congress which consistently has cut back the Administration's requests for funds. During his 3 years in office, President Eisenhower has received for overseas aid $1.8 billion less than he requested.

The figures in this area are deceptive. It has been widely stated that of last year's $2.7 billion appropriation for overseas aid, $1.6 billion was to go for economic aid. It has also been stated frequently that most of our aid is now going to Asia and the Near East. Strictly speaking, this is true. What the figures conceal is the fact that almost $1 billion in economic aid was appropriated for "defense support" program, and that the lion's share of this $1 billion is allocated to South Korea, Formosa and free Indochina.

"Defense support" means economic aid, but its purpose is to fortify the economies of countries whose large military establishments are beyond their ability to support. This kind of aid is thus tied to military objectives, which means it is applicable only for those countries willing and able to establish military alliances with the West. There is nothing wrong with this except that there is precious little cash left over for the 30-odd underdeveloped countries which do not qualify for defense support aid. In fact, what was left over for economic development and technical assistance from the last appropriation was considerably less than half a billion dollars.

The wisdom of the policy which gears so much of our economic aid to strictly military objectives must be measured against the new reality of international politics today, namely, the Soviet Union's recently inaugurated economic offensive directed toward the depressed parts of the world. It remains to be seen how wise and how effective this offensive will be. But this is hardly the time for the United States to consider withdrawing from the arena.

The reason for economic aid is not to buy military alliances, but to produce greater economic and social stability in areas of the world where social unrest creates vulnerability to Communist infiltration. Viewed in this light, the new "Northern Tier" alliance along the Soviet's southwestern frontier, and composed of Pakistan, Iran, Iraq, and Turkey, might more fruitfully be made the instrument of economic development rather than military strength.

In his state of the Union message, President Eisenhower declared that free governments in the underdeveloped areas needed "assurance of continuity in economic assistance for development projects and programs which we approve and which require a period of years for planning and completion." This is commonsense. Egypt's Aswan Dam project on the upper Nile is a nice example. It is estimated that it will take at least 10 years to complete.

There has in fact been considerable continuity in our overseas aid program during recent years. Despite large variations in appropriations and frequent threats to liquidate the whole thing, we have been spending annually between 4.2 and 4.8 billions for foreign aid. What is now needed is to begin preaching what we practice. We must give the assurance that this continuity is a recognized part of our policy.

When the discussion turns to the work of the U. N., it should be noted that the technical assistance program of the U. N. and its specialized agencies is doing much the same thing as the program of our own Government. But the difference is that the U. N. works at the level of multilateral, international cooperation. Therefore its programs are free from the accusation, no matter how false it might be, of imperialistic intervention in the domestic affairs of states being helped. This allows economic aid to be carried on in countries which are reluctant, for a number of reasons, to accept United States aid directly.

Again, remembering that our objective in many underdeveloped areas is not to buy military alliances but create conditions of stability so as to prevent Communist infiltration, it is entirely in our interest to support the U. N. program. For 1956 our contribution is $15.5 million, a sum that represents well over half the total U. N. budget for technical assistance. Understandably, we are reluctant to contribute more until such increases as we might give are matched by other participants. However, the possibility of such all-round increases might well be explored further.

Finally, one would hope that the simple humanitarian argument will not be absent from the coming congressional debate. A nation cannot afford to sacrifice the national interest in order to serve humanitarian motives. But on the question of foreign aid, there appears to be a happy concurrence between interest and larger human values.

Before swinging the ax at our overseas-aid program, and before demanding huge tax reductions, we would do well to reflect on the magnitude of our material wealth and our good fortune in a poverty-ridden world. Arnold Toynbee has suggested that our age may well be remembered not for its horrify-

ing crimes or its astonishing inventions, but because it is the first age since the dawn of history in which mankind dared to believe it practicable to make the benefits of civilization available to the whole human race. This session of Congress might ponder the challenge contained in the famous historian's surmise.

One Way of Solving Homes for the Aged

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. MULTER. Mr. Speaker, the Reader's Digest for February 1956 contains the following interesting article on new methods of housing the aged:

HOW TO RETIRE ON $20 A WEEK
(By William S. Dutton)

How can one retire and live decently on less than $20 a week? That is one of prosperity's mounting problems, faced by two-thirds of all Americans over 65. Now, suddenly, some of them are finding an answer that might be a tale from the Arabian Nights—except that it is true.

In the thriving suburban area southwest of Philadelphia is Riddle Manor, built in the early 1900's by the late Samuel D. Riddle, owner of the famous race horse Man o' War. He lavished more than a million dollars on the mansion's luxurious appointments and its 13 acres of wooded grounds. In 1952 this estate was put up for sale, and although the price finally dwindled to $50,000, the problem of maintenance was enough to awe most potential buyers. Then along came a Philadelphia real-estate appraiser with a bold idea that may well prove to be one of the social discoveries of our century.

Riddle Manor is now the home of 55 retired men and women of limited income. Indeed, not having a lot of money is one requirement for living there; the old folks handle the upkeep problem by doing most of the work themselves, and have fun doing it.

Besides low income there are only 3 admission requirements. First, the applicant must intend to make his permanent home at the manor, though anyone dissatisfied may leave (fewer than 1 percent do). Second, he or she must be free of communicable disease or mental illness and be able to attend to ordinary personal needs. Third, conduct is expected to be socially acceptable.

Rates at the manor are from $15 to $25 weekly, depending on accommodations. There is no other financial obligation. As yet no one has been turned away solely for lack of funds. Extra money toward room and board can be earned simply by assuming a few chores which are no more strenuous than those usually done at home. Otherwise, the only mandatory work at Riddle Manor is care of one's own room. Meals and privileges, which include the right to have occasional friends in to dinner at no extra charge, are the same for everybody, regardless of rate. Only first-quality food is served, and it is professionally prepared. A doctor is on call day and night, and if guests become seriously ill arrangements can be made with good nursing homes and a hospital nearby. In short, money has ceased to be a worry at Riddle Manor. And so has loneliness.

The incredible part of it is that Riddle Manor is earning a profit. I have examined its books and talked with amazed bankers. It is a business, beholden to no charity or special benefactor. Its guests are its income, and its owner-management pays full taxes. And the property is being steadily improved out of income. Recently, for instance, 5 new rooms, each with new furnishings, have been added.

The genie of this magic is Charles S. Lavin, 58, who makes no claim to doing magic. He is content that his friends are beginning at last to grant that he is sane.

"My toughest job," he told me, "is convincing people that what I'm doing can be done."

Riddle Manor, now owned by Lavin's friends, Dr. and Mrs. J. D. Rapp, is only one of his bold projects. Four others, even larger ventures are now operating under the plan, and a nationwide chain of retired folks' estates and hotels is contemplated as fast as desirable places can be lined up.

Here is Brookwood, in the lovely countryside ner Media, Pa. Its huge frame-and-stone house with 37 acres on a wooded stream had stood unwanted and neglected for 5 years. Today, in its setting of broad lawn, great old trees, and neat asphalt driveway, Brookwood resembles an exclusive suburban hotel, trim with new paint and room, power-run dumbwaiters, and modern heating plant. As I drove up I heard the notes of a piano and voices singing a familiar old hymn; the Golden Age Club was holding choir practice. More than 100 seniors are enjoying their ease here on incomes averaging $70 a month, and its books also show a profit.

Then there is the Boulevard Hotel in Miami Beach. This once-fine hostelry was going to seed, outdated by glamorous new multi-million-dollar hotels on the ocean. With its paint peeling and its pillared lobby threadbare, the Boulevard was sold in 1954 at a giveaway price: $340,000. Now it is like a new hotel, and some 200 retired men and women from as far away as Maine and Oregon have moved in, doing away with bellboys, porters, chambermaids, and tips.

A retired meat buyer itching to be busy again, took over management of the dining room and kitchen. Grandmothers who had been expert office workers took over the front desk, and an ex-accountant from Cleveland assumed charge of the books. A retired barber who had once prettied up theatrical stars reopened the beauty shop, and a charming little lady from Key West keeps the flower beds abloom in the 2-acre private garden.

This is no side-street hotel. It is a 7-story, fireproof structure of 220 outside rooms overlooking the Bay Shore golf links and a district of fine old homes and lawns. It boasts a swimming pool, cabañas, and sundeck. The Boulevard once commanded rates of $15 to $25 a person per day without meals. Those are now the weekly rates with meals. Yet the hotel began paying a profit its first year, after 125 guests had registered there for permanent residence.

Charlie Lavin does not pretend to be a hotelman any more than he does to being a maker of magic. He is a quiet, well-built man, usually in shirt sleeves, and doing something for somebody. I found him at the Hotel Monterey in Miami Beach, which he had just bought at the distress price of $70,000. The place was empty, and its adjoining garden was high with weeds.

"But look at that sunset," he exclaimed, pointing to the shimmering blue-and-gold waters of Biscayne Bay just beyond a palm-dotted park. "That alone is worth $70,000."

The time was October 1955, the low point of the Florida beach season. On November 1, repaired, repainted, scrubbed, and polished, the Monterey reopened with 33 retired guests to begin its new career. Some of the Boulevard people came over to wish them Godspeed. So did Benjamin Mandell, who owned the Westview next door, a dignified hotel of 119 rooms, facing the same park, bay, and sunsets.

"I think you know my aunt," Mandell said. "She is a retired physician of 82. She believes so firmly in your ideas on keeping old folks happy that she, too, has moved to the Boulevard. Wants to be independent."

Lavin smiled. "All of our people do."

His neighbor was studying the bay and sunset. "Maybe you'd like to manage the Westview. Apply your ideas and run it as you wish. Pay me something if you make a profit, nothing if you don't. Write your own contract."

The Westview may soon be No. 5 in the golden-age chain and, as Charlie Lavin's fame spreads, he is beginning to receive similar offers from all over the country.

Lavin began his career as a real-estate salesman in Philadelphia, progressed to mortgage broker and then to appraiser for an insurance company. Meanwhile he accumulated a wife and six children, a home, not much money but a wealth of experience.

Not all of the experience was happy. More and more he came up against the problem of retired people trying to make small fixed incomes meet rising costs. A rash of boardinghouses were appearing on shabby streets into which old folks were crowded to the limit the law allowed.

One evening Lavin came home sick at heart. His work that day had taken him into a house where 15 aging men and women shared a single decrepit bathroom. There was hardly room to walk between the beds, and the place reeked.

"I believe in America," Lavin told me. "It's been good to me and my family. But that night, thinking of those old people ending their days in that filthy dump, I wondered."

He began studying America's retirement problem and found that it is not a pretty one. Latest census estimates reveal that almost 14 million persons are 65 or older, and 65 percent of them have incomes of less than $1,000 a year. Nearly 3 million are living alone or with nonrelatives, and about 3 percent are in institutions.

"That only begins the problem," Lavin said. "Around 47 million of us are over 45 and would be in a tough spot if we had to look for another job. Call it our Act III."

The urge to find a happy ending to that act for the average citizen would not let him sleep nights. The first glimmering of a plan came one December day in 1947 when he was asked to look over Brookwood. The grounds were a tangle of head-high brush and the old abandoned mansion had a haunted air. "But structurally it was sound," Lavin said. "It was like those folks in the boardinghouses, just needed some new clothes, a haircut, and a chance. I imagined them roaming those 37 acres."

That Sunday he coaxed a few friends to inspect Brookwood and outlined his scheme to use the retired estate to house retired people. "Look, Charlie," said one man, "this ghost-trap isn't worth 50 cents, let alone $50,000. Don't be a sucker."

But Charlie Lavin, then 50, was not to be discouraged. Against all advice, he converted his life's assets into cash or credit and bought Brookwood. He, his wife, and son Bob (Brookwood's manager now) moved in and set about making the huge old house livable again, an accomplishment almost as fantastic as the venture itself. Lavin hired eight boys from the nearby Williamson Trade School who were eager for practical experience. "The boys," Lavin says, "were the first people outside my family who didn't think I was crazy."

The Lavins haunted the furniture auctions. They bought the best they could afford, and worked into the night getting the truckloads of beds, bureaus, chairs, and rugs in place. Finally Brookwood began to look like a home again, and in March 1948 a classified ad appeared in the Philadelphia Inquirer:

"Dream home for retired people. Beautiful country estate near Media, $50 to $60 monthly."

The first applicant was Henry Ferris, a former automobile and boat salesman who had lost a leg in an accident, along with his savings and his job. But he had a piano that he had kept despite all reverses. "I'll lose the other leg rather than let my piano go," he said over the phone.

Lavin sent a truck for the piano and paid for the moving. The ancient instrument stands today in the main hall of Brookwood, a prized common possession. The hymnals are all faiths are piled on its top. Around it Ferris built up the Golden Age Choir of 35 voices. Three years ago they sang—Jew, Catholic, and Protestant as one—at his Quaker wedding.

Brookwood's buildings alone, improved yearly out of income, today have an insurance valuation of $225,000. All but a few of its first year's guests are still there. Four are now in their nineties; the average age of all guests is 79.

Charlie Lavin hopes that others will adopt his plan. It is applicable, he points out, to countless hotels and estates now classed as "white elephants." One requirement is that the property be pleasantly located and not too far from churches, shops, and other centers of community life. The last thing retired people want is isolation and stagnation, Lavin said; then added with pride that the Boulevard alone had five marriages in its first year.

Another requirement, if the plan is to be financially secure, is that the property be large enough to provide generous living space for at least 100 guests—although that capacity can be attained gradually, as is now being done at Riddle Manor. A primary requirement, of course, is that the purchase price be rock-bottom.

But the big saving is made by everybody's sharing in the work and taking pride in doing so. The seven-story Boulevard, serving more than 600 meals daily, is operated by two cooks and two general-maintenance employees, and 18 guests who earn $10 each per month for part-time services. Other guests, accustomed to home responsibilities, are eager volunteers, and almost any type of skill can be mustered among them to meet specific needs.

Lavin has achieved the rare triumph of a morale that is "all for one, and one for all." A retired postal worker drew me aside to say: "This is wonderful. I didn't believe it could be true when I first heard about it. My wife and I took a room on trial, and held onto our home in Connecticut. Now we've sold our home. We're here for keeps.

"You know," he added, "just being here make a man feel good. This is the beginning of something that our country will gain by; it rounds out the American dream. And we are making it work."

Edward Hubert Butler

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1956

Mr. OSTERTAG. Mr. Speaker, the people of our country have sustained an immeasurable loss in the death last Saturday of Mr. Edward Hubert Butler, editor and publisher of the Buffalo (N. Y.) Evening News, and president of WBEN.

Throughout his long life, Mr. Butler's capacity for leadership of the highest order was demonstrated in many fields, and his profession, his community and his country were enriched by it. A newspaperman, with a deeply-felt sense of the responsibility of a free press in a free country, he served as president of the American Newspaper Publishers Association, and as director of the Associated Press, while building the Buffalo Evening News, and its associated enterprises in radio and television, into one of the most distinguished newspaper properties of this country, and for that matter, of the world. Meanwhile, he gave himself unsparingly to his community and his country, serving in innumerable capacities in civic, educational and philanthropic undertakings. For 38 years he served as a member of the board of the New York State College for Teachers, in Buffalo, and his gifts to, and support of the University of Buffalo won for him the Chancellor's medal, in 1953, for his civic patriotism and public service.

Honored by many organizations and by three foreign countries—Poland, France and Italy—it is perhaps most appropriate at this time, as we celebrate Washington's birthday, to recall that, on May 20, 1955, he was awarded the George Washington Honor Medal of the Freedom's Foundation, for his "continuing efforts in bringing to News readers through numerous projects and activities a realization of the importance of maintaining American traditions and the significance of this country's mission to bring about a greater understanding of freedom."

Mr. Speaker, under leave to extend my remarks, I include in the RECORD an editorial which appeared in the Buffalo Evening News, of February 20, in tribute to Mr. Butler:

EDWARD HUBERT BUTLER

No one who has grown up in western New York as a reader of this newspaper has to be told what kind of a citizen Buffalo has lost with the death of Edward H. Butler.

In everything that the News stands for; in every civic cause it has fought for; in every cultural, educational or philanthropic endeavor it has pushed; in the kind of newspaper it is; in the journalistic standards it seeks to reflect; in the convictions on great public issues it expresses—Mr. Butler's great personality and his lifelong dedication to community service are mirrored.

For any of his associates to attempt an objective evaluation of the man whose name has appeared for nearly 42 years at the head of this column as editor and publisher, would be at once impossible and superfluous: impossible because we have been too close too much a part of the institution he built to its present stature; superfluous because our professional pride in being identified with his kind of newspaper is self-evident from the long association most of us have had with it. The News has always been "Mr. Butler's paper," but he made it much more than that. There was no one at The News, he liked to say, who worked for him; rather, we all worked with him for the News.

What we are as a newspaper is only part of what Mr. Butler was as a person. So boundless was his energy in the early and middle years, and so continuous and far-ranging his interest in community affairs and his concern for people, that merely to list his extracurricular activities and affiliations would fill these columns to overflowing. Yet to any discerning reader, it can fairly be said that the truest image of the man was on view daily in the News.

Mr. Butler held strong convictions on many public questions; these columns have long reflected them. He also had a vast tolerance for other people's opinions; this newspaper has reflected that, too. He was a deep believer in the fundamentals of American freedom, a patriot in the broadest sense. He was a prime mover in scores of fights for community progress, civic reform, honest government and social betterment; no reader will need to have them enumerated. He was motivated by a deep religious faith, with its accent on good works and human dignity and brotherhood; to the extent that we are in fact a community of good neighbors, of broader tolerance and brotherly understanding than when he was young, Mr. Butler's active part in every campaign to make it so will not soon be forgotten.

The son of the founder of the News, Mr. Butler was trained to the role of publisher and editor. But it was a far thinner paper then; an institution well begun, but with its greatest years of growth yet to come under his leadership. As newspaper technology grew in complexity, Mr. Butler saw to it that the News kept pace with the times. When radio promised to get the news more quickly to the people, he was among the first publishers to experiment with that. When the TV age was dawning, he helped it through its infancy and for several years the News station, WBEN–TV, was the only one operating in this area.

As publisher and editor, Mr. Butler was both businessman and newspaperman. He demonstrated the businessman's judgment and administrative capacity to build his enterprise on a strong economic foundation; he also had the newspaperman's sure instinct to recognize that reader confidence is a newspaper's priceless asset—something that must be justified to be gained and must be consistently merited to be retained.

To those who knew him most intimately, the personality traits they will remember longest were his never-failing friendliness and courtesy; there was a personal warmth to this man that surpassed ordinary thoughtfulness and considerateness, a love of people that only mellowed with the years. He had that rare capacity for friendship that added a measure of brightness to countless thousands of the lives he touched, either closely or with some casual, half-forgotten kindness.

But it is as Edward H. Butler, editor and publisher of the Buffalo Evening News, that his life will be appraised and he will be remembered, and he would want it so. For it was to the News—and through it, to the service of his community, his country, and humanity—that his heart and soul were dedicated.

"I have preferred," he once said, "to be known to the public through my newspaper, and through it I have attempted to put into practice those things which I believe to be sound and true, and for the advancement of our country, our world neighbors and all of our people in this community where we work and live. * * * If we can contribute to an increase of friendship and understanding and good will among the nations of the earth as among the peoples of our city, we shall have rendered humanity a great service."

Mr. Butler built the News and its sister-enterprises—WBEN, WBEN–FM, and WBEN–TV—to what they are today. Now he leaves their surviving caretakers with a great tradition and a greater obligation. In the spirit of trusteeship and dedicated community service with which Mr. Butler infused the News, we shall do our best to carry on.

"Bloopers" Bad for Public Relations

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 23, 1956

Mr. HUMPHREY. Mr. President, I recently had occasion to mention on the Senate floor that the editor of the Mankato Free Press, Mankato, Minn., had written editorials which I considered to be unfair and unnecessarily critical of my motives in commenting on the Dulles brink-of-war controversy. I am happy to say that this editor has within the last month been responsible for some constructive and helpful editorials on this and other aspects of the conduct of our foreign policy.

On January 31, 1956, in an editorial entitled "'Bloopers' Bad for Public Relations," the editor discussed the recent forays of the Secretaries of State and Agriculture into the magazine field. The editor says very much the same things that I had said earlier on the same subjects. I ask unanimous consent that his editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

"BLOOPERS" BAD FOR PUBLIC RELATIONS

The old saying, "Oh, that mine enemy should write a book," will be recalled with regard to the recent difficulties into which both Secretary of State John Foster Dulles and Secretary of Agriculture Ezra Taft Benson were plunged as the result of recent magazine articles.

It is not necessary for a member of the Eisenhower administration to write a book—he needs only to endorse a magazine article, which regrettably in these two cases was not even read in advance by the Cabinet officer concerned.

Secretary Dulles has drawn sharp fire and criticism for the article in Life magazine regarding his brink of war phrase, and Secretary Benson was forced to apologize for an article appearing in Harper's, which critics charged belittled the farmer.

The slip by Secretary Benson is perhaps understandable. An aid approved the Harper magazine article without submitting it to the Secretary. Mr. Benson promptly and forthrightly accepted full responsibility, apologized for the slip and disavowed the sentiment expressed.

With Secretary Dulles, however, the widely discussed and criticized Life article is less understandable or excusable. The State Department has a particular responsibility to consider carefully the import of such statements, both at home and abroad. Mr. Dulles refused to discuss the article at length on the grounds that to do so "would make of it a state paper."

That being true, and it is true, there is all the more reason why such articles and interviews should be more carefully scrutinized and should be held to the minimum. Otherwise there will be a tendency by both officials and peoples abroad to lose confidence in the sound judgment and integrity of our foreign policy.

From its inception the Eisenhower administration has appeared inept and amateurish in this matter of public relations. During the first few months, or even years of a new administration, this is understandable. Now, however, after 3 years in office, it is time that a more considered and responsible policy was in operation in all departments.

The public is entitled to full information on the operations of the Government, but this information should be carefully prepared and weighed before it is released. Irresponsible statements of the kind we have had from two departments during the past week, statements which either have not been read, or have been only sketchily checked by aids and underlings, indicates a lack of responsibility in high places which is not conducive to public trust and confidence so essential during a critical period such as that which we are now experiencing.

Use by the Nation's Hospitals of Ford Foundation Grants for Antidisaster Preparations

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, February 23, 1956

Mr. WILEY. Mr. President, I was pleased to read the February 16, 1956, issue of the magazine Hospitals, Journal of the American Hospital Association.

Its contents are devoted largely to an analysis of the tremendous advances and opportunities made available to the Nation's hospitals by virtue of the welcome Ford Foundation grants.

In a lead article in the issue, Dr. James P. Dixon, commissioner of health of Philadelphia, points out that the Ford grants are "an investment in leadership," a great opportunity for the trustees and administrators of the 3,500 voluntary, nonprofit hospitals to serve their communities now and in time to come in ever more complete and effective ways.

One of the articles in the symposium relates to a phase of hospital service in which all of us are naturally interested. That is the capacity of the Nation's hospitals to prove adequate for any emergency which may come because of national, State, or local disaster.

The hospital is, of course, a key unit of the Nation's civil defense program. Upon the hospital's ability to withstand the impact of any havoc, whether it be in the form of enemy attack or flood, tornado, earthquake, or fire, depends much of the future well-being of our citizens.

I send to the desk the text of this particular article and ask unanimous consent that it be printed in the Appendix of the RECORD. I hope that it may help spur the thinking of other community leaders in cooperation with Red Cross, military, civil defense, law enforcement, and other experts to plan adequately against the possibility of disasters.

I commend the other contents of the February 16 issue of Hospitals to the attention of my colleagues and the public as a sure indication of the deep interest of the Nation's hospitals—in the Badger State and elsewhere—in ever more effectively serving our people, both as regards their regular and emergency needs.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DISASTER PLANNING—HOSPITAL AND COMMUNITY NEEDS AND THE FORD GRANTS

(By Charles V. Wynne [1])

One of the ways Ford Foundation grants can be used effectively is in the purchase and installation of services which a general hospital should have to be self-sufficient in any disaster, under all conditions short of complete annihilation. In order to be self-sufficient, the hospital must have the obvious facilities for plant operation. However, other facilities are also needed for smooth operation and efficient service during a crisis, such as adequate emergency and accident treatment areas, proper location of admitting offices, adequate storage space, and provision for stepped-up use of facilities ordinarily not required in day-to-day hospital operation.

The organization of a hospital is, by nature, geared to meet emergency situations and it seems elementary to discuss the installation and the alteration of facilities to meet these situations more efficiently. However, recent flood disaster experiences, especially in Connecticut, have clearly shown that these services are needed. Following this disaster, administrators from those hospitals involved held a critique. In the discussion, it was pointed up that hospitals have a right to expect provisions for such extraordinary needs to be financed in some manner other than from money realized from charges to patients. Hospitals now have an opportunity, through the Ford Foundation grants, to improve hospital service to the community by giving attention to planning for disaster.

WATER STORAGE

Water becomes a problem when there is either none or too much of it. In the recent disaster, flood waters contaminated the sources of water supply, eventually resulting in the hospital having no potable water. A hospital can provide a convenient alternate source of supply by installing its own wells with a storage capacity adequate for its needs to provide sufficient gallonage per minute, hour, or day, to provide the entire requirements of the hospital on a demand basis. It will be more practical, however, to provide storage areas for this water with a proper chlorination plant attached to it. It would also seem practical to design the facility so that at the proper time the city supply could be terminated and the hospital source started.

In discussing this matter with hospital administrators who are in the process of planning additions to their hospitals, it was unanimously agreed that such a facility was not only necessary but that storage of water could supply other needs in addition to standby service for the hospital. For example, an enclosed reservoir could be used as a swimming pool for the school of nursing and, on demand, could supply adequate water for special purposes in the hospital.

Several storage methods suggest themselves immediately: either underground or above ground, in concrete or in steel tanks, providing a flow by gravity or by pressure. These are details, naturally, which must be worked out for each individual hospital. No one can deny that it is a highly necessary facility and that it should be high on the priority list when thinking of spending this money for disaster planning.

STANDBY EQUIPMENT

Another important service vitally needed in a hospital is provision for standby light and power. In the day-to-day management of hospital service there seems to be too little attention given to this matter. How-

[1] Charles V. Wynne is administrator of the 356-bed Waterbury Hospital, Waterbury, Conn.

ever, increasing differences in expected weather conditions have made all of us aware that hospitals must have this service. It is not sufficient to have a standby generator—be it gas, gasoline, or oil driven—to provide service in certain parts of the hospital while waiting for the commercial utility companies to put the hospital back in operation. When disaster strikes, it comes with a jolt, and the "certain" places previously planned for light and power are usually not the areas where service is desperately needed. It seems more practical to have the hospital need for light and power met by complete emergency standby service so that the entire electrical power load is provided at a moment's notice. Consideration also should be given to proper lighting of stairways and corridors, in addition to planning adequate lighting for outside facilities of the hospital, notably the parking areas, entrances, and exits.

Hospitals should have boilers fueled by both coal and oil. When disaster strikes, there may be a distinct shortage of fuel oil or coal. Provision for both types of boilers will keep the hospital in service at all times. Sufficient storage area for both coal and fuel oil should be made at the same time so that the hospital can continue its service uninterrupted for considerable periods of time. The experience in Connecticut definitely shows that boilers fired by coal and oil place the hospital in a position to render community service on demand.

Another problem, not ordinarily thought of except in time of disaster, is the matter of maintaining adequate communications. When disaster strikes, it is necessary to disrupt some services and step up others, to rearrange headquarters and to organize facilities to meet the situation. On the nursing divisions, especially, the intercommunication system between the nursing station and the patient's bedside proved helpful in our flood crisis. Similar equipment between areas such as the hospital lobby and the emergency room, the admitting office and the emergency room, pharmacy and the emergency room, and the general storage area and the emergency room would have proven to be valuable. For instance, in our hospital, the chief of staff made his headquarters in the emergency room and the administrator established his in the front lobby. Both could have been in closer contact had there been provision for intercommunication between the two points other than the telephone. Such a system would serve a purpose in day-to-day operation and would become vital when disaster strikes.

Careful consideration should be given to the location and design of the emergency room. It should be located to facilitate admitting, detaining, treating, and discharging patients. When casualties arrive at a hospital, it makes sense to have plans which permit an orderly flow of patients from (1) an admitting point controlled by a nursing station to (2) a treatment area and then (3) a detention area or an in-patient division. Close proximity of the emergency room and the admitting offices form a unit which can work exceedingly well in a crisis and provide day-to-day service on an efficient basis.

HELIPORT PLANNING

While planning for interior alterations or new construction is important, it is just as important to plan the outside area of the hospital so that efficient and direct facilities for transportation and discharge are available. One problem rarely thought about in the planning of outside facilities of the hospital is a heliport. In the past flood disaster crisis, this hospital, by virtue of having planned rather extensive parking areas, was able to set up a heliport which permitted delivery and discharge of patients, supplies, and equipment which would not have been possible otherwise. Heliports should be planned sufficiently close to the hospital so that patients and supplies can be carried to it, if necessary, or transported by vehicle, if desired. It should not be located so close that the rotors of the helicopters push in the windows or blow all the dust and dirt from the parking areas through open windows. Having a heliport on top of one of our buildings did not make sense to us because it meant difficulties in transportation through the buildings.

The experience of our hospital and other hospitals during the recent disaster has indelibly impressed us with the need for the services described in this article. The needs for these services are known to exist but it takes a flood, earthquake, or tornado to make people aware enough of their need to take action. In planning for disaster, the community has the right to expect that lessons learned in previous crises serve as a basis for services they are willing to underwrite. With additional funds available, such as the Foundation grants, there is every reason to believe hospitals will improve their services by giving attention to the facilities required for serving their communities in times of disaster.

Could Any Test Be More Difficult?

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial about President Eisenhower from the Redwood City (Calif.) Tribune of February 18, 1956, entitled "Could Any Test Be More Difficult?"

COULD ANY TEST BE MORE DIFFICULT?

If President Eisenhower survives the ordeal through which he must pass in the next 2 weeks, he ought to be fit for anything.

In that time he must make a decision which will affect the course of history.

This is not to say that he is either indispensable or inevitably right. It is merely to recognize the fact that the President of the United States is in a position so sensitive and so powerful that his personality, his way of doing things, his ability to swing others into line with him, his ability to prevent some things from happening and to cause others to happen—all these set off chain reactions throughout the world.

If Mr. Eisenhower decides against running, other methods and another personality will control and different reactions will be set off. He must feel that his own approach has been fundamentally right; otherwise he would be a man with no faith in himself and the God to whom he consistently turns for guidance.

If he decides to run, is elected, and then is stricken while in office, the consequences would be far reaching. Would they be disastrous?

Now that the doctors have spoken, we are told, he must make his choice alone with his judgment and his conscience. If that were possible, it would be easier. But he has to make it under crushing and bewildering and conflicting pressures. He must make it amid the shouting of major and minor prophets, the cheers of those who expect of him miracles beyond any man's power, and the warnings of those who see only danger unless he steps aside.

A man who can withstand all this without breaking need not be greatly intimidated by anything that lies ahead.

Colonialism and Liberalization of Our Immigration Legislation

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 23, 1956

Mr. HUMPHREY. Mr. President, the editor of the Mankato Free Press has recently written editorials on the issues of colonialism and the liberalization of our immigration legislation. I ask unanimous consent to have these editorials printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Mankato Free Press of February 10, 1956]

AGE OF COLONIAL REVOLTS

The present age may come to be known as the age of colonial revolts. Egypt, India, Burma, and Ceylon have freed themselves from Great Britain. That power has found it expedient to grant home rule to Malaya and the Gold Coast of West Africa. The Sudan is setting itself up as an independent state. France has fared no better, having lost Indochina, and apparently being on the way to losing North Africa as well.

Now an assertion of the forgotten men has manifested itself in France's Pacific colony of New Caledonia, known to most Frenchmen chiefly as a penal colony. The Melanesian population has received the political recognition of being granted membership in the French Parliament. Now the natives and poorer French settlers have joined in electing Maurice Lenormand, a Frenchman with a Melanesian wife, to Parliament on a platform resembling that of our New Deal.

The old-established interests do not like it, but they will do well to make considerable concessions. The Pacific islanders are on the march, like the native population of British Asia, French Africa, and Indochina.

[From the Mankato Free Press of February 11, 1956]

LAW SHOULD BE LIBERALIZED

The United States has completed the most prosperous year in its history. Employment has been at an all-time high. According to President Eisenhower, this unprecedented prosperity will continue. Yet the United States continues to bar admission to all but a few of the thousands seeking life here.

The refugee-relief program, passed in 1953, provides for admission of 209,000 foreigners. To date, hardly more than 51,000 have been admitted, and the program terminates at the end of this year. This is unbecoming the most prosperous Nation in the world. Particularly for one facing a constantly mounting labor shortage in many fields.

One reason for the program's failure is the stipulation that every refugee or refugee family entering this country must have assurance of a specific job by a specific employer. These assurances are unavailable in sufficient volume, not because of unemployment here, nor of lack of need for the skills possessed by these refugees, but because of misunderstanding and even reluctance of individuals to provide such a guaranty. This deficit could be made up quickly if voluntary agencies were permitted to sign employment assurances, as they were in the days of the displaced persons program.

This is a Nation of refugees, yet the present law, in effect, works to hamper the admission of refugees. Congress certainly should liberalize this law according to President Eisenhower's recommendations, remembering that the richness of individual talents and the unity of diversified cultures has brought America to its strength.

Upper Colorado Storage Project Scheme Defies Presidential Advisory Committee on Water Policy

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. HILLINGS. Mr. Speaker, the proposed upper Colorado River storage project bill, H. R. 3383, is wholly incompatible with the recommendations of the Presidential Advisory Committee on Water Resources Policy of December 22, 1955.

If ever a piece of water resources legislation cried for processing under the procedures the Presidential advisory committee recommends, this is it. This would involve an application of benefit-cost principles which would give a more realistic appraisal of the benefits and detriments of this project; and ultimate review by an independent Board of Review which should give the Congress a correct picture of the highly controverted engineering and financial details of the proposal.

Compare just two of the statements of the Presidential advisory committee with the facts of this project:

1. Use of excess revenues:

* * * * *

The committee believes that such a use of excess revenue from Federal power sales to repay a portion of the costs of other types of projects is a justifiable procedure provided the project to which such revenues are applied is a part of the area from which such excess revenues are derived. However, it should be pointed out that the utilization of excess revenue to aid projects which are in no way related to the facility producing the excess revenues amounts in reality to the operation of a Government facility to obtain a profit to be used for other purposes, and there are obvious limits beyond which such a policy cannot be justified (report, pp. 33–34).

The participating projects to be benefited by the anticipated power revenues are connected in no other way with the power dams. Each one of these irrigation ventures could be constructed without the storage dams. No water impounded by these dams is to be placed on the land. Yet 88 percent of the cost of these irrigation projects is expected to be repaid from power revenues. If such a percentage does not exceed obvious limits, what would? The precedent in this bill would be so enormous for this type of subsidy that we may as well forget a national water policy on this score.

2. Payment of interest:

* * * * *

The Committee recommends that as a general policy interest be paid on all Federal investment subject to repayment. In making this recommendation the Committee recognizes that the provision of interest-free Federal funds for irrigation does not conform to this policy. The Committee believes, however, that this provision should not be eliminated but rather that interest should be shown clearly as a Federal cost, as should all nonreimbursable items in all projects (report, p. 34).

The Bureau of Reclamation has admitted that the project recommended by the Secretary—Glen Canyon and Echo Park Dams and 11 participating projects—"would result in a total interest cost of $1,153,000,000 in the year 2032."

This staggering figure has been variously estimated by other sources to run as high as $4 billion, depending on which of the many over-all project plans may be under consideration. In any event, consider the Bureau figure as a minimum. This is not included as a project cost as the Presidential Advisory Committee now recommends. It was brought out only by determined questioning. It gives some idea of the true cost of the project to the taxpayers.

Glossary of Terms Used To Keep the Wheels Turning in Government and Industry

EXTENSION OF REMARKS
OF
HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following glossary of terms used to keep the wheels turning in Government and industry:

Program: Any assignment that cannot be completed with one phone call.

Channels: The trail left by interoffice memos.

Coordinator: The guy who has a desk between two expediters.

Consultant or expert: Any ordinary guy more than 50 miles away.

Under consideration: Never heard of it.

Under active consideration: We are looking in the files for it.

Conference: Where conversation is substituted for the dreariness of labor and the loneliness of thought.

Committee: A means for evading responsibility.

Board: First, made of wood; second, long and narrow; and, third, sometimes warped.

Reliable source: The guy you just met.

Informed source: The guy who just told the guy you just met.

Unimpeachable source: The guy who started the rumor originally.

Make a survey: Need more time to think of an answer.

Note and initial: Spread the responsibility.

Clarification: Fill in the background with so many details that the foreground goes underground.

Check the files: Ask the janitor to look through yesterday's sweepings.

Finalize: Scratch gravel to cover errors.

Magnesium in Pacific Northwest

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. WESTLAND. Mr. Speaker, a great area of untapped mineral wealth lies in the northern Cascade Mountains of the State of Washington. In the vast olivine deposits of the Three Sisters Mountain, in Skagit County, lies an olivine deposit estimated to contain enough magnesium oxide to produce 500 million pounds of magnesium metal a year for 500 years.

A new process for producing magnesium metal from the olivine has been developed by a University of Washington graduate student, Kermit Bengston, which might well result in a practical method of manufacturing and selling this magnesium at a lower cost than aluminum. I include an article from the Seattle Times, of February 5, 1956, describing Mr. Bengston's process:

UNIVERSITY OF WASHINGTON STUDENT'S PROCESS GETS MAGNESIUM FROM SKAGIT ORE

A process for producing magnesium metal from the vast olivine deposits of Three Sisters Mountain was reported today in The Trend in Engineering, University of Washington technical publication.

Kermit Bengston, graduate student in chemical engineering, reported the results of work begun 9 years ago and now approaching conclusion.

If a new method of treating granulated olivine with chlorine gas proves feasible on a pilot-plant basis, Bengston said, anhydrous magnesium chloride "could very probably be obtained at less cost than by the present commercial process and certainly with greatly reduced capital investment."

Magnesium metal is now obtained principally from sea water, with magnesium chloride the next-to-last step.

An electrolytic process, similar to that used in the production of aluminum, is the final step in converting the magnesium in the sea-water test. A similar last step would be used in Bengston's process.

University of Washington mining and chemical authorities long have regarded the Three Sisters formation, in Skagit County, as a storehouse of fabulous wealth, awaiting an economically feasible process for magnesium extraction.

The mountain formation, 10 miles long, 2 to 3 miles wide, and rising to a 6,700-foot elevation, is almost solid olivine, an ore containing 49 percent magnesium oxide.

It has been estimated that the mountain could produce 500 million pounds of magnesium metal a year for 500 years.

"I haven't worked out this figure myself, but after climbing the South Sister I can believe it," Bengston said.

The olivine ore also includes "lenses" of chromite.

Bengston's method involves "fluidizing" the olivine ore. This means granulating the rock and using gas to keep the ore particles in motion, as if they constituted a liquid.

The gases used in the process are chlorine, to form magnesium chloride, and carbon monoxide, to absorb oxygen released in the reaction of the chlorine with the olivine.

Bengston began his work on olivine in 1947 as an undergraduate. It was interrupted in 1951 when he went into the Navy. He resumed his project in 1953.

His research has provided theses for his bachelor's and master's degrees—and a patent on his process.

The final steps of his project will be the basis of a doctor's thesis—"and perhaps a practical method that will permit magnesium to be manufactured and sold at a lower cost than aluminum," Bengston said.

Look It Up and Think

EXTENSION OF REMARKS
OF
HON. JOHN DOWDY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1956

Mr. DOWDY. Mr. Speaker, a timely editorial appeared in the December 8, 1955, issue of the Crockett Democrat, published in Crockett, Tex. Under unanimous consent, I insert in the Appendix of the RECORD the following editorial:

LOOK IT UP AND THINK

Now that the campaigns are under way we have started hearing the sneers of the people regarding politicians.

That, to us, is maddening.

Webster defines politics thusly: The science of government; that part of ethics which relates to the regulation and government of a nation or state for the preservation of its safety, peace, and prosperity.

Mr. and Mrs. Houston County, stop and reread that if you please.

There are lots of candidates for office, but they are only the figureheads, to be elected by you, to administer the various offices of your government.

Don't you dare sneer and call down the wrath of your household on their heads. They are politicians, because they want to hold the important jobs that political office gives them.

You may or may not have had the guts it takes to enter a campaign, and too many of you stayed away from the polls in the past, and there is no reason to think you will vote this year.

You are in politics, if you value the air you breathe. If you or your sons, or your fathers, or grandfathers ever took up arms in defense of the United States. That was politics—violent politics every time they pulled the trigger of an M1, but don't ever sell politics short.

You who live in the freedom of Houston County are in politics, whether you vote or not. You are interested in politics because the Government has made it possible, through wars and trading, for you to be in politics.

Don't, please don't, in the coming months say anything derogatory about politicians per se. A personal like or dislike of a candidate in politics. Express yourself, especially at the polls, but don't ever sell politics or politicians short.

Some people like to farm, some like to run newspapers, some like to fish for a living, all have a place in the world and you, Mr. and Mrs. Houston County, are in politics every day of your lives.

Don't sneer—cheer.

It is refreshing to have some people brag because they are politicians. They usually are not the psuedostatesman that sits on the courthouse bench and pokes fun at every candidate.

American Policy in the Near East

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1956

Mr. ROOSEVELT. Mr. Speaker, I have recently received a memorandum from Mr. I. L. Kenen, executive secretary of the American Zionist committee for public affairs. It is a most interesting comment on the reply of Secretary of State John Foster Dulles to the declaration of recent date signed by so many Republicans and Democrats. I believe that this analysis by Mr. Kenen deserves the thoughtful consideration of all of us. Therefore, it is included for the information of the Members:

MEMORANDUM ON THE SECRETARY OF STATE'S LETTER OF FEBRUARY 6, 1956, ON AMERICAN POLICY IN THE NEAR EAST

In his letter of February 6, Secretary of State John Foster Dulles has categorically declared that "the foreign policy of the United States embraces the preservation of the State of Israel." Moreover, he concedes that the Arab States may attain military superiority over Israel. In fact, he says, their population preponderance and the availability of huge Soviet arms supply could make the arms disparity impossible to offset. Thus our Government recognizes Israel's danger and its own responsibility for helping to meet it.

This appears to be an irrefutable argument for granting Israel's request to purchase arms, but to our great regret the Secretary of State does not reach that conclusion, although the original Israel request has been pending 4 months and was promised sympathetic consideration by the administration last November. While Mr. Dulles does not exclude the possibility of arms sale to Israel, he believes that the main solution lies in (1) action by the United Nations; (2) implementation of the Tripartite Declaration of 1950 by which the United States, the United Kingdom, and France declared it a policy of action to deter aggression, and, finally, (3) establishment of friendly relations between Israel and her neighbors.

Diplomats of the United States, the United Kingdom, and France have begun discussing the measures that might be taken in the event conflicts break out anew. These conversations are an outgrowth of the Anglo-American talks held here last week.

No concrete proposals have been formally announced, but newspapers have published divergent reports:

1. It has been suggested in some quarters that the force of U. N. observers might be enlarged. However, this would not in itself deter infiltration or aggression, and U. N. authorities do not regard it as an effective answer to the problem. At best, this is of purely local significance.

2. It has been rumored that the three Western Powers, the United States, the United Kingdom, and France, would undertake to commit forces in the area to halt aggression by either side.

It is not clear whether the powers would undertake this police action (a) under the authority of the U. N.; (b) on their own initiative; or (c) by virtue of treaties with the states directly concerned.

If the great powers were to rely on U. N. authorization, the U. S. S. R. might veto any positive action to defend Israel. Moreover, it will be recalled that in 1948, when both the United States and the U. S. S. R. were united in the U. N. Security Council in the effort to halt aggression in the Near East, it took all of 30 days and 4 orders to cease fire before the U. N. could force the Arabs to a truce. One may speculate on the fearful destruction that could be visited on Israel if the Security Council were immobilized and Israel had no weapons to counter the swift and modern equipment now in Egyptian hands.

On the other hand, it will be unprecedented if the great powers were to act without U. N. sanction or, in the alternative, without the agreement of the states directly concerned. This could set a dangerous example for other powers to act on their own initiative in the Near East or in other parts of the world.

In addition, it would be a reversion to the 19th century, and all Near East countries, which have waged an ideological war against imperialism and colonialism, would doubtless resent a status reducing them to protectorates or wards.

It would seem, therefore, that the logical method of establishing some kind of machinery to keep the peace would be through bilateral or multilateral treaties in the region by the terms of which the countries of that area would receive guaranties from the great powers to respond to their appeal in the event of aggression against them. Such treaties could be negotiated within the framework of the United Nations Charter and would be completely consistent with the regional defense systems which have been negotiated in other parts of the world and which today knit together 44 countries.

Accordingly, it seems to us that our Government should now consider negotiation of such security treaties with Israel and other countries in the Near East that want them. We continue to believe that it would be a fatal mistake to defer such pacts until after Arab-Israel agreement is reached on boundaries and other issues (a proposal which Mr. Dulles has renewed in his letter to the Congressmen).

It is reported in Washington that the current discussions will come to a head within a month. If no firm decisions can be reached within that time, the dangers in the area will doubtless increase. Meanwhile, Arab arms superiority mounts every day as Soviet arms pour into the area while Israel's arms request is stalled.

The foregoing review of the difficulties now confronting Western statesmen shows the complexity of the problem. It underlines the urgency of immediate and effective action to deter aggression; that is, to let Israel have the weapons it must have to defend itself. For treaties and guaranties, even if they are finally negotiated, are no substitute for arms, as democratic Poland, Czechoslovakia, and other countries learned in 1939. With the greatest of good will and the most effective guaranties, there is real danger that an exposed and ill-armed Israel could suffer terrible destruction and loss of life before help could come, if enemies attacked her and she did not have adequate weapons to bear the brunt of the assault.

Thus, there is danger in continued delay. Mr. Dulles has stated that the preservation of Israel is part of the United States foreign policy. Our Government must enable Israel to do what she can to preserve herself.

We believe this is vital if communism is to be blocked in the Near East. We believe it to be crucial to the best interests of the United States and the free world.

I. L. KENEN.

As a Farmer Views the Farm Program and His Problems

EXTENSION OF REMARKS
OF
HON. OTTO KRUEGER
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. KRUEGER. Mr. Speaker, under leave to extend my remarks, I would like to include the following letter from Grant Trenbeath, a farmer at Neche, N. Dak. I know Mr. Trenbeath as a practical, hard-working farmer, and an independent thinker. His views, as offered here, are in contrast to so many we have heard which are represented as grassroots thinking:

Ninety-percent supports for wheat are necessary for the coming year, if acreage restrictions are imposed to the degree present surpluses can be reduced. Ninety-percent supports necessary as a stopgap until we see how effective the soil-bank program will be.

Ninety-percent supports are not the solution to a long-range farm program. As Ole Flatt stated, "It can only be a steppingstone but never a cornerstone."

There never were two greater crimes committed against the American farmer as those that took place in the past 6 years. First allowing 90-percent supports to continue, without acreage controls, and watching surpluses mount; and secondly, when acreage quotas were applied the Congress did not restrict acres even close to what was necessary to curtail surplus growth. Now we are faced with a serious situation, with the majority of the farmers reasoning, not looking for a long-range solution to get out of the public trough, but grabbing for the best plan that assures them the most out of it.

As I mentioned at the Grand Forks meeting, we along the Canadian border are very aware of a situation we believe needs correcting. The Canadians developed a good variety of hard red spring wheat, much in demand prior to this year, but in adequate quantity within the States from last year's crop, to take care of all necessary seeding this spring. The Canadian farmers are willing to clean, bag, tag, treat, and transport this variety into this country cheaper than the American farmer can prepare his own wheat, of the same variety, for seeding so he is leaving it under CCC loan or selling it on the market.

Here is what is taking place. The annual commercial wheat import quota from Canada is 795,000 bushels at a duty of 21 cents a bushel. But registered seed if color treated so it will not get into commercial channels, may be imported in unlimited quantity at an import duty of 5 percent of the cost (in the case of wheat between 10 cents and 11 cents a bushel). Since November 1, 1955, until January 31, about 800,000 bushels came into the United States in this manner in the district comprising North Dakota and one county of Minnesota. At this rate, by April 1, it is probable that 1,500,000 bushels will be imported in this one district alone, not including the rest of Minnesota and east and also Montana west. This is all hard red spring wheat that is indirectly competing on the open wheat market, being financed by the CCC and storage being paid by the United States Government. Plus the fact we are losing 10 cents a bushel import duty, on a commodity in great surplus within the United States. This situation needs immediate attention as it will continue into another planting year.

The greatest deterrent in making any farm program workable are the large surpluses. Parity should be achieved in the open market and not as a direct subsidy from the Government. The new soil-bank program will insure the United States against food shortages in case of drought and war emergency in the soil and not reflect as a drag in the commodity markets.

We, therefore, believe present surpluses should be disposed of immediately, even at a great loss, to make the new program effective. Even if the soil bank succeeded in reducing acreages on basics 15 to 20 percent a year, at best it would be 6 or 7 years before surpluses could be eliminated, in the case of wheat. During this time the costs to the Government in storage and direct subsidy will be tremendous and the farmer still demanding more, so it would be realistic for the Government to take its loss in stocks on hand rather than spending twice the amount in making the new program work and then probably not succeeding.

The farmer has got to realize he must not continue to place himself on a higher pedestal in his demands on the Public Treasury. Other segments of the United States economy will be entitled to the same consideration and we will have a completely socialized economy. We must be leaders in getting every segment of the economy away from the public trough. If we continue as in the past, the public could rise up and stop this increasing Government subsidy to the American farmer and we could lose the farm evernormal granary. What then?

We have just received the working details of the new soil bank. It appears to us, here, the big money was placed on the wrong horse. Less money should be paid in the conservation reserve and more on the acreage reserve.

The sole purpose of the program is to create a stop-gap voluntary incentive for the farmer to reduce his plantings in the basic commodities, in surplus. The very opposite will be achieved. Every farmer you talk to here, plans to participate heavily in conservation reserve, but still plant his full quota of wheat. In some of the less-productive areas they will place the whole farm in the conservation reserve, excepting that portion required to plant and summer fallow for the next year, their whole quota of wheat.

If the new program for the rest of the country corresponds to the figures here its purpose will be defeated.

GRANT TRENBEATH.

La Prensa and El Tiempo

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Thursday, February 23, 1956

Mr. SMATHERS. Mr. President, I ask unanimous consent that an editorial appearing in the Washington Post and Times Herald under date of February 4, 1956, entitled "La Prensa and El Tiempo," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LA PRENSA AND EL TIEMPO

After 5 long years of suppression La Prensa once again is appearing as a free newspaper in Buenos Aires. The case of La Prensa during those 5 years became a symbol throughout the free world of the effort of totalitarianism to grind all independent thought under its boot. The valiant fight of La Prensa's exiled owner, Dr. Alberto Gainza Paz, did much to alert other peoples to the fact that press freedom is intimately connected with all other freedoms. La Prensa's editorial on its reopening is a powerful statement of the responsibility of independent newspapers to help maintain freedom by reporting the truth and commenting on public affairs. We know that it will never waver in this purpose, and we trust that it now will have a fruitful role in the rebuilding of a happier Argentina.

Contrast this reaffirmation of freedom with the lamentable situation in Colombia, where the iron arm of the Rojas Pinilla dictatorship is reaching out to crush more free newspapers. For more than half a year the voice of the once great Tiempo of Bogota has been silent. Two other opposition papers, El Espectador and Diario Grafico, have been closed as the result of governmental action. Even as there is discussion of a new press law which would forbid governmental censorship or suppression, a Conservative newspaper, La Patria of Manizales (which had supported the Government but ventured to criticize certain measures), has ceased to appear because of censorship. More and more the events in Colombia are beginning to resemble those in Argentina under Peron. It is perhaps pertinent to remind Gen. Rojas Pinilla of what happened to Peron.

Profits Without Federal Controls

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. WESTLAND. Mr. Speaker, the egg and poultry industry has been a stanch advocate of keeping governmental controls out of its business. Its members have opposed controls and subsidies and have worked out an active program of promotion, self-regulation of production, and quality improvement.

The following editorial which appeared in the Seattle Times, I believe is a convincing testimonial to the success of this segment of agriculture:

WASHINGTON EGG AND POULTRY FARMERS HAVE PROFITABLE YEAR

Although Washington State farm production in general dropped last year by about 10 percent as compared with 1954, one branch of agricultural activity prospered and did a volume of business that set a new record. The Washington Cooperative Farmers Association, which represents some 45,000 farm-family members, reports a business volume of more than 51,300,000 for 1955, and an operating margin of $2,935,769 which is distributed to the association's members. The State's egg and poultry farmers had a substantially more profitable year than their colleagues in some other segments of the farming industry.

Washington agriculture in 1955 generally felt the effects of the price squeeze and the curtailment of wheat acreage. Weather conditions dealt severe blows, too, notably to the western Washington strawberry and oat crops. The State's overall egg production was slightly down, but Harry J. Beernink, general manager of the cooperative association, has advised his members that its 1955 egg receipts were up 14½ percent.

The State egg and poultry farmers enjoy many advantages over other phases of agriculture. They have a populous and growing local market which is seldom adversely af-

fected by foreign competition and complex world economic problems as is the case, for instance, with grain. Through their cooperative association they enjoy the benefits of a vigorous advertising program and extensive scientific research in marketing methods, feed, nutrition, and fertilizers that enable them to improve and dispose of their products. The association plans an advertising budget of $450,000 for 1956.

The Washington Cooperative Farmers Association has a continuing program to encourage farmers in eastern Washington to raise more corn and grain suitable for poultry feed. During 1955, the association paid $1,350,000 in freight charges to haul corn from the Middle West. It costs $1,000 to bring a single 50-ton freight car of midwestern corn to the association's mills in this State. If eastern Washington farmers would increase their feed crops materially, both they and the State's egg and poultry raisers would profit thereby.

The Washington Cooperative Farmers Association makes a substantial contribution to the State's overall economy when its members flourish. In providing jobs and in the purchase of supplies and transportation, its activities are reflected favorably in every business field. For example, in 1956, the association plans a $350,000 program of new construction and building modernization. The State always benefits whenever any of its agricultural enterprises thrive.

CIO Union and Its Lobby Against the Natural Gas Bill

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. SHEEHAN. Mr. Speaker, the Chicago Tribune, on February 21, 1956, contained an editorial which should be brought to the attention of the Senate which apparently is going to investigate all phases of the natural gas bill lobby situation.

As the Tribune points out, one of the facets of the investigation should be to determine how much influence contributions of the CIO labor union had in shaping the thinking and voting of some of the most vociferous opponents of the natural gas bill, who apparently received huge campaign contributions from the CIO union which opposed the gas bill.

The editorial is as follows:

CERTAIN SENATORS AND THEIR BACKERS

Mr. Eisenhower vetoed the bill to free independent natural gas suppliers of Federal control, notwithstanding his belief that the legislation was needed and that it was in the national interest. He took this contradictory action because he saw evidence in the fact that an oil company lobbyist had offered a $2,500 campaign contribution to Senator CASE, of South Dakota, that an "arrogant" attempt had been made by "a very small segment" of the natural gas industry to interfere with governmental processes.

After Senator CASE brought this matter to the attention of the Senate, a special committee was appointed to investigate. Another committee is commissioned to study the whole problem of lobbying and campaign contributions.

Mr. CASE did not accept the money for his campaign. He had previously been understood to be in favor of the bill to free natural gas from control. After he informed the Senate of the offer of campaign funds, he voted against the measure. Yet, in his testimony before the investigating committee, he refused to say that he felt that any improper influence had been attempted. He said that he was not alleging a bribe, that "there was nothing proposed to me in this matter," and "there was nothing promised." The apparent effect of the offer was merely to change his own vote.

"Liberal" Democrats are trying to make a great deal of this incident and imply that "the interests" buy and sell influence on the Senate floor. A majority of Democrats who voted in favor of the bill, which passed the Senate 53 to 33, even after CASE had made his dramatically timed announcement.

But the "liberal" Democrats are in none too happy a situation. Representative WINT SMITH, of Kansas, has called attention to the fact that numerous prominent liberal New Deal Senators are in the habit of accepting much more substantial contributions to their campaign chests from such vested economic interests as unions, and, by the rule the liberals seek to apply in the Case affair, these Senators should be regarded as equally beholden to the donors. Also, if the oil company which offered support to Senator CASE is to be considered suspect, so equally, are all other donors.

Thus Senator PAUL H. DOUGLAS, of Illinois, a self-knighted Galahad who led the fight on the natural gas bill with a 4-day harangue, is cited as having received $30,500 from labor organizations in his 1954 campaign for reelection. This is 12.2 times as much money as was tendered Senator CASE; so, if an inference of impropriety is justified in the one case, it must be assumed that the unions wanted, and expected, 12.2 times as much from Senator DOUGLAS as the oil company sought from Senator CASE.

The unions contributed on a similar scale to such other pets as Senators NEUBERGER, of Oregon, and MURRAY, of Montana, who, with Senator DOUGLAS, always vote the way the the union bosses see things. Is it not justifiable to conclude, then, that in large areas of legislation the votes of these Senators have been signed, sealed, and delivered in advance to the union bosses who possess such substantial equity in them?

New Low in Politics

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. ARENDS. Mr. Speaker, under leave to revise and extend my remarks, I am inserting in the RECORD the editorial entitled "New Low in Politics," which appeared in the February 16 issue of the Danville Commercial-News.

I have been very much distressed that politics is being played with this extremely important farm problem. The bill as reported by the Democrat-controlled Agriculture Committee will gravely injure the Illinois corn farmers:

"Atrocious * * * as bad as can be!"

That is what Senator CLINTON P. ANDERSON, New Mexico, Democrat, has to say about the farm bill reported by the Senate Agriculture Committee, of which he is a member. Under the leadership of its chairman, Senator ALLEN J. ELLENDER, of Louisiana, the committee would restore rigid high support prices. ANDERSON knows they won't work, because he was Secretary of Agriculture in the Truman administration.

In spite of the fact that ANDERSON has warned his party repeatedly that rigid supports which stimulate production have had their chance and failed, ELLENDER has plunged all out for high supports. Agriculture Secretary Ezra T. Benson has warned Congress and the Nation that if ELLENDER's bill is passed the President surely will veto it.

"Then," retorts ELLENDER, "there won't be any farm bill."

We hope the public, and especially farmers, will take note of that statement, which we think sets something of a new low in peanut politics.

ELLENDER apparently is motivated by 2 or 3 selfish and narrow objectives. He can't get away from the idea that this is an election year and that partisan politics come first. He wants high supports and easy Government money for cotton and peanut growers under a program which stimulates production of these items, already a drug on the market.

The President has proposed a soil bank plan under which farmers would receive incentive payments to retire land temporarily from production. The soil bank is included in the Ellender bill because the committee apparently could find no major fault with it.

La Prensa's First Editorials

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Thursday, February 23, 1956

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "La Prensa's First Editorials," which appeared in the Washington Daily News of February 3, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LA PRENSA'S FIRST EDITORIALS

On March 12, 1951—after the great Argentine newspaper La Prensa had been shut down by the totalitarian Peronistas—we printed an editorial on page 1 entitled "Buenos Aires Papers Please Copy" in which we offered La Prensa space daily to print its editorial voice, until it could again be heard in Argentina.

The exiled owner, Dr. Alberto Gainza Paz was unable to furnish it; not only was it impossible to get free comment through Peronista censorship; such comment, if written, would have endangered Argentine writers who had been silenced. Refused passports, they were actually prisoners in their own country, in or out of jail.

Now Peron has been deposed, and La Prensa has been returned to its rightful owners.

Therefore, it is with a special pleasure that 5 years after our offer was first made, we publish the editorials below. They are La Prensa's first, published today as it resumed it proud career as a free newspaper.

Five years ago, the voice of La Prensa in Washington would have dramatized the dangers of nationalistic totalitarianism to the conference of North and South American foreign ministers then about to convene here

to discuss the problem of hemispheric defense.

Today, the voice of La Prensa can dramatize to our State Department—and to us all—the wisdom of never compromising with the devil.

Five years ago, we said "* * * an idea cannot be shot, or bombed out, or hung to a lamp post. Even an evil idea * * * Hitler was finally buried under a most fantastic holocaust of bombs; Mussolini came to an obscene and terrible end, hanging upside down from a street lamp." Peron, luckier than his spiritual brothers, today perches in a Panama hotel, living off his thievings, still plotting and spouting lies.

But whether or not dictators die or are deposed, totalitarianism does not die, and we are naive if we suppose it.

Mankind's struggles for political and economic security and individual safety are unending. Over the centuries its gains are small, and bitterly won.

Reopened, free La Prensa is today a citadel retaken, a symbol and a warning that the stubborn vitality of good can prevail only if men who are dedicated to political decency, who stand for the right to honestly criticize government, who stand to tell the truth as they sincerely see the truth—stand together, wherever they may be.

FOR DEFENSE OF FREEDOM

After more than 5 years of forced silence we return to take our place in journalism. We return to renew our labor in service of the Argentine nation and for the democratic ideals and liberties which we have unwaveringly defended.

Our voice was silenced for having stated the truth in our news columns and for thinking the truth and expressing it editorially.

For several years we had edited our newspaper without knowing whether the edition which we were putting out might be the last or the next to the last.

Then, January 25, 1951, the blow was struck. It had been carefully prepared. It was disguised in the garb of a union conflict. Initiated with a list of demands presented in the name of workers who did not form even part of La Presna's personnel, and with obvious official machination, publication of this newspaper thus was made impossible. The three branches of government cooperated to plan and execute what to the country and the world was presented as the expropriation of La Prensa. That is what the congress called it when it voted it.

But it was actually closure and confiscation for defending freedom.

Then, outrageously using our name, and using our plant, a newspaper was published which the people always knew to be a fraud.

The tyranny prolonged itself for as long a period as it was able to support itself, and then the best happened.

After 12 years of dictatorship and a little more than a century from that glorious deed, a new liberating revolution has put Argentina again on the road to its redemption * * * If the disaster of 12 destructive years of despotism and ineptitude exceeds even the worst expectations, our country still has the necessary elements under a regime of freedom and of individual guarantees to rebuild.

The recapture of liberty and the enjoyment of the essential rights of man repay these efforts. They are worth the sacrifices necessary to put our country back on the road to rehabilitation.

This common task will be historic. It will mark the start of a new era. And La Prensa, which was first published when the first definite struggles began for that which we call national organization after the consolidation of the Argentine union, will take part in this task without wavering. With concern for public good as from its first hour and during its whole existence, La Prensa will be published in the service of truth, justice, culture and progress, and, always, in defense of freedom.

THREE QUESTIONS

For more than 81 years, the Nation's life was reflected, justly, in the pages of this independent newspaper. They formed a written day-by-day history—true history written almost at the moment the events occurred.

After January 26, 1951, this history of the Argentine people, chronicled and commented upon in our columns, was stopped.

On that date violence at the service of infamy changed the written history into absolute silence.

After more than 700,000,000 copies—at the rate of some 400,000 papers daily—the honest Argentine chronicle started in October, 1869, could not be printed. From our collections are missing events of the last 1833 days, the cruelest of the recent tragic years suffered by the Argentine people * * *

Present Argentine generations and those to come will feel urgent need for answers to questions emerging from the Argentine drama:

What is the extent and depth of the destruction suffered by our country?

How, in a country with our culture and democratic tradition, is such a constitutional catastrophe possible? How can such a rule by force be implanted? For that is what it was—rather than a system of government which stopped our national progress. It was a repetition of regimes which caused the last war.

How, finally, can the principal moral and material damages caused during the unlucky cycle be repaired most quickly and—

How can anything even remotely like this tragic period be prevented from ever happening again in Argentina?

Little by little the whole truth is being learned. The people should not be long in understanding—we are sure—that the devastation was carried out by means of three equally sinister methods—lying, bribery, and fear.

Some were deceived.

From others, guilty complacency was bought.

And terror annulled the honest reaction of many.

There was a false key to open the door to the land of such fiendish methods. The false pass key was suppression of freedom of expression. When this happened, almost an entire people were made blind, deaf, and dumb.

Any community thus restricted in its information, in passing judgment, and in forming its thought is put in such condition that it can be carried along tortuous roads to the most dangerous extremes. The truth of this statement is clear not only in the Argentine experience—the tragedy of other peoples also corroborates it.

Why Go to School?

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, February 23, 1956

Mr. MUNDT. Mr. President, the question is often posed by young people in America, "Why go to school?" In some instances the full outline of answers is difficult to give, and even more difficult to sell to the youngster.

It seems to me that Mr. Joseph Paul Bitzer, the faculty adviser of the journalism students in the Lemmon, S. Dak., High School, has put the advantages of going to school in concise and succinct form in his article, Why Go to School, which appeared in the Lemmon Squeezer, the high-school paper.

So that other instructors and other students may have the benefit of this well-written article, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY GO TO SCHOOL?

(By Joseph Paul Bitzer)

You are now going to school. To be more exact, you are attending one of the many public high schools in the United States. Your school is similar to each of the other schools, and again, it is different from the others. No 2 schools are exactly alike, the same as no 2 persons are the same. Many of you may be wondering just why it is necessary to spend so much time in school. Many of you may believe that some of the time is well spent, and some of the time is wasted. Many of you are probably wondering, "Just why do we go to school?"

First, you are living in a free country, and the people who were here when the place known today as the United States decided that in this new free land, everyone should have an opportunity to have an education, to be able to learn for himself, and in turn become a better citizen. One could also say, to fit in with the conditions of life as they are where you are living, and when you are alive. So you will be able to do your part in making your community, and in turn your State, and country, a much better place in which to live. By being able to do your part well, you in turn should be able to live a more happy, prosperous, worthwhile life. And if most of us were able to do this for our country we would have a better place in which to live. And to continue, if all of the human beings existing on the earth were able to have your opportunities, what a wonderful world it could be for everyone.

Now, let's go to the school. Our own Lemmon Public High school. Before it was mentioned that it was similar, but also different from the rest throughout the United States. It is true that our school is not as large as some of the schools in the big cities. Students going to schools in the larger cities have many opportunities which you could never expect to get in your own place of learning.

Many of you may have been in a big city school system, and you may miss some of the opportunities you had at that particular place. Then, you at Lemmon High have many opportunities which students in other places would love to have. Considering everything, it is all good public education. Whether you are in a school the size of Lemmon, a high school having an enrollment of 2,000, or a high school with an enrollment of 50, each place has something which is good, and something that only this particular school can be proud of.

Next, let's take a look at some of the courses or subjects and we will also consider the extra-curricular activities. Many of you may wonder why you are taking certain subjects in high school. There are two main reasons: one because the State laws specify that these courses must be taken, and the other reason, because the members of your school community believe that they are for your benefit. Extra curricular activities are usually the result of interest on the part of the students, and what the public considers good for the community.

Some of the subjects you study will help you earn money in actual life; others will make life more pleasant for you, and others will prepare you better to fit in with your fellow human beings. It is true that you may be taking courses which will never benefit you, or perhaps you may think so now, and perhaps this way for many years to come, but if the course helped you to think, and opened your eyes to something you would never have considered on your own, it may be doing you more good than you may realize now.

High school students have an opportunity to prepare themselves for college, and for those not going to college, to prepare themselves for actual life.

Extracurricular activities are excellent. It is often true that a student learns more from extracurricular activities than studing the regular formal subjects. Could it be that if the present extracurricular activities were required for credit, and your present courses such as English, history, etc., were extracurricular, that you would take more interest in them.

While going to school you should learn to think for yourselves, but you should also have the patience to do what you are told to do while a student. You may consider the information given you as foolishness. You may resent taking orders and often not having an opportunity to fight back, but in the long run, you may find it to your advantage to listen, form your opinions while a student, and then express yourselves when your education is completed. This does not mean that you are not to express your opinions, but before you condemn a subject, a person, etc., sit through the discussion and when you are no longer a student and when you are a leader, do what you consider best.

It is surprising how much sense certain supposed to be ridiculous things make in later years. There are usually reasons for what you are doing in school and again, it may be a good idea to do them to the best of your ability.

So in closing, we can answer our question, Why do we go to school? by knowing that when we go to school, we have an opportunity to prepare ourselves to fit in with the conditions of life as they are in our particular time and community. Students going to school are working for themselves. They are working to prepare themselves to be better human beings and this means that the future of today will be responsible for an even better tomorrow.

Lincoln Day Speech by Hon. Clifford G. McIntire, of Maine, at Keene, N. H., Before the Cheshire County Republican Organization

---

EXTENSION OF REMARKS
OF
HON. PERKINS BASS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1956

Mr. BASS of New Hampshire. Mr. Speaker, under leave to extend my remarks, I take great pleasure in inserting in the RECORD a copy of a speech given by my good friend and colleague, Congressman CLIFFORD G. MCINTIRE, of Maine, before the Cheshire County Lincoln Day dinner held in Keene, N. H., on February 16, 1956:

As Republicans we meet here tonight to celebrate the birthday of a martyred President, and, in so doing, may well consider, for a time, those virtues which he represented. To know those virtues, and to appreciate them, is well. It is not enough.

Abraham Lincoln had an understanding of human nature and a standard of values uncommon to any walk of life, and certainly not often to be found in a President. He was temperate in all things except, possibly, his love of man and his hatred of unnecessary suffering. In an Executive, these things are desirable. They are not enough. Sensitive as a child, he had the rugged strength of your mountains. He was intellectually honest. Morally he was brave. That is enough.

His early failures, his lack of formal education, and his comparative povetry marked him as what one of our major political parties would refer to as "a common man." But for himself, and for all other Republicans—all Americans—he would assert, with Dean Alfange: 'I do not choose to be a common man. It is my right to be uncommon. I seek opportunity, not security. I do not wish to be a kept citizen and dulled by having the state look after me. I want to take the calculated risk; to dream and to build, to fail and to succeed. I refuse to barter incentive for a dole. I prefer the challenge of life to guaranteed existence, the thrill of fulfillment to the stale calm of utopia. I will not trade freedom for a beneficence nor my dignity for a handout. I will never cower before any master nor bend to any threat. It is my heritage to stand erect, proud and unafraid; to think and act for myself, enjoy the benefit of my creations, and to face the world boldly and say, 'This I have done.' All this is what it means to be an American."

Lincoln was born in 1809—21 years after New Hampshire came into the Union—when my State of Maine was still a part of Massachusetts, and this Nation had been in existence only 33 years.

Americans then had all the enthusiasm, vigor, and fearlessness to attempt the seemingly impossible that we recognize in our United States Marines today, and the same amazing ability to accomplish it. The world looked at us with dubious eyes, critical of our unorthodox ways, and with no conviction we would come to other than a bad end—and that speedily.

Lincoln believed that to know what is right is not enough. To dare to do what is right is. Throughout his Presidency, he looked upon our Republican Party as the organization best capable of conducting the affairs of the Nation fearlessly and effectively, and on February 27, in a public address, warned against "groping for some middle ground between the right and the wrong; vain as the search for a man who should be neither a living man nor a dead man."

Believing that "He who does something at the head of a regiment will eclipse him who does nothing at the head of a hundred" regiments, his idea of political potency was not to nominate a man because that man would be easy to elect. His philosophy dictated that you find the man who stood for the things in which the party honestly believed, and an army of eager campaigners would arise and exert the necessary energy to elect.

Lincoln was unique, in looks, in personality, and in thought. He has become the symbol of this Nation. He did not write the words, but he of all of our countrymen believed so implicitly that "all men are created equal" that he was willing to trust in God to uphold his stand, and so staked his future and that of his country on that proposition.

Those fishermen and traders who were the early settlers of New Hampshire had those qualities which made possible the breaking away from the known perils and persecutions of the Old World and the setting up of a new organization of States—the knowledge of the past and the vision of the future that inspired those who wrote our Constitution—and such qualities were reliable governors to assure that progress would be steadily upward. Our real danger, from the outset, was that we would travel so far so fast that we would lose sight of the reasons for the grand attempt. It is so easy to forget.

One whose ancestors claimed New Hampshire as their home claimed acquaintanceship with a man who often proclaimed "I know a lot. I just can't remember it." Abe Lincoln would have appreciated such a story.

He is the all-American of all the years. He knew hunger for food, but it was learning for which he thirsted. He toiled and suffered, and he knew defeat intimately. For long years every hope seemed vain, but he perserved in efforts to improve himself and to make the world a better place in which others could live. He might easily have found bitterness in his hard wrestlings with fate, and found excuse, as others have, for settling for the cheap rewards paid to those who practice political expedience. But providence was trying the right man. One who, although beaten to his knees, always staggered back to his feet, and, with eyes raised, pushed forward, would be a worthy trustee for the liberties of a people.

It was almost exactly 100 years ago, at Peoria, that Lincoln said, "If there is anything which it is the duty of the people to never intrust to any hands but their own, that thing is the preservation and perpetuity of their own liberties and institutions."

Here tonight, we should ponder well whether we have been alert in this regard; whether, as individuals, we have been willing to assign our rights and obligations to our own Government; whether, as a Nation, the preservation and perpetuity of our liberties and instiutions has been or is being delegated to others.

While Lincoln concerned himself with preservation of our Union, Marx and Engels preached the doctrine of Communist statism and control over the individual, advocating a new and evil system of government and society in the guise of assisting and elevating man.

Communism exerts force, and utilizes a fifth column. Socialism practices a stealthy political maneuvering. Such procedures are as foreign to the Republican Party, as they were to Abraham Lincoln. Such leadership of the world's freedom-loving peoples would never have permitted the deathly cold hand of communism to clutch and hold Eastern Europe and most of Asia as it does today nor have permited the filching fingers of Socialism to perform a sleight of hand on most of the rest of the world, so that the powers of the people became the powers of government itself.

Lincoln neither feared nor disdained wealth. Like each of us, he probably had a wholesome respect for something he had little of. He did not try to discourage its accumulation. At Cincinnati in 1859, and the following year in New Haven, he publicly proclaimed his conviction "That men who are industrious and sober and honest in the pursuit of their own interest should, after a while accumulate property, and, after that should be allowed to enjoy it in peace is right. I like the system which lets a man quit when he wants to, and wish it might prevail everywhere. One of the reasons why I am opposed to slavery is just here. What is the true condition of the laborer? I take it that it is best for all to leave each man free, to acquire property as far as he can. Some will get wealthy. I don't believe in law to prevent a man from getting rich. It would do more harm than good. So, while we do not propose any war upon capital, we do wish to allow the humbliest man an equal chance to get rich with everybody else."

Certain self-styled "idealists" would label profit as immoral. But they mistakenly assume that financial is the only kind of profit, or that that is the kind that is immoral.

Few persons and corporations can be persuaded to risk capital and few individuals will exert great personal effort without some promise, however remote, of reward of one kind or another. It is through profitable management that plants are expanded, more work provided for our citizens, and an ever higher standard of living enjoyed by all.

In every country where initiative and incentive have been restricted, and success penalized, the standard of living has been lowered, and frequently only grants in aid by this country have kept their citizens alive. Communists and Socialists, alike, decry profits, taxes, and individual freedom. But a government that carries on the business of a nation (as Communist and Socialist Governments do) receives the profits, makes the decisions as to what part it shall keep in lieu of taxes, and takes from the individuals their freedom. We know that profits make living possible. Taxes make governments function. But individual freedom is what makes both living and government desirable.

Those who advocate centralization of power have made few converts from among Republicans, for, as a party, now as in Lincoln's time, we are firm for a strong Union of strong States. Similarly, those who would subvert our Constitution, or make of it merely an exhibit for the archives, substituting some world charter as our rule for operation, are certainly a small minority in our party.

Lincoln was truly "of the people" as he was "for the people." While we can readily believe that his impulses were all good, he was not impulsive. He was a thoughtful man, and acted only upon mature reflection. His conduct and record would seem to refute the idea that statecraft is something to be schooled in, and diplomacy the "dexterity and artfulness of securing advantages without arousing hostility." He was not artful. He overcame the weakness and meanness of his associates by his infinite patience, complete honesty and magnanimity. He was never unduly concerned with the future and fortunes of Lincoln, but he cared passionately that America should be a place where a humble man might find opportunity for happiness—where the courts should be truly temples of justice for all—where people like himself might find possibilities for service, happiness and, even as he did, immortality.

He took his position and his duties seriously. Himself he did not. He was never what we call a "stuffed shirt." His critics decried his lack of what they termed dignity. But Lincoln would be the first to say that for sheer dignity nothing can surpass a body ready for burial.

In all his utterances, witty or serious, Lincoln spoke as the great majority of all good Americans would had it the gift of words. He put into words what many of us strive desperately and despairingly to state as our philosophy of living. Now, 99 years after his death, undimmed by time or the momentary bursts of brilliance from the meaner achievements of the politically expedient, at home and abroad, his name and memory live on.

Republicans created our national banking system; built up the Nation's credit; and made our currency, based on gold, the world's soundest. We demanded respect for our flag and our nationals the world over—the safety of our citizens was guaranteed while they were on the high seas or abroad.

Republicans passed the first Civil Service Act in 1883, and revised it to provide equal pay for equal work.

The Department of Labor in 1884, Commerce in 1903, the Patent Office, Weather Bureau and Postal Savings System all were established by the Republicans, and it was our party that created the Federal Bureau of Investigation.

Lincoln recommended establishment of a Department of Agriculture in 1862 and the same year passage of the Homestead Act provided farms for our people and opened the West to settlement. Later, the Morrill Act provided land for agricultural and mechanical arts colleges, such as our University of New Hampshire.

When Lincoln became President, the Democratic Party had been in power for many years, and every patronage job was filled with a Democrat. Republicans then, as now, besieged the White House, demanding appointments. One day a Senator, calling on the President, noticed his dejection and expression of anxiety and said, "Mr. President, has anything gone wrong? Have you heard bad news from Fort Sumter?" The President, still solemnly, replied: "No! It's just the postmastership at Jonesville, Mo."

Our Republican Party is situated today much as it was then. Grave problems face our Nation. Any delegation of our duty and responsibility to try to solve them to another political party is an act of cowardice of which we'll never be guilty. Am I right?

A few short years ago a famous American pondered the question as to whether or not he would be a candidate for the office of President of the United States. Over many years he had worked closely with his Government. One major party had urged him to be their condidate. He gave the matter most serious, and, I am sure, prayerful thought. I believe he looked back over American history and thought in terms of the great men and the things they believed, and the standards that they established. I believe he looked over our great system of political parties. He had never joined one, so he looked objectively. He thought of Jefferson, but concluded that the principles laid down by that great statesman were not those of the leadership of the Democratic Party today. Few men had had the privilege to observe more closely the workings of the Truman administration—its policies—and those in authority. He wanted no part of it. He chose the party of Lincoln, and with the encouragement of you folk in New Hampshire and others across the country became a candidate and was elected President of the United States. That man was Dwight D. Eisenhower.

The leader of the greatest armed might in the history of the world has proven himself the greatest President and world leader we have known in generations.

Nearly 4 years of his leadership are now a matter of public record.

It is a record that renews our faith in America; that proves we can enjoy peace, prosperity, and fiscal integrity, and look upon government as a servant and not the master of the people. We find in public office those who look upon administrative and elective office as a public trust and not just a part of the Pendergast or Hague machines or a part of Tammany Hall. We expect loyalty, justice, and equity, and want no more Hisses or Caudles. This type of government has brought encouragement to our people, renewed our faith in ourselves, and furnished a basis for trust and confidence in representative government.

A great American tonight turns over in his mind the problems and issues associated with another great decision. Again he considers the matter seriously and prayerfully. A matter of party is not involved. He knows which party has helped him build for a greater America. He will make the decision and map the course, and to each of us passes the responsibility of getting out and working in the coming campaign—electing a Republican President and a Republican Congress. To do less will put us back on the road to Trumanism. To those who would do that the road signs should read, "Dangerous; proceed at your own risk."

Daniel Webster has said that "duly performed or duty violated is still with us, for our happiness or our misery." Well, freedom and the future are not for fumblers.

Covered Bridges in Pennsylvania

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Thursday, February 23, 1956

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting editorial on the subject of the 142 covered bridges on the Pennsylvania highway system. The editorial appeared in the Washington (Pa.) Observer of February 16.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ONE HUNDRED AND FORTY-TWO COVERED BRIDGES

In this day of high speed motor traffic, the day of the covered wooden bridge is numbered—there are only 142 of the picturesque structures on the State highway system, Secretary Joseph J. Lawler said today.

Since World War II there have been 359 covered wooden bridges on the system, but floods, gales, and old age have claimed 217 of them on replacements. The department shies away from putting a roof on any bridge and except in a few isolated cases all bridges built by the State are now made of steel.

The department has never built a covered wooden bridge, the accumualtion of them having come about through action of a series of legislative bills, which transferred ownership of the bridges from counties, boroughs, and townships. Many counties and townships have off-system bridges.

Most of the bridges in use today were built of spruce or pine with hemlock being used in a few. These timbers were selected because they were readily available in the neighborhood and because native spruce, pine and hemlock provided the longest timbers. In many bridges the original deck and superstructures are still in place. Stone, quarried or cut in areas adjacent to the bridge was used in the piers, which usually were set on a bed of gravel in the stream. Wrought-iron nails and wrought-iron angle braces made in local blacksmith shops were used in some of the bridges. In others wooden pins were used to tie the structure together.

The roof and closed sides were put in place to save the plank floor from rotting and the department's chief maintenance item on the bridges today is repairing these sections of the bridges.

Greene County has the greatest number of bridges on the State system with 20; Columbia County has 17; Bedford and Lancaster Counties each have 14.

The oldest bridge, according to department records, is that over the Tulpehocken Creek in Spring and Bern Townships, Berks County built in 1834, while the second oldest is over the Conewago Creek in Butler Township, Adams County, built in 1836. Old timers claim that most of the bridges in Lancaster County are much older than that, but no dates for them are available.

Only 3 of the bridges, 1 in Indiana and 2 in Perry County, are posted to carry 15 tons, while one in Adams and Cumberland Counties is posted for 10 tons. Posted weights for the balance of the bridges range from 1½ tons to 7 tons with the majority of them being able to carry 3 tons.

Remaining covered wooden bridges on State highway system by county are as follows:

Adams 11; Bedford 14; Berks 2; Bucks 4; Chester 6; Clinton 1; Columbia 17; Cumberland 8; Dauphin 4; Erie 2; Greene 20; Indiana 2; Juniata 6; Lancaster 14; Lehigh 2; Lycoming 1; Northhampton 1; Northumberland 1; Perry 8; Snyder 2; Somerset 4; Sullivan 1; Washington 9; and York 2.

Nothing New Under the Sun—Upper Colorado Storage Project and Hoover Dam

EXTENSION OF REMARKS
OF
HON. ANTONIO M. FERNANDEZ
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. FERNANDEZ. Mr. Speaker, no great venture was ever undertaken by this country of ours but what timid souls and others not so timid but for varying reasons, have shuddered and cried out with dismay at what was being proposed. It was so in the development of the lower Colorado River which was initiated with the construction of that great manmade reservoir of water and power, the Hoover Dam, formerly known as Boulder Dam.

The debates in Congress on the Boulder Dam act are replete with warnings that the construction of this great work was "preposterous," "dangerous," "indefensible," "absurd," and as one good Senator put it "likely to lead to the most tremendous man-made catastrophe in the history of the human race." At another point he said that it was "a menace to the lives of thousands of people which might result in the greatest manmade disaster in history."

And so it is with the upper Colorado River storage project shortly to be considered by the House. On February 6, in the Appendix of the RECORD, the gentleman from California [Mr. HOSMER], has an insertion with respect to the upper Colorado River entitled "The Greatest Engineering Blunder in Our History." In that insertion he tells us that last summer he hopped down into the depths of Glen Canyon, in a helicopter, and in no time—with the aid no doubt of a gunnysack in which to collect his samples—he found devastating evidence against the upper Colorado storage project. He found that both the Colorado River, and the San Juan River a hundred miles away, were covered with Chinle, which Chinle when touched by water dissolves, so he warns us; and, says he, the Glen Canyon Dam would be not a mighty reservoir of water and power, but a "billion dollar mud puddle."

But that is not all he found. Notwithstanding studies made by able engineers who have studied the project for years in thorough detail, and at great expense, the gentleman from California for the first time discovered that there were two gaping subterranean caverns, so huge they can hold 350 million acre-feet of water, or, as he says, "26 years flow of the whole Colorado River," and, he gravely tells us, that is where the water will go.

So it was with Boulder Dam back in 1928. Of the Senator who warned of Boulder Dam being equally disastrous back in 1928, the venerable California Senator, Hiram Johnson, said in the great Boulder Dam debate:

He knows more than all the engineers who have examined this project; and he, with his technical skill, with his ability as an engineer, with his knowledge of earth strata, with his infinite variety in dealing with dams, with his constructive genius—he says * * * that this can not be done; and, therefore, his ipse dixit having been uttered, it must not be done.

After reviewing what he described as the 40-page 2-day speech of the Senator in question, Senator Johnson concluded with these words:

And so I say to the Senator * * * and others, who, from one motive or another, follow him, and those he follows: Fear not; this dam can be built, and, under the providence of God, will be built. It will be another milestone in progress and achievement, another tribute to American ability, skill, and courage.

And, of course, as everyone knows, the development of southern California, initiated by the building of Boulder Dam, more than fulfilled the predictions and the hopes of that great Senator and the sponsors of that project. It would have been disastrous for this country if the agricultural production, and the hydroelectric and industrial production, which resulted from the enactment of that bill, had not been available to America during the last war.

On the House side during the Boulder Dam debate, this is what was said:

From a Member from a northeastern city, and a very fine and sincere Member for whom I have the greatest respect, at page 9784 of the RECORD of May 24, 1928:

This bill proposes to irrigate 500,000 additional acres of land that is not now being irrigated, and the land is so highly productive that it will very materially work to the injury of agriculture through the competition it will involve.

They talk about bills to improve the agricultural situation, and then they bring in here bills which are designed to hurt the agricultural situation; bills which will make the situation a great deal worse than it is now.

Is it not about time that those Members representing agricultural interests and who have the interests of agriculture at heart shall put a brake on this type of legislation and decide that the Government shall not, by the expenditure of the taxpayers' money, try to make worse and worse the agricultural situation?

And from another northeastern Member, at page 9978:

The farmers are crying for relief from overproduction, but still we go on reclaiming more lands for agricultural production. * * *

I am opposed to constructing a dam that will constitute a menace. The proposed dam would be at least 675 feet high from the bedrock. That is four times as high as Niagara Falls. It is 120 feet taller than the Washington Monument.

He predicted the dam would not hold, and he said:

It is appalling to think what destruction would follow in the wake of such a wall of water as would follow the breaking of the proposed dam. The territory is subject to earthquakes.

From a western Member, at page 9500:

I have opposed it because it is entirely unsound in its economic aspects and will mean the loss to the Federal taxpayer of every dollar expended upon it. * * * I have opposed it because it is based upon an engineering scheme so absurd, so dangerous, so badly conceived that it can only be called preposterous.

And again at page 9502, he said:

Let us pause for a moment in order that we may hear from the people of Imperial Valley. Under date of February 5, 1927, the vegetable growers of Imperial Valley wrote me, in part, as follows:

"The only people who would benefit from this legislation are the real-estate speculators. There is no sense in bringing more land into cultivation when 90 percent of the farmers in the Imperial Valley cannot now make a reasonable earning on their investment. Any new land brought into bearing can only be used for producing such products as we now produce on the land under cultivation and on which we are unable to make any money."

And there is still another of their basic representations which they must know is not true, and that is that this project can be paid for through the sale of electric power. * * * They know that the Federal Government will lose every cent of capital it puts into this project.

Many more such arguments were echoed back in 1928. But even as the sponsors of Boulder Dam and the lower basin had faith in 1928, and as they have seen their faith fully justified by history, so we who believe in the upper Colorado storage project have faith in the wisdom of this Congress, and we have faith that, as Hiram Johnson said of Boulder Dam:

It will be another milestone in progress and achievement, another tribute to American ability, skill, and courage.

And, may I add, foresight.

Why Irrigate Poor Land First?—Another Ridiculous Feature of the Upper Colorado River Storage Project

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. LIPSCOMB. Mr. Speaker, one of the most ridiculous arguments being advanced in favor of the upper Colorado River storage project is the project's alleged benefits to our Nation's agricultural program. The project would supply irrigation water for high-altitude land in Colorado, New Mexico, Utah, and Wyoming.

Let us see just how ridiculous this argument is.

THE PROJECT WOULD GROW CROPS ALREADY IN AGRICULTURAL SURPLUS

Because of a surplus of agricultural products and depressed prices for such products, the Congress is now considering a soil-bank proposal which would take 40 million acres of agricultural land

out of production at a large cost per acre to the taxpayers.

Inconsistently, the upper Colorado River storage project would put new acres into production—also at a large cost to the taxpayers per acre.

Surplus agricultural products already being supported by the Nation's taxpayers—without considering the new costs of the soil-bank proposals—include corn, cotton, wheat, butter, oats, butter oil, cheese, dried milk, wool, rye, barley, dry beans, cottonseed oil, grain sorghum, hay and pasture seeds, and soy beans. Sugar beets are under the restriction program of the Sugar Act of 1951, and the price is held up to a desired level. What are called proportionate shares are established by the Secretary of Agriculture. Thus, if more sugar-beet land is brought into production, shares of all others must be decreased accordingly.

Reports of the Reclamation Bureau reveal that all of the types of crops which would be grown on each of the proposed projects in the upper Colorado River project are already surplus agricultural crops being supported by the Nation's taxpayers. The crops to be grown on these projects will be largely grain and forage crops for dairy cows and sheep which will produce butter, milk products, and wool which are already in surplus and under Government subsidy and in storage at a fantastic cost.

THE PROJECT WILL SERVICE, FOR THE MOST PART, ONLY MARGINAL AGRICULTURAL LAND

The Nation's taxpayers would be forced by the upper Colorado bill to spend hundreds of millions on irrigation projects which will supply water for farmlands of relatively poor quality. The projects will service for the most part only marginal agricultural land much of it at high altitudes suffering frosts each month of the year and having a short growing season at best.

Only 20 percent of the lands serviced by the project are classified by the Bureau as class 1. The lands are at high elevations—as high as 7,000 feet. The growing season on this high mountain plateau is very short. On some of the lands there is frost every month of the year. Low-value feed crops will be the principal products.

It has been demonstrated that these lands, even when fully developed under the upper Colorado bill, will be worth on the average only about $150 per acre. Yet the cost to the Nation's taxpayers to develop them will average $3,000 to $5,000 per acre according to figures of the Bureau of Reclamation.

Such a result cannot be justified in the face of the fact that at a cost of less than $100 per acre fertile lands in the East, Middle West, and South could be irrigated, thus bringing heavier yields than ever from the best agricultural land in the Nation.

There exists at least 20 million acres of undeveloped fertile land in humid areas of the United States which can be developed for agriculture at a fraction of the cost of the acreage serviced by the upper Colorado storage project.

Contrast the upper Colorado's plan for irrigating marginal high-altitude land at a cost of $3,000 to $5,000 per acre—to produce land which will be worth on the average only about $150 per acre even when fully developed—with the fact that there are at least 20 million acres of first-class land on existing farms in 19 States of the Middle West, South Atlantic, and southern States that can be placed in production at any time they may be needed at a fraction of the cost. And remember that even much of this first-class land is not "needed" under cultivation in this era of agricultural surpluses.

The Department of Agriculture reports that there are more than 20 million acres of undeveloped fertile land in the humid areas of the United States which can be developed by low-cost drainage. Such land is available in Alabama, Arkansas, Florida, Georgia, Illinois, Indiana, Kentucky, Louisiana, Michigan, Minnesota, Mississippi, Missouri, New York, North Carolina, Ohio, Pennsylvania, South Carolina, Tennessee, Texas, Virginia, and Wisconsin.

Development costs in these States would be from $60 to $100 per acre for such land—compared with $3,000 to $5,000 per acre for land to be developed by the upper Colorado irrigation projects. The cost involved to taxpayers of the Nation in developing new and supplemental water for the acreage serviced by the upper Colorado project, which amounts in all to only about 600 square miles of new land, would range up to 50 times as much for each acre developed.

MOLEY ARTICLE

The ludicrous picture presented by these bald inconsistencies has been well described by Mr. Raymond Moley in his regular column Perspective, in Newsweek magazine, in an article entitled "New Acres for Old" in the issue of February 6, 1956.

I commend this article to the attention of my colleagues and the taxpayers of our Nation:

In the President's state of the Union message, separated by only a few sentences are two recommendations: "I shall urge authorization of a soil-bank program to alleviate the problem of diverted acres and an overextended agricultural plant * * *" and "I strongly recommend that action be taken at this session on such wholly Federal projects as the Colorado River storage project and the Fryingpan-Arkansas project.

This means that the President is asking Congress to take out of cultivaiton an immense number of acres at a large cost per acre to the taxpayers, and on the other hand to bring into cultivation or to increase the productivity of over a million acres at a cost in the upper Colorado project of as high as $5,000 an acre and in the Fryingpan-Arkansas project of about $1,400 an acre.

This continues the mad cycle which has been going on for years: The Agriculture Department laboring to curb production, and the Interior Department just as zealously trying to increase production. Of course, this makes no sense. But lots of things in politics make no sense and are paid out of the sweat of the taxpayer's brow.

Nearly 2 years ago, when the gigantic upper Colorado project was presented to Congress by the administration and the Hoover Commission was setting to work to look into all and sundry water conservation projects, the President appointed a committee on the general subject, composed of Secretary McKay, chairman, and the Secretaries Benson and Wilson. This committee has just submitted its report.

In the first place, the report recommends that State and local governments should share the cost of water projects. But the President in his message recommends that the two projects named above be wholly Federal.

Next, the committee recommends that there be set up "an independent Board of Review * * * to analyze the engineering and economic feasibility of projects and report to the President." If any such board were to report independently and factually on these two projects, it can be taken for granted that no President would dream of recommending them. As it happened, the pressure for these projects came from interested Members of Congress and bureaucrats anxious to spend more and more tax dollars. The congressional committees that considered them are stacked with Members from the beneficiary States. In the case of the bill which passed the Senate last year (S. 500), only one Member came from east of the Mississippi, and he represents a State paying a relatively small percentage of the taxes involved. One might as well have a plaintiff pick the jury which would pass upon his claim.

The other notable recommendation is that while the old practice of charging water users on irrigation projects no interest on the money advanced by the Federal Government should be continued, nevertheless interest should "be shown clearly as a Federal cost." This means that when a project is presented to Congress, all the cards would be laid on the table. Hitherto the interest charge has been one of those things that the interested parties never chose to mention. Only occasionally a stalwart champion of economy has pried that cost out of the Bureau of Reclamation.

That interest charge is very important. Since no project except 1 or 2 has been paid for by the water users within the 53 years since Federal irrigation began, the interest charge runs to twice to three times the original cost.

Immediately after the President made the report public, a Congressman from Colorado, WAYNE N. ASPINALL, shouted his disapproval and in so doing let a cat as big as a mountain puma out of the bag. He said that "if they did not favor the elimination of the interest charge immediately after adding it to the cost of construction, there wouldn't be a reclamation project in the United States that would be economically possible."

In short, if the real cost plus interest were considered, none of the presently proposed irrigation projects would stand scrutiny.

That is exactly what I have been saying in this space for 2 years.

Upper Colorado River Storage Project

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1956

Mr. UTT. Mr. Speaker, if the next 25 years are as dry in the western part of our country as the last 25, it will take the whole quarter century to fill the proposed Glen Canyon Dam. Since the financial feasibility of the upper Colorado River project depends upon the power production of this dam there should be no authorization of such a proposal until the question of interpretation of the Colorado River compact is

settled in the United States Supreme Court where the issue is now pending.

Article 3 (e) of the Colorado River compact provides:

> The States of the upper division shall not withhold water, and the States of the lower division shall not require the delivery of water, which cannot reasonably be applied to domestic and agricultural uses.

The power production at Glen Canyon Dam therefore depends on whether or not the upper basin States, under the Colorado River compact, have a right as against the lower basin States of Arizona, California, and Nevada, to accumulate and withhold water at Glen Canyon for power generation if the lower basin needs it for domestic and agricultural uses.

Article 4 (b) of the Colorado River compact provides:

> Subject to the provisions of this compact, water of the Colorado River system may be impounded and used for the generation of electric power, but such impounding and use shall be subservient to the use and consumption of such water for agricultural and domestic purposes and shall not interfere with or prevent use for such dominant purposes.

Governor Johnson, of Colorado, in his statement to the Senate hearings on this project said:

> Furthermore, should the lower basin require an additional supply of water (over and above the award of 1,500,000 acre-feet to Mexico and 1 million acre-feet to the lower basin) for agricultural and domestic purposes, the water stored in these reservoirs (Glen Canyon and Echo Park Reservoirs) must be released.

Governor Johnson further stated that:

> Under the seven-State compact the upper States must deliver at Lee Ferry in each 10-year period 75 million acre-feet to the lower States and 7,500,000 acre-feet to Mexico before they can use one drop of water themselves beyond what they used before the seven-State compact was ratified.
>
> In the current 10-year period that will leave only 3,250,000 acre-feet per year for their total use. In the previous 10-year period they would have had 4,150,000 acre-feet a year. In 1902 the upper basin States under this formula would have had no water at all.

Is it not foolhardy to invest hundreds of millions of dollars in Glen Canyon Dam on a question of interpretation of the Colorado River compact which may be set aside by the Supreme Court in an action which is now pending in that Court? Plain commonsense demands that all consideration of this bill await the Supreme Court decision.

This bill is scheduled for the floor during the week beginning February 27.

My statement is based on information contained in the minority report on the bill.

The Hoover Commission, in its bipartisan study of reclamation projects, reports that in the water-resources field, five conditions must be found necessary for the success of reclamation projects:

First. They must have technical feasibility.

Second. They must be sound financially.

Third. They must have fertile soil capable of agricultural production over long periods of years.

Fourth. They must have adequate and suitable water supply.

Fifth. There must be farmers available who are interested in and enthusiastic for irrigation agriculture.

Relating these to the project before Congress, the record shows there is question as to the technical feasibility of the proposed 700-foot Glen Canyon Dam; the financing is wholly unsound; the soil by and large is of dubious quality, and the water supply is actively in litigation in the Supreme Court.

The Commission further found "experience shows that the farmers alone cannot bear the whole cost of irrigation projects."

Conceding this, would it not be a proper inquiry for Congress to determine what the farmers should pay? Should they pay only 12 percent, as this bill allows? If so, who should bear the balance of the cost, local area residents or the taxpayers in every corner of the Nation?

The Hoover Commission makes a suggestion on this score—that the beneficiaries (including States) contribute at least 50 percent—which may well be forgotten if the "hydro-headed" monster now before Congress becomes law.

I believe that the people are entitled to and will demand a thorough consideration of the Hoover Commission recommendations in the light of this boondoggle project before the Congress. This project goes against every one of the five conditions which must be met before any reclamation scheme can be successful.

It is an attempt to deprive the taxpayers in every part of the Nation of money during the next 100 years which has no business being spent even in 1 year.

Don't Let Them Sell Us Up the River

EXTENSION OF REMARKS

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement relative to the upper Colorado River storage project bill.

Federal Reclamation Program Makes Tremendous Contribution to the Economic Development of Southern California

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1956

Mr. ENGLE. Mr. Speaker, the Federal reclamation program has had a tremendous impact on the southern part of my State of California. The largest Federal development is the Boulder Canyon project, including the Hoover Dam, Imperial Dam, and the All-American Canal system. This project took 20 years to build and represents an investment of approximately $350 million. The contribution of this project to the economic development of southern California has been tremendous. The availability of low-cost power has been a big factor in the rapid growth of industry as well as the rapidly expanding population. The water supply for about half a million acres has been firmed up and water made available to a considerable amount of new land. The value of this development has been particularly apparent during 1954. Nineteen fifty-four would have been the first of two successive critical drought years were it not for the water stored behind Hoover Dam. Because of the availability of water one-half million irrigated acres produced over $115 million in agricultural products during 1954.

Sometime ago I requested the Interior Department to furnish the Interior and Insular Affairs Committee information describing accomplishments of specific reclamation projects. The information on several of the projects has been received, the latest being on the All-American Canal system.

For the information of Members of the House, I am inserting in the Appendix of the CONGRESSIONAL RECORD the Commissioner's transmittal letter, which sets out some of the highlights of this report on the contributions of the All-American Canal system to the economic development of the area which it serves. The letter follows:

> UNITED STATES
> DEPARTMENT OF THE INTERIOR,
> BUREAU OF RECLAMATION,
> *Washington, D. C., February 15, 1956.*
>
> HON. CLAIR ENGLE,
> *Chairman, Interior and Insular Affairs Committee, House of Representatives, Washington, D. C.*
>
> MY DEAR MR. ENGLE: Responsive to your request that this Bureau submit information describing accomplishments of specific reclamation projects, we are pleased to transmit herewith two copies of an additional report recently completed entitled "Report on Contributions of the All-American Canal System, Boulder Canyon Project, to the Economic Development of the Imperial and Coachella Valleys, Calif., and to the Nation."
>
> Briefly, the All-American Canal System includes Imperial Dam and Desilting Works on the Colorado River about 18 miles northeast of Yuma, Ariz., a system of main canals to the Imperial and Coachella Valleys, Calif., and an underground distribution system to serve about 75,000 acres in the Coachella Valley. Irrigation water through this system was first supplied to the Imperial Valley in 1940, and to the Coachella Valley in the latter part of 1947.
>
> Some of the highlights of the report are as follows:
>
> 1. Imperial Valley:
>
> A. The value of crops and livestock produced increased from $26.7 million in 1940 to $129.6 million in 1954, or by 4.8 times. During this same period the index of prices received by farmers increased only 2.4 times.
>
> B. Total agricultural production in railroad carlot equivalents increased from 53,000 in 1940 to 109,000 in 1954.

C. Acreage irrigated increased by 38,000 acres from 414,000 acres in 1940 to 452,000 acres in 1954.

D. Production of electric power from hydroelectric plants constructed and under construction on the All-American Canal would require consumption of about one-half million barrels of fuel oil annually if this power had to be produced from oil-fired steam plants.

E. The assessed valuation of Imperial County increased from $36,175,000 in 1940 to $72,611,000 in 1954.

F. The volume of retail trade in the Imperial Valley increased from $23.7 million in 1939 to $104.3 million in 1953.

G. In 1954, nearly $2,300,000 was collected as a result of the California State retail sales tax levy, and the property tax levy produced nearly $5 million.

H. Fruit and vegetables equivalent to over 42,000 railroad carloads were produced in the Imperial and Coachella Valleys in 1954, with shipments to almost all the 48 States and Canada. A large portion of these important foods was shipped during the winter months to supply the off-season demand.

I. Increase in population, car and truck registration, building permits, postal receipts, and other economic indicators reflect the beneficial effect of an assured water supply through the facilities of the All-American Canal system.

2. Coachella Valley:

A. The value of crops and livestock produced increased from $13.1 million in 1947 to $25.3 million in 1954, or by 1.9 times.

B. Agricultural production in railroad carlot equivalents increased from 8,420 carloads in 1946 to over 14,000 carloads in 1954. The acreage irrigated has increased from about 20,000 acres in 1946 to more than 50,000 acres in 1954.

C. The assessed valuation of the Coachella Valley County Water District which encompasses the service area has increased from $12.9 million in 1947 to $42.7 million in 1954.

D. Prior to the availability of Colorado River water, good quality raw desert land in the Coachella Valley could be purchased for about $30 per acre. In 1955, these same lands, developed for irrigation of field crops, were valued at about $500 per acre, an increased valuation of about $14 million for the 30,000 acres of new lands irrigated.

E. Similarly with the Imperial Valley, but to a much higher degree, the various economic indicators such as population increase, postal receipts, utility connections, building permits, and bank resources reveal the tremendous economic growth of the area since water became available through the facilities of the All-American Canal system.

Any comments or suggestions you may have regarding the attached report will be appreciated.

Sincerely yours,

E. G. NIELSEN,
Acting Commissioner.

New History of the Democratic Party

EXTENSION OF REMARKS
OF

HON. JOHN LESINSKI, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1956

Mr. LESINSKI. Mr. Speaker, I am today inserting in the RECORD the fourth installment of the New History of the Democratic Party. The first installment was inserted by myself in the CONGRESSIONAL RECORD of January 19, 1956, page A531; the second and third installments were inserted the same day by Hon. JOHN E. MOSS, JR., and Hon. W. J. BRYAN DORN, respectively, on pages A533 and A534.

The articles to date point out specifically the advantages of the Democratic Party for Americans. It points out that the Democrats are the true liberals, and that the Democratic Party understands not only the underdog but also what makes the big money man tick.

We are presently driving more quickly than ever toward a socialistic state. Big business is getting bigger and small business is disappearing. This disappearance of the middle class has been the downfall of many nations in Europe. I pray to God that Italy, France, and England should not become the prototype for America.

The article follows:

PART 4—NEW HISTORY OF THE DEMOCRATIC PARTY—WOODROW WILSON MAKES AMERICA A WORLD LEADER—REFORM AT HOME AND WAR ABROAD

For the 16 years following his first race for the Presidency in 1896, William Jennings Bryan was his party's acknowledged leader. And though he lost three times for the Presidency, the influence of his cause spread beyond his own party. In the opposition ranks, it inspired a new breed of Republican, which called itself, at various times, Bull Moose or Progressive. Its aim as expressed by Republican William Allen White, included "cleaning up local politics, ending the wholesale buying of State legislatures, and giving a new chance to the economic underdog." The names of their leaders are well known: Robert LaFollette, of Wisconsin; George W. Norris, of Nebraska; and, of course, the leader of the Bull Moose Party, Theodore Roosevelt. These men were true followers of Lincoln, but the rest of the Republican leadership, known as the Old Guard, fought them as much as they did the Democrats.

Under Bryan's leadership in foreign affairs, the Democrats opposed much of the imperialism arising from the war with Spain. Many Americans thought it great sport to shake the Big Stick at the small nations of South America. Republican foreign policy reversed the spirit of the Monroe Doctrine by declaring that, although Europe could not interfere in South American affairs, the United States could. These actions caused a resentment among our Latin American neighbors that still colors their view of the United States. But the basic sympathies of the Democrats were opposed to taking this advantage of the people of weaker nations.

The Democrats worked on more than just the national level during these years. The campaign of 1896 had invigorated the party on the State and local level as well. In the West and South, Democrats listened to stump speakers, voted in primary elections, and burned bonfires on election night. Democratic State administrations served as testing grounds for railroad regulation, minimum wages, and many other programs later to be adopted by the Federal Government.

With the quickening of immigration, the Democratic organizations of the large cities had a special task: to cast new citizens in the mold of the Republic. Millions of immigrants were streaming into America each year. Democratic ward leaders found them living space, helped them secure their citizenship, brought them food and coal when times were hard. True, the immigrants gave their votes in return. But there were other reasons for these services. The ward leaders had been immigrants themselves, not too long ago. They knew that, with a little help, these foreigners could become worthy Americans.

One of the marvels of America is how these different ethnic groups, whose countrymen were fighting each other so bitterly in Europe, could live beside each other in the great cities in peace. Much of the credit must go to the understanding help of the politicians.

The tireless work of Bryan and his followers bore fruit in 1912. A split in the Republican Party between the Old Guard and Progressives allowed an easy Democratic presidential victory. The President-elect, Woodrow Wilson, pledged himself to remedy the evils exposed by earlier Democrats. As he said in his inaugural speech:

"We have been proud of our industrial achievements, but we have not hitherto stopped thoughtfully enough to count the human cost, the cost of lives snuffed out, of energies overtaxed and broken, the fearful physical and spiritual cost to the men and women and children upon whom the dead weight and burden of it all has fallen. * * * There can be no equality of opportunity, the first essential of justice in the body politics, if men and women and children are not shielded from the consequences of great industrial and social processes which they cannot alter, control, or singly cope with."

As President, Wilson put the strength of the Federal Government behind improvement of the life of the common man. He believed, in the words of Abraham Lincoln, that "the legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do for themselves."

Applying this philosophy, Wilson's Democratic administration built an impressive record of achievement. The Federal Reserve Act took the control of the Nation's currency, which had been centered in Wall Street, and dispersed it among 12 regional Federal banks. The Clayton Act attacked monopolistic trade practices, and expressly declared that "the labor of human beings is not a commodity or an article of commerce." An income tax law was passed, to distribute equitably the burden of running the Government.

The dreams of the reformers of the 1890's had been realized.

Also during Wilson's administration, women won the right to vote. This doubled the size of the electorate and destroyed the last artificial barrier on the road to full citizen participation in government.

But impressive as were Wilson's achievements, history will remember him as a leader of the world. For in this broader task, his idealism and eloquence, his ability to plumb the moral reserves of the people, found fullest expression. America had been lucky. An ocean had isolated her from the continual strife in Europe, allowing her to develop in peace. But now that she had grown large and powerful, as the world's most successful democracy, she was destined to lead the cause of democracy in the world.

Wilson did not want to enter the First World War. But with the German forces overrunning peaceful nations and sinking American shipping, the time came when, in his words, "the right was more precious than the peace."

To achieve victory, the country equipped a large army, mobilized the home front, and greatly enlarged Government services to coordinate the war effort. But, according to historian Mark Sullivan, "the largest single factor in the war was the mind of Woodrow Wilson." Wilson's thoughts and words were weapons. In the most discouraging days of the war, they gave the Allied Nations fresh awareness of a reason for their sacrifices.

During this period, Wilson gave classic expression to the principles of Democratic Party foreign policy. "The national interest would best be served," he said, "by the attain-

ment and preservation of world peace." He knew that just as war arose out of ill feeling between nations, peace could only be based on mutual understanding and mutual respect. To achieve this, he proposed a League of Nations, where each country would have a voice is settling international differences.

But beyond the elimination of war, Wilson had the vision of the world becoming more democratic, not by force, not by economic coercion and dollar diplomacy; but by the strength of the American example. This was the hope behind Wilson's 14 points, a series of peace aims which not only shortened the war, but made Wilson the greatest leader for peace in the world.

To make his vision a reality, Wilson went to Europe at the close of the war to help construct the League of Nations. But when he returned, he found Congress, controlled by isolationist forces, unwilling to accept his plans. So Wilson toured the Nation, carrying his fight for the League to the people. "If the League were not approved," he warned, "I can predict with absolute certainly that within an other generation there will be another world war." But too many people would not listen. Wilson lost his fight, and in the process, his health and strength as well. He returned to Washington a broken man, comforted only by the pioneer's knowledge that history would show him to be right.

Comments of Mr. Ray Henle, Editor in Chief of the News Program, Three-Star Extra, in Connection With the United States Delegation's Visit to Brazil for the Inauguration of Their President

EXTENSION OF REMARKS
OF
HON. DeWITT S. HYDE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. HYDE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to include the excellent comment of Mr. Ray Henle, gifted editor in chief of the famous NBC news program, Three-Star Extra.

One of my friends, Dr. Joseph F. Thorning, associate editor of World Affairs, is mentioned in this national broadcast as a member of the United States special diplomatic mission to Brazil which was headed by Vice President RICHARD M. NIXON and Mrs. Nixon. As Mr. Henle points out, Vice President and Mrs. Nixon have been most effective envoys of goodwill in their visits to foreign lands.

Dr. Thorning, who resides in the Free State of Maryland and is a specialist on inter-American affairs, reports that the success which the Vice President and Mrs. Nixon enjoyed in the Far East and in the Republics of Central America and the Caribbean has been repeated, with exceptional brilliance, at all the ceremonies held in Brazil in connection with the inauguration of our good friend, President Juscelino Kubitschek. Dr. Thorning adds that the other members of the United States delegation were tireless in their efforts to show an interest in, and deep devotion to, the people and the Government officials of the great Republic of Brazil.

It is worth noting that, upon the return of the United States delegates to the United States, they were the guests of honor in the Brazilian Embassy at a reception sponsored by Ambassador Joao Carlos Muniz and Mrs. Muniz, both highly respected leaders in the diplomatic corps of Washington.

I am both gratified as well as encouraged to see that such a keen observer and good reporter as Mr. Ray Henle sensed the importance attached to the composition of the United States delegation by President Dwight D. Eisenhower and Secretary of State John Foster Dulles. Not long after the broadcast on the Three-Star Extra program, the United States delegation was described, editorially, in the New York Times as impressive; in the Brazil Herald as brilliant; and in the Washington Star as distinguished.

The news broadcast follows:

THREE-STAR EXTRA BROADCAST, NBC,
JANUARY 24, 1956

In connection with reporter Ed Tomlinson's reports on conditions in Latin America, the United States is losing no opportunity to make a strong diplomatic gesture to Brazil, our long-time good, strong arm in defense of this hemisphere.

Brazil's new President, Jusceline Kubitschek, will be inaugurated on January 31. This Government is sending a top-notch, very powerful delegation to attend the ceremonies.

Our delegation will be headed by Vice President and Mrs. Richard M. Nixon, whose skill on the international front has been amply demonstrated.

Also on the delegation will be Gen. Lemuel C. Shepherd, USMC (retired), new Chairman of the Inter-American Defense Board; Mrs. Alice Roosevelt Longworth; and Dr. Joseph F. Thorning, associate editor of World Affairs, one of our strongest links with Latin America, generally.

Also Senators H. ALEXANDER SMITH, New Jersey, and THEODORE FRANCIS GREEN, Rhode Island, and Chairman JAMES P. RICHARDS, of the House Foreign Affairs Committee, and Representative JOHN VORYS, of Ohio.

It's a mark of unusual respect to the great South American Nation of Brazil; and one that will undoubtedly be noted with pleasure by all our sister Republics of this Western Hemisphere.

Jim Farley on Lincoln

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in Nyack (N. Y.) Journal-News on Febrpary 15, 1956:

JIM FARLEY ON LINCON
(By Frank Ernest)

I've read a lot about Abraham Lincoln, I've heard a lot about him on radio programs, I've heard—second hand through a friend who back in the past was a drummer who used to make Rockland County his territory—about Lincoln's stories, but most of all, I have learned a lot since Saturday about Lincoln's place in the field of politics.

And, in its comparison to present days, I have learned it through the greatest politician and one of the greatest men of our times. Speaking at the annual dinner of the Peekskill Lincoln Society at Bear Mountain Inn last Saturday night, former Postmaster General James A. Farley, a real Demorcat if I ever met one, paid a tribute to Mr. Lincoln that Republican audiences throughout the country might well applaud. In this brief space, I have room only for excerpts of what Mr. Farley said and, therefore, I shall, let him take over:

"One of the proofs of Lincoln's greatness is that he does have something to say to everyone high and low, rich and poor, no matter what his occupation. Most of us who have briefly emerged in the national affairs will swiftly pass. Great men do not pass; and Lincoln was one of these."

And then he speaks of Lincoln's friend, William Henry Herndon, who was angry at seeing Lincoln made into a legend. "For this reason," said Mr. Farley, "Herndon spent the later years of his life in bringing together everything he could find about Lincoln, good or bad, big or little. As a result, we have not a picture of an angel in a church window, but a knowledge of the man, great enought to give inspiration to every American; a Lincoln so human that every one of us feels he has had him for a friend. Not many men in history could pass that test."

POLITICAL LEADER

"I do not know that Lincoln's principal significance is as a politician, but that certainly was one of his great contributions and its worth thinking about in these times.

"Being a first-class political leader, Lincoln had the wisdom to call in and consult all sorts and kinds of men. Again, with fine political instinct, he frequently allowed his visitors to believe that they were really initiating the policy of the country. * * * Only later, as the whole truth comes out, have we discovered that it was Mr. Lincoln who made the policy, though he was humble enough and adroit enough to allow lesser men to believe that they were running the Government."

Mr. Farley then went into the misunderstandings the people of the country had of Lincoln. Some of them thought him weak, some thought him indecisive, some only considered him as a "country bumpkin" and some in his own country actually hated him.

"Mr. Lincoln," said the greatest politician of our times, "is thought of frequently as a war President. Yet the policy which has made him great in American history was his persistent use of political methods. He was convinced that wherever political measures could be used, force might be avoided. He stuck to this both before and in the middle and at the end of the Civil War.

"It seems to me at least possible that if Lincoln had taken office immediately upon his election in November 1860, instead of having to wait until March of 1861, the Civil War might possibly have been avoided. The reason I think so is this: Passions were running high in 1860 and the only chance of avoiding the Civil War lay in bringing together, by political methods, the moderates, both of the North and the South. But during the months between election and the inauguration, a President-elect cannot do very much to guide political movements."

CAN'T BE PROVED

"No one can prove a historical might-have-been, but having had some contact with politics, I really wonder whether Lincoln's very great gifts in handling politics and politicians might not have been able to bring about a solution by political methods instead of war."

Mr. Farley then spoke of how Lincoln was attacked in really blasphemous terms and continued: "In a democracy like our own, our entire national life is a vast cooperative scheme. To the technical politician, extremism is not only a blunder; it is a crime.

I think Lincoln taught us this and though, from time to time, some may forget, the country as a whole has learned its lesson.

"In this year of 1956, we see a world where group still fights group, doctrine clashes with doctrine and nations engage in cold wars. Nevertheless, even in this mad disorder, the United States has steadily preserved the ideal of good will, of moderation, of justice. * * * We are able to attack social problems which often are bitter in the extreme and still find a way of moderate commonsense toward an ultimate goal of progress. * * * Without trying to usurp the place of the historian, I think I may say that we owe this in a great measure to Abraham Lincoln."

"The Union was saved, with God's help, for all time. * * * The bond was forged faithfully and well. In its time, it has overcome the peril from within and, now we see that it is no less stanch and true against the peril from abroad. That is our legacy from Lincoln and our blessing from God."

That, in part, is the tribute from one of our great men of today to one of the greatest who ever lived.

Hoboken Dentist's Way of Life: He was Always Giving Someone a Boost

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an item from the Jersey Journal, Jersey City, N. J., regarding the recent death of Dr. Menelaus Pappas, of Hoboken, N. J. Dr. Pappas, although young in years, filled his life with good deeds and was highly esteemed in all religious circles. His early death was a sad loss not only to his family but also to the community where he did so much for his fellow men.

The article follows:

HOBOKEN DENTIST'S WAY OF LIFE: HE WAS ALWAYS GIVING SOMEONE A BOOST

(By Gene Flinn)

A group of youngsters were running through the streets of Hoboken, playing "follow the leader." One of the smaller youths was left behind when confronted with a fence too high for him to climb.

An older boy—a short, but stockily built lad—retraced his steps and helped his younger playmate over the fence.

"That's the way Dr. (Menelaus) Pappas was all his life—he was always giving someone a boost."

In this manner, Joseph Hanrahan, Hoboken attorney and source of this anecdote on the boyhood days of Dr. Pappas, described the man, whom he had known all his life.

"It was the same way when someone was hurt at play," Hanrahan added. "Mimi—we shortened 'Menelaus' to 'Mimi'—was almost always the first one at the side of an injured playmate."

In his student days Mimi was captain of the St. Peter's College basketball team.

"He would seldom get many points—maybe six a game—because he'd rather pass than shoot," a former teammate said. "But while he was not outstanding, he was a man you had to have on your team because he had wonderful spirit and always kept his head when the going was rough."

"Mimi was a 'steadier'; in life and on the basketball court he could make people laugh when they were getting too serious," Louis Rovelli, also a lifelong friend of the dentist, declared at the Bosworth Funeral Home last night.

When World War II broke out, Dr. Pappas, who had completed his internship at the Jersey City Medical Center, served with the 24th Infantry Division in the Pacific theater and was discharged with the rank of captain.

His years in the service stimulated his sympathy for his misfortunate buddies—the paraplegics.

"Once when Mimi was on a committee to raise funds for the paraplegics the group was summoned to a social designed to increase interest in the drive," a friend declared. "No one realized it at the time, but Mimi had organized the affair and paid the bill on his own."

A devout member of St. Demetrios Greek Orthodox Church in Jersey City, where he had been vice president of the board of trustees, Dr. Pappas was also highly esteemed in Catholic, Hebrew, and other religious circles.

Besides the many floral wreaths—six coaches of flowers were at his funeral today—scores of mass cards were sent to the relatives of the Hoboken dentist. Sisters from the Academy of the Sacred Heart and St. Mary's Hospital (he had been on the hospital staff) were constant visitors to his wake.

Jewish leaders—Dr. Pappas had been Christian chairman of the Hoboken United Jewish Appeal—announced that five trees are to be planted in Israel in his name.

Although a bachelor, Dr. Pappas, who died on Christmas Day in his 44th year, understood the ways of children—especially when they approached his dentist's chair.

"The first time they came they were frightened," his brother, James, a Hoboken attorney, declared. "But once they got to know him it was a different story. Sometimes the parents of these children became his patients because of the confidence he had instilled in their youngsters."

Children were not the only ones who sent him patients. Dr. Pappas had advised his friends to send people to him who could not afford to have their teeth fixed—in keeping perhaps, with his habit of always giving someone a boost.

Labor Never Had It So Good

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. ARENDS. Mr. Speaker, under leave to revise and extend my remarks, I am inserting in the CONGRESSIONAL RECORD a column by Gould Lincoln entitled "Labor Never Had It So Good."

The gains which the workingman and the average family have made under the Eisenhower administration disproves the accusation that this is a "big business" administration:

THE POLITICAL MILL

(By Gould Lincoln)

LABOR NEVER HAD IT SO GOOD

American labor is better paid and has more jobs than ever before. This has happened during the Eisenhower administration—a Republican administration. Take a look at the labor situation in this country today. Approximately 65.5 million workers have jobs. Unemployment, by official count, is 2,471,000. It is a million less than last year. Average weekly earnings of factory workers are $75.76, nearly $5 more than last year. Labor-mangement disputes have been settled through free bargaining methods, with the Federal Government keeping hands off, except in an advisory and conciliatory capacity. Loss of wages through strikes has been kept way down.

This record of labor gains may be responsible for the violent onslaughts on the Eisenhower administration by Democratic leaders, and some of the union labor bosses, who are the allies of the Democratic Party. It could be they are scared, fearing that labor, when it comes time to vote next year, may take cognizance that the workers are better paid, with more jobs and fewer unemployed. It could also be that the Democratic leaders, and the labor bosses, will have a difficult time persuading the workers to vote only for Democratic candidates for office, from President down.

WITHOUT BASIS

The attacks on Mr. Eisenhower and the Republicans as enemies of labor are raucous and without solid basis. Take, for example, the charge widely broadcast in a Labor Day statement by Democratic National Chairman Paul M. Butler that a member of the Eisenhower Cabinet, Secretary of the Interior McKay, is engaged personally in a union-busting drive, in connection with a strike at the McKay automobile agency in Salem, Oreg. Mr. Butler was repeatedly told before he issued the statement attacking Mr. McKay that the Secretary of the Interior had completely divested himself of all part in the policies and management of the McKay agency when he came to Washington to serve in the Cabinet. That, however, did not in any way cause Mr. Butler to hesitate. His statement said: "Labor Day, 1955, marks the first Labor Day in the country's history when a member of the President's Cabinet is openly conducting a union-busting drive."

Former President Truman, delivering a Labor Day speech in Detroit, declared that the Republican administration is afraid of labor because of what it will do in the elections next year. What it looks like, however, is that the Democratic leaders and the labor bosses are afraid of what the rank and file of labor will do in these elections. So they continue to rant against the Eisenhower administration, charging it is run by big business and that it believes in good times for business. It is clear that good times for business mean also good times for labor. The fact that labor and management have been getting together in a peaceable manner to adjust differences, including demands for increased pay and for annual wage agreements, appears to have sent cold chills down some labor leaders' backs.

CLASS APPEAL

"We are aghast and appalled," James B. Carey, CIO secretary-treasurer, said, "at the self-serving, greedy tactics of the present administration keyed to the belief that 'what's good for business is good for America,'" in another attack on the Eisenhower leadership. How Mr. Carey, Mr. Butler, and Mr. Truman are going to convince the workers that their charges are honest and factual is not clear. They are, of course, just another attempt to stir up one class against another. It seems, indeed, a terrible calamity—in the eyes of the Democratic leaders—that labor has prospered under an administration headed by a Republican President.

Labor in this country has more to be thankful for under the Eisenhower administration than wages and employment. It has seen the fighting in Korea brought to an end, with no more American boys—sons of labor and of all other circles—killed and wounded on the battlelines. It has seen Mr. Eisenhower take a leading part in the

drive for world peace. It has seen prosperity in this country without a war, which has not happened in more than two decades. These are factors, too, which may have an effect on the elections next year.

Territorial Waters Question Touchy

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. UTT. Mr. Speaker, on February 20, I placed in the Appendix of the RECORD a statement entitled "Freedom of the Seas." In my remarks I discussed a recent resolution on Territorial waters adopted by the Inter-American Council of Jurists at Mexico City. The Council of Jurists is a technical agency of the Organization of America States.

This matter is given further treatment in an article appearing in the San Diego Union on February 17, by David Hellyer, the able inter-American editor of that paper.

The article throws additional light on a technical subject, but one which is of importance to our people and economy. I know that Members of Congress will be interested in Mr. Hellyer's comments.

The article follows:

DAVID HELLYER SAYS TERRITORIAL WATERS QUESTION TOUCHY

San Diego's economy is bound to feel repercussions, in time, of action taken in Mexico City early this month on the touchy question of territorial waters.

Delegates to the Third Inter-American Council of Jurists there passed a resolution recognizing the right of each nation to set its own territorial limits at sea. Fifteen Latin American states supported the resolution, which was drafted by Mexico. The United States, which held out for recognition of the time-honored 3-mile limit, cast the lone opposition vote. Five nations abstained.

The Latin Republics have long been hypersensitive on the subject of nonintervention. They have upheld aggressively the principle that each nation has the right of self-determination—a principle strongly supported by the United States as well. But the Latin nations in their zeal have at time felt they must stand together against the Colossus of the North. This appears to be one of those times.

William Sanders, United States delegate to the council, told this writer in Mexico City that he considers the resolution a strictly political document. Sanders argues that the council exceeded its assigned task as an advisory body of the Organization of American States in fostering a political document rather than a technical study.

Sanders furthermore contends that the resolution is "contrary to international law" in several particulars. But, he says, it will have absolutely no legal effect. Mexico attempted to phrase the resolution in such a way as to give the action the status of a formal declaration, if not of law. But Sanders succeeded in putting through an amendment which reduced the resolution to the status of a "preparatory study." It is in this guise that the resolution will be discussed next month at Ciudad Trujillo, when the OAS holds a special session in the Dominican Republic's capital.

Mexico is highly sensitive on this territorial waters business at the moment because of what she alleges to be pirate activity by United States fishing vessels in her waters. So Mexico emerged as the spokesman and champion for other powers which earlier had taken the limelight on the matter: Ecuador, Peru and Chile.

What action the American states will take on the resolution cannot of course be predicted accurately. But the battle lines seem clearly formed. If the forces continue alined as they are now grouped, the Ciudad Trujillo meeting could produce a definitive statement on maritime territorial limits which would support the majority view expressed in Mexico City.

This could have farreaching effects on San Diego's fishing fleet, and hence on the local economy. If the other American republics should band together against the United States, we might see nations of this hemisphere claiming as much as 200 miles to sea as their maritime limits. Chile, Ecuador, and Peru already have jointly declared their jurisdiction over 200-mile zones fronting their shores.

This whole matter of territorial waters is a highly technical one. Hence its great importance is likely to escape the average citizen.

But at stake is a freedom which the United States has always stood ready to defend, with arms if necessary: freedom of the seas.

Bombs Can Never Raise a Flag on Iwo Jima

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. SIKES. Mr. Speaker, under permission to extend my remarks, I submit herewith an editorial from the Florida Times-Union of February 19, 1956, entitled "Bombs Can Never Raise a Flag on Iwo Jima." This excellent editorial emphasizes the essentiality of a balanced defense force if our Nation is to have actual military security:

BOMBS CAN NEVER RAISE A FLAG ON IWO JIMA

The mock atomic invasion of Iwo Jima now in progress in the Pacific is doubly significant.

These maneuvers look back 11 years to World War II and one of the bloodiest battles of the Pacific campaign. They mark a hard-won victory, symbolized by the famous raising of the American flag on Mount Suribachi, which cost the lives of more than 4,500 Americans and 20,000 Japanese.

But, at the same time, these anniversary maneuvers look forward to battles that might have to be fought in a future war. And to this end they include the simulated use of the latest weapons of war, including atomic bombs and shells.

Therefore it is important to note that the forward-looking mock invasion of today is not fundamentally different from the actual invasion in World War II.

The air power and the fire power now available for an amphibious landing do dwarf anything available 11 years ago. But now, as then, the actual invasion of Iwo Jima requires men who can land and fight for possession of the island.

This fact stands out in the current maneuvers because it directly contradicts the popular notion that superweapons have made foot soldiers all but obsolete.

Today the man in the street and the man in high office is all too eager to believe that long-range bombers, guided missiles and nuclear bombs make it possible to knock out an enemy with the flick of a switch and without the bothersome and bloody business of men fighting face to face for the possession of hills and beaches. These flights of push-button fancy conjure up reassuring pictures of, not islands, but whole continents lying prostrate and helpless after one mighty blow of the bombs.

But the mock atomic invasion of Iwo Jima should make it obvious that the fundamental principles of war have not changed. One need only ask, if our military men regard thousands of men to be necessary to take one tiny island, how many men will be required to seize and hold an entire continent?

A Revealing Blunder

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. MULTER. Mr. Speaker, permit me to direct to the attention of our colleagues to Mr. Walter Lippmann's column on administration policy which appears in the New York Herald Tribune for February 21, 1956. The column follows:

TODAY AND TOMORROW
(By Walter Lippmann)
A REVEALING BLUNDER

The affair of the Saudi Arabian tanks is a ludicrous but damaging example of what can happen in a big and complicated Government when it is not clearly led and firmly administered from the top. For months, this Government has been faced with the dangerous problem of arms shipments to the Middle East. On this subject there has recently been a conference at the highest level between the President and the British Prime Minister. There have been many pronouncements about arms for the Middle East. How then could it happen that the State Department had forgotten about its own approval of the sale of the Saudi Arabian tanks, that the Defense Department was operating without realizing what a mess the shipment of these arms would now cause, once the facts became known.

The reason for this incident must be that there is no high policy for the Middle East which comes from the top and is administered all the way down the line from the policymaking officials to the operating officials. The President has not, of course, been truly in command, certainly not since his illness, in fact not really since he went to Denver last August. Yet it is only the President who can effectively coordinate two great departments like State and Defense. He can coordinate them only if at Cabinet meetings and elsewhere he makes the heads of these departments understand clearly what the policy is. It is only too obvious that nothing of the sort has happened during the past 6 months, or could have happened.

The lack of a high command has been aggravated by the way Mr. Dulles conceives the office of Secretary of State. He thinks of himself as a roving negotiator, who represents the President's constitutional authority to conduct foreign affairs. He works

out high problems by personal negotiation, and then leaves the policies to be administered and operated in his absence by officials who do not know at first hand what they are. Mr. Dulles is not in Washington long enough or continuously enough to command the operations of his department. The effect, as the Saudi Arabian tanks illustrate, is to leave the immediate business of the Government to be operated by bureau chieftains on their own notions without overhead directions from the top.

The administrative confusion is not the only, or indeed the most serious, consequence of the way our affairs have been conducted during the past 6 months. There has been nobody at the top whose business it has been, or who was able, to face up to the new Soviet challenge which has confronted us since the first Geneva meeting. The President has been too ill to deal with it, and Mr. Dulles has been too preoccupied with his travels, his negotiations, and his speeches. In these past 6 months we have suffered the biggest and most serious setback since the Communist victory in China.

The fundamental cause of the setback is that the Soviet Union has been developing a new foreign policy since Geneva whereas we have remained frozen and inflexible in the policy of the pre-Geneva period. That is why there is scarcely a country from France and Italy and Germany and Greece to India and beyond where the pro-Western and pro-American parties and politicians are not in trouble. With nobody at the top in Washington who can and will take new decisions, our diplomacy is almost everywhere fighting unattractive rear guard actions.

It would be interesting to know who in the high places where decisions can be taken has been putting his mind on the speeches delivered last week at the Communist Party congress in Moscow. They are very long speeches. But they are exceedingly important. Their common theme is that within the Communist world they have an industrial system which is, in terms of national power, not only in arms but also in the means of capital development, already reaching equality with the West. The Soviet leaders have been declaring that the rate of economic growth in the Soviet Union surpasses that of all countries, and that, therefore, they will become a more and more formidable competitor in the economic and political markets of the world.

I do not know whether all the statistics that were put out last week are correct. But the world will not doubt the great fact that the Soviet Union is now the strongest power in Eurasia. It is this economic fact which accounts for the extraordinary tone of confidence that pervaded all the speeches made in Moscow last week. It also explains the ideological and political declarations about how Krushchev and his people expect to win the cold war without revolutionary violence. They believe that in the competition with us for influence in the uncommitted countries, they can make more attractive offers than we are likely to make.

Even if they cannot offer as much economic aid as we could, they will be able to offer more than Congress will allow us to offer. Moreover, whatever they offer, they can offer on terms which are politically more attractive than the terms which Congress insists that we should impose.

They are in a stronger bargaining position in the uncommitted nations. For they do not ask, they do not need to ask, for military pacts or their equivalent. They are able to identify themselves with the popular longing to remain unentangled. What is more, in the underdeveloped countries, which are by definition without capital resources, the governments must necessarily play the principal role in capital formation. This suits the Socialist ideology of the Russians. It runs at cross purposes with our own anti-Socialist ideology.

The new challenge of the Soviet Union is very formidable indeed. If we are to meet it, we shall have to reverse ourselves on a number of things which are strongly believed in here. We shall have to be willing to export capital on a considerable scale. We shall have to be willing to do that without insisting on military terms, without penalizing political neutrality, and without expecting the underdeveloped but old and crowded countries to adopt all the principles of the American free-enterprise system. We shall, in other words, have to be willing to contribute capital to countries, which, as neutrals and as Socialists, will be unlike the United States.

The alternative, I believe, is to go on losing our influence in the uncommitted world.

Salute to Brotherhood Week

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. KEATING. Mr. Speaker, I doubt that there is one among us who is not conscious of the fact that we are in the midst of the annual observance of Brotherhood Week. In the newspapers, theaters, and pulpits of this great land, this wonderful thought—launched by the National Conference of Christians and Jews—has been spread.

It has been reassuring to observe the response of the people of this Nation to the appeals of religious and lay leaders of all faiths. I am sure many have realized that this week is a time for stocktaking and soul searching; a time for rededication to democratic principles and to the principles of our religious faiths.

To me Brotherhood Week is America's positive answer to the greatest challenge of our times—that is, if the human race is to survive there must be established a firm foundation of understanding and brotherhood around the globe. It seems to me that we can make the most significant contribution in the history of man if we can create an atmosphere of brotherhood and love in our world to replace the present aura of distrust and fear.

It is my hope that this week will form another link in what may eventually become part of a powerful chain, not only in the United States, but throughout the world, that will embrace men and women of every race, creed, and color, who will live side by side in a spirit of mutual respect.

Let us all join together and march in that procession which must someday lead us to ultimate victory over the forces of disruption, bigotry, and intolerance. Let us show the world that we Americans do not seek to destroy the beliefs and practices of those not in our own particular faith, but we believe there can be created a genuine spirit of brotherhood among all faiths if we but have the will and patience to bring it about. And let us never forget that in the principles of our religious teachings lie the hope and salvation of this world in which we live.

Republican Economics and the Vicious Cycle

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. ROGERS of Texas. Mr. Speaker, the following editorial from the Castro County News, published at Dimmitt, Tex., in the district which I have the honor to represent, is excellent:

REPUBLICAN ECONOMICS AND THE VICIOUS CYCLE

Time magazine this week came up with an interesting little article. This story concerned with national economy, said in effect that a different ideology was evolving concerning our economic situation.

This article pictured 4 graphs, all but 1 slanting upward from left to right. The gross national product was depicted as climbing from $262 billion in 1949 to $357 billion in 1955. Average weekly earnings have apparently climbed from an average of $50 to $80 in the same period, and wonder of wonders, the consumer price index has risen only 12 points. A beautiful picture of a booming economy. We will take up the fourth graph in a moment.

The Republicans are assuming a different theory of economy. Time said the Democrats were intent on giving equal shares to everyone of a static economic pie when they were in office. But now the picture has changed, viz: The Republicans are sitting back and letting the economy climb and climb and climb. They are concerned with keeping everybody's graphs going upward at the same pace in an expanding economy.

But now we come to the fourth graph. It shows the farm price picture 42 points off of 1949. Time goes on to laud the Republicans for their deep, deep concern for the farmer. A fine bunch of people the pro-Republican magazine says. Just look what they are going to do: Ike will keep all the graphs parallel (and do it with 90 percent parity, apparently). This child-like faith in a system of politics and political control is not very laudable in our opinion—especially when simple economic principles say one major group cannot lag behind for long without bringing on a general depression.

We've been listening since last summer when the rumblings of discontent became more evident than ever before concerning the promises of our national farm and political leaders. There have been many bags of hot air, speeches, and thousands of printed words on the future and sure-to-come heyday of the American farmer. But the actions we've seen are the same old operations set up by the Democrats that haven't yet been curtailed by the Republicans.

The latest farm program is nothing but a gilt-edged farce, filled with words calculated to soothe and relax—words, which, if they came true, would add another Government giveaway program to those already in force and would not help our farmers at all. Ike's farm plan says we'll be benevolent and give everybody something for nothing. Each farmer will receive many hundreds of dollars for letting a portion of his land lay idle. Dear Mr. President: It takes many thousands

of dollars to run a farm. A lot of farmers in Castro County went further in the hole this year than twice the amount proposed as payment for idle acres—and they did it on good crops. And besides that, most farmers are normal, independent people—they want to work for what they get.

We hear a lot of talk about a surplus from Farm Secretary Benson. And who is to say we have a surplus? In broad general terms, we are one cotton crop ahead ordinarily and a little more on wheat. Because one man is afraid—and apparently wishing we were 1 year behind in production instead of ahead—every farmer in the county is hurting. And economic hurt is about as painful a sensation as can be found, especially when the people we hire to take care of such things fall down on the job.

We are not an economist, nor do we pretend to know more than anyone else about farm or any other national current problem. But it doesn't take an expert in the Kinsean Theory of Economics to see the relation between industry, labor, the farm and consumers. Just let the farmer fall behind for a few years without breaking even. First he can't buy new farm machinery, then that industry cannot buy steel, because it can't sell production. Steel then lays off workers who can't purchase without a job. Their purchasing power, along with the farmer, is taken out of the economy. The luxury item producers lay off workers, who join the others and the cycle runs the gauntlet, taking more and more every time it comes around until utter chaos exists as it did in 1929. Is Republican history beginning to repeat itself? Everything depends upon the consumer. Our every national industry is geared to the needs of the consumer and the Nation's farmers comprise a major consumer section. Economics are funny. Things have a habit of snowballing in either direction. Prosperity builds prosperity and recession builds recession unless emergency props are applied.

Time magazine had a thought-provoking article. It was written, however, not to cause the reader to think. This magazine is like hundreds of others who today are thinking how much nicer it is to have a counterfeit $10 Republican bill than a sound $5 one of a Democratic trademark.

We were pleasantly surprised when we noted that 2,250 people in Castro County received their poll taxes this year. This is a 400 increase over the previous highest figure. We hope this is an indication that many of our county citizens are eagerly awaiting the November general election. It is a healthy sign that will go a long way toward keeping ours a healthy county.

Upper Colorado Project: More Cost, Less Acreage

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. HOLIFIELD. Mr. Speaker, 20 million acres of undeveloped land are available in areas with adequate rainfall for crops. These acres can be developed and fertilized for a portion of the cost necessary to bring into cultivation the arid acres of the upper colorado area project.

The Bureau of Reclamation presented cost figures for initial participating projects. Costs allocated to irrigations varied from $210 to $794 per acre, or an unweighted average of over $400 per acre. Little of this land even with sufficient water would command a fair market value as high as this. Costs estimated for some 22 other possible participating projects, on the basis of only partial investigation, run as high or higher, and up to $1,530 per acre in one instance. We deem these costs excessive and economically unsound.

There exist at least 20 million acres of undeveloped fertile land in humid areas of the United States which can be developed for agriculture at a fraction of the cost of the acreage serviced by the upper Colorado storage project.

The Department of Agriculture reports there are more than 20 million acres of undeveloped fertile land in the humid areas of the United States which can be developed by low-cost drainage. Development costs would be from $60 to $100 an acre for such land. The cost involved to taxpayers of the Nation in developing new and supplemental water for the acreage serviced by the upper Colorado project, which amounts in all to only about 600 square miles of new land, would range up to 50 times as much for each acre developed.

As an example, the Department of Agriculture lists acreage available for low-cost development in these 21 States as follows:

	Acres
Alabama	683,000
Arkansas	1,865,000
Florida	1,970,000
Georgia	1,721,000
Illinois	69,000
Indiana	135,000
Kentucky	170,000
Louisiana	2,769,000
Michigan	690,000
Minnesota	874,000
Mississippi	1,272,000
Missouri	323,000
New York	100,000
North Carolina	1,157,000
Ohio	95,000
Pennsylvania	90,000
South Carolina	996,000
Tennessee	242,000
Texas	3,928,000
Virginia	514,000
Wisconsin	316,000

Fifty-two

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. MULTER. Mr. Speaker, I am happy to call to the attention of our colleagues, the following editorial on the Fifty-two Association which appears in the New York Times for February 22, 1956. The Fifty-two Association of New York, Inc., is a nonprofit, nonsectarian, nonpolitical organization which since 1945 has been keeping its pledge, that "the wounded shall never be forgotten," with outstanding programs of entertainment, job assistance, hobby programs, adapted sports, and other special rehabilitation services for hospitalized servicemen and veterans.

FIFTY-TWO STILL AT IT

That group of volunteer business and professional people around town called the Fifty-two Association is now in its 12th year, entertaining servicemen at hospitals and camps and helping to place veterans—especially the disabled—in jobs. "The wounded shall never be forgotten" is its slogan; it was born out of the Second World War. A dozen years later it is still at it. Hospital patients are visited from Boston to North Carolina. Last year more than 20,000 servicemen and veterans were entertained at 275 parties. This April the New York and Chicago chapters sponsor their eighth annual national wheelchair basketball tournament demonstrating that ability, not disability, counts. Fifty-two, a member of New York's Welfare and Health Council, fortunately has a long memory.

The Scientific Manpower Shortage

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of my colleagues a series of articles from the Washington Post on the scientific manpower shortage. The articles, dated February 20, 21, 22, and 23, respectively, are as follows:

[From the Washington Post and Times Herald of February 20, 1956]

NEW IDEAS DIE UNBORN—SCIENTIST NEED EXCEEDS SUPPLY

(By Nate Haseltine)

(First of a series)

"Best bet today—country life at city pay."

"Rare opportunities for well qualified individual gifted with imagination and inventiveness. Salary up to $12,000 with excellent growth potential in nationally known company manufacturing stable line of equipment."

"Modern benefits program * * * relocation expenses paid."

"Relocation allowances, liberal employee benefits, ample housing in beautiful suburban country type area tuition refund program (nine graduate schools in area of plant)."

"We need a couple of junior engineers who are ready for heavy responsibilities. We are expanding in electronics, need top talent and will pay top prices."

"Where exploring minds find full outlet."

"You can obtain your M. S. or Ph. D. at company expense."

The above are excerpts from advertisements appearing in the Nation's newspapers, week after week, as industrial firms and scientific laboratories bid for engineers, scientists, and other trained specialists.

Salaries are seldom mentioned, but occasionally you'll see a price tag. Like "design engineer * * * $12,000" or "mechanical engineer * * * $12,000" or "junior engineers * * * start at up to $10,000."

Today, college engineer and science graduates can expect a choice of at least six jobs, all with starting salaries which, until recently, where those commanded by scien-

tists or engineers after 10 years' working experience.

Suddenly as though without warning—though warning was there—the Nation got caught hard in a serious shortage of scientifically trained personnel.

Why?

There are a lot of little reasons. Some who have studied the situation seriously say too much emphasis has been put on little reasons. Such as the oft-repeated and convenient charges that schools today aren't teaching science as it was taught when father or grandfather were boys.

Or that the draft has been diverting the Nation's youth from scientific pursuits. Or that science teachers have been lured by higher pay nonteaching jobs, thus undermining the foundations needed to assure future crops of scientists and engineers.

LITTLE REASONS

These are important but little reasons, contributory only in a small degree to the real cause. Those seeking ways to correct today's plight agree that America's economy, even the old American way of life, was lost in the tremendous advances in scientific and technological developments necessitated by World War II.

The country unknowingly stepped across a threshold of that age. It wasn't so much that schools were turning out fewer graduates of scientific bent; it was the suddenly increased need for more and more of them.

The scientific manpower shortage today is real. It is serious. Some say it is downright critical, and unless alleviated quickly may cost the United States its leading role in world power, perhaps even its existence as a democracy.

Howard Meyerhoff, chief of the Scientific Manpower Commission, says the "most conservative" estimates he can now make is that there are 7,500 unfilled positions requiring scientists, and 15,000 unmanned engineering jobs.

It is anybody's guess, Meyerhoff says, just how many thousands more could be used if today's actual needs were met. Industry after industry, he noted, has shelved planning for even attempting scientific projects simply because there would be no one to staff them.

Research projects of great promise are born and die on the drawing boards. Others are stillborn in creative brains. Still others have never been conceived because scientists are kept too busy to let their minds explore.

Automation—where machines control machines—is still beyond sight, according to Dr. Allen V. Astin, Director of the National Bureau of Standards. There just aren't enough scientists, engineers and technicians to fit together all of automation's pieces.

MAN STUMBLED

The scientific age opened, and man stumbled at the entrance.

"Man has achieved a theoretical breakthrough of such proportions that every fiber of his skill and ingenuity will be strained merely to exploit a portion of what has already been revealed," says John Jay Hopkins, chairman and president of General Dynamics Corp.

Hopkins blames the American educational system, in part, for the unpreparedness. The educational system, he charges, "has been overrun and left behind by successive tidal waves of technological advance."

These are the onrushing, engulfing waves of atomic fission, applied solar energy, electromagnetic antigravitational developments, electronics, radioactivity, and the looming development of controlled atomic fusion.

James R. Killian, Jr., president of Massachusetts Institute of Technology, sees the present crisis as not just a shortage in scientific manpower in numbers but also in quality. It is a shortage, he said, of high intellectual talent adequately educated and in the right place. It is a shortage of specific skills adaptable to specific areas.

For one thing, Killian says, too many young people of exceptional intellectual ability drop out of our educational system before they have achieved an education which exploits their abilities.

Any good strategy for building up an adequate degree of scientific manpower, he says, must be related to identifying, encouraging, and more fully educating the top talent of American youth.

[From the Washington Post and Times Herald of February 21, 1956]

SCIENTIST LACK IS FELT HERE

(By Nate Haseltine)

(Second in a series)

Perhaps nowhere else in America are scientists and educators paying more attention to the Nation's scientific manpower shortage than here in Washington.

It is from here that the Defense Department channels its contracts to Federal agencies, industrial firms, universities and scientific laboratories throughout the country.

It is in the Defense Department that the full force of the shortage of engineers, physicists, chemists and mathematicians (to name only the most scarce) is most evident.

It is here, in Washington, to the National Academy of Sciences, that the Government sends its scientific problems for solution—be they wartime or peacetime problems. The academy is the headquarters and workshop for the Nation's top scientists.

Today's prime scientific problem, academy officials agree, is not only how to go about putting a man-made moon in an encircling orbit around earth. It is not only how to build atomic reactors to power ships and planes or heat, aircondition and power future cities. It is not only this country's dwindling natural resources.

It involves and affects all of these.

Today's top scientific problem concerns the Nation's human resources, particularly the resources of scientific and technical personnel.

In words of Rear Adm. H. G. Rickover, chief of the Atomic Energy Commission's Naval Reactors Branch, the critical question is: "How can we provide the trained men and women needed to maintain the momentum of our rapidly expanding technical civilization?"

It is not education's fault, alone, Rickover says. It is the failure of almost everyone to recognize the impact of the 20th century scientific revolution and to take necessary steps in time.

Today that impact is being recognized—at the higher levels of Government, industry, and education. It has not filtered down yet through school administrations and into the homes, where eventually it must be recognized if its challenge is to be met successfully.

Regardless of the cause, the correction of the Nation's scientific manpower shortage is dependent upon the American educational system.

The secondary schools simply must provide more and better science teachers, more and better science courses, more and better student selection and guidance, and more opportunities for capable students to enter colleges to complete scientific education.

Leading educators readily agree to these premises for a solution. But they contend that the educational system is not geared to such selectivity, and question whether it should be. They see no justification to oft-made proposals of higher pay for science teachers—without similar pay increases for all teachers.

Some well-intentioned educators have said that there is really no need for high-school classes in such subjects as chemistry and physics. Just graduate students with a sound education in mathematics, and they'll be able to grasp chemistry and physics in college, they say.

What these educators overlook, or at least gloss over, is the fact that student interests are developed largely before college age. Take chemistry and physics out of the high schools, and you dam off the spring that nurtures future scientists.

The scientists who fathered most of today's advances were products of past educations where more stress was placed on science subjects at the high-school level. Nowhere is this more evident than in physics.

Prof. W. C. Kelly, of the University of Pittsburgh, made a special survey on the subject of physics teaching in the secondary schools of United States.

He found that in 1895 almost one-fourth (23 percent to be exact) of all high-school pupils were enrolled in physics classes. By 1952, the last year for which he was able to obtain full reports, a bare 4.3 percent of high-school students were enrolled in physics.

Physics enrollments, he reported, have declined steadily for the past six decades.

An obvious reason for the decline, Kelly admitted, was that the student of the nineties had fewer studies to choose from.

[From the Washington Post and Times Herald of February 22, 1956]

PRIVATE INDUSTRY VIES WITH EDUCATION—SCHOOLS LACK SCIENCE TEACHERS

(By Nate Haseltine)

(Third of a series)

Washington and its environs has its exceptions—some good secondary schools where capable science teachers enthuse and prepare students for science careers.

To name a few, there is Woodrow Wilson High School here: Washington and Lee Senior High in Arlington, and the Bethesda-Chevy Chase High in Montgomery County.

But even the better schools hereabouts lack enough qualified science teachers and guidance counselors.

The situation that exists here exists, generally, throughout the secondary schools across the country. It is at its poor best in metropolitan and consolidated school areas; it is at its bad worst in the rural areas.

Scientists, engineers and educators agree that today's schooling opportunities just are not geared to meet today's and the future's demands for more and more scientists and engineers needed to man the scientific age this country has entered.

In the Washington area there are about 340 working teachers of biology, chemistry, physics and general science. More than 90 percent of these are qualified by admittedly low qualification standards.

If you accept—as many scientists and some educators recommend—a minimum qualification of a bachelor of science degree, only about 1 of every 3 of these teachers would qualify. A good science teacher need not necessarily have that degree, but it helps.

A less publicized point of alarm is that almost all the degreed science teachers here got their degrees before World War II. This means that most postwar, science-educated teaching graduates with B. S. degrees simply are not taking science teaching jobs. They're lured by industry's better-paying positions.

The assumption is borne out in a report of the research division of the National Education Association. A portion of that report showed what proportion of students who prepared for teaching actually held teaching positions 1 year after college graduation.

The statistical breakdown is most significant in the science education category. It showed: Of those graduates who had majored in chemistry with intent to teach the subject, only 36.1 percent were teaching chemistry the following year; in biology, 45.4 percent remained to teach, and physics retained 51.8 percent of its crop.

Scientists say that even more significant statistics could be compiled 3 to 5 years later. Such a survey, they said, would show that many more of the new teachers of chemistry, biology and physics (mostly young men with new family obligations) would have left teaching for work in industrial and scientific laboratories.

Some steps have been taken to reverse the trend of science teachers leaving education. Admittedly progress in this direction is piecemeal. Other steps are being taken to encourage more capable students to study for science teaching careers.

Perhaps the most effective push in the right direction has been the snowballing interest of high school students that is promoted by science fairs and science talent searches.

In the Washington area last year some 5,000 junior and senior high school students prepared special scientific projects to exhibit. Only 500 could be displayed for lack of exhibit space in the final competition here. This year the fair sponsors plan to set up four such fairs to better give everyone a chance for winner honors.

The Science Fairs as well as the Westinghouse Science Talent Searches are promoted on a nationwide basis by Science Clubs of America, with headquarters here.

One new boost to science education, the so-called Arlington plan, is still in its infancy here, but may become a model for the Nation. It is designed to make the science teacher better schooled for his job, and his job more attractive.

Named for nearby Arlington where it is being started, the plan sets up a community fund to underwrite costs of postgraduate courses for employed teachers. All teachers in the school system are eligible, but priority is given mathematics and science teachers in junior and senior high schools.

All colleges and universities serving the metropolitan area here are cooperating by setting up new courses to meet the teachers' educational needs. The plan has the initial sponsorship of the National Academy of Sciences' National Research Council and the aid and cooperation of the American Association for the Advancement of Science.

As the program continues, it will be administered by a board of trustees. Serving on the board will be responsible representatives of participating universities, parent-teacher groups, business executives and outstanding civic leaders.

There are other drops, too numerous to give individual credit. Many of the Nation's largest industries are offering summer jobs to science teachers; some are sending their scientists into school systems as part-time science teachers.

[From the Washington Post and Times Herald of February 23, 1956]

SCIENTISTS SEEK END TO ENGINEER SHORTAGE

(By Nate Haseltine)

(Last of a series)

The Nation's educational system must be shifted into a higher gear, and provide a college education to every capable high school graduate.

This is an ideal voiced by serious scientists concerned over the system's failure to provide enough engineers and scientists to man today's scientific and technical age.

They don't ask that every student be channeled into science and engineering courses. They believe that the loss of scientifically capable students to college training today has been the cause of today's and the future's scientific and engineering shortage.

Today, less than half of the students capable of getting a college degree ever go to college.

Some 60 percent of the best students in the Nation's high school graduating classes do not go to college. This represents a tremendous loss of some 250,000 students.

Half of the students who do enter college do not graduate. And for every high school graduate who eventually earns a doctoral degree, 25 others with the intellectual ability to do so do not acquire degrees.

Today's real educational need, scientists and educators appear to agree, is for a concerted effort to identify, encourage and more fully educate the top talent of American youth. Most immediately, the scientists say, today's sagging emphasis on science courses in secondary schools must be shored up, and the unfilled science teaching posts must be manned.

Also advocated by the scientists and many educators are accelerated training courses for gifted students. If the public schools can set up special classes for those who for physical or mental reasons cannot keep pace with class averages, similar special classes for outstanding students can be incorporated into public-school systems.

The mathematics teachers there found that in a school of several thousand students they could select 25 bright ones in each freshman class who could work much faster and harder than the others. In 4 years the entire program covers elementary, intermediate, and advanced algebra; plane, solid, and analytic geometry; trigonometary, and a touch of calculus.

It's a tough course, but here is what Dr. Alan T. Waterman, director of the National Science Foundation, has to say about tough courses:

"The people who established this country and pushed its frontiers across 2,000 miles of wilderness were men and women of endurance and tough moral fiber. They were not afraid to expose themselves and their children to the incredible physical hardships of wild terrain and primitive living.

"Now the frontiers are those of the mind.

"Are we to shrink from equipping our children with the intellectual toughness and vigor needed to meet the challenges of a technological age? Or are we to assert that the hard subjects, such as languages, and logic, and math, and physics, and chemistry are too much for them? It would be strangely incompatible with our heritage if we should."

Actually, one of the deterrents to students signing up for science courses in high schools is the unwarranted and too general impression that science study is impossibly hard for any but the specially gifted brain. Advanced mathematics, physics, chemistry, and the like are not that tough.

There are other false impressions that make students shy away from scientific studies. These include anti-intellectualism, a disdain and distrust for the learned man. Then there are the antagonisms from falsely based feelings that science and engineering are materialistic and antihumanistic.

Scientists will get their best boost when, through science fairs and other educative processes, today's students and their parents learn the true values, rewards, and needs of scientifically educated citizens.

Everybody's Ideas

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. HOLIFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article from the Dalles (Oreg.) Chronicle:

EVERYBODY'S IDEAS

The drastic measures Congress is soon going to take to remove farmland from production in order to eliminate food surpluses should focus attention on the enormously expensive upper Colorado River project which the President has endorsed. Why, no one seems to know, except that Coloradoans sold him on it when he was there vacationing.

Congressman CRAIG HOSMER, of California, will present to the House of Representatives the result of a study showing at least 20,937,153 acres of good cropland now idle. This on top of 40 million acres the administration wants removed from production through its soil-bank plan.

This land, according to HOSMER, is productive, much of it close to markets. It could be put into full-scale production to meet a national emergency for from $15 to $150 an acre, the Congressman claims.

In contrast, the Colorado project is said to require $5,000 an acre to bring into production arid lands in Wyoming, Colorado, Utah, and New Mexico. The cost may run $4 billion. It is the most costly development project ever proposed, and in a period of heavy overproduction of foodstuffs.

The time may come when this project and some other high-cost jobs, like the Mountain Home in southwest Idaho, estimated at from $1,500 to $2,500 an acre may have to be built to relieve a food shortage. But it most certainly is not in order now. Nor in the next two decades, assuming the steady population increase the experts forecast.

If Congress has even elementary intelligence it will douse all such projects for the duration of the food surpluses at least. (Capital Journal, Salem.)

Reds Act To Join Civil Rights Push

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1956

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following excerpt from an article in the New York Times of Wednesday, February 22, 1956:

REDS ACT TO JOIN CIVIL RIGHTS PUSH—SEEK FULL ROLE IN STRUGGLE OF NEGROES IN THE SOUTH—NAACP WARNS UNITS

The Communist Party, which had been laying low dodging congressional process-servers for several years, plans to inject itself into the civil rights struggles in the South.

This was disclosed by Claude Lightfoot, Negro Communist leader, who heads the party in Illinois. Interviewed by the Worker, Communist newspaper, last Sunday, about civil rights cases, Lightfoot said:

"I am certain that in these days and in many other struggles our party will resume its full role, justifying new levels of good will and confidence among the broadest sections of the Negro people."

The Worker said, "Lightfoot spoke of the role of Communists and of Left Progressives in dramatizing the plight of the Negro people before worldwide public opinion."

Lightfoot has been sentenced to serve 5 years in prison and pay a fine of $5,000 under the Smith Act. That act makes membership in the Communist Party, while knowing its aim is the violent overthow of the Govern-

ment, a crime. His conviction is being appealed.

Communist support or participation in the civil-rights movement of non-Communist Negro groups will lend credence to the propaganda of the White Citizens' Councils in the South, Negro leaders believe. The councils picture the civil-rights movement as being Communist-inspired.

Upper Colorado Project: Supreme Court Decision First

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. HOLIFIELD. Mr. Speaker, as a Congressman from southern California, I deem it my duty to oppose the upper Colorado River project, not in a spirit of antagonism to my colleagues from that area, but in view of the threat which this project would constitute against more than a half-billon-dollar investment of the 27 cities in the Metropolitan Water District of Southern California.

We believe that a suit for clarification of the meaning of the Colorado River compact, which is now before the Supreme Court of the United States, should be settled before further diversion of water is authorized by Congress.

Once that clarification is made I am sure that no southern California Congressman would object to feasible projects in either the southern or northern compact States. Of course all such projects should be justified on an economic basis.

The project would critically impair operations at Hoover Dam and lose $187 million in revenues to the Federal Treasury.

During the 25-year period of filling the dams contemplated by the bill, firm power output at Hoover Dam would be reduced by 25 percent. Secondary energy would be wiped out entirely. This shortage would cost the lower basin about 200 additional millions of dollars for replacement power and cost the Federal Treasury about $187 million in lost revenues.

To say the least, this is a strange power policy for the Federal Government to follow. First it builds Hoover Dam on the lower reaches of the Colorado River. The power can be produced very cheaply so the Secretary of the Interior enters into contracts to sell certain quantities of power at rates of 2 mills per kilowatt-hour and less. Then the Federal Government builds additional dams upstream. Here power cannot be produced so cheaply. But in order to generate power at these upstream dams to be sold at 6 mills, it cuts back the production of 2-mill power at Hoover Dam, which is already constructed and operating efficiently. This is Government waste with a vengeance.

Essentially, the Colorado River storage project implies the destruction or impairment of 25 percent of the value of the Boulder Canyon project to help make possible the construction of a new project upstream, to furnish power at over twice the cost and water at several times the cost of that which would be taken away from the lower basin, in violation of the covenant of the Government in the Boulder Canyon Project Act and in the power and water contracts made under that act.

Moreover, the Federal Government will be in breach of solemn contractual obligations if it curtails energy output at Hoover by intercepting water for creating powerheads at the upstream dams. The project may not legally impound water for power purposes if needed to generate electrical energy at the lower basin dams. If the Federal Government breaches its contracts with power contractees in the lower basin by cutting back power deliveries at Hoover Dam, it will be subject to suit for hundreds of millions of dollars in damages.

Moscow Turns on Stalin

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. DOYLE. Mr. Speaker, by unanimous consent heretofore granted me so to do, I call to your attention, and that of my other colleagues, to an editorial appearing in the New York Times on Monday, February 20, 1956:

MOSCOW TURNS ON STALIN

Even the most calloused observer of the Soviet scene must be astounded by the speed and extent to which the Twentieth Congress of the Soviet Communist party has been turned into an anti-Stalinist demonstration. Khrushchev, Malenkov, Mikoyan, and Suslov once vied with each other to praise Stalin, whom Khrushchev once called the "father, wise teacher and directing genius of the party, the Soviet people and the workers of the whole world." Now these same men compete to find the most bitter phrases to apply to Stalin's regime. "Twenty years of dictatorship and lies" sums up their characterization of the Stalinist era.

Mikoyan has gone furthest of all. He has explicitly opened the Pandora's box of official Soviet history and exposed a few of the lies and falsehoods contained therein. So far Mikoyan has only rehabilitated two of Stalin's many victims, Kossior and Antonov-Ovseyenko, but the process can hardly stop there. Virtually all of Lenin's closest associates in the Bolshevik Revolution and the first few years of Soviet power—Trotsky, Zinoviev, Kamenev, Bukharin, Rykov, and many others—were put to death at Stalin's order and put into Soviet history as traitors and "enemies of the people." In the land of falsehood, even a small gleam of truth is a dangerous thing. Can the new revision of Soviet history about to begin be contained within the limits the present leadership deems desirable, or will the whole edifice of Stalinist lies, frame-ups, and murders be exposed?

Why has this startling reversal taken place? Most likely Khrushchev and his fellows are responding to the great revulsion against Stalin and Stalinism among the people. The Khrushchev gang, Stalin's creatures and accomplices, hope to retain their power by harnessing this torrent of popular sentiment themselves. Abroad, they presumably hope to impress democratic Socialists, anti-Communist Russians, and others that the Soviet dictatorship has been reformed and is now different from the monstrous evil that was Stalinism.

But we should not be tricked. The men who denounce Stalin now were trained by him and their hands are as bloody as were Stalin's with the blood of innocent millions. They have no claim to power other than that they were, as they once phrased it, the "closest comrades-at-arms of the great Stalin." It is good that they have begun to confess some of Stalin's crimes against the Soviet people. Stalin is dead and cannot be punished. When will the Russian people call his living accomplices to account for their share in those crimes?

The Bill of Rights

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD a prize-winning essay written by Miss Karen Holt, a senior in the Carbon Hill High School, Carbon Hill, Ala. Miss Holt's essay is entitled "The Bill of Rights."

The essay follows:

THE BILL OF RIGHTS
(By Karen Holt)

In America today, we take many of our liberties and privileges and even our freedom for granted. We don't stop to think how many people in both colonial and modern times have sacrificed their lives and fortunes in order to secure happiness and freedom for the future generations.

When our forefathers, the makers of the Constitution, considered it unnecessary to forbid some of the invasions of personal liberty and property rights in the Constitution, the people were not so sure they wanted this kind of government. They remembered their long struggle in England while securing their rights and how difficult it was when they settled in America to keep them. Virginia and other States made it plain that they expected a bill of rights to be added when they ratified the Constitution. Madison, called the father of the Constitution, led the necessary movement in Congress.

On November 3, 1791, the first 10 amendments went into effect. They form the so-called Bill of Rights. They underline the basic principle of the Declaration of Independence, that the purpose of the Government is to protect individual rights.

The Bill of Rights is the foundation upon which our American democracy rests. Americans will be free as long as its provisions are respected.

We Americans are always talking of freedom. What is freedom? Freedom may be defined as the constant struggle and fight for human longings. It is not only necessary to fight to gain liberty; we must continually struggle to keep it even after we obtain it. President Franklin D. Roosevelt in May 1941 said that we must preserve our four freedoms.

First and most important is that freedom of speech and expression. There can-

not be democracy unless men can say and write what they wish. This freedom cannot exist where there is tyranny. Even the seemingly most insignificant person may speak what he thinks.

Second of the four freedoms is the right of each man and woman to worship in his or her own way. No one tells us what church we must attend and we are not ruled by a government which tells us what to believe and what to do. Americans are not slaves of the Nation as many men in other parts of the world are. Our Founding Fathers, such as the Pilgrims, sacrificed everything for the right to worship as they pleased. Years ago a Russian once said, "Religion is like a nail—the harder you hit it, the deeper it sinks into the wood." This has been proven true countless numbers of times.

Freedom from want is the third of the four freedoms. Other freedoms could be very unimportant if we were starving to death. Many people believe that the world can produce enough goods and food for everybody. Both men and nations are likely to become desperate when facing starvation. We are more certain of our own freedom if all men and all nations have freedom from want.

The last of our four freedoms is freedom from fear. Roosevelt said, "The only thing we have to fear is fear itself." We are all afraid of the things we can't see, as fear of the dark when we were very young. It is easy to imagine that someone wants to harm us. Our minds are free if we can feel unafraid and secure. We cannot enjoy other freedoms if we are overcome with fear. People of all nations are tied together by a common love of human freedom.

Now let us think for a moment about other freedoms stated in the Bill of Rights.

In 1734 John Peter Zenger was charged with printing seditious libels and was acquitted by a jury. This decision established liberty of the press for the colonists. One important cause of the Revolution and American independence was Thomas Paine. He was not afraid to write his beliefs and opinions. Having freedom of the press means that we get first-hand information on important local and world events. We learn different opinions of informed people on interesting subjects.

The Bill of Rights promises to the people the right to peaceably assemble. We are not denied the privilege of discussing matters of interest together. The people have the right to keep and bear arms for protection. According to the fourth amendment troops will not be quartered in our homes without our consent.

The fifth amendment protects against anyone entering to search your home. A person must have a warrant stating the place to be searched and the persons or things that are expected to be found in a search.

The right to trial by jury is enjoyed by all Americans. A person is not compelled to be a witness against himself and must first be indicted by a grand jury for the crime he is said to have committed. He will not be tried for the same offense twice. After a verdict of guilty he may take his case to a higher court. According to the Bill of Rights, the accused may enjoy the right to a speedy and public trial with an impartial jury and he is informed of the nature and cause of the accusation. An individual has the right to his life, liberty, and property.

Excessive bail is not required nor excessive fines imposed. The States and people have powers reserved to them that are not delegated in the Constitution.

Another freedom not mentioned in the Bill of Rights is the chance of obtaining a free education which means that the children of the rich and poor have a more nearly equal start in life. In America any person, rich or poor, has a chance to gain wealth and position. Lincoln is one of the best examples of a person who rose to fame through a struggle of poverty. Inventors, such as Morse and Ford, overcame poverty to achieve world importance. These achievements were possible only in a land where freedom of opportunity exists for all people.

All of our accomplishments would be of little value to us if we were not free. The greatest of all our debts to the past is for our freedom.

A great price was paid for the freedom we possess today. A huge number of men in Washington's army froze to death in the winter camp at Valley Forge during the Revolutionary War. Nathan Hale gave his life for our beloved country. His last words were, "I regret that I have but one life to give for my country." Patrick Henry, a great statesman, declared, "I know not what course others may take, but as for me give me liberty or give me death." Freedom to these people was above any price tag.

But what does all this talk of freedom mean to me as a future voter and responsible citizen? It means that each Sabbath Day I may visit and worship at the church of my choice. It means that I do not have to be worried about suddenly being aroused in the night by a loud rapping at my door. I will know my neighbors are my friends and not my enemies. I can think what I please and speak my thoughts. I have a future to look forward to through the many opportunitites offered me. It is not enough to talk of freedom; we must preserve it. It is up to the younger generations to blaze freedom's trail of the future and to let freedom ring.

California Witnesses Prove That Colorado River Project Will Not Threaten California's Water Rights

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. ENGLE. Mr. Speaker, It is the duty of those of us who represent California in the Congress to satisfy ourselves that not one drop of water to which California is legally entitled is taken from it by the Colorado River project legislation. That this is at the heart of California's particular concern in this matter is clearly set forth in the following excerpt from the comments of the California State engineer, Mr. A. D. Edmonston, on the report of the Secretary of the Interior on the Colorado River storage project:

The primary interest of the State of California in the specific projects set forth in the report of the Commissioner of Reclamation as approved by the Secretary of the Interior on January 26, 1951, is that in the construction and operation of any of these projects, California will receive its due apportionment of the waters of the Colorado River system as provided for in the Colorado River compact and related laws, instruments, and documents.[10]

Should authorization of the project prejudice California's legal rights to the waters of the Colorado River, my duty as well as the duty of every other person charged with the responsibility of representing California in or before Congress would be to oppose the legislation with all possible vigor. Conversely, such opposition is out of order if it can be established that authorization would pose no threat whatsoever to California's legal share of waters of the Colorado River, providing the project is otherwise in accord with the general policy of the Federal Government governing water resources development.

I have come to the conclusion that it is possible for the upper basin to develop and use some of the water to which it is entitled under the terms of the Colorado River Compact without impairing its ability to deliver to California and the other lower basin States the water to which they are entiled. That conclusion is based on statements by Northcutt Ely and Raymond Matthew, attorney and engineer, respectively, for the California-Colorado River Board, and on official comments and statements by California State Engineer Edmonston, and by the Colorado River Board of California to the effect that all of the consumptive uses in the upper basin contemplated in current legislation can be made without interfering with the quantity of water which must be delivered to the lower basin. Later [11] in this article evidence will be presented from the official record which establishes that California officials have, first, admitted that water available for use in the upper basin is more than adequate to supply all the requirements of the projects included in the Colorado River storage project without injury to California; second, maintained that large holdover storage in the upper basin is an essential prerequisite to development there in order to assure that California and the other lower basin States will continue to receive the water to which they are entitled under the compact; third, urged prompt construction of the largest feature of the Colorado River storage project, namely, the Glen Canyon reservoir; and fourth, endorsed the generation of electric energy as a necessary and desirable adjunct of upper basin development.

BACKGROUND OF PROPOSALS FOR UPPER BASIN DEVELOPMENT

Basic to any understanding of the rights of the seven States of the Colorado River Basin to the use of the waters of the Colorado River is the Colorado River Compact of 1922.[12] That compact divides the Colorado River Basin into two parts, the upper basin comprising parts of the upper basin comprising parts of the States of Arizona, Colorado, New Mexico, Utah and Wyoming, and the lower basin comprising parts of the States of Arizona, California, Nevada, New Mexico, and Utah, with Lee Ferry, a point in Arizona, as the dividing point between the two basins. Each basin is defined to include, in addition to the specified States, such other States located outside the drainage area of the Colorado River system as are or will be beneficially served by waters diverted from the Colo-

Footnotes at end of speech.

Footnotes at end of speech.

rado River system above or below Lee Ferry, as the case may be.

Article III (a) of the compact apportions to each basin in perpetuity:

The exclusive beneficial consumptive use of 7,500,000 acre-feet of water per annum.

Article III (d) provides that—

States of the upper division will not cause the flow of the river at Lee Ferry to be depleted below an aggregate of 75 million acre-feet for any period of 10 consecutive years.

The Colorado River Compact and the Boulder Canyon Project Act,[13]—which authorized the Hoover Dam and the All-American Canal as its major features—became effective in 1929 after ratification of the compact by 6 of the 7 States of the Colorado River Basin, the enactment of the California Limitation Act[14] and the proclamation by the President. Development in the lower basin proceeded at a fast pace with the construction of Hoover Dam, Parker Dam, Davis Dam, the Colorado River Acqueduct, and other works. Development in the upper basin, on the other hand, proceeded more slowly, due to various factors including the lack of a comprehensive plan for the use of their waters and of an apportionment of the waters among the States themselves, and to various economic, technical, and other problems that confronted it.

The first effective step toward eventual upper basin development came with the enactment of the Boulder Canyon Project Adjustment Act of 1940.[15] Section 2 (d) of that act provided for a payment of $500,000 annually from the Colorado River dam fund, which was established by the Boulder Canyon Project Act, to a special fund in the Treasury designated the "Colorado River development fund." The first receipts of the fund up to $1,500,000 were directed to be used "for the continuation and extension, under the direction of the Secretary of studies and investigations by the Bureau of Reclamation for the formulation of a comprehensive plan for the utilization of the waters of the Colorado River system for irrigation, electric power, and other purposes" in the upper and lower divisions of the Colorado River Basin. Receipts of the fund through the year 1955 were directed to be used for investigation and construction of projects in the four States of the upper division.

Pursuant to that authorization, the Department of the Interior undertook an exhaustive investigation of potential water resources developments in the Colorado River Basin in Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming, the results of which were contained in an interim report of the Secretary of the Interior published in 1947 and entitled "The Colorado River—A Natural Menace Becomes a National Resource."[16] Before publication the report was submitted to the seven affected States and to the Secretary of war, the Federal Power Commission, and the Department of Agriculture, and their replies were included in it. The report contained a comprehensive inventory of potential water resources developments in the Colorado River Basin. In his letter transmitting it to the President, the Secretary of the Interior stated:

Although I cannot recommend authorization of any projects at this time, I am sending the accompanying inventory report forward in order that you and the Congress may be apprized of this comprehensive inventory of potential water resource developments in the Colorado River Basin, and of the present situation regarding water rights in the Colorado River Basin.[17]

The report took cognizance of the fact that while the Colorado River compact divides the water between the upper and lower basins, it made no division among the States within each basin. It further noted that an Upper Basin Compact Commission had been created to apportion upper basin water. The commission reached agreement and the compact became effective upon the concurrence of Congress in 1948.[18]

Following the apportionment of the waters among the upper basin States, various bills were introduced to authorize developments there. Meanwhile the Department continued its studies, and under date of December 1950, the Bureau of Reclamation presented Project Planning Report No. 4–8a–81–1 which recommended approval of an overall plan of development of the upper Colorado River Basin and initial authorization and construction of 5 storage projects and 10 participating or consumptive-use projects. Under date of June 14, 1951, California submitted its views and recommendations on the report, saying, among other things, the following:

The State of California favors congressional authorization of the specific projects set forth in the proposed report of the Secretary of the Interior or as may be modified, and their construction with Federal funds consistent with national welfare if (a) such projects qualify under criteria, policies, and procedures of the Congress, and (b) the diversion and utilization of the waters of the Colorado River system by and through these projects will not impair the rights of the State of California or any of its agencies to the waters of that system as defined and set forth in the Colorado River compact and related laws and documents.[19]

The project was the subject of continuing study by the Bureau of Reclamation on the basis of which a supplemental report dated December 10, 1953, was prepared. It recommended the construction of the Glen Canyon and Echo Park storage and power units and of some 11 reclamation projects. The total cost of the units recommended for authorization was $923,056,000. The report was transmitted to the Speaker of the House.[20] President Eisenhower referred to the report in a press release dated March 20, 1954, which read, in part, as follows:

I have today approved recommendations for the development of the upper Colorado River Basin.

The general plan upon which these recommendations are based has been prepared by the Secretary of the Interior. The Secretary's recommendations have been reviewed by the Bureau of the Budget. Legislation embodying the administration's recommendations is being prepared for introduction in the Congress.

This is a comprehensive, well-planned development of a river basin. The close Federal-State cooperation upon which the Secretary's plan is based also carries out this administration's approach to water-resource development.

The development will conserve water, enabling the region to increase supplies for municipal uses, industrial development, and irrigation. It will develop much-needed electric power.

The development calls for sound financing. The legislation now being drafted will set up a fund for the entire project so that it will be constructed and paid for as a basin program.

I hope the Congress will give early consideration to enactment of the administration's legislative proposal. I firmly believe development of the upper Colorado River Basin, in accordance with its provisions, is in the national interest.[21]

The President has repeatedly urged the Congress to approve his proposed upper Colorado River development. In his State of the Union message to the Congress in January 1955, President Eisenhower stated with reference to the project:

The Federal Government must shoulder its * * * partnership obligations by undertaking projects of such complexity and size that their success requires Federal development. In keeping with this principle, I again urge the Congress to approve the development of the upper Colorado River Basin to conserve and assure better use of precious water essential to the future of the West.[22]

In his budget message for the same year the President said:

I also recommend enactment of legislation authorizing the Bureau of Reclamation to undertake construction of two comprehensive river-basin improvements which are beyond the capacity of local initiative, public or private, but which are needed for irrigation, power, flood control, and municipal and industrial water supply. These are the upper Colorado River Basin development in the States of Colorado, Utah, Wyoming, Arizona, and New Mexico, and the Fryingpan-Arkansas development in Colorado. The Colorado River development will enable the upper basin States to conserve floodwaters and to assure the availability of water and power necessary for the economic growth of the region * * * Sale of power generated at these developments will repay the power investment within 50 years and will make a contribution toward repayment of other investments.[23]

In his State of the Union message for 1956, delivered only last month, President Eisenhower again urgently recommended action authorizing the Colorado River storage project and the Fryingpan-Arkansas project during the current session of Congress.[24]

THE PROJECT BEFORE CONGRESS

The Senate's bill to authorize the project, S. 500, passed that body during the 1st session of the 84th Congress. It would authorize 6 storage reservoirs with hydroelectric features and incidental works and 12 participating or consumptive-use irrigation projects plus some 21 additional projects conditioned on later congressional approval of feasibility re-

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

ports on each. The total construction cost of all features in the Senate bill is $1,658,460,100.

H. R. 3383, to authorize the project, was favorably reported.[25] by the Committee on Interior and Insular Affairs on July 8, 1955, and shortly thereafter cleared for floor consideration by the House Committee on Rules.[26] Congress adjourned before the matter was taken up in the House. It is assumed that the backers will press for House action early in the current session of the 84th Congress. As reported by the committee, H. R. 3383 would authorize as an initial phase of the comprehensive plan of upper basin development 4 holdover storage reservoirs and 11 participating projects. The 4 holdover storage units and their locations are as follows:

Glen Canyon, Ariz. and Utah. Flaming Gorge, Utah and Wyo.; Navajo, N. Mex.; Curecantil, Colo.[27]

The 11 consumptive-use projects would bring irrigation to some 132,000 acres of new land and provide a supplemental water supply for an additional 234,000 acres.

The controversial Echo Park Dam, which has been opposed by individuals and organizations on grounds that it would invade the Dinosaur National Monument, was eliminated from H. R. 3383 in our committee, as was the Juniper Dam. The bill would authorize the appropriation of $760 million which is $190 million less than the $950 million recommended for the project by the Eisenhower administration.

Recently an agreement was reached between the governors, Senators, and Representatives of the upper basin to eliminate Echo Park Dam from the project in deference to those who opposed that particular feature because of its location. Based on the elimination of Echo Park, the executive secretary of the Wilderness Society, which is typical of the national conservation societies which opposed the project solely because of Echo Park, advised Congressman Dawson of Utah by letter dated February 1, 1956, that its opposition has been withdrawn.[28] That withdrawal leaves the California opposition as the only objector to legislation to authorize the Colorado storage project.

Although, as has already been pointed out, California's primary concern with legislation to authorize the Colorado River storage project relates to any adverse effect the project may have on its legal shares to the waters of the Colorado River, much criticism has been forthcoming from the California opposition based on the financial aspects of the project. Following is the allocation of costs of the project which would be authorized in the pending H. R. 3383:

Item and allocation	
Nonreimbursable: Flood control, fish and wildlife and recreation	$8,205,000
Reimbursable:	
Power	422,743,500
Municipal water	40,950,000
Irrigation	[29] 282,800,000

Of the total cost of the project less than 1 percent is nonreimbursable and that is for features which have specifically been recognized as Federal expenses such as flood control,[30] fish and wildlife,[31] and recreation.[32] The remaining 99 percent plus of the cost is reimbursable. The entire allocation for municipal and industrial water and power of approximately $463.7 million is returnable to the United States with interest on the investment plus interest accruing during construction. The irrigation allocation of $282.8 million would be repaid in equal installments over a 50-year period plus any development period authorized, but does not bear interest in accordance with a principle that has been a part of reclamation law for over 50 years.

Referring to the application of revenues contemplated from the project included in H. R. 3383, the following is set forth in the committee report:

In a 50-year period following the last power installation, net power revenues from the power facilities herein authorized are estimated at $1,075 million. Irrigation revenues in 50 years from the irrigation projects herein authorized are estimated at $36.6 million. The $1,075 million from power revenues would be sufficient to pay the power investment of $422.7 million, interest on the power investment of about $320 million to the Federal Treasury, the necessary financial assistance to irrigation of $246.2 million ($282.8 million minus $36.6 million) and leave a surplus at the end of the period of about $86 million. Municipal water revenues would be sufficient to repay the municipal water allocation with interest including interest during construction.

After the project has been completely repaid, the net power revenues amounting to from $15 million to $20 million annually for the units herein authorized will continue to flow into the Treasury. Over the long run, these additional revenues will more than offset the cost to the Federal Government resulting from interest-free financing for the irrigation investment. Thus, it is evident that the repayment plan is sound and that repayment is in accordance with the normal procedure for reclamation projects.[33]

In his testimony on S. 500.[34] Mr. Northcutt Ely decried the fact that the power revenues, in addition to repaying the cost of the power facilities with interest, will be used to pay out the cost of the reclamation facilities included in the project. Yet the use of power revenues for such purposes has been a common feature of Federal reclamation projects financing.[35] It received the endorsement of President Eisenhower's Presidential Committee on Water Resources Policy in a report [36] sent to the Congress on January 17, 1956. The Committee was comprised of the three following Cabinet officers: Secretary of Interior McKay, Chairman; Secretary of Agriculture Benson; and Secretary of Defense Wilson. In their report the members said in part as follows:

Use of excess revenues: Reclamation law has for many years permitted the application of excess revenue from the sale of power and municipal and industrial water (i. e., revenues received in excess of the amount necessary to amortize the capital cost with interest and cost of maintenance and operation of such purposes) to help repay part of irrigation costs. Such application has been made on numerous projects over many years. It should be recognized, however, that any charge for power above that necessary to repay power costs constitutes in effect an assessment upon the power users, who include practically all of the residents in the region. Thus, it is one method of collecting a share of costs from secondary local beneficiaries.

The Committee believes that such a use of excess revenue from Federal power sales to repay a portion of the costs of other types of projects is a justifiable procedure provided the project to which such revenues are applied is a part of the area from which such excess revenues are derived.[37]

The Californians who object to the project on grounds of subsidy do so in the fact of the fact that the major subsidy to the reclamation projects comes not from the Federal Treasury, but from the power users in accordance with regular principles. The Federal subsidy amounts to only $8.2 million and that for features which are recognized as Federal expenses.[38] Contrast that subsidy with the estimated nonreimbursable Federal cost of $348 million [39] for only one flood control project in Southern California, namely the Los Angeles County drainage area—excluding the Whittier Narrows Reservoir—and you can get some idea of the reaction of Upper Basin spokesmen to challenges to the Colorado River storage project based on economics by the California opposition. Thus a single flood-control project which benefits 1 area in California carries a nonreimbursable Federal grant which is over 43 times the subsidy to the Colorado storage project in which 4 States benefit. If it is considered appropriate to take into account the cost to the Federal Government based on the non-interest-bearing irrigation investment, those features of the Colorado River storage projects would cost the United States some $285 million in interest over the 60-year amortization term. At the end of that period, all Federal costs will have been repaid. The nonreimbursable Federal grant for the Los Angeles County drainage area, on the other hand, will over the same length of time cost the United States $570 million in interest alone and this interest cost will continue to mount indefinitely. After 100 years, it will amount to $870 million.

Furthermore, it is difficult for Californians to oppose the upper basin development on economic grounds when the State of California is going to build the Feather River project out of its own funds with no reference to historical standards of feasibility.

SOUTHERN CALIFORNIA'S POSITION

At the outset I stated that my refusal to join the alinement against the upper basin development which Northcutt Ely and Raymond Matthew—attorney and engineer, respectively, for the California-Colorado River Board—have spearheaded is based on a conviction that it is possible for the upper basin to develop some of its legal share of the waters of the Colorado River Basin without impairing California's rights to its share of the same waters. It is my purpose to now set forth the evidence on which that conclusion is based—evidence assembled from the public record which I believe does not support the stand of those who

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

have fought upper basin development as a "threat to California's vital water and power supplies." [40]

WATER AVAILABLE FOR USE IN UPPER BASIN

It has already been shown that article III (a) of the Colorado River compact apportions to the upper basin the beneficial consumptive use of 7,500,000 acre-feet per annum from the waters of the Colorado River Basin. The State engineer of California has stated that the long-term average quantity available for use in the upper basin may be somewhat less than 7,500,000 acre-feet a year due to article III (d) of the compact which provides that the upper basin States will not cause the flow of the river at Lee Ferry to be depleted below an aggregate of 75,000,000 acre-feet for any 10 consecutive years. He stated that studies have indicated that the upper basin during a critical period such as 1931–40 would not have more than 6,077,000 acre-feet available to it, which, together with estimated reservoir losses of 831,000 acre-feet, would result in a total consumptive use of 6,908,000 acre-feet. He then concluded that the long-term average quantity available for consumptive use in the upper basin is between 6,900,000 and 7,500,000 acre-feet per year.[41]

There has been unanimous agreement among Californians that the consumptive uses of projects included in S. 500 or H. R. 3383 would not require near the amount of water allotted to the upper basin by the compact. Mr. Ely testified, in part, as follows:

The aggregate consumptive use of these projects is said to range from about a half million to about 1½ million acre-feet. These quantities when added to about 2,500,000 acre-feet, said to be required by projects already constructed or authorized would represent a total use of say 3 million or 4 million acre-feet in the upper basin. The larger of these figures is still within the quantity of 7,500,000 acre-feet per annum, the use of which is apportioned to the upper basin by article 3 (a) of the Colorado River Compact. Moreover, the engineering studies indicate that this total could be permanently put to use without the construction of any new hold-over storage whatever.[42]

Not only did Mr. Ely and Mr. Matthew concede that the consumptive uses of all projects included in the Colorado River storage project legislation is well within the upper basin's entitlement, but they testified such uses were so small that they could be made without the construction of any hold-over storage facilities whatsoever.

Mr. Matthew testified before the House committee, in part, as follows:

Under present conditions of development of the upper basin, the measured flow at Lee Ferry during all periods of 10 consecutive years has always materially exceeded 75 million acre-feet throughout the period of record to date. Studies by the Bureau in the project planning report indicate that in the dryest 10-year period of record, 1930–40, the upper basin could have theoretically used, without holdover storage, about 4,300,000 acre-feet of water, or about 2,300,000 acre-feet more than the present use as estimated by the Bureau.[43]

Mr. Ely referred to the fact that all authorized and contemplated uses in the upper basin would represent a total of from 3,500,000 to 4,500,000 acre-feet in the upper basin and added:

Moreover, the engineering studies indicate that this total could be permanently put to use without the construction of any new holdover storage whatever, and that no holdover storage would be required for nearly half a century even if other projects were added.[44]

Even the pendency of the case of Arizona against California does not affect the amount of water required for consumptive use by the Colorado River storage project, plus that required for all presently authorized and existing projects. The future determination by the Supreme Court in that case on such important questions as whether beneficial consumptive use as used in article III (a) of the Colorado River compact and the Mexican Water Treaty means the quantity in fact used, measured at the place of use, or the effect of that use measured in terms of stream depletion at Lee Ferry, as well as its decision on other disputed interpretations of provisions of pertinent compacts, laws, and treaties does not warrant a delay in authorization of the Colorado River storage project, since, as Mr. Ely has testified, the amount involved in that litigation vis-a-vis the upper and lower basins amounts to 2 million acre-feet.[45] Thus if all disputed issues in that case are resolved in favor of the stand California has taken in Arizona against California now before the Supreme Court, there will remain 5,500,000 acre-feet per year available for use in the upper basin. This amount is still well over 1 million acre-feet in excess of the 3,500,000 to 4,500,000 acre-feet which Mr. Ely testified could be put to use in the upper basin without any danger to the lower basin.

THE STORAGE DAMS

By far the biggest assault from southern California on the Colorado River storage project has been directed at the storage dams. This is understandable since those dams, which include hydroelectric features, are the "cash registers" of the enitre development. This is so because the revenues derived from the sale of power will, in accordance with standard practice, be used to pay off part of the cost of the participating, or irrigation, projects. Without them the irrigation projects canot be built except at prohibitive cost and the waters of the Colorado River apportioned to the upper basin by the compact must remain undeveloped.

The desire of southern Californians to forever preclude or at least delay development in the upper basin is understandable when the effect of such development on lower basin power revenues is taken into account. Manifestly, water which is used in the upper basin will not pass through Hoover and other lower basin dams to generate low-cost power. The power generated from water to which the upper basin is entitled is sold as secondary—undependable—energy at a low rate as contrasted with firm—dependable—energy which is sold at a higher rate. That upper basin Senators are not insensitive to this basis of the southern California opposition is shown in the following colloquy between Senators Anderson, of New Mexico, Watkins, of Utah, and Mr. Raymond Matthew, of the Colorado River Board of California, in the course of the Senate hearings:

Senator ANDERSON. May I stop you there to ask: Since this has been dealing with Hoover Dam, is it or is it not a fact that the Hoover Dam contracts are all set up on a basis of gradual reduction of power quantities dependent upon the development of the upper basin?

Mr. MATTHEW. That is correct.

Senator ANDERSON. Then why should you suddenly complain about it now, if what you anticipated takes places?

Mr. MATTHEW. Well, this is far more than was anticipated. The firm power is defined in the contracts starting with 4,330 million kilowatt-hours a year, reduced by 8,760,000 kilowatt-hours a year, due to depletions in the upper basin.

Senator ANDERSON. Would the projects involved in this bill reduce it more than that?

Mr. MATTHEW. Yes, these storage projects would——

Senator ANDERSON. But, surely, you would not contend that it was anticipated that the flow at Lee Ferry should be above 7½ million acre-feet, and keep Hoover Dam going to capacity?

Mr. MATTHEW. Not just necessarily for that. I am merely pointing out that under the contracts as set up, in order to deliver that firm power at Hoover, it would require the larger quantity. And if there was only 7,500,000 acre-feet at Lee Ferry, then the firm power output would be reduced 26 percent, and they would not get any secondary.

Senator ANDERSON. I am trying to get down to bedrock, but you insist on these interpretations of the contracts requiring the delivery of 7½ million acre-feet at Lee Ferry. Now, if we live up to that part of the compact, and that results in any cutting down at Hoover Dam, do you think that is wrong?

Mr. MATTHEW. Yes, we do.

Senator ANDERSON. You do. Therefore the Hoover Dam situation is more important than that section of the compact? [46]

* * * * * *

Senator WATKINS. I am just wondering how they can lose when, as a matter of fact, they have been getting the benefit of a gift, in effect, from the upper basin States all these years in the way of secondary power, and, of course, firm power, much more of it than you could ordinarily guarantee unless you counted on having the water from the upper basin States run there personally (sic).

Senator ANDERSON. That is the loss, Senator. The loss he is talking about is a loss that they would obtain if somebody stopped all the water in the Colorado River Basin from flowing down there.

Senator WATKINS. If we stop giving our water to them.

Senator ANDERSON. Yes. That is the loss.

Senator WATKINS. I have had people make gifts to me once in a while, and if they stop giving me those gifts I have lost (sic).

Mr. MATTHEW. As was testified to yesterday by Mr. Tillamn, of course, that secondary power and firm power was not guaranteed.

Senator WATKINS. It was not. That is true.[47]

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

It is clear, as brought out in the foregoing colloquy, that the reduction of energy available to allottees of Hoover Dam power which will result from the use by the upper basin of its share of the Colorado Basin waters has been anticipated since consummation of the compact. The Hoover Dam energy contracts with California public agencies and companies such as the cities of Los Angeles, Pasadena, Glendale, and Burbank, the Metropolitan Water District, and the Southern California Edison Co., and the California Electric Power Co. each contain the following express condition and covenant:

Delivery of water for generation of electric energy:

10. (a) Subject to—

* * * * *

(ii) the further statutory requirement that this contract is made upon the express condition and with the express covenant that the rights of the * * *, as a contractor for electrical energy, to the use of the waters of the Colorado River, or its tributaries, shall be subject to and controlled by the Colorado River Compact.

The United States will deliver the State energy in the manner required in this contract.[48]

Although Mr. Ely's position is that all the participating projects in the upper basin can be built "without the necessity for any storage whatever," [49] and Mr. Matthew has stated that "storage units should not be built in the upper basin in advance of their need in connection with consumptive-use projects," [50] the California State engineer and the Colorado River Board of California included the following recommendations in their comments on the Secretary of the Interior's report on potential upper basin developments:

CONCLUDING COMMENTS

The following comments and conclusions are submitted with respect to the proposed report of the Secretary of the Interior entitled "The Colorado River," approved June 7, 1946.

* * * * *

6. Large holdover storage as indicated in the report is required in meeting the requirements of the Colorado River compact and in conserving and utilizing as far as it is ultimately possible the waters of the Colorado River system.

* * * * *

RECOMMENDATIONS

C. That prior to determination of the allocation of the waters of the Colorado River system among the States of the upper basin, new consumptive-use projects in that basin be authorized under the following conditions:

(a) That the consumptive use of each project be assuredly within each water allocation as is considered the minimum for the State for which the project is to be constructed, after due allowance for all existing and authorized projects.

(b) That, concurrently with the construction of any new projects in the upper basin which involve large additional use of water, holdover storage capacity be provided in that basin, to such an extent as may be necessary to assure that the flow of the river at Lee Ferry will not be depleted below that required by article III (d) of the compact.[51]

The largest in physical dimensions and cost of the storage dams, which is included in both the House and Senate bills, is Glen Canyon with a total cost allocation of $421,270,000. It represents 55 percent of all the recommended appropriation for units authorized in H. R. 3383. The reservoir storage capacity of Glen Canyon would be 26 million acre-feet and the total installed power capacity, 800,000 kilowatts. This dam would be located on the Colorado River in northern Arizona about 13 miles downstream from the Utah-Arizona State line and 15 miles upstream from Lee Ferry, which divides the upper and lower basins.

This dominant financial and physical feature of the entire Colorado River storage project was endorsed as late as February 15, 1954, by the State engineer of California in his official comments on the administration's report on the project, which comments were approved by Fred W. Simpson, chairman, the Colorado River Board of California. They were, in part, as follows:

CONCLUDING COMMENTS

* * * * *

10. The early construction of Glen Canyon Reservoir would be justified from the standpoint of other immediate advantages. Based upon the cost analyses in the report, the Glen Canyon Reservoir and power development could be constructed and operated on a sound financial basis and therefore merits authorization at this time.[52]

Testifying on H. R. 3383, Raymond Matthew endorsed Glen Canyon thusly:

Of all the proposed units of the storage project, the Bureau's cost estimates indicate that the Glen Canyon Reservoir and power development is the only one that can clearly stand on its own feet as a financially sound project unit.[53]

It might be expected that after a clear endorsement of Glen Canyon by the State engineer, the chairman of the Colorado River Board of California, and by Mr. Raymond Matthew, the chief engineer of the board, as an economically feasible and even desirable development, that Mr. Northcutt Ely would follow the official State position. Instead of doing so, he opposed the Glen Canyon development as unsound.[54]

Much criticism on the project is based on an allegation that the storage dams may be operated in such a manner as to be detrimental to the rights of California, particularly during the period when the reservoirs are being filled. The Department of the Interior has repeatedly emphasized that the filling of the reservoirs will be accomplished in a manner to minimize any adverse effect on Hoover Dam power. Commissioner of Reclamation Dexheimer testified that during many years they have had to release flood waters from Hoover Dam to make space. He continued:

That water is wasted. Every year we are wasting water into the gulf because we do not have adequate storage now to take care of it.

If we could have stored water a few years back from excess, it would have been available now and would certainly be beneficial not only in the upper basin but in the lower basin.[55]

Dead storage can be built up during the long construction period by impounding what would otherwise be run-off or waste waters from Hoover Dam. In that manner the heads for initial power generation would be accumulated over a long period of time without affecting the production of power at Hoover. The time required to fill the reservoirs would, of course, depend on the amount of run-off in the river. Under unfavorable conditions, filling could be achieved in 5 years, but it could be much longer in the event of drought. In short, the Department of the Interior has given every assurance that it will adapt initial filling to the amount of run-off and the downstream demands for water and firm electrical energy. By the way of further protection for the lower basin, section 15 of H. R. 3383 directs the Secretary of the Interior to operate the facilities authorized in the bill in compliance with the compacts and acts which comprise the so-called law of the river and permits any State of the Colorado River Basin, in the event the Secretary fails to so comply, to maintain an action in the Supreme Court of the United States and gives the consent to the joinder of the United States as a party in such suit.

One further consideration relative to the upper-basin storage is that the benefits will not accrue only to that basin. California and the other lower-basin States will likewise share in the benefit, since it will be assured of a regular supply in accordance with the terms of the compact. Thus, in years of low flow in the river caused by drought, water will be released from the reservoirs to satisfy California's rights.

GENERATION OF ELECTRIC POWER IN THE UPPER BASIN

The importance of the installed electrical energy generating capacity at the storage dams as a means of financing part of the cost of the irrigation works has already been discussed. There will be no problem whatsoever in marketing the energy to be generated by the Colorado River storage project in the power-hungry area it will serve. Ten private power companies have offered to purchase any available power above that required by project or other Government contracts.[56] Referring to the private power companies' proposals, our committee stated in its report:

The committee finds that this project is unique in that there is no public versus private power controversy involved. Representatives of the 10 private power companies operating in the area presented testimony before the committee indicating their desire to cooperate with the Federal Government in the transmission and marketing of electric power and energy from the Colorado River storage project. Their proposal provides essentially that the Secretary construct the backbone transmission lines connecting major powerplants of the project and that use be made of the existing systems of the companies and additions thereto to market the power.

* * * * *

The proposal by the power companies seemed entirely reasonable to the committee.

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

The Department of the Interior advised the committee that it was sympathetic to the private power companies' proposal and indicated that the suggestions would be given studied consideration if the project were authorized. Therefore, the committee expects the proposal by the private power companies for cooperation in the development to be carefully considered by the Department of the Interior and the electric power and energy of the project to be marketed, so far as possible, through the facilities of the electric utilities operating in the area, provided, of course, that the power-preference laws are complied with and project repayment and consumer power rates are not adversely affected.[57]

Not only the private power companies, but the REA cooperatives,[58] and the State of California are anxious to secure the power. The State engineer of California, Mr. Edmonston, and Mr. Matthew and Mr. Edmonston, the chief engineer and chairman, respectively, of the Colorado River Board of California stated as late as February 15, 1954, in their official report on the project as follows:

11. Glen Canyon power could be readily disposed of in the lower basin where there is a great need for additional power. The question of policy regarding its disposal merits the special consideration of the Executive and the Congress.[59]

California's official position has always been favorable to the development of the power potential of the upper basin. In its official comments on the Secretary's interim report on the Colorado River appears the following with respect to the development of electric power in the Colorado River Basin:

ELECTRIC POWER

Full development of the water resources of the Colorado River necessarily include the production and transmission of hydroelectric power made possible by the construction of storage works for the regulation and utilization of the waters of the Colorado River and its tributaries.

An initial construction program could and should include hydroelectric power developments when found needed and justifield. Such projects are nonconsumptive in effect.

* * * * *

RECOMMENDATIONS

A. That an immediate and intensive investigation and study be made and reported upon by the Bureau of Reclamation, in cooperation with interested agencies, concerning possible hydro-electric projects upstream from Lake Mead on the Colorado River with a view to authorization and construction at the earliest practicable date; provided, it be found that such projects are of nonconsumptive-use character, are feasible from engineering and economic standpoints, are consistent with the primary purpose of furnishing water supplies for domestic and irrigation uses in accordance with the Colorado River Compact, and will not be inconsistent with a comprehensive plan for progressive development of the Colorado River system.[60]

Disregarding this fair and reasonable recommendation of the State of California, California opposition has stood steadfast against the storage dams and appurtenant power facilities proposed for initial authorization in pending legislation to authorize the Colorado River storage project. As already indicated, if they succeed, they will foreclose upper basin development since the power dams are the cash register that make that development possible.

CONCLUSION

It would appear to be an inescapable conclusion from the evidence assembled from such official California sources as the California State engineer and the chairman and chief engineer of the Colorado River Board of California that authorization of the Colorado River storage project will not deprive California and the other lower basin States of the waters of the Colorado River Basin to which they are entitled. Not only have those officials approved the devlopment generally, but they have specifically endorsed the construction of storage reservoirs in the upper basin as a necessary protection for lower basin water supply. The major storage facility of the project, the Glen Canyon Reservoir, has been twice officially endosed by two successive California State engineers, Mr. Edward Hyatt and Mr. A. D. Edmonston, by the last two chairmen of the Colorado River Board, Mr. Evan T. Hewes and Mr. Fred W. Simpson, as well as by Mr. Raymond Matthew, chief engineer of the Colorado River Board of California. In view of the stand taken by these responsible State officials, I fail to see the basis for opposition on the part of California to the Colorado River storage project.

Our Mental-Health Problem—Mental Illness Can Be Cured

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1956

Mr. ROGERS of Texas. Mr. Speaker, I am including herewith the last in a series of articles on our mental-health problem. These articles were prepared for the Amarillo Globe-Times by two of the newspapers' top writers, Louise Evans and Mary Tom Rasco. While this series has been concerned with the problem as it affects Texas, what has been said in them can be applied to all the other States because the problem of proper care and treatment of the mentally ill is a nationwide problem. I hope the Members have had an opportunity to follow this series and that it may be the inspiration for added effort to do something for the mentally ill. Mental illness can be cured if we determine to tackle the problem with proper energy and resources:

THE MENTALLY ILL CAN BE CURED—WHAT TEXAS CAN DO

(By Louise Evans and Mary Tom Rasco)

There's a good job a-begging in the Texas State Hospital system.

Last spring the legislature approved a deputy administrator, which can be paid as high as $17,000.

The money was available on September 1, 1955. In this first month of 1956, the job has not been filled. Nor had any concrete efforts been made to canvass possibilities among highly skilled men.

A man qualified in hospital administration should have the job. If he were a psychiatrist-administrator, as is Dr. George W. Jackson who heads the Kansas institutions, it would be pure gravy since Dr. James A. Bethea, capable executive director of the Board of Texas State Hospitals and Special Schools, is near retirement age.

But remember—in the mental health field in the United States today, one begs, borrows, or steals personnel.

It takes more than money to buy them. You can't even train your own unless you have a drawing card—a training hospital * * * a chance for research * * * good working conditions * * * some vital, creative program in which the worker feels he has a part.

Texas can develop such attractions. But it will take some vision on the part of the board, of the legislators, and the general run of Texans.

* * * * *

BIG CITIES SKIPPED

There is something to be said for tossing the whole Texas Hospital and Special School plant into the gulf and beginning over. Take a look at the map (at right). Note location of the facilities. With the exception of the State capital and its nearby neighbor, San Antonio, not a big city is served by a State hospital. The gulf-coast area with such cities as Houston, Beaumont, Galveston, Port Arthur—the most heavily populated area in the State—does not contain a State mental hospital other than the small training facility (233 beds) administered by the University of Texas Medical Branch, at Galveston.

The urban centers produce the patients. In these urban areas of Texas, too, are concentrated the men and women who have training in medical, psychiatric, and the auxiliary services needed in a good treatment program.

Try to persuade an American housewife to carry on her 1955 duties in an 1855 kitchen—yet we are asking that new techniques in mental care be carried on in buildings as unsuited, some 100 years old.

But since the plant has an estimated worth of $150 million and since what is carried on inside the buildings is more important than even their location and structure, we can take a page from Kansas' book:

1. Reevaluate the patients; get the mentally retarded into training schools; the aged senile into nursing and boarding homes; the nonpsychotic alcoholics into clinics; the criminally insane into prisons; the children into special treatment centers. (There are more than 60 Texas children in our hospitals for the insane. They have no separate quarters * * * just more statistics, mixed in with hopeless adult cases.)

2. Place the emphasis on the care and treatment of the mental patients already in the hospitals with the hope of obtaining beds through dismissal of long-term patients.

3. Inaugurate a realistic program of charges so that individuals and relatives can participate in the cost of care.

4. Set up a training program to build a skilled staff.

5. With this staff, keep up with the current load. Don't let the mentally ill stack up on waiting lists or in hospitals without diagnosis and immediate treatment.

6. Start research programs, especially into the treatment of mentally disturbed children.

Whether this fact points the way or not, Kansas achieved part of its success because it reorganized the entire mental health program under a board of social welfare. It recognized that the social problems of neglected children, aged needing public assistance, broken homes, failures in community organization—the whole complex of factors—formed the swamp in which mental illness breeds.

Durwood Manford, of Smiley, former speaker of the house and now chairman of the Texas board, believes an equally integrated program can be worked out in Texas under the interagency agreements which the legislature has approved. Under these agreements, Texas agencies can perform the functions of another if necessary—as, for instance, the department of public welfare—social workers can assist the board in carrying out needed social work at the county level. But as a generality it's mighty hard to get several agency directors to see eye to eye on an integrated program. Some one individual is always resistant.

(The Texas Research League did not recommended such a complete reorganization in its 1955 report. Asked why, staff members explained that its study had been invited only by the Board of Texas State Hospitals and Special Schools. However, the league has been invited to make a similar study of the Texas Department of Public Welfare within the next 2 years. By that time, it may become apparent more integration is needed for a strong Texas program for mental health.)

This is a problem of administration, however. Hospital population undoubtedly will drop through application of good administration. But the meat of the problem still is: How are we going to treat and rehabilitate our mentally ill?

The answer lies in staff members—dedicated people—some of them highly skilled, and some of them merely sympathetic and knowledge of the needs of patients under their care.

If one of the Texas hospitals were made into a teaching and training institution such as Topeka State Hospital has become, slowly the prestige of its accomplishments would attract trainees.

Or let 1 of the 3 fine medical schools in Texas—the university's medical school at Galveston or its southwestern branch at Dallas or Baylor in Houston—adopt a hospital as a training unit. If the Topeka hospital can be used for training of staffs for the other 2 Kansas hospitals, there is no reason why Terrell, Austin, and Rusk cannot be used as training grounds for the other 3 Texas hospitals—and for the skilled help needed in training schools for the mentally retarded, in nursing homes for the aged senile, and even in industrial schools for the juvenile delinquents.

RESEARCH VITAL

A research program into mental illness is an economic necessity. Suicides, a common end to mental illness, account for more deaths in the United States than the five most common communicable diseases. If 1,000 Texan children are allowed to reach our custodial type of mental institution and live only to the age of 60, it will cost Texas $36 million to support them, in cost of operations alone. And remember, it is in the minds of the children where the factors for mental disease can be dissected most successfully.

A State resident center for disturbed children, as recommended by the Texas Research League, therefore, would serve as a research field which may someday give us the answer to this problem of overloaded mental hospitals.

COSTS GOING UP

Last August there were 16,445 persons in Texas State hospitals. (Don't think the State is carrying the whole load of mental care. There are about 4,000 private hospital beds in Texas that bear mentally ill patients.) In 1975 there will be 28,000 in State institutions if a mental-care program is not started.

Given no further inflated costs, disregarding the multi-million-dollar construction program to house that number, consider that it will cost Texas $24,600 more each day to support the increased number. It already costs us $20 million annually for 16,445.

Don't think this increase won't happen. In February 1953, when the Texas Research League started its survey of Texas institutions, the patient load stood at 24,000 (of which two-thirds were in the mental hospitals), and there was a waiting list of 200. By the time the study was completed in late November 1954, the patient load had increased by 1,200 and the waiting list stood at 800.

VOTERS AT FAULT

It would be satisfying to our separate consciences if the blame for the piecemeal program since 1949 could be pushed off on the Board of Texas Hospitals and Special Schools. But Texans went to the polls in 1949 and voted down a constitutional amendment which was the cornerstone to a modern program for caring for the mentally ill, the aged, and the mentally retarded.

Do you remember how many Texans bothered to vote on that important constitutional amendment which would free the "jury trial" commitments? Exactly 282,982. Such a minority report from the voters ought to have broken the spirit of the board and legislators.

The defeating vote was narrow—10,176. But it was a mandate from the people. Until that constitutional requirement comes off the books, no modern program for treatment of the mentally ill can be built.

INSUFFICIENT FUNDS

In 1949 the board tried to meet an emergency situation of overcrowding in the hospitals. It made a quick survey and recommended a $41 million building program to put beds under all patients and literally to build roofs over their heads.

The building program, unfortunately, did not allow for future growth. (In 1949 Kansas decided to cut down on future growth by treating the ill then in institutions and staffing up to treat new admissions. It chose to build its mental-health program with brains, not bricks.)

Since the legislature, called in special session in 1950, voted only $35 million for the program, it probably wouldn't have done the board much good to plan for the future. (However, legislators presented with realistic estimates of growth, and a blueprinted program for future creative care of the mentally ill, might have listened.)

The 51st legislature voted a new cigarette tax of 1 cent and allocated $5 million from the fund for each of 7 years to accumulate the $35 million for building. The 54th legislature, sitting last spring, continued the cigarette tax but did not continue the $5 million allotment. After 1957 the board will have to ask its building requirements from each upcoming legislature. Presently it is spending $1½ million of each $5 million annual allotment for repair and renovation of existing buildings.

WORSE TO COME?

Hindsight is always brilliant thinking. Now we can ask: Why didn't the board, the legislature, and Texas recognize the shortsightedness of such a policy? Why didn't someone, somewhere, pick up the 14-point program and put it into effect? Wise personnel policies, intensive in-training programs, emphasis on medical and psychiatric

care of the patients and a realistic policy of admissions could have been bought with some of a $35 million allotment.

Instead, what happened? The board floundered in administrative detail. Five directors came and went in 5 years. In 15 hospitals, 43 superintendents have served in the past 5 years.

Instead of starting a mental health facility, in either Dallas or Houston, where both concentration of population and therefore mentally ill folk and where medical talent and auxiliary services of psychologists, therapists, and nurses are found, the board approved additions to facilities which for many reasons should either have been closed or changed to other types of institutions.

The Texas Research League by 1954 found that some of the buildings erected since 1950 are flawed in construction and ill-fitted for the function they should perform.

But the most uncomfortable fact that emerges is that at the end of the 7-year building program, the degree of overcrowding in most facilities will be greater than it was in 1949.

LOOK AT NEW YORK

Texans cannot build themselves out of this predicament of overcrowded institutions for the mentally ill, mentally retarded and aged. We have to think our way out.

The Board of Texas State Hospitals and Special Schools can spearhead a modern program of mental health. But don't blame the board if Texans, speaking through their legislature, refuse to adopt such a program.

We can go to the polls next fall and join the rest of the western world in discarding a law for the insane we inherited from the Middle Ages.

We can insist upon a teaching and training hospital as a pilot program.

We can demand that the board put skilled hospital administrators and top medical men in charge of the mental health institutions.

We can demand that it formulate policies that will make dedicated folk of the personnel—right down to the ward aides and shoe-repair men—needed to run the complex system.

We can insist upon research into the cause and cure of mental illness.

Suppose we don't. Suppose we elect to reject such a program.

We have been talking a lot about Kansas. Let's have a quick look at New York, one of our older States. It has billions of dollars invested in schools, in a gigantic highway system, mammoth bridges, public works, and State services. And it has to have a State income tax to support this structure.

Yet the figures show that one-third of its entire State revenues goes to the care of the mentally ill. Having just completed a half-billion dollar building program, it has had to vote another $375 million bond issue for buildings. New York didn't start soon enough.

Texas now has a young population. It doesn't have the burden of an aging population that New York has, but it will. Also it will be facing the attritions of an urbanized State. In the last census, 62 percent of Texans lived in urban centers. The trend has been accelerated since.

When we reach New York's stage of urbanization, when our percentage of older people starts rising, we will have the same costs—unless we plan now.

Texas can afford to adopt a modern program.

In fact, we can't afford not to. The stakes are too high.

Public and private facilities for care of mental patients in Texas (excluding State hospitals)

Conservation of Marine Resources

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. TOLLEFSON. Mr. Speaker, at the recently concluded meetings of the Inter-American Council of Jurists in Mexico there occurred an action which has been interpreted as a severe setback for United States diplomacy. There was passed a resolution dealing with the breadth of the territorial sea and the principle of freedom of the seas. If carried to its logical conclusion the resolution would split the oceans surrounding the Americas into segments of soverign territory stretching to sea as far as the coastal country thought was necessary to protect its interests. The implications of such a radical change in practice upon the defense, merchant marine, and air commerce of the hemisphere are so far reaching that they defy immediate assessment.

Hardly less shocking to United States diplomacy than the substance of the resolution was the way in which its passage was accomplished. The Department of State has worked with some degree of urgency and energy in recent months to explain and rationalize the position of the United States on the doctrine of the freedom of the seas to our southern neighbors 1 by 1 and in groups. But in the last analysis nations who have already laid claims to 200 miles and more or high seas prepared a resolution without asking the United States to participate in its drafting, and ramrodded it through the meeting without analysis, discussion, or study. The vote was 15 to 1 against the United States. Four other countries tempered the defeat lightly by abstaining from voting.

This is not the first time that this subject has been brought to the attention of the Congress nor do I suppose it will be the last. The topic has been fermenting in Latin America for 10 years. The last time it bubbled over was at the 10th Inter-American Conference at Caracas in the spring of 1954. In reaction to that the Congress enacted Public Law 680, 84th Congress, 2d session, which among other things provided for the United States Treasury standing good for any fine when a vessel of the United States was seized pursuant to rights and claims not recognized by the United States.

This is a complicated subject and there are undoubtedly some aspects of it of which I have no clear understanding. I say this advisedly, because I am certain that no rational person knowing what little I do about the subject would have voted for such a resolution, and I am sure

that the delegates there assembled were rational persons and represented rational governments. A large component of the problem, however, is concerned with the conservtion of fishery resources lying in the high seas and this is a subject about which I do have some knowledge and understanding.

The development of fishery conservation theory and the application of it to the practical problems of conserving marine resources has been advanced substantially in my State during the past 30 years. Such eminent scientists in the field as M. F. Thompson, F. Harvard Bell, H. A. Dunlop, Richard VanCleve, W. C. Herrington, Lloyd A. Royal, J. L. Kask, and M. B. Schaefer have come from the school of fisheries of our University of Washington to contribute mightily to theory and practice in the field. Such eminent public-spirited laymen as Edward W. Allen, the late Miller Freeman, Harold Lokkon, and others are known nationally and internationally, with their Canadian counterparts across the border, for the skill with which they have translated these scientific activities into practical diplomatic, economic, social, and political accomplishments.

I hope that it is with pardonable pride that I relate the achievements which the United States has made in the conservation of fishery conservation in the past 30 years, which are unequaled by any other country, and the part that citizens of my State have played in that achievement. I do this not for the glorification of our State or Nation but to illustrate to our neighbors to the south that the objectives they seek in this complex matter can be accomplished quite adequately, practically, economically, and quickly by peaceful international collaboration and cooperation, which strongly promotes international good will among the participants instead of generating chaos in international relations as would the resolution adopted at Mexico City if it were put into practice.

During the First World War there was much the same shortage of protein food in the world as we remember from so short a time ago in the Second World War. Fishermen and farmers were exhorted to produce more and more food. Under this impetus the halibut fishermen of the State of Washington, British Columbia, and Alaska expanded their fishing effort as rapidly as possible until it spread all over the Northeast Pacific and out along the Alaskan Peninsula. During the entirety of the 1920's, the intensity of the fishery continually increased, but just as steadily the total catch of halibut by Canada and the United States declined.

By 1924, the direction of decline was so apparent to the industry leaders on both sides of the border that they knew something had to be done about it, but they knew not what. Now, of course, we know that the resource had been overfished during the intensive harvesting of World War I, but a short 30 years ago this thought was not widely harbored. Most people still considered that the fish of the sea, like the sands of the beach, and the stars in the skies, were unlimited in number and inexhaustible in supply. There was no science of applied fishery biology as such, and oceanography was a fancy name some Navy people used to refer to the study of wind, wave, and weather at sea.

However, something was required to be done or the whole industry would go broke. The leaders of the industry finally prevailed upon their governments to negotiate a treaty under which a joint commission could be appointed to study the matter. The treaty was signed and put into effect in 1924.

The newly appointed Commissioners had no better knowledge about what had happened to the halibut than did the fishermen. To get started they hired a bright young man who did seem to have some ideas on the subject. He is now the world-renowned Dr. W. F. Thompson, director of applied fishery research, University of Washington. He hired a group of young graduate students, none of whom had had fishery training, and put them to sea with the fishermen to study, observe, and report upon the ocean, the fish, the fishery, the fishermen, and the observable relations between them. This was the International Fishery Commission, and it was the first venture of the sort that nations had embarked upon.

Results did not come quickly or easily, but after 6 years of the most rigid examinations of the facts available to them, Dr. Thompson and his young men had put together a theory to account for the diminished catches of halibut despite the intensified fishery effort. It ran, in essence, like this:

Fish are continually entering the fishery from the newly born crop that comes along each year, and the weight of the fish in the stock was increasing as the individual fish in it grew. On the other hand fish were leaving the stock steadily by death. In a state of nature these forces were in equilibrium and the ocean was supporting the maximum population of halibut it was capable of doing.

When a fishery was started on such a virgin stock of fish three things happened: First, the total abundance of fish in the stock began to decrease; second, the average size of fish in the stock began to decrease; and, third, the productivity of the stock in terms of pounds of fish it would yield to the fishery began to increase. All three of these things continued to happen until a maximum point of productivity was reached. This corresponded precisely with a certain, determinable level of fishing effort. If the fishery was increased in intensity beyond that level the catches would actually decrease, and the more you fished beyond that point the less you caught.

Essentially there was a point of fishing effort at which the stock of fish would produce the maximum sustainable yield. If you held the fishery at that level the production could be had year after year indefinitely. If you let the fishery go beyond that point you were wasteful of the resource, because less fishing would catch more fish. On the other hand it was just as true that if you did not fish that hard you were just as wasteful of the resource, because part of it was being lost by natural deaths to no man's use.

If all of this theory was correct then all that had to be done to restore productivity and prosperity in the halibut fishery was to cut back the fishing effort to below that point which in any season it would produce a little less halibut from the stock—when taken together with natural deaths—than natural growth had added to it.

While all of this sounds logical, coherent, and sensible in 1956 it was nothing but radical theory, unsubstantiated by experience, in 1930. The International Fisheries Commission had no authority to establish the regulations anyway. The Canadian Government could not regulate American boats. The State of Washington could not regulate Canadian boats. Catches were steadily falling off. Fishermen had to fish steadily the year around throughout the bitter winter to scratch together a meager living. The whole industry was going broke and the outlook was bleak.

So after a year or so of wrestling with the problem the industry on both sides of the border decided to take the gamble. Things could not be much worse anyway. So, accordingly, their leaders went once more to Washington, D. C., and to Ottawa and asked their Governments to renegotiate the treaty establishing the International Fisheries Commission so as to give the Commission regulatory authority over the halibut fishermen of both countries. This was done, and in 1933 the regulation of the fishery was begun on the basis of the scientific information gathered by Dr. Thompson and his young men.

The thing was a success almost from the start. Within 2 years fish were enough more plentiful on the banks that even the fishermen could tell the difference. Fishing was easier, catches were had more quickly; it was soon possible even to increase the permissible quota of catch for the season and still keep the stock increasing. In 1937 the treaty was renegotiated again to give the Commission more regulatory authority over the fishery. This still worked good and catches were increased steadily. This has kept right on year after year until last year the catch was more than twice as great as it had been in 1933, it was greater than it had been at the height of the unrestricted fishery of World War I, and the catch was taken in 2 months of fishing instead of 12 months. The stock was producing pretty close to the maximum quantity of halibut each year that the North Pacific was capable of doing. Friction between the Governments and the fishermen of the country was almost nonexistent. The industry in both countries was stable and profitable.

While this great experiment was going on the salmon fishermen of Puget Sound and nearby British Columbia, who depend on the production of salmon from the Fraser River, began to suffer the same troubles that the halibut fishermen had gone through during the twenties. The harder they fished the less they caught. The example of what was going on in halibut was under their eyes. They asked the two Government to do the same for them that they were doing for

the halibut fishermen. As a result a treaty establishing the International Salmon Fisheries Commission was signed by Canada and the United States in 1937. After a period of several years of scientific research, as provided for in that treaty, that Commission began the regulation of the fieshemen of both countries. The results over the past 10 years have been, if anything, more spectacularly successful than was the case with halibut.

World War II brought the same aftermath of hunger as did World War I and similar increase sin fishing intensity. But now theory was available, experience and practice had been gained with such problems, and trained scientists—mostly from Dr. Thompson's brood—were available. The tuna fishermen of California had watched the halibut and salmon fisheries go through periods of great growth, overfishing, short resulting catch, scientific research, economic distress while the resources war rebuilding, and then again stable catches and prosperity. They determined to avoid this cycle by getting their research done before overfishing came, to get the facts in hand with which to build adequate regulations against the date they were needed. So they came to Washington and asked their Government to do for them what it had done for the salmon and halibut men. From this grew the highly successful Inter-American Tropical Tuna Commission established under treaty among the United States, Costa Rica, and Panama.

Next the New England fishermen came asking the same thing. Haddock and cod were getting hard to catch and small in size. This was a much more complicated problem than had been tackled yet. Several different kinds of fisheries were being fished in the area by several types of gear. The cizitens of 10 countries—Canada, Iceland, Norway, England, Denmark, Italy, France, Spain, Portgual, and the United States—fished together in the area. This was just about as complicated a set of economic, social, legal, political, and diplomatic problems as can be conceived in a fishery problem. Yet the 10 nations—working on the example of the now old halibut commission—did sign a conservation treaty, establish the International Commission for the Northwest Atlantic Fisheries, conduct their researches jointly under it, and finally began to jointly regulate their fishermen. My friends from New England tell me that progress under this multilateral commission has been most satisfactory. International friction over the fisheries has quite died away, and the haddock and cod are getting larger and easier to catch again.

Now a similar treaty has been signed between the United States and Canada to cover the fisheries of the Great Lakes. Another signed a few years ago between Canada and the United States and Japan to cover all their joint fisheries in the North Pacific has materially reduced friction over fisheries in the area and Russia has even asked for permission to attend the next Commission meeting. For some years 19 nations have been engaged under similar treaty to study and regulate the whale fishery of the whole world under the International Whaling Commission. Although the United States has not had a whale fishery for a generation it took the initiative and leadership in establishing the International Whaling Commission and nas actively participated in its work and deliberations. Negotiations are now underway among Japan, Russia, Canada, and the United States to draft a conservation treaty covering the fur seals of the North Pacific. A similar treaty has been proposed by the United States to Mexico to cover the shrimp fisheries of the Gulf of Mexico.

Mr. Speaker, this mixture of industry, scientists, and Government officials in international fisheries conservation commissions works. In all cases where it has been tried, and these are now too many to be regarded as accidental, the resource has been conserved, the industry has been made economically sound, and international friction has diminished or quite disappeared.

What was novel 30 years ago when the citizens of my State first got into such problems has now been recognized as sound practice by the majority of nations. In April of 1955 the fishery experts of 50 countries gathered together in Rome under the auspices of the United Nations in the "International Technical Conference on the Conservation of the Living Resources of the Sea." After 3 weeks of meeting, during which some of the sessions were quite stormy, the conference adopted a report which contained these general conclusions:

The conference notes with satisfaction conservation measures already carried out in certain regions and for certain species at the national and international level. International cooperation in research (including statistical investigation) and regulation in the conservation of living resources of the high seas is essential. The conference considers that wherever necessary further conventions for these purposes should be negotiated.

The present system of international fishery regulation (conservation measures) is generally based on the geographical and biological distribution of the marine populations with which individual agreements are concerned. From the scientific and technical point of view, this seems, in general, to be the best way to handle those problems. This system is based upon conventions signed by the nations concerned.

From the desire expressed during this conference by all participating nations to cooperate in research and from the guidance given by existing conventions, it appears that there are good prospects of establishing further conservation measures where and when necessary.

Thus, Mr. Speaker, there is a system of international cooperation adequate to provide for the full conservation of fish resources lying in the high seas. It has been tried successfully time after time on a great variety of such problems to the satisfaction of the nations involved and their fishermen. It has the stamp of approval of most of the mafitime nations. It is to be hoped that our Latin American neighbors, who are not fishing people, and who have no more trained fisheries scientists than we had 30 years ago, will give this method thorough study and evaluation. It is certain that the United States would give the utmost cooperation in following such a method in their area. It is equally certain that the destruction of the doctrines of the freedom of the seas which they propose to accomplish this end will not prevail.

Ike's Veto

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. ROGERS of Texas. Mr. Speaker, to those of us who are concerned with the preservation of States rights, the veto of the gas bill was most disturbing. Typical of the reception of the veto in my State of Texas is the following editorial which appeared in the Pampa Daily News, at Pampa, Tex.:

IKE'S VETO

That self-professed antagonist of creeping socialism, President Dwight D. Eisenhower, seems to be laboring under the delusion that the way to resist said creeping socialism is to run headlong into its arms; at least that is the only conclusion a rational individual can come to with the advent of his veto of the bill which would have freed natural-gas producers from Federal bureaucratic control.

One advantageous factor which should result from Ike's ignorance of the basic principles involved or his hypocrisy (take your pick) will be the awakening which should come to many of his bewitched worshipers who looked upon him as the knight-errant of free enterprise and, sad as it is to relate, Texas has had its share in this category. Indeed, Ike has now earned his place as the No. 3 man in the holy Socialist triumvirate of Franklin Roosevelt and Harry Truman.

The obvious has been so glaring so long that we wonder why many of the Ike cult needed this veto action to awaken them. After opposing the Bricker amendment, appointing a confirmed Socialist as Chief Justice of the Supreme Court and expanding the grandiose fraud of "social security," to name a few examples, the opening of the wedge of a system of Federal price controls shouldn't be too much of a shocker.

In his veto statement, Ike implied resentment because a campaign contribution was offered Senator CASE of South Dakota on the alleged basis that he favored passage of the bill. To an individual grounded in basics, the measure would have been considered in principle and that principle would be to the end of protecting the source of all freedom, the right of ownership in property.

We trust the President is pleased with the results of his action. The leftwingers are howling approval from coast to coast and the most obtuse Marxian doctrinaires can smile with glee at the opportunities now before them for, as Ike knew, there is virtually no chance the bill can be passed over his veto. In light of this, Ike's statement about being "in accord with its basic objectives" proves to be damning by faint praise.

Then, too, there is that patently synthetic concern about the gas lobby when the goons of organized labor and the NEA operate a couple of the most blatant pressure groups to daily kick, push, and bludgeon our national legislators one could imagine. Since these two outfits have been doing it for years, we assume it has become a royal prerogative

in their case. Such, however, is the degradation of democracy.

We surmise that Ike and his retinue have already calculated how many votes will be forthcoming from the eastern metropolitan minority groups because of his action, but then you don't have to be a wizard to realize they have more votes than the gas producers. And the vote is the politician's sole judge of virtue.

The late William Graham Sumner, a political science professor at Yale, a renowned sociologist, and ordained clergyman, made the observation in 1910 that he didn't think the American Republic would live much after 1950 because of the grasping for power on the part of Central Government. Sumner, of course, didn't mean that the Republic would not exist in form, but rather that it would be so enervated by Government intervention that the chance for its continued life as a defender of freedom would be nil. Sad to relate, Sumner's pessimism was partially confirmed Friday with the Eisenhower veto.

The price for ignoring principle is high and posterity will be able to count January 17, 1956, as a stellar day in the forging of their shackles of servitude.

What Now?

EXTENSION OF REMARKS
OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1956

Mr. BYRD. Mr. Speaker, under previous leave to extend my remarks, I wish to call the attention of my colleagues to an article which recently appeared in the International Peasant Union. The article was written by Dr. Milan Gavrilovic, and it is entitled "What Now?" Dr. Gavrilovic ably presents his point that America must spring awake before it is too late. The long arm of Moscow is already upon the horizon, and the clenched fist will surely descend. Will we, like the five foolish virgins, be found sleeping at the midnight hour with no oil in our lamps? Or will we snap to our senses before the blow has fallen? Dr. Gavrilovic's words make one wonder.

The article follows:

The second Geneva Conference, held last November, was convened to follow through on proposals made at the first conference in July. Objectives included the unification of Germany through free elections and the establishment of a system of collective European security to guarantee the independence and frontiers of all present European states, including those dominated by the Communists and the Soviet Union. Another objective was to limit armament—especially to forbid atomic arms. To unify Germany meant to release Eastern Germany from Communist enslavement, to unite her with West Germany and to bring the united Germany into NATO. To limit armament meant to recognize once more, this time collectively by the Western Big Three, the Communist status quo in Europe and to forbid the powerful atomic weapons which the United States still possesses more strongly than any other country. The West was most concerned with Germany's unification; the Soviets with the armament question. A Western proposal read: "France, the United Kingdom and the United States of America are not prepared to enter into a system of European security which, as in the Soviet proposal put forward at Geneva, does not end the division of Germany." The Soviet proposal asked for "collective security in Europe instead of the formation of groupings of some European states directed against other European states" and for "principles of respect for the independence of states and non-interference in their internal affairs." Into that European system both Germanies would enter as equal, sovereign states, recognized by all. This system, according to the Soviet proposal, "would facilitate the earliest possible settlement of the German problem through the unification of Germany on a peaceful and democratic basis." Naturally, there was no hint of free elections, they being "obsolete," and if not a bourgeois prejudice, definitely a bourgeois fraud. But, of course, the Soviets mentioned reduction of armaments, interdiction of atomic weapons and withdrawal of foreign armies from the European countries. And finally, as if incidentally, the Soviets said in Article 14 that "the Warsaw Treaty of May 14, 1955, the Paris agreements of October 23, 1954, and the North Atlantic Treaty of April 4, 1949 shall become ineffective."

This Soviet proposal meant for the Soviets to gain everything, for the Allies to lose everything. The Allies would not only have to recognize the Communist status quo in Europe, collectively this time, not only to guarantee the existence of all these Communist states, but also to recognize the new Communist member, East Germany. The Allies would have to accept the unification of Germany without free elections, leaving unification to be achieved by the only manner according to the well-established pattern; coalition with the Communists first, then the ousting of non-Communists from the government. The Allies would have to renounce all anti-Communist activities such as the Voice of America and Radio Free Europe, as required by the principle of noninterference of foreigners in the internal affairs of other countries, but the Soviet Union could continue its propaganda in other countries, for this is not accomplished by the Soviet citizens but by citizens under Communist influence in those countries who are free to make any propaganda whatsoever on the grounds that it is constitutional freedom of opinion. Allied armies, especially the American, would have to withdraw from territories of the European states because they would be "foreign," but all Communist armies would remain in all those Communist countries as simple parts of the Soviet Army, because they would not be "foreign" but domestic. NATO would dissolve and nothing would be left of it, because after the dissolution of the Warsaw Treaty there would remain the individual treaties concluded between all these Communist countries and the Soviet Union at the end of the war, and there would remain the Communist solidarity which units all of them unto life and death without any treaty obligation. Lastly, the Allies would respect the obligation of interdiction of atomic weapons once the proposal was accepted, while the Soviet Union would do so only so far as she considered it useful to herself, just as the Soviet Union has done with all treaties concluded with her. The Soviets consider the free West as an enemy, and their word given to an enemy is not binding.

Obviously the Soviets could not achieve their plan. But they have achieved something else. Since the Geneva Conferences, the Soviets have had the feeling of full certitude that the free peoples and their governments sincerely do not want war. Sheltered so safely from war and feeling secure in the term "Geneva spirit," the Soviets promptly transformed Geneva into a great platform for their propaganda, and the "Geneva spirit" term into a shield against any attack against them. Even following the first Geneva Conference in July, Khrushchev's true thinking showed itself to those in the West who began to believe the Soviets were heeding this spirit by a certain ideological slackening, and a certain abandonment of Marxism. "That will happen," Khrushchev said, "when the shrimp starts to whistle, the fish to speak." Khrushchev spoke the simple truth: Soviets stand and fall with Marxism. On the eve of the anniversary of the Soviet Revolution, at one of Moscow's most solemn meetings, and just before Molotov left for Geneva after the second conference's recess, Lazar Kaganovic spoke to the peoples of the free world over the heads of their governments. He said: "We can say today that the forces of peace have increased and that the force of the people is a decisive force. And the people, including those of the imperialistic countries, do not wish to perish or suffer in the interest of militarism." If free people do not wish to perish or suffer, he indicated they have to exercise pressure on their governments to accept Soviet demands, and if a government refuses, they have to elect another. They can do it for they are free to do it. In this respect they will have all the help of the Soviet Union. That promise is absolute. Kaganovic said: "No one will ever be able to break the close bonds linking the Soviet people with the broad people's masses, with the working class of all countries of the world." To kill the morale of the enemies of communism and to raise the morale of its adherents represents the thinking of Kaganovic, who boasted of the increasing Soviet power, and concluded: "If the 19th century were a century of capitalism, the 20th century is a century of the triumph of socialism and communism." Translated into clear language, that means: "If the 19th century were a century of freedom, the 20th century is a century of triumph of the dictatorship of the proletariat, enemy of any freedom." Translated into practical language, it reads: "Who has ears to hear, may hear. Let him hurry up to take a place on our bandwagon for otherwise he might fatally be late."

Kaganovich's speech showed clearly the briefing Mototov received before he left Moscow for the second time in November, not even considering the praise bestowed on him by Kaganovich. Molotov strictly followed these instructions. The new Soviet offensive hinted at by Khrushchev when he said Marxism would be abandoned "when shrimps start to whistle," and which was developed strongly by Kaganovich in Moscow, was continued by Molotov in Geneva. In refusing the demand for free elections in East Germany, he said straightforwardly: "Much has been said here with regard to the election system of the Western states, in regard to the fight among the parties for parliamentary seats. But in the elections of which Messrs. Dulles, Pinay and Macmillan have told us, the question after all is: Whether the government will be replaced or not. * * * The question of all-German elections is not merely a question of a change of government. * * * Naturally, there can be no consent to taking back from the working masses of the German Democratic Republic the plants and factories, land and natural resources." And quite in the spirit of Kaganovich's speech 2 days earlier in Moscow, he added: "The German Democratic Republic, being a state of German workers and peasants, has a great future, since it follows the main road of the development of the whole of humanity and has strong and true friends." He could not have stressed more clearly the solemn speech of Kaganovich about the world aims and world politics of the Soviet Union.

The representatives of the free West could not accept this purely communistic thesis. And in refusing it they have emphasized the unbridgeable difference between the two op-

posite ideologies. At the concluding meeting on November 17, Dulles said: "The Soviet refusal even to contemplate free elections in East Germany has a significance which goes far beyond the confines of Germany. It highlights, as no words could, the situation throughout Eastern Europe. If the so-called German Democratic Republic cannot stand the test of the people's choice, no more can the regimes imposed on the other peoples of Eastern Europe. This topic was not on our agenda because the Soviet Government had refused to accept it there. * * * Conditions in Eastern Europe may be such that the Soviet Union feels that it cannot now agree to free elections in any area it controls, because that would have a contagious effect." And Dulles once more repeated the beliefs of democracies. "The free democracies believe that human beings were given minds with which to think and consciences with which to judge right and wrong, and that human dignity requires freedom of thought and freedom of conscience. We also believe that the peoples of the world are essentially a single family, the members of which are naturally sympathetic to each other." These words could not fall on fertile ground. Mutual love has its place in religion and in the ideology of freedom, but it cannot exist in an ideology that rejects the religion and is based on a doctrine of hatred. Macmillan underlined the difference in these words: "The real problem is our radically different approach to German reunification. We believe that individuals and nations should be free, free to choose their own form of government and free to choose their own future. We also believe they should be free to choose their own way of living. The Soviet Government, however, continues to believe in its rights, nay its duty, to impose when it can, political and economic system on other nations and to withhold from them the right to choose their own future. Once more it is clear that we are back in that strange nightmare where men use the same words to mean different things—peace-loving, democratic freedom, all these splendid words, which we have inherited through the long history of civilized Europe, have clear and inspiring meanings to us with deep undertones. They appear to have a wholly different significance to the Soviet Government.

Not only different but quite the opposite. It is important that the basic differences have been stressed by Dulles and Macmillan. Their declarations, let us hope, will convince even the greatest unbelieving Thomas and the naive victims of the Communist propaganda, that it is no fault of their governments if there is no true peace; these people would certainly have made their own statesmen responsible if they had refused to go to Geneva once the proposal had been made. These declarations have done something more. They have stopped the spiritual demobilization of the West, not only stopped it but started new spiritual mobilization before rising danger. The declarations have also stopped the dangerous spiritual demobilization of the enslaved peoples who, rightly or wrongly, have begun to consider the pourparlers in Geneva as bargaining of the great at the expense of the small. But the declaration did not dispel the clear conviction of the Soviets that the West does not want to go to war in any case except if it is itself attacked by the Soviets. For the Soviets the great shelter from the war remained. Shielded behind it, the new offensive they started in Moscow with the speech of Kaganovich, continued in Geneva with the declarations of Molotov; and without even waiting for the outcome of Geneva, they went on with it throughout the vast India with the numerous speeches of Khrushchev and Bulganin. Their Communist hatred of the West grafted very well on the hatred of the natives against their former colonial masters. The success was tremendous. These two most important Soviet leaders began to behave there as if large India were their home, so that in the end one could neither know who was there at home and who was not, who was the guest and who the host—Khrushchev and Bulganin or Nehru—nor who was introducing whom to the masses of India. Finally, Khrushchev said that they were the guests, but now no longer the guests of Nehru and his government, but the guests of Indian peasants. Said Khrushchev: "Now our peasants have in their own hands the political power to develop themselves spiritually, mentally, and physically. Our peasants and farmers have chosen the path of collectivized agriculture and this is the way they enrich themselves spiritually and culturally. So allow me on behalf of the collective farmers of the Soviet Union to wish you prosperity materially as well as spiritually." He was "more than sure that you will find your own road to this end if you will look for this road hard enough, just as your government is looking for it." In point of fact, the peasants in Russia have no political power whatsoever—like no one else has, except the Communist Party. When the day comes that they gain that power there will be no Khrushchev to speak on their behalf. The peasants in Russia did not choose the road of collectivization, but have fallen by the millions in the bitter fight against it, for their own land and their own freedom. Nor were the peasants in the Soviet Union enriching themselves spiritually, mentally, and physically, and as for enriching themselves materially, not even Khrushchev had the courage to say that. But who of those 50,000 peasants who listened to him at one meeting knew the sufferings of the Russian peasants? And when he recommended to them the road of collectivization which brought such happiness to the Russian peasants, there was no doubt that many among his peasant listeners "will look for this road hard enough." And the Communist Party of India will surely know how to help them.

At the departure of Bulganin and Khrushchev at the aerodrome, Nehru spoke to the mass, in front of the loudspeaker: "Our friendship with the Soviet Union is not directed against anybody. Our getting closer to the Soviet Union does not mean that we are drawing away from others." The fakirs of India are famous for their incredible miracles and tricks. But the trick of getting closer to the Soviet Union today without drawing away from the West, that is a miracle that only the greatest fakir of India could accomplish. We dont' believe in that miracle. And we do not believe at all that Nehru is the greatest fakir of India. Between him and even the smallest true fakir exists a big difference. Ordinary fakirs try to make their spectators believe in their optical illusion and not themselves; Nehru is trying to make himself believe without making anyone believe in the West. In bidding the Soviet leaders farewell Nehru declared with a note of emotion in his voice: "An entire generation will remember your visit. Please come back again. We will expectantly await you." This good man was not aware that they did come to stay, that they are already there, in his own country, within his own people, and that there was no need to specially ask them to come again.

On their return to Moscow on December 21 both Khrushchev and Bulganin told a crowd of 20,000 at Moscow Central Airport that they would continue their war on Western colonial policies. Khrushchev asserted that Western colonialism was disintegrating everywhere. He branded colonialism as a "disgrace to modern man." And he promised his listeners and Asia and Africa; "We shall keep repeating this point as long as colonialism exists." No better wish for the New Year and no one closer to the heart of Asia and Africa could he hand out. Yes, we know, there is no worse colonialism today than the Soviet and Communist colonialism. It is not only that the Soviets reduced so many modern European countries to the status of their colonies, but the Communist regimes everywhere reduced their own peoples to a status very, very far below that produced by any colonialism that ever existed or that could possibly be imagined. But in Asia and Africa, who cares what is happening to European peoples? Do even the free European people care?

Bulganin and Khrushchev returned to Moscow with 3 agreements in their pockets, concluded with 3 Asian countries—India, Burma, and Afghanistan. These agreements were "welcomed by the peoples of South Asia." Said Bulganin: "However, not everyone likes it. Our journey and statements, particularly the statements of Comrade Khrushchev, not only aroused the stormy approval of our friends, but also caused stormy indignation of the reactionary press and certain respectable Western statesmen, particularly in Britain." It does not matter to them at all if Western powers do not like their friendship with the Asiatic peoples. "But we," said Bulganin, "we like this friendship very much and it suits us very well." Of course, it suits them very well. In the opinion of both men, "the Soviet Union could now count on the support of India, Burma, and Afganistan in international affairs."

They are right. But this journey was not a mere diplomatic success. Before they left India, Khrushchev and Bulganin gave a tea party for about a thousand of their Indian friends. There Nehru declared: "If any lack of understanding or misunderstanding existed between our people and the people of the Soviet Union, it has faded away because of my visit to the Soviet Union and much more by your visit to this country." Obviously. And they will end in full agreement as soon as that "road of collectivization" is found, the road Nehru is seeking with the candle in his hand. The day India finds that road and begins to tread it, all misunderstanding will indeed disappear, and with it Nehru himself. But something has already disappeared. The Asiatic continent has disappeared for the free peoples of Europe and America. At the confines of Asia and Africa, the Arab world has disappeared, and the entire Arab and the entire Negro world is disappearing on the African continent. The American flag has been torn down in Jordan. In fact all the flags of free peoples have been torn down with it. The arm of Moscow is long.

And what now?

There facing each other, stand two, not only opposite, but also enemy ideologies. They are in full clash. It is no longer, and never was, a purely academic conflict. Behind both of them there stand two enormous armed forces in permanent growth. The situation is now more serious than before Geneva. The danger from the Soviets is much greater. Yet America, Great Britain, and France still declare that nothing could force them to take arms except a direct attack on them. It seems that they do not consider that the loss of Asia today or the loss of Africa tomorrow (just as they did not consider the loss of half of Europe yesterday), is a direct attack on them. It seems that the Soviets can freely continue their business of encircling the free world by inciting everywhere the hatred against the still free Europe and America, playing everywhere the generous Santa Claus that brings freedom and independence. It seems not only that individual countries are falling, but entire continents with all the countries and peoples living on them. It seems that for America, Great Britain, and France all this does not mean direct attack on them. It seems to be forgotten that today every people is a neighbor to every other people, let alone one continent

to another. Every people in Asia and America is neighbor to every other people in Europe and America, the same as are their continents. If the Soviets have reached their frontiers, they in fact have, reached the frontiers of all peoples, frontiers of all free peoples.

Some need to see the enemy soldier at the threshold of his home or to hear the burst of atomic bombs above his head to be aware that direct attack has begun. Some see that same enemy soldier going toward his home before he has reached the threshold of it, and he hears the burst of the atomic bombs before they are launched, without waiting to hear them exploded above his head. For these, the attack has already begun. In their hands is the destiny of their own peoples and of all free peoples. Theirs is the responsibility, too. If they are dead sure that this enemy soldier, though he has started for their homes, will never reach it, and if they are dead sure that the atom bombs will be stifled before they can cross their frontier, they can wait calmy. But they must be aware that during this waiting period the enemy circle around them might tighten to such an extent that there will no longer be any need for this enemy soldier to reach the threshold of their homes nor for the atomic bomb to be sent on its flight. They must be aware that situations arise that eliminate the question, "What now?" and leave only a flat declaration: "Now? Now it is too late."

Farm Problems in Calhoun County, Iowa

EXTENSION OF REMARKS
OF

HON. JAMES I. DOLLIVER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1956

Mr. DOLLIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from 10 farmers of Calhoun County:

LYTTON, IOWA, *February 18, 1956.*

Mr. JAMES DOLLIVER,
House of Representatives,
Washington, D. C.

DEAR FRIEND: The opinions presented in this letter represent the thinking of 10 farmers in Calhoun County who have met together and analyzed the farm problems as pertaining to our county and the Corn Belt. We have considered all factors affecting our farm operations. We have endeavored to make an honest, comprehensive study of our farm problems and are presenting for your information and digest our analysis of this situation and solution to said problems.

We believe that our problems in Calhoun County tie in and are quite similar to the problems of farmers in the other 98 counties of Iowa and, no doubt, reflect the problems of the entire Corn Belt. We also concluded that our problem is definitely related to and affected by certain trends taking place in States outside the Corn Belt.

At the end of our analysis we agreed that the same answer to our problems is comparatively simple, that Congress should recognize this fact and not be forced into the complicated and unhealthy approach that many insist on.

In analyzing the problems of overproduction and Government subsidization as affecting farmers of Calhoun County and Iowa we considered first our major sources of income and have outlined them as follows.

Farm income in Calhoun County is derived mainly from two sources—sale of livestock and associated products, and, sale of grain.

1. Livestock income includes that from sale of beef, swine, dairy—milk, cream, and veal—poultry and eggs, sheep, turkeys.

2. Income from grain:

Corn; outlets: To eastern, western, and local markets as livestock feed and for processing. Also includes that part sealed under Government program.

Oats; outlets: Generally same as for corn.

Wheat: Very little grown in Calhoun County. In rest of the State most wheat goes to processors, with some for local feeding.

Soybeans, outlets: To processors.

Hay, outlet: Largely to local beef and dairy operators.

We call your atention to Babson's report on Iowa income in 1954 by percentage. Swine lead with 40 percent, cattle 26 percent, corn 12 percent, dairy 6 percent. Evidently the greater part of our corn and oats not shipped out of the State or sealed has been marketed in the form of livestock and dairy products. Sale of these two products represent 72 percent of our total income.

What has happened to our farm income of recent years?

Instead of maintaining a rival upward pace with that of our national economy, farm income has declined. Particularly so in the case of beef and swine, which have always been our largest source of income.

This decrease in livestock income due to depressed prices has invloved us in much talked of "price squeeze" situation.

We now arrive at the question of cause for this livestock price drop.

After giving under-consumption due consideration we agreed that the primary reason for this drop in livestock prices was definitely that we have overproduced in beef and hogs. We find that the old law of supply and demand has still been functioning and to the extent that our markets simply would not absorb our excessive supplies of beef and pork at a profit to us.

Our next step was to determine why we have this overproduction of livestock.

We are listing the two major reasons for this development:

1. Our extremely large supply of corn on the farms and in storage.

2. Our extremely large supply of livestock feed crops, consisting primarily of oats, barley, soybeans, hay, grass, and sorghums.

We now had to determine what agency was responsible for our large supplies of corn and livestock feed crops.

It was agreed that even though our individual efforts produced these excessive supplies, that primarily a major part of said responsibility must be placed squarely on our unhealthly farm programs of the past 20 years.

The next step naturally was to prove or point our various defects in our present and preceding Government programs, and, by the process of deduction, arrive at the proper course of action to take in correcting these abuses. We have listed under A, B, and C, the most important reasons why our past Government programs have failed to get the contemplated job done.

A. Despite the fact that approximately 51 percent of the farmers in Calhoun County participated in the Government corn-acreage program, more than normal supplies of corn have been built up. This happened because many of the nonparticipating farmers went all out on corn production. The increased production of these farmers more than offset the decrease obtained from the cooperating farmers.

The fact that a large amount of free corn has existed each year and at a price considerably lower than the sealing price definitely encouraged the expansion of hog and cattle feeding. Following the pattern established in the early thirties our livestock farmers in 1954 and 1955, in order to maintain their volume of dollar sales, and also wishing to make use of their large supplies of livestock feed crops, increased their livestock production. This course was followed even though our market requirements did not warrant such action. Consequently, depressed hog and cattle markets developed.

We can only deduct that cheap corn plus unlimited supplies of livestock feed crops invited this overproduction of livestock.

B. Failure of the Department of Agriculture to make sufficient allowance for the impact of hybrid seed corn, fertilizers, and improved farming methods.

C. Fact that cross compliance was not enforced.

Acreage taken out of corn by those complying with their base was diverted to other grain and feed crops. Each farm, whether in the program or not, was allowed to produce a full capacity, resulting in exceedingly large supplies of livestock feed crops. Statistics show our 1955 supply of livestock feeds to be the largest on record. Also vitally affecting the interests of the Corn Belt farmer was the fact that practically all of the acreage taken out of wheat and cotton was diverted to livestock feed crops, thereby stimulating additional expansion of livestock feeding in these areas.

The following situation also exists: Those farmers who have been cooperating by accepting bases now possess more fertile farms than a majority of the noncompliers. Actually the latter are the ones who are in the most need of conservation practices and good soil management. This is an opportune time to point out the biggest gripe of those farmers at our meeting who have been participating in the Government program regularly. They feel that they have carried the load for the nonparticipators, that they have created a healthier market for these people, who operated as they pleased and sacrificed nothing. They also know that if a voluntary corn acreage cut is asked in 1956 that they will be asked to carry still more of the load.

At this point we wish to present other conclusions on which we have agreed and other facts pertinently related to our farm problem.

A. We recognize the fact that our farm units in the United States are producing more products than our American and foreign markets will absorb at a profit to us. It is our belief, that generally speaking, our actual production, plus our potential production, has been 20 to 30 years ahead of our population increase, and will no doubt remain thus for some period of time.

B. We recognize that our basic problem in Calhoun County and in Iowa is one of overproduction of corn and livestock products. We must decrease our output of these products.

C. We recognize the fact that Government farm programs the past 20 years despite corn acreage controls and incentive payments, have resulted in excess supplies of free corn, burdensome supplies of sealed corn, and abnormal supplies of livestock feed crops.

D. We recognize that you are well aware that our overall national economy ties in very closely with our farm economy. That in order to preserve a prolonged sound national economy we must have a sound prosperous agriculture. We well remember the period from 1930 to 1934 when depressed farm prices due almost entitrely to overproduction, dragged our entire national economy to catastrophic depths. History has a habit of repeating itself and the farm trend the past 2 years has certainly been in the direction of the trend followed after 1929. It is a fact that we farmers in Calhoun County and the Nation, as a whole, are at present insufficiently organized to adequately secure and maintain our place in the national economy. Therefore, it appears

that in order to avoid a disastrous repetition of the early thirties, it is definitely up to Congress to help us develop and maintain a sound agricultural economy until the time arrives that we are able to assume this responsibility ourselves.

E. We recognize that the present management of our soil will determine how well our future generations will eat. We realize that it is economically unsound to mine our soil by recklessly producing quantities of food far in excess of our yearly normal demand. We point out that practical soil and water conservation practices are two of the most important issues facing our Nation today. We believe that our nonfarm population is now sufficiently conscious of this problem to financially support Congress on any sensible action that may be forthcoming.

In our discussion of the farm problem as hitherto presented to you, we determined that the "price squeeze" as such has developed largely because our supplies of corn and livestock feeds encouraged overproduction of livestock to the point that they have been a drag on the market.

Our analysis conclusively points out that Congress can take 1 or 2 courses. Either enact into legislation a farm program that will get the job done or come up with some silly substitute that may well bring about a repetition of the troubles that we faced in the early thirties.

Bluntly speaking, our two recommendations are drastic. We are sure that either one will get the job done.

1. Compulsory corn acreage control with accompanying strict cross-compliance, on a national basis, complete enough to reduce our supplies of livestock feed crops by 10 percent or more.

2. Compulsory soil bank plan, placing 10 percent of the total crop acres of each farm in a soil bank, to be seeded down to soil-conserving grasses and left completely idle.

By utilization of either one of the two programs mentioned we have in mind a long-range program that would eventually lead to the establishment of a complete soil-conservation program on every individual farm unit, with established crop rotations based on the capability of the soil.

We are committed to making the above two recommendations only on the condition that a referendum be taken in the fall of 1956 or January of 1957 to determine whether a compulsory program shall continue in use.

COMMENTS

Make substantial payments on retired acreage as soon as possible in order to get cash into the hands of needy farmers.

Allow diverted acreage that has been seeded down to be changed to a different piece of ground as needed to fit the original rotation program of that particluar form. This is a must.

Distribute surplus corn in Government bins at no more than original sealing price to those farmers wishing to be paid with corn or who wish to buy some outright.

In case the soil-bank plan is used, make certain that land placed in the soil bank is reasonably productive and not marginal land. Allow more than 10 percent of each unit to be placed in the soil bank if desired and if approved by the Department of Agriculture. Maintain existing ASC setup to regulate the program.

Maintain crop loans at 100 percent of parity or sufficiently high to discourage cheap feed which in turn stimulates livestock overproduction.

The possibility exists that with proper acreage control and adequate diversion of cropland to soil-conserving grasses, that price supports would eventually not be needed.

In closing we feel that the methods which we have suggested to use in solving the farm problem are aimed directly at the forces which have instigated our price squeeze. We believe that our thinking is sound and realistic. We hope that Congress in their approach will be likewise.

We realize that our thoughts should have been presented to you at an earlier date. However, we still wish to be on record in your file, as of this date, with the findings that we have made.

Sincerely yours,

T. E. Denise; R. J. Ringgenberg, Lester Peters, Lytton, Iowa; Charles O. Doty, Walter Fischer, Lake City, Iowa; Grant Kneller, Lytton, Iowa; Bob Roske, Rockwell City, Iowa; Melvin R. Haden, Frank C. Richardson, Gail Berkler, Lytton, Iowa, was not present to sign.

The Price of Freedom Is High

EXTENSION OF REMARKS

OF

HON. ARMISTEAD I. SELDEN, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 22, 1956

Mr. SELDEN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the CONGRESSIONAL RECORD, I am pleased to include a recent speech made by my distinguished colleague, Hon. KENNETH ROBERTS, who represents the fourth Alabama district.

This address was delivered by Congressman ROBERTS at the midwinter conference of the Veterans of Foreign Wars on February 11, 1956, in Anniston, Ala. I am sure that all who read Representative ROBERTS' timely statement will find it of real interest:

The price of freedom is high. All of us in this room are aware that the price of freedom is high because we have already made a substantial payment. Some of the payment has been made in the currency of time from our own lives; some has been made in the currency of dollars and cents; and some of us have had members in our families make their final payment with their life.

When the United States entered World War I, it was with the hope that this was the "war to end all wars." Unfortunately time has cruelly shown us that this was a pious hope. Following the Treaty of Versailles, the United States, searching for the road to peace, participated in a disarmament race. An immature United States danced and drank its way through the roaring twenties, oblivious to world problems; seeking only the gratification of momentary pleasures.

The "crash" which obliterated our dream world of the twenties was a harsh, terrifying experience for America. The long, hard depression had a sobering and maturing effect on our country. During these years of the thirties there was a hard core which felt that the United States Government should devote its foreign policy to staying free from any entangling alliances. Our efforts should be directed toward strengthening our own domestic policy. We had remained out of the League of Nations and we should not now indulge in politics abroad. It was during these years, while we refused to look beyond the gentle rolling surf of our coastlines, that Hitler and Mussolini rose to power. The results of our hope to remain free from world strife by not participating and assuming our role of responsibility took its toll when World War II broke out and invaded the lives of all of us.

I am proud of the mature, responsible role the United States has played since this time. Through the combined efforts of all our citizens the United States did reach total mobilization. The United States contributed her men, her industrial strength, and her philosophy rooted deep in constitutional liberty and respect for the individual. The United States contributed these elements so that the world could live in peace again and be a haven for all freemen everywhere.

Unfortunately once again time did not bring our wish true, at least not immediately. In contrast to previous behavior, however, we have not drawn about us the cloak of isolationism in the false hope that this would provide protection. We have taken a strong stand to see that what we fought for and what many men died for will not be lost. We still must make payments upon the altar of military preparedness if we want to keep peace. And this we are willing to do.

This time the United States took a strong stand to keep faith with those who died so that they may sleep in peace in Flanders Field. You might ask, what has our program for peace been? First, let me say it has been a strong, positive program based on a realistic appraisal of the world—the world's many governments, its peoples, and the intricate struggle being made by some for world control. When I think of what might be called our militant program for peace, which to some may seem a contradiction in terms, I am reminded of a statement made by that wonderful warm, human philosopher, Will Rogers. Will Rogers commenting on the reality with which the Pilgrims faced life said: "When the Pilgrims prayed, they usually had a musket in their hands so they'd be sure to get what they asked for."

Of our immediate postwar action, I think that history will prove that the Marshall plan was one of the greatest and most humanitarian concepts ever conceived and implemented by any conqueror. It would have been quite possible for a nation geared to win an all-out war, while still in the white heat of battle, to have accepted the infamous Morgenthau plan—a plan to completely carve up the carcass of Germany and serve it upon a platter for all the victors to relish. Our philosphy transcended this petty bitterness and embraced a program to benefit free men wherever we could. We had not lost our vision. We had come to the sad realization that though the last shot had been fired in the hot war, the struggle still continued.

It took both courage and vision for our Government to act to aid Greece and Turkey. Time has proved that this decision was right.

Our Government was not flustered by the Russians prohibiting land travel into Berlin. We countered this maneuver with the Berlin airlift.

As the true character and designs of the Russian Bear continued to unfold bit by bit, the United States and our allies adopted a counterdefensive policy. The Western Allies formed the North Atlantic Treaty Alliance. This has been followed more recently by the Southeast Asian Alliance.

The United Nations, with our full support, took the difficult strong stand to meet force with force to halt overt aggression in Korea.

In this tense international chess game being waged between the East and West it is difficult to anticipate where the next move will be made. It is not difficult, however, to know what the aims of our opponent are, and our best defensive is to be prepared and to remain alert.

Congress has been very much concerned about both remaining prepared and alert. Although the present administration in 1953 recommended a New Look for the Air Force, which, translated into simple language, meant a cutback in the number of air wings, Congress opposed this action and appropriated funds to provide us with 137 air wings.

In the 1st session of this 84th Congress the administration moved to cut down the manpower of the United States Marine Corps. Congress opposed this reduction. Congress voted additional funds to increase manpower personnel and to maintain it at combat readiness.

This year I think that either the present administration decided that the people

wanted and knew a strong military defense program was essential or the administration feared congressional criticism and opposition, for in the President's budget for fiscal year 1957 the defense budget requests are up over last year's and are higher than what everyone was predicting would be requested. I am not advocating that military appropriations be allowed to break the financial back of the Nation. However, when our national income is higher than it has ever been, and when it appears probably that the budget may be balanced this year for the first time since the Truman administration accomplished this in 1948, it seems only sensible that we make an intelligent investment in those programs which are essential to maintaining world peace. If we do not, it may very well be that there is no peace, no prosperity, no freedom, and very little hope.

It was of very grave concern to me when I read the first of Gen. Matthew Ridgway's story, and I quote: "I felt I was being called upon to destroy, rather than to build, a fighting force on which rested the world's best hope for peace. * * * As Chief of Staff, I quickly learned that though my own recommendations were made on a purely military basis, the decisions of the Defense Department were based on considerations other than clear-cut military needs. They were based on budgetary considerations, on political consideration, on the advantage to be gained in the field of domestic politics by a drastic reduction in military expenditures."

If any of General Ridgway's statement is true, it is a shocking situation. The defense of our country should not become political football considerations. The people of our country who are called up to arms whenever there has been an error in judgment, do not want partisan politics to determine our policy. We cannot afford to be partisan in terms of either money, men, or time. As a Member of Congress, regardless of whatever party-line propaganda may be distributed, I can assure you I intend to support those programs which I sincerely feel will carry us toward peace. This is a matter of world security.

One of the deadly races now being run between Russia and the United States is to develop the ballistic missile. Since the end of World War II, the Kremlin has been striving to narrow the technological gap between the Russian economy and our own. Each year they have challenged us more formidably in our one area of superior strength—our ability to design and put into production superior weapons. The Soviets achieved their first atomic bomb in 1949. In 1953, less than 9 months after the United States first full-scale hydrogen tests, the Russians detonated a hydrogen bomb. The Soviets have developed the Bison x long-range jet comparable to our B–52's. Today our monopoly for delivering atomic bombs no longer exists. There are facts we cannot ignore.

In the hands of a treacherous aggressor, the intercontinental ballistic missile can bring hydrogen warfare's threat of extinction to Main Street, United States of America. And it can arrive in less than 30 minutes, direct from Moscow. To date, there is no known defense against this monster.

During the past few years, Congress has been appropriating increasing amounts of money for the guided-missile program. I feel that this program will have to be seriously stepped-up if we want to win this race. If we do not win, it is possible that Russia will blackmail our allies into inactivity by threat of extinction. It is possible that this program could be quickened, if Senator JACKSON'S proposal to remove this program from interservice rivalry were followed and it was established in an independent setup, such as the Manhattan District was created to develop the atomic bomb. I hope that the Senate and House Armed Services Committees will give this deadly matter their immediate attention.

In this race for technical superiority, we cannot overlook the need for brains. Are we winning the race developing and training one of our greatest natural resources, the minds of our young people. In the 26 years between 1928 and 1954 Russia graduated 682,000 engineers as against 480,000 in the United States. Last year Russia graduated twice as many engineers as we did.

At this time I would like to say that I am very much in favor of the stand which the VFW had taken in supporting legislation which would continue GI educational training benefits so long as young men are being drafted. Such legislation seems only equitable to me. I should also like to point out that this program pays for itself in dollars and cents as well as in intangibles. When the trainees of World War II completed their training, their income was below that of nonveterans in the same age group. In 1954, 10 years after the act had been in effect, the veteran's average earning power had gone past the nonveterans, and these men were contributing in income taxes alone approximately $1 billion a year more than the nonveterans. The total cost of the World War II educational program was $14½ billion. This means that the program paid for itself within 14½ years and that the taxes after that are all profit. And it cannot be overlooked that this program trained 180,000 needed doctors, 113,000 research scientists, 450,000 civil engineers and many, many others. I can assure you that I expect to support legislation to continue this very fine program when it comes before the House of Representatives for a vote.

I have spoken of military preparedness this afternoon. But it is in the hearts and minds of men that we shall win our final victory. The success of our great humanitarian concepts—the Marshall plan, the point 4 program, to share the world's abundance—is obvious, if one is to judge by the fact that Russia is now trying to emulate us. World War II cost us $350 billion. Our foreign aid programs have cost less than $65 billion. This is a small investment to make for peace, and the return is incalculable in terms of life, liberty and happiness.

I am sorry if I seemed to have painted you a picture of gloom here this afternoon. I do not feel that way about it. I do feel that it is a realistic appraisal and that a strong portion of our defense depends upon facing reality. I would like to say that I have faith. I have faith in this great Nation of ours. In the heritage bestowed upon us by our ancestors who came to this wilderness to found a nation dedicated to "liberty, justice, and freedom for all."

The West believes in the dignity of man; in human worth; in freedom for the development and expression of man's soul. For these reasons I do not doubt that we shall win ultimate victory in the hearts and minds of men. In Zechariah it reads: "Not by might, nor by power, but by my spirit, saith the Lord of hosts."

Upper Colorado Project; Like an Iceberg, Hides Much From View

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. HOSMER. Mr. Speaker, save for the extraordinary provision apportioning power revenues among the four States in which the projects will be built, the so-called new upper Colorado bill remains substantially the same as the old one and continues all its vices. The only change in projects enumerated has been in section 2. Here Woody Creek has been eliminated and San Miguel and Yellow Jacket substituted, all in Colorado.

Since we are dealing with the same hulk, all of the objections already voiced on this bill hold good. These objections have been set forth in detail beginning at page 25 in House Report No. 1087, 84th Congress, 1st session.

The $1½ billion project approved by the Senate and the ostensibly smaller House bill are one and the same thing. Like an iceberg, the House bill displays only a part of its mass to view, but the remaining bulk nevertheless exists and must be reckoned with.

This includes such things as billions in added burdens on United States taxpayers, an increase in the national debt, invasion of national parks, more surplus crops and a host of other undesirable consequences.

The upper Colorado storage project as presently proposed should be roundly defeated. That will clear the way for a revised plan which will produce results, not merely consequences.

Address Delivered at the 20th Annual Dinner of the Chicago Decalogue Society of Lawyers

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. YATES. Mr. Speaker, one of the distinguished bar associations of the city of Chicago is the Decalogue Society of Lawyers. With its membership of approximately 1,200 lawyers, it is the third largest association in the city and the 14th largest in the Nation.

Each year the Decalogue Society presents an award of merit to a person whom it considers to have made a most significant contribution to the community or to the Nation. Among those who have received this award are Rabbi Stephen M. Wise, Bishop Bernard J. Sheil, Bartley Crum, Leo A. Lerner, Hon. Adlai E. Stevenson, and former President Harry S. Truman. Its award for the year 1955 was bestowed on Senator HERBERT H. LEHMAN at the annual patriotic dinner of the Decalogue Society, held on February 18, 1956, at the Palmer House, in Chicago.

Senator LEHMAN, who is senior United States Senator from the State of New York, richly deserves this honor, for his has been a long and distinguished career of public service, marked by high idealism, the greatest integrity, and superb ability.

The president of the Decalogue Society who presided so ably at the ceremony, Mr. Bernard H. Sokol, is an outstanding member of the bar of the city of Chicago. Mr. Sokol introduced Judge

Ulysses S. Schwartz, of the Appellate Court of Illinois, who presented the award of merit to Senator LEHMAN.

Mr. Speaker, I am attaching to my remarks the speeches of Mr. Sokol and Judge Schwartz. Senator LEHMAN'S speech already appears in the CONGRESSIONAL RECORD of February 20, 1956, page A1523:

ADDRESS BY BERNARD H. SOKOL

The same committee which selected the recipient of our merit award, selected the man to bestow it. The implication is obvious. Our discernment did not abate.

To bestow our award we chose a man who has had a distinguished career as special city prosecutor, leader of the city council, and one of the acknowledged leaders of the Chicago bar. Because of his great ability, his transition from great lawyer to great judge was a logical one.

He has been chief justice of the superior court and is today a presiding justice of the appellate court of Illinois.

Apart from these distinctions, there was a singular appropriateness about our choice. As early as 1914, in a speech delivered to the Iroquois Club, he criticized the Dillingham-Burnett Immigration and Naturalization Act, which contained many of the same onerous provisions present in the McCarran-Walter Act today.

Our annual merit award is the greatest treasure which the Decalogue Society has to give. We believe that it is made the greater by the man who delivers it tonight.

I present to you Judge Ulysses S. Schwartz.

ADDRESS BY JUDGE ULYSSES S. SCHWARTZ

This is the month of February. It is an election year. And all over the land the air is ringing with eloquent speeches in which comparisons are made between men of today and the great men of the past. Those who have been likened to Lincoln would fill a metropolitan directory. Right at this moment, somewhere some candidate for alderman or mayor, Democrat or Republican, is being told by an ardent supporter (and perhaps office seeker) that he is another Lincoln. I hesitate to participate in this practice and yet the occasion tonight affords a happy opportunity to do so.

Benjamin Franklin has been neglected in this political pastime, not for lack of honor to his memory, but because he was unique and not easily the subject of comparison. He was a businessman and a very successful one. He acquired financial independence hardly midway in life and thereafter devoted his talents to the service of his country and humanity.

Our honored guest, like Franklin, commenced his career as a businessman. He is familiar with the balance sheet, with the practices of the counting house, but while his eyes may have rested there for a time, like Franklin he soon turned to the greater balance sheet—counted not in dollars, but in service to human beings. Herbert Lehman has devoted his life to that high vocation with a rugged constancy and ardor that is also remindful of Franklin, giving and working quietly and earnestly in numberless good causes.

More than 40 years ago he took a leading part in directing the collection of a large sum for the relief of Jewish war sufferers in Europe. Since then there has hardly been a moment when he has not been engaged in some enterprise for the public good, culminating in the greatest of all humane enterprises, the organization he headed for foreign relief following the Second World War, which performed the tremendous task of feeding, clothing, and finding shelter for the millions whose lives had been disrupted.

Under his leadership as Lieutenant Governor and then Governor of New York, legislation to prevent social and religious discrimination, to provide for the care of the aged, to mitigate the hard life of those who toil—all were effectively enacted. And then, when he had reached what has been considered the end of man's allotted span, he entered the United States Senate.

Now, his vital enthusiasm unabated, his keen, alert mind unimpaired, he still stands at Armageddon and battles for the Lord. At this very time he is in the midst of the hardest and one of the noblest battles of his life—the amendment of those provisions of our immigration law which for more than a generation have been an offense to great groups of our citizens. That is the subject of his talk tonight. I recall the arguments for the first of such proposed measures. Those arguments were sometimes glossed over with vague implications and sometimes they contained outspoken pronouncements that the disfavored of that law were simply inferior in blood to those favored. Such a law is a grinning, sardonic gargoyle, making a mockery of our professions of love of freedom and equality. It is this modern demon that our embattled champion of 78 has undertaken to slaughter. And even with this undertaking he has not forgotten the other problems of oppressed peoples, particularly those from whom he sprang, who, through great sacrifice and struggle having established the little land of Israel, now find themselves threatened and beset on all sides. He still has time for them.

But for all his ardor in a cause he deems to be right, he is a man of moderation. Like Franklin, who stood his ground for the colonies in England with unflinching firmness while the tempest whirled about him, yet avoided bitterness and preserved his friendships, so has it been with Senator LEHMAN. Moderation is a fighting word today, but what do we mean by moderation as applied to political conduct? Learned Hand has as always given us the true answer, and I quote his words: "It is a temper which does not press a partisan advantage to its bitter end, which can understand and will respect the other side, which feels a unity between all citizens * * * which recognizes their common fate, their common aspirations—in a word, which has faith in the sacredness of the individual."

The people of the Senator's State came to know this spirit of moderation in him and they showed their appreciation of it by giving him the greatest plurality ever given any candidate for Governor in that State. It is this spirit which underlies the many instances of generosity to his opponents, of their cooperation with him, and of his reappointment to public office of political adversaries. That same moderation may account, too, for the fact that Look magazine in a recent survey of the Jews of our country found there was one whom all would unreservedly approve, HERBERT LEHMAN. But there is nothing of milk and water in that moderation. In my own mind there persists the picture of him in debate with one of the younger men of the Senate, too well known for his vituperation and abuse in public utterances. That younger man, purporting to read from a paper, made a statement which Senator LEHMAN challenged. The Senator then vigorously strode up to the younger man and, to his obvious discomfiture, demanded to be shown the statement he had pretended to read. Courage as well as moderation are here in abundance.

It may seem presumptuous that a local organization of lawyers should bestow an Award of Merit on a man who has earned worldwide renown, who has time and again been honored by his own State, whom great nations have honored, a man who has walked with the meek and the humble, the mighty and the noble of the earth. But the Award of this Society has come to have a significance among those who value service to humanity and to country. For this Society has fulfilled the purpose of the Award and has discharged its responsibility with such complete integrity that the Award itself has a value far beyond the worth of those of us who undertake to bestow it. Success has not been its yardstick, nor ability, nor talent, nor genius. Combined with these must be an abiding compassion for fellow men, a love of country, a seasoned and rugged zeal in the propagation of that faith.

Our Committee has selected wisely and well and never better than in this instance. It is my honor to bestow our award of merit upon you, Senator LEHMAN.

Answering the Bellyache of Time

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1956

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am including herewith an editorial from the Jackson (Miss.) Daily News, appearing under date of February 17, 1956. The editorial was written by Maj. Frederick Sullens in answer to a below-the-belt assault made on him and his colleagues of the southern press by Time magazine. The editorial speaks for itself:

ANSWERING THE BELLYACHE OF TIME

Time, a weekly magazine, self-constituted mouthpeice of the NAACP, and blatant advocate of complete social equality, takes a whack at the editor of the Daily News in its current issue.

The article, as per usual when Time attempts to discuss any southerner or anything Southern, is a grotesque distortion of facts. Under the caption "Dilemma in Dixie," Time says that "southern newspapers with scattered exceptions, are doing a patchy, pussyfooting job of covering the region's best running story since the end of slavery," meaning, of course, the effort of the NAACP to force hireling Negresses into the student body at the University of Alabama.

That, of course, is a wilful and deliberate lie. Southern newspapers have given the Authurine Lucy story all the covering its worth-whileness as a news story justified. It was far from being the "region's best running story since the end of slavery." Maudlin and wishy-wash and namby-pamby, indeed, must be the low gravity mind of the editor who concocted that sentence.

The Authurine Lucy story is merely a passing incident, nothing more. There will be more like it, and perhaps much more so, whenever efforts are made to force Negroes into white institutions of learning.

Another deliberate lie perpetrated by the Time writer is:

"Privately, many southern journalists are far more enlightened than their fellow citizens on the segregation issue but are professionally hamstrung by front office pressure and fear of community wrath."

The editor of Time, to save himself from the hot hole in hell where he rightfully belongs, cannot name a single instance where a southern journalist has been "hamstrung by front office pressure." Moreover, he well knew that statement was a lie when he wrote it—a lie just as outrageous as that when Time and Life tried to make a hero out of Emmett Till by claiming that the boy's father died in action on a World War II battlefield. He died in action, all right, but it was action at the end of a rope when he was hanged for the double crime of rape and murder. No other magazine in the history of this Nation ever printed a piece of sickly, sloppy sentimentality that was so glaringly false.

An overwhelming majority of the editors in the South are fully awake and alive to the many dangers involved in the attempt to enforce the integration decision of the Supreme Court and they are crying out against it, instead of peacefully accepting the situation as Time tries to make it appear.

Personally, the 78-year-old editor of the Daily News—it isn't a disgrace to be 78 years of age—does not care one tinker's damn or a slight whoop-in-hell what the editor of Time may think or say about him. It has been our pleasure on several occasions to point out the utter falsity of articles appearing in that publication, and naturally there is no kind feeling for the editor of the Daily News in the sanctum where its riffraff writers congregate.

Therefore, it is with pleasure that the Daily News reprints what the quidnunc commentator on the Times staff has to say about this editor. Here it is.

"At its worst, notably in Mississippi, the southern press is full of slanting, suppression, and rabble rousing against integration. The most violent is the Jackson (Miss.) Daily News (circulation 38,813), whose ripsnorting old (78) editor, Fred Sullens, incites readers against mongrelization under such front-page scare lines as 'You Are for Us or Against Us.'"

The best NAACP-loving Time could say of the Daily News is that "the best Editor Sullens could say of the Negro was in a sentimental story on the funeral of an 83-year-old onetime janitor at the University of Mississippi; the paper started a scholarship fund in his name, and sang his praises as a good Negro who knew his place."

Charges Time, which pretends distaste for such notoriously leftwing Yankee tabloids as the New York Post but sometime sounds strikingly similar notes, especially in its back-of-the-book summaries of the arts and sciences:

"Such papers as Sullens' Daily News now run more Negro crime news under bigger headlines than ever before—even when it means going as far afield as Chicago. They spike occasional wire stories that show integration working, e. g., a recent AP dispatch about the acceptance of three Negroes at the University of North Carolina. They print and reprint testimonials by Negroes who say that they prefer segregation and ignore Negro leaders on the other side, except to quote them out of context to make them sound like wild radicals."

Time prints on the following page a picture of the editor of the Daily News and quotes him as using these words: "A dead Negro was a good Negro." No such words ever appeared in this paper. They were created in the mind of a writer who has probably never been south of Battery Park and knows no more about the Negro problem and integration than he knows about the Einstein theory of illimitable spae, or how to build a spaceship and journey to the moon.

It is not a pleasant task for the Daily News to bandy words with the editor of Time. The job is akin to wasting lather in shaving an ass or skinning a polecat—nasty and profitless work, for there isn't a ghost of a chance that Time will ever say anything nice about the South and southern people if it can possibly be avoided.

Incidentally, that soft sobbing and low moaning you hear in the distance comes from the circulation department of Time. It is caused by its steady loss of circulation in the South ever since its dirty handling of the Till case, and its continuous bellyaching in behalf of social equality.

Surpluses for Europe

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. WIDNALL. Mr. Speaker, unprecedented storm conditions in Europe this winter have created an opportunity for us to further evidence the humanity of the American people. Suffering among human beings and livestock can be alleviated out of our huge surpluses of foodstuffs.

Actually no physical transfer of foodstuff is believed necessary to relieve outright starvation conditions since the Government already has on hand in Europe millions of pounds of foodstuffs that can be made available immediately. These, in turn, could be replaced by shipments from the United States at a later date.

I suggest that we move immediately to authorize the various American volunteer organizations—some 20 of them with units in Europe—to make distribution of food packages and other essentials to take care of the immediate problem of starvation. This I understand is more real than would seem possible in these times.

However, in addition, it seems to me the problem is much larger than just seeing to it that people don't starve. Our great surpluses of food creates on obligation for us under these conditions—an obligation to help these people in every way we can.

It is already apparent that farmers in many European nations will have to start from what we call scratch in order to bring back their acres to fertility. We can aid them in many ways.

I suggest that we proceed with the utmost dispatch to make our surpluses available to these winter-stricken nations which are still in the grip of an unrelenting winter, the worst in a century.

In addition, I suggest that we consider making available to those nations supplies from such other surpluses as we may have available.

From our tremendous surpluses, generous, unstinting, and immediate gifts would demonstrate once again most clearly to the entire world that we are not the selfish, grasping people we have been pictured in the Communist propaganda mills.

No one under these circumstances could be persuaded that we were dumping surpluses on the world market, for if stories from Europe are true, and I am sure they are, the average European farmer will be lucky if he can just restore his land to normal conditions by the end of the coming growing season.

I believe this is a splendid opportunity to aid a stricken people, create good will for our country, and in a way relieve come of the distress that has occurred economically here and abroad from the storing of such tremendous quantities of surpluses, particularly in foodstuffs.

Of course, President Eisenhower already has ordered some shipments for relief in Europe, but it is my hope that every effort be made to see that these European nations are abundantly supplied in the quickest possible manner with as many of our surplus supplies, as may be necessary to carry them through the 1956 growing season.

Cotton Acreage Allotments

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. DORN of South Carolina. Mr. Speaker, the southeastern part of the country voluntarily reduced its cotton acreage for many years. We have gotten no credit for this voluntary reduction in the recent cotton allotments. On the contrary, we are being forced to reduce our acreage this year by a larger percentage than some other sections of the Nation. We are being forced out of the cotton-planting business. Those in charge of administering the farm program here in Washington seem to be more concerned with acres, allotments, and surpluses than they are with human beings.

In a free country like ours, I maintain that any program should permit a man to plant enough to pay his taxes, earn an honest living and be a good citizen. Many of my farmers have been reduced and reduced in acreage until they can no longer maintain themselves upon the farm. These farmers are past the age when they can learn a new occupation. Some will have to wait 15 or 20 years before they can draw social security. Mr. Speaker, what are they going to do in the meantime? Any farm program should take into consideration a farmer's right to respect as a human being, with the opportunity by his own efforts to support his family.

Greenwood County planted 79,000 acres of cotton in 1910; 70,000 in 1920; approximately 39,000 in 1930 and this year we have dropped to the astounding low acreage, under the allotment program, of approximately 4,000 acres. The percentage of acreage reduction might not be as high in some of my other counties but it has been fantastic.

These farmers in the twenties and early thirties were encouraged by the Agriculture Department to diversify and cut down on cotton acreage. This they voluntarily did. Having gone along with this program, we now find ourselves reduced to the point where we can no longer stay on the land.

Mr. Speaker, I hope every Member of this Congress will read the following letter from an outstanding farmer in my district which very ably points out what is going on:

ANDERSON, S. C., *February 3, 1956.*

Mr. BEN BOATWRIGHT,
Chairman ASC State Committee,
Columbia, S. C.

DEAR MR. BOATWRIGHT: On January 9, 1956, I had a meeting with the Anderson County ASC committee in reference 1956 cotton allotment for my farm, possibly you have a report in your office of this meeting.

I am now requesting the State Committee review this matter at your earliest convenience.

I own and operate 492 acres of land, 316.9 acres in cultivation—wheat allotment 1956—26 acres—cotton allotment 1956—57.5 acres. You can see that I have been cut below cost of operating this farm.

History of this farm since 1948, these records are true and correct, before 1948 the acreages were larger.

	Acres
Cotton:	
1948	124
1949	122
1950	100
1951	102
1952	104
1953	109
1954 (allotment)	68
1955 (allotment)	66
1956 (allotment)	57.5
Wheat:	
1948	65
1949	60
1950	55
1951	60
1952	60
1953 (allotment)	50
1954 (allotment)	29
1955 (allotment)	27
1956	26

The above acreages were planted and harvested through 1955.

My farms have been reduced in cotton acreage approximately 50 percent and wheat acreage slightly more than 50 percent, and I am asking for relief from this condition, not as a handout from you or the Government, but I am asking for enough cotton and wheat acreage to keep this farm in operation and not have to face bankruptcy.

My taxes, as other farms in Anderson County, have doubled since 1949, other costs have increased as your committee well knows.

At the present time we have 30 people on these farms including my family. How can we 30 people (4 families) receive enough from 57.5 acres of cotton to live?

If your committee needs further information on my farm, I will be glad to appear before your committee with any and all information that you desire. This is a life and death case with me now, and I am asking for more cotton and wheat acreage so that I may earn my livelihood and not be a ward of the Government.

Under average conditions this farm should not be cut below 75 acres cotton and 40 acres wheat, then some years this operation would not be profitable.

Please place this letter before your State Committee and let me have your answer as soon as possible.

Very truly yours,

ELIAS T. MCGEE.

Add Loss of Priceless Uranium Reserves to Other Fantastic Upper Colorado Costs

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. HOSMER. Mr. Speaker, to the already fantastic cash costs of the upper Colorado River storage scheme in the form of construction outlays and interest at 2½ percent per year for up to a hundred years or more on the money borrowered to make them, that is, 250 percent interest, yet another expense to the American people, must be added.

This amounts to the priceless reserve of uranium ore that would, like the lost continent Atlantis, be inundated by the waters of the project's reservoirs.

The following letter comes from a geologist. He does not live and work in New York, California, or any other place remote from the proposed project. He lives and works in Moab, Utah, in the heart of the proposal. Not only that, he has completed a comprehensive geological examination on the Glen Canyon area requiring approximately 4 months of detailed field study. This is the same area in which Wilbur A. Dexheimer admitted the geologists of the Bureau of Reclamation had only done surface geology. Dexheimer's admission was made during the Interior Committee hearings on the bill and will be found on page 246 of the committee hearings.

Read why geological consultant George R. Grandbouche concludes that loss of these deposits "will be of considerable detriment to our national defense and economy":

MOAB, UTAH, *February 1, 1956.*

Hon. CRAIG HOSMER,
United States Representative, California,
Washington, D. C.

DEAR SIR: After reading your protest of the construction of the dam under the proposed Glen Canyon unit, Colorado River storage project, in the Salt Lake Tribune dated January 31, I would like to commend you on your stand.

However, as a geological consultant with over 3 years experience in uranium, and associated minerals, of the Colorado Plateau in general and with the Glen Canyon area in particular, perhaps you have overlooked a most vital reason for objecting to the Glen Canyon unit, Colorado River storage project.

No mention was made of the uranium deposits, now so vital to our national defense and national economy, which would be buried under millions of tons of water and which could never be recovered if the Glen Canyon area was flooded by the Colorado River storage project.

I have recently completed a comprehensive geological examination and report on the Glen Canyon area for several large uranium companies. This examination required approximately 4 months of detailed field study of the area in question, and consisted of both aerial reconnaissance and exhaustive field investigations. During this time I flew Glen Canyon and the canyons of the San Juan in a chartered super cub for the purpose of mapping detailed structural and sedimentary geology. I flew in and along the canyons for a distance of approximately 100 miles. Outcrops of considerable importance were noted on the map and were subsequently revisited by use of a jeep and by foot. During this period I flew for 3 days giving adequate time for this examination.

Several trips into the area required camping and long stays as it is quite far from the nearest settlements. During these trips I examined numerous Chinle-Shinarump sandstone lenses and paleo-stream channels which are one of the most important guides to the discovery of uranium deposits on the Colorado Plateau. Enclosed you will find several pictures taken during the examination, containing notes on the reverse side, regarding their importance and location. If the Colorado River storage project is completed and a dam constructed, it is probable that all of the pictured area, in addition to a great proportion of the area examined, will be inundated and rendered useless to the Nation.

For example, the Whirlwind mine located in sec. 2, T. 41 S. R. 13 E., has produced over 1,000 tons of uranium ores. It is probable the waters backed up by the dam will flood the Whirlwind property and parts of Copper Canyon, Nokai Canyon, and most important Oljetoh Wash, wherein is located some of the best uranium mines on the Colorado Plauteau. Also, Industrial Uranium Corp. has just recently blocked out an estimated 125,000 tons of uranium ore. Other major deposits situated in Oljetoh, Wash., are the Mitten-Skyline Koley-Black and several other interests too numerous to mention.

The Chinle formation in the area which probably would be covered by water possesses a great potential of uranium reserves, and that any destruction will be of considerable detriment to our national defense and economy; therefore, in the best intrests of the Nation I would like to voice my support in your stand.

Sincerely,

GEORGE R. GRANDBOUCHE,
Geological Consultant.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

The REA—Yesterday and Today

EXTENSION OF REMARKS
OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1956

Mr. COOLEY. Mr. Speaker, our distinguished colleague, Hon. W. R. POAGE, of Texas, addressed the National Rural Electric Cooperative Association in its national meeting at St. Louis on January 25. What he had to say is worthy of the attention of all of us who have watched the great contribution REA has made to America's free enterprise system in the last two decades.

Mr. POAGE, as a member of the House Committee on Agriculture, has had a large part in promoting this very important program that turned on the lights in millions of rural homes in America, and that has brought to these homes the freedom from drudgery, the conveniences and the comforts that hitherto were shared and enjoyed only by the people of our towns and cities.

I want to commend Mr. POAGE for the great contribution he has made to REA, and I ask unanimous consent that the text of his address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentleman, it has been a number of years since I have had the opportunity to meet with the men and women from all over America who have done so much to improve rural life—the men and women who have built the great rural electric service systems of the United States. Probably nowhere in the history of the world can we find a parallel to the electrification of the American farm. And to you, the leaders of the local rural electric cooperatives from Puget Sound to the Straits of Florida, I unhesitatingly give the credit. Others have indeed come into the picture since you showed that it was a practicable and profitable undertaking, but they stood aside when the whole field was theirs for the taking. You led the way; others followed.

It is with real pleasure that I return to one of your great conventions. It is a real inspiration to work with this group. In it are some of my finest and closest friends. I am proud of every one of you. Had I not been, I am sure I would never have agreed to leave the great agricultural price fight in Congress and to come here and speak on the subject assigned to me this afternoon.

On the other hand, had you been any other than the sincerely dedicated group of public-spirited citizens which you are, you would have never asked anyone to speak on the rural-telephone program. You could have smugly passed it by. You could have talked only of your great and praiseworthy achievements in the field of electrification. That is your especial responsibility. You need not bother with the problems of getting telephone service for farmers; that is, you would not need to do so were it not for the same spirit which makes you co-op managers sit up nights trying to figure out ways whereby you can take lights 2 long miles up the creek to a lonely cabin which will never pay more than a minimum bill, the same spirit which has made hundreds of you board members give the co-op more of your time than you are able to give to your own business, this same spirit forces you, and I believe it forces me, to do what we can to lend a hand to the rural-telephone program.

That program needs a hand. The act of Congress authorizing the REA to make telephone loans has helped. It has helped the situation even more than most of you know, but to be a success, the telephone program needs enthusiasm and cooperation even more than the electric program ever needed it. We started the rural-electric program just as farm income began to move upward from the depth of the depression. The telephone program had hardly gotten off the ground, as it were, when the terrible and relentless price squeeze began to paralyze the farmer. We started the electric work with a program for which we can expect at least 95 percent acceptance when economic conditions are favorable. The telephone program can never expect connections to reach more than possibly three-fourths of our rural homes, even in the most prosperous times. Most people look upon electricity as a necessity to be retained and paid for even after they have lost the family automobile. Many people look upon a telephone as a luxury to be taken out when the going gets hard.

We would, therefore, be unrealistic as well as unfair if we were to expect too much of the rural-telephone program. But let us see just what has been done and what needs most to be done that we may the better appraise the needs of the future:

In order to see what the rural telephone program has done, we must in all fairness, go back to the time when we began talking about REA financing of telephone lines. We must do this because we recognize then, as we recognize now, that one of the greatest contributions of the REA telephone program would be the momentum which it would give to nonborrowers to improve and extend their own rural systems. I recall that during the fight to pass the rural telephone bill, I repeatedly made the statement that I expected such legislation to be of far more help from the standpoint of inducing the private telephone systems that theretofore had refused to give any appreciable rural service, to extend and improve that service. Of course, it worked out exactly that way. For 20 years prior to the discussion of an REA financed rural telephone system, the number of rural phones in America had dropped steadily from 2,498,493 in 1920 to 1,526,954 in 1940. Very few of the independent telephone companies were putting in any new rural lines and, of course, the farflung Bell System was concentrating on the higher returns to be found in the great cities and in the long line service, but once the REA telephone system was proposed and a bill introduced in Congress, even the Bell System undertook to forestall the passage of legislation by constructing lines which it had just a few months earlier declared unfeasible.

During the fall and winter of 1948–49, this legislation was pending in the House of Representatives. The Southwestern Bell Telephone Co., which operates the exchange in my hometown of Waco, was refusing to accept new city subscribers on the theory that the switchboard facilities at Waco were inadequate to care for any more connections. Of course, this was but the predicate for one of their periodic drives for higher rates. Strangely enough, each time the big telephone companies increase the efficiency of their plant, they increase the charges to the public. Be that as it may, the Southwestern Bell picked this peculiar time to vastly expand its rural service in the country surrounding Waco. Hundreds of telephones were connected in the rural areas of the county. They all went on the overloaded switchboard of Waco. I think it is but fair to attribute this and similar activity throughout the country to the pendency of the REA legislation.

Since this legislation was passed, this same Bell affiliate has been extremely anxious to extend its rural lines in another one of my counties where there are two privately owned REA-financed independent companies trying to provide rural coverage, but in still a third county of my district where there has been very little possibility of any well-financed new telephone development, the Bell people have been completely unwilling to give any appreciable new rural service. I have asked them why. Their answer has simply been that they weren't ready to develop the territory. Somehow or another they never seem to get ready to develop any territory until somebody else offers to develop it.

Let us, therefore, start with 1945 when there were about the same number of rural phones as in 1940—roughly a million and a half. By the time REA actually was making telephone loans in 1950, there were probably 2 million rural telephones in the United States. Today, there are about 2½ million rural telephones which means that almost exactly 50 percent of the farms of America today have telephone service, and, of course, the service is available to a good many more who simply feel they can't afford to pay the necessary rates. Probably more than half of these rural homes that have telephone service have modern service, so we can say that while the picture is not all bad, neither have we begun to approach a solution of the problem.

At the same time, we are reminded that in February 1949, speaking on behalf of the Independent Telephone Association, Col. William C. Henry stated:

"There is now available, without construction charges to the subscriber, rural telephone service to between 80 and 85 percent of the occupied farms of the United States. Adequate rural telephone service is not a national problem."

At the same congressional hearing, Mr. E. M. Widen, of the Southwestern Bell Co., of this city, said:

"If let alone, there is no question in my mind but that this problem will be met by my company and other telephone companies."

Most of the older delegates here today will recognize a striking similarity between these statements and those of Mr. Neff who, in speaking for the private power companies in 1935 said that the job of rural electrification was then practically complete.

As a matter of interest, I think we should observe that the loan part of the telephone program has moved rather more rapidly

than some of us had supposed. At the end of the first 5 years of electric loans, REA had committed $369 million. At the end of 5 years of telephone loans, it had approved $275 million. Of course, these figures are somewhat like comparing bales of cotton with bushels of corn, but it does indicate that the privately owned telephone companies cannot sit complacently by and assume that their stranglehold on territory which they do not serve will never be challenged. And that, to my mind, is one of the most important features of the whole program.

It is very true that I would feel that the situation were much better if more of these loan funds had actually been advanced to the borrower. Only about one-half of this money has, as of this date, been actually turned over to the borrowers for construction. Likewise, I would feel better if a somewhat larger percentage of these loans were going to farmer-owned cooperatives. As of December 31, 1955, loan allocations had been made to 226 commercial companies and to 189 cooperatives. Just over half of the money was advanced for new construction, most of the remainder for improvements. Again, of the 606,000 subscribers to be served by these outstanding loans, just over one-half, 310,000, will be new subscribers while 296,000 will be customers who had some kind of telephone service but who are now to get improved, modern service.

While the record of repayments of telephone loans is not as good as that of the electric systems, it is certainly not a record of which we need be ashamed. As of November 30, 1955, there were 24 delinquent borrowers. They owed $527,398, but against this, we must note that other borrowers had paid $112,300 in advance of the due date. Most of these delinquencies seem to be due to the fact that the original telephone loans were, in most cases, made before it was possible to secure equipment and before it was possible to establish an earning base on the funds borrowed. I believe that REA has largely corrected this situation and that we can reasonably hope that the record of the next 5 years will be much more favorable.

And what of the needs of the future? Can we by legislation? Can we by administration? Can we, in any other way, increase the efficiency and the progress of the rural telephone program? I have no magic formula. In 1944, the Agriculture Committee of the House was able to so revise the basic REA legislation that the electric co-ops were given a longer amortization period, a guaranteed low-interest rate, and the assurance of effective help in solving their engineering and operating problems. There is no such opportunity to come to the aid of the telephone borrowers at this time. I have inquired both of borrowers and of the REA as to what, if any, legislation Congress should pass in order to be helpful. I stand ready—and I know the majority of the Agriculture Committee of the House stands ready—to sponsor any sound and reasonable legislation that may be needed. Frankly, there have been very few suggestions made for legislative changes. Possibly this convention may want to offer suggestions. If it does, I can assure you that they will be well received.

What, then, of the administration of the act? Certainly some of our ablest telephone people have contributed to the administration of the program. Certainly both Claude Wickard who launched this program, and Ancher Nelsen who now directs it, have been anxious and determined to bring telephones to our farm folks just as far as they could. I am not here to criticize or condemn anyone, but since it is much easier to sit on the outside and tell someone else how his business should be run, then it is to actually accept the responsibility for running it, and since I am prone to take the easy course, I think that we should at least consider the possibility that we might be able to improve this program by applying some of the techniques that were successful in the case of rural electrification.

Fundamentally, it seems to me that our present telephone program does not have the crusading spirit that was associated with the early days of the electric program. I have tried to determine why this is lacking. I believe that basically it is lacking because the farmers simply have not felt that this telephone program was their program as they did in the case of the electric program.

Now, I am not here to say that I think that REA should make all its loans to cooperatives or even that it should undertake to see that cooperatives handle the bulk of the business. I look upon farmer cooperatives simply as a means of getting something done that someone else won't do at a reasonable price and with reasonable efficiency. There can never be much public demand for an REA financed rural telephone cooperative in an area where a commercial company is providing adequate coverage and satisfactory service at reasonable prices. There would never have been a single rural electric cooperative had the power companies of America met the reasonable needs of the rural areas for electricity. It would not be necessary to organize another rural telephone cooperative in the United States if the existing telephone companies would overnight provide the needed service at reasonable prices, but they haven't done it, and I have no reason to believe they will do it without the nudge that these farmed-owned cooperatives give them. On the other hand, I realize the farmer-owned cooperatives need the competition of the privately owned commercial companies. When you and I were working to get the electric cooperatives established, REA was giving us every kind of help that it could in connection with organization and management of the cooperatives. I think we need that kind of aggressive assistance right now. I fear that REA is not giving it.

The telephone problem is more difficult than the electric problem and the telephone companies are even more obstinate and, in many cases, more reactionary and less inclined to give service than were the electric companies 20 years ago. This is understandable because of the even greater monopoly that exists in the telephone field than is found in the highly monopolized electric field. The American Telephone & Telegraph Co. is the largest corporation in the world. It controls about 80 percent of all of our telephones in the United States and it controls an even larger percentage of the long-distance lines.

The so-called independents who carried on a long, bitter—and almost successful—fight against the establishment of an REA financing system for rural lines have in many cases been even less cooperative with the needs of the people than the Bell System. I am delighted that some of their members have recently seen fit to avail themselves of REA financing. I welcome them into the fold of REA borrowers, but I would say to them as I would say to the farmer-owned cooperatives: I don't want to see any one segment of the industry obtain a monopoly. I believe the whole great work of the REA rests on the fact that it has been able over the years to prevent the development of monopoly in the electric field. I want to see the same thing prevented in the telephone field. One of the ways to do this is to keep a substantial balance between commercial companies and farmer-owned cooperatives. To keep this balance, it seems to me that the REA should give the same kind of cooperation and help to the telephone cooperatives which was accorded to the electric cooperatives in years past.

Along much the same lines, it seems to me that there may be room for substantially more research and development of telephone equipment and facilities than there has been by REA. Again referring to the early days of the electric system, REA carried on the research needed to materially lower the cost of rural systems. That research was just as helpful to the private power companies as it was to the cooperatives, although in the beginning most of the private power companies opposed it. I have a feeling that today the private telephone equipment companies don't want REA to conduct this kind of research. I think it is one of the great obligations of that lending agency.

Two highly controversial fields for a possible speeding up of the telephone work present themselves: Both involve a compromise of the ideal with the practical question of costs to the farmers. One lies in the reduction of the so-called equity requirements. Frankly, I don't know how far we should go. I realize that telephone connections are not as stable as electric connections. I realize we must have some local investment before we can expect the Government to advance the money for entire new plants. This problem of equity investment is possibly more serious with the farmer-owned cooperatives than with the commercial companies. Commercial companies ordinarily have some substantial equity either in money or in kind, but in the case of the cooperatives, the present regulation usually simply means that they must collect $50 per prospective subscriber in cash. This is a far greater sum than I as a householder have to put up as a deposit with any utility company—either in Waco or in Washington. I have at least wondered if it might not be feasible to require each subscriber to furnish his own instrument—of course, buying the instrument from the local cooperative—and to provide that should the subscriber discontinue the service, that the instrument would be reconveyed to the cooperative with appropriate and rather substantial depreciation deducted.

The second closely related field of possible acceleration of the program seems to me to involve the question of the quality of service. We all want good service. We want the best we can pay for, but may it not be that a great many of our people who cannot pay for the kind of telephone service that is given here in St. Louis might be able and glad to pay for something, possibly a little better than the fenceline service that we used to have when I was a boy, but still something less than the best? I know that I would like to have a Cadillac automobile. I am sure it is a good car and doubtless worth the money—if you have the money, but I have never owned a Cadillac. I do own a Chevrolet and I do get a great deal of pleasure out of it. Maybe we are trying to force all of the rural people of America to buy Cadillac phone service when their income won't afford it. If we are really interested in wide coverage, we better give some thought to the statistics on the limited number of Cadillacs as contrasted with the number of Chevrolets and Fords in the United States.

Again, I confess that I am not expressing any matured or well-thought-out conclusions. I am simply offering a suggestion for consideration.

I think, however, that I can, without fear of contradiction, put my finger on the one single factor which more than any other has retarded—and still retards—the development of rural telephone. That is the tragic inadequacy of farm income. If every American farmer were making $10,000 a year or up, we would need no Government lending program; rural telephone service would be so profitable that even the most conservative commercial companies would seek to furnish it. The latest figures indicate that the average farm income is only about $913 per year. This means that vast numbers of farmers who should be consumers of their own local telephone systems simply can't afford the

convenience of a telephone, regardless of the fact that they may even now have telephone wires across their front yard.

Farm income, or the lack of it, is unquestionably the most pressing economic problem at this time confronting America. It limits your business—electric as well as telephone. It adversely affects the REA's collection records. It is beginning to throw men out of work in the implement and equipment factories of St. Louis, and sooner or later, it is certain, if not corrected, to lead our high-flying economy over the same kind of brink which so nearly ruined us in 1929. No one knows how long we can "free wheel" down the road. We did it for 7 or 8 years in the twenties. We have done it for 3 years during the fifties. Maybe we can do it for several years to come, maybe we are already on the brink as we were in the spring and summer of 1929—I do not know, but this I do know—that unless we improve farmer income the rest of our great economic edifice is sure to fall.

Nor has the Department of Agriculture or the administration offered us any clear or effective program for an immediate increase in the price of the things farmers grow.

But I resolved that I would not talk any politics at this convention.

The only way I know of to keep that resolution is to stop—so thank you one and all.

Why Farm Programs Are Necessary

EXTENSION OF REMARKS
OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, February 24, 1956

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter to the Wall Street Journal, dated February 10, 1956, on the subject of the farm problem, written by Mr. C. W. Croes, a distinguished citizen of Aberdeen, S. Dak.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FEBRUARY 10, 1956.

The WALL STREET JOURNAL,
Chicago, Ill.

Our attention has been called to the article entitled "And Heaven Too," under your Review and Outlook of February 7, 1956.

In this you generally criticize the Senate Agriculture Committee and the Congress for its efforts to do something for agriculture.

Apparently the basis for your criticism is the assumption in the fourth paragraph of your article which you express as follows:

"But the purpose of rigid 90-percent supports, which the same bill would reestablish, is to encourage maximum production; they were decreed early in World War II to meet swollen wartime demands."

In this opinion which we think is completely out of line with the facts, we believe rests most of the misunderstanding and opposition to the farm-support program.

We think a correct interpretation of the purpose of any support for agriculture is to give agriculture some of the benefits of our protective policy.

In other words, it is to compensate agriculture in whole or in part for the burden of overhead that is hung on agriculture's shoulders by our protective policy, our minimum wage law, our restricted immigration behind which labor can organize and force its wage scale higher, our time and a half for overtime, our tariffs that protect industry from foreign competition when industry pays that wage scale and extracts from the consuming public its 10, 15, or 20 percent return on the investment.

Frankly, we do not feel too critical of the author of this article or of others, even Mr. Fischer, the author of the now famous, Country Slickers Take Us Again, in Harper's magazine of December, for having expressed what we think is a dangerously unfortunate and unwarranted picture of the farm issue.

We are not too positive as to who should bear the responsibility of giving to the public the true facts as to the cost that our much lauded protective policy hangs on the shoulders of agriculture.

We are inclined to feel that this should be the responsibility of the Department of Agriculture; although it is an element of such vital interest to the Nation that every influential agency in the Nation's economy should have those facts clearly at hand.

For the past several years, we have tried to find some agency that could give us some authentic information as to how much the farmer's overhead is increased by our protective policy. We had hoped that the National Industrial Conference Board might have made such a study, but they advise us they have not and they know of no place where such information is available.

Just after the present administration came into power, we wrote the Department of Agriculture asking for this information. We are convinced that it was a vital bit of information that the Department must have in order to deal intelligently with the economic welfare of the great agriculture industry.

In reply, we got a sheaf of statistics showing all the details of the cost of the support program to date, but not one word in answer to our inquiry.

What costs does our protective policy add to agriculture's operation?

We note you say that the purpose of the support price was to encourage maximum production. We believe on scanning the records you will agree that this could not be true. The first support program went into effect some time before we entered World War II.

It went into effect at a time when there was no shortage of supplies. On the contrary, a surplus already showing up and acreage limitation went into effect very shortly after the first support price program went into effect.

Later when the needs of World War II began to develop, the acreage limitation was lifted and the support was left at 90 percent of parity. War needs pushed the market price to a maximum of 113 percent of parity consumed the accumulated surplus stocks of agricultural products and even threatened a shortage and some limited rationing.

We think the record will show that at no time except in the case of flax when vegetable oils were short, and possibly 1 or 2 other minor items, was support prices used to encourage production.

One hundred percent of parity is a level calculated as accurately as could be done that would give agriculture approximately the benefit of our protective policy that is enjoyed by labor, particularly organized labor and by industry. Since agriculture has, since colonial days produced an exportable surplus of most farm products tariffs give very little protection without a support program. All commodities of which there is an exportable surplus would naturally float to the world market level. Liverpool less freight was the market price of wheat and most other farm commodities until a support price went into effect in the middle thirties. It will be the level again anytime that a support program is denied agriculture.

Another very erroneous thought that seems current in most of the eastern press, is that agriculture has become unimportant: It represents only 13 percent or less of the Nation's population.

We lose sight of this fact that every man that has left the farm since our grandfathers represented 60 percent of the population has been replaced by machinery; machinery and supplies that comes from the shelves of industry.

The 13 percent who still remain on the farm, consume and pay from 10 to 20 times the volume of goods coming off the shelves of industry and labor that their grandfathers consumed. Fifty years ago, a few hundred dollars would adequately equip the average farm. Twenty-five to fifty thousand dollars is required now to equip the average farm.

Agriculture's gross income has shrunk an estimated 30 to 40 percent in the last 5 years. That 30 to 40 percent shrinkage in agriculture's income will be only a year or two late in making its effect felt in the market outlet from the shelves of industry and labor.

Furthermore it is not only the farmer's buying power that we lose, but the business of the small towns and the cities whose primary source of new wealth is serving the agricultural community of the Nation are affected as this loss of buying power pyramids as it moves toward industrial centers.

Peculiarly labor's periodicals indicate that they are conscious of that, but generally speaking, industry's spokesman, such as your good paper seems to be almost completely unconcerned or is it completely unaware of this disastrous loss in marketing outlet for the goods of industries.

Can anyone seriously doubt that this 30 to 40 percent reduction in gross income for the Nation's agriculture has not contributed liberally to the cause of unsold cars in the automobile industry, has not contributed liberally to the ever increasing volume of long term credit, installment payment, mortgages on the income of the next 2, 3, or 4 years.

Back in the early twenties we were constantly told that it was economically unsound to do anything for agriculture. Agriculture's buying power became exhausted early in the twenties. In the middle twenties, industry busied itself rebuilding its own house, ignoring the lack of agriculture's buying power that normally should come from its annual production of new wealth from the soil, but by 1929 the house of cards collapsed.

Following World War II, we had a reasonably effective support program for agriculture, one that kept the economic bloodstream of buying power reasonably well distributed and circulating from the grassroots to the industrial heart of the Nation.

* * * * * * *

* * * Supports, of course, call for effective control of production. Our present agriculture surpluses are not the result of intelligent price supports that would give the farmer the benefit of our protective policy. They are the result of lack of effective control.

Controls have their objectionable features. Those objectionable features are not as bad as bankrupcty of the industry with bankruptcy of the Nation inevitably following as it did in 1929. We start artificial blocking of the law of supply and demand when we start with tariff, combinations of industry, organized labor, restricted immigration, minimum-wage law, time and a half for overtime. If we drop all of those, the farmer will face the world and hold his own. He cannot carry the overhead of all of those and sell his products in competition with the low standards of foreign countries.

C. W. CROES.

ABERDEEN, S. DAK.

United States Policy Toward the Satellite States

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, February 24, 1956

Mr. LEHMAN. Mr. President, in the January 23d issue of the Washington Post and Times Herald, there appeared a very interesting letter by Mr. Stefan Osusky, on the subject of our policy toward the satellite states. I ask unanimous consent that the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LIBERATING THE SATELLITES

Mr. James P. Warburg's letter of January 12, Liberating the Satellites, calls for several observations. He maintains that President Eisenhower's Christmas message to the captive European nations, assuring them that their peaceful liberation "is a major goal of the United States policy," was not a wise act.

One of Mr. Warburg's arguments is that the President's message was motivated more by partisan electoral politics than by any serious considerations of foreign policy. While I have no desire to meddle with American party politics, I feel perfectly qualified to give information to your readers on the foreign policy aspect of the President's message from a European point of view.

I was, last July, at Strasburg at the session of the Assembly of the Council of Europe, when the parliamentary delegations of 15 free European nations debated the policy of the Council in view of the impending Geneva "summit" conference of the Big Four. After an exhaustive debate the Assembly unanimously approved a report which provided that Europe's security and peace depended on its unity, the enslaved nations included.

The report said: "The West can never accept as final any settlement which would perpetuate the loss of their national independence and their political liberties by a large number of the peoples of central and eastern Europe. Every country must be entitled, in full independence, to choose its political regime and its social structure. This choice implies that its elections shall be free, its government independent, and that there shall be no interventions by foreign countries in internal affairs.

And at its autumn session, on the eve of the Big Four Foreign Ministers Geneva Conference, on October 26, 1955, the Assembly reiterated its stand for the national independence and political freedom of the subjugated nations of central and eastern Europe.

Moreover, the 15 Foreign Ministers of the free nations of Europe, in a meeting in Paris, on December 13, 1955, approved the stand taken by the Assembly of the Council of Europe and resolved "that security for all cannot be achieved on the basis of the present division of Europe," and "that the creation of a united Europe remains indispensable." I hope that this makes it clear that in his Christmas message President Eisenhower voiced not a sectional or partisan view but a major political goal common to the United States and the 15 free European nations.

Furthermore, Mr. Warburg places Radio Free Europe's activity, with regard to the countries behind the Iron Curtain, on a par with the activities of the Communist parties in the free countries. Radio Free Europe is engaged in the task of diffusing information denied the enslaved nations by their taskmasters, and dedicated to the cause of right and liberty.

There is no common term of comparison between the activities of the free American people in its diffusing truth with the work of the Soviet wrecking crews, the Communist parties, in the free countries. There is, after all, a difference between working for liberation and working for enslavement.

STEFAN OSUSKY,
WASHINGTON.

A Blank Check

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement based on information contained in a minority report on the Colorado River storage project bill. The bill is scheduled for the floor during the week beginning February 27.

Total costs of this Colorado River boondoggle are unknown. Therefore the bill in its proposed form amounts to a blank check to a Government construction agency which has been treated overgenerously already in the past.

Interest charges alone for the full period allowed for repayment are estimated at between $320 million and $1,153 million, or from 30 percent to more than 100 percent of the original estimated construction cost. This, of course, will be subject to revision upward should more participating projects be added, and there are many being talked of. They are of dubious value, to say the least.

Extension of the repayment period to the year 2032 is a departure from precedent and means that it is entirely probable that the year will be beyond the economic life of some of the units.

Almost complete dependence for repayment of the costs of the project upon a system of high-cost hydro projects amounts, in my mind along with the minds of the minority members of the committee, to fiscal necromancy.

There is much doubt that a ready market can be found for this high-cost power—at 6 mills per kilowatt-hour. Sufficient evidence to justify dependence upon this source of revenue for repayment costs has not been presented. It is indeed doubtful that consumers will pay the high rates that will be needed for the liquidation of the cost of this project. These rates would necessarily be far above established rates at other reclamation projects.

It is strange, too, to have such dependence placed on hydropower near the center of the largest coal reserves in the Nation. These reserves need only to be mined to produce steam-generated power to the full extent of any foreseeable demand. The oil-shale deposits of the Colorado Plateau are another potential source of energy to compete with this high-cost hydropower.

I submit that this blank check project amounts to no more than the wildest of wild dreams to spend Government money for a wholly unnecessary source of power. This proposed project not only is financially unsound, but also is not reconcilable with the interests of common sense.

Most Needed Man

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, February 24, 1956

Mr. SMITH of New Jersey. Mr. President, in light of the pending interest in juvenile delinquency, I have had called to my attention by a constituent of mine a column entitled "Most Needed Man," written by H. I. Phillips, which appeared in the February 10 issue of the Newark News. As this article contains some homely and interesting observations about how delinquencies used to be taken care of, and some of the limitations of today, I ask unanimous consent that this brief article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ONCE OVER
(By H. I. Phillips)
MOST NEEDED MAN

The greatest blow to juvenile delinquency and crime in general would be the restoration of that vanished American, the cop on the beat. What a law-enforcement factor he was in the days when a policeman knew nothing about engines, passed nobody in a cloud of dust and depended on his feet, a nightstick, a resolute sense of duty, and a familiarity with the neighborhood. Teenage crime never got to first base until cops began covering their beats sitting down. The kids terrorized nobody longer than it took for Officer Callahan to come flatfootedly around the corner with fire in his eyes. No schoolboy gangs started anything he couldn't stop fast.

The cop on the beat was an institution guaranteeing protection, an instrument for good behavior, and a force for law and order. He was a personality, not a vague figure in a squad car, a well-known law-enforcement agent, not a shadow flitting by in an auto; a definite name, not a license-plate number. He knew mom, pop, and all the kids.

He was John Law, not car 367 or one end of a two-way radio circuit. His word was law. When he spoke the word it had nothing to do with psychiatry. (A psychiatrist was generally though to be a vaudeville acrobat who also imitated birds.) The probation officer was a kid's old man. And he accepted no reports by letter or telephone.

A juvenile crime wave occurred only if some kids stole a gate off the same fence two Halloweens in succession. Or when junior tore up his report card. The nearest thing to school vandalism took place when some moppet wrote Susie Loves Gussie on the fence.

The cop on the beat carried a billy or persuader and had a way of innocently twirling it that induced respect and discipline. He

never used it on the moppets and only applied it to teen-agers who had height, weight and reach on him. But, dangling idly, the nightstick was a greater influence for good behavior than the pistol is today.

The cop on the beat had a way of taking a baddie by the collar and getting an immediate surrender by the force of his ultimatum. There was no neighborhood protest, no parent demanding his transfer and no arrogant teen-ager hoodlum carrying his case to the United Nations.

The cop on the beat left the station house with one plain assignment: "Cover your beat and take no nonsense." This has been superseded by "Check every traffic meter," "Keep traffic moving" or "Remember this is the day you escort the Brazilian Ambassador."

(This is no knock on the cops of today; they are doing what modern civilization, growing populations and inadequate staffs compel them to do. But they are obliged to do too many things over too much territory too swiftly, mostly by automobile, motorcycle, and whistle.)

More cops on the beat are a must. Get them back and there will be a complete collapse in the switch-blade knife business, neighborhood gang activities and juvenile nose-thumbings at law and order. What America needs is a return to the effectiveness of "Cheese it, the cop."

Surplus Agricultural Commodities

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. TOLLEFSON. Mr. Speaker, Mr. Henry C. Parke, chairman, merchant marine committee of the national security commission of the American Legion, presented a very fine statement before the House Merchant Marine and Fisheries Committee on February 16, 1956. I am inserting it in the RECORD for the the information of the Members.

Mr. Chairman and gentlemen of the committee, my name is Henry C. Parke. I am chairman of the merchant marine committee of the national security commission of the American Legion. We Legionnaires have minutely examined our whole merchant marine policy and our support of it is based upon proven facts as well as upon congressional findings.

Two world wars and the Korean conflict have dramatically demonstrated that a strong American merchant marine is not only vital to our general economic welfare but also to our very security as a Nation. Both as General of the Armies and as the Nation's Chief Executive, President Eisenhower has repeatedly and emphatically called the Nation's attention to these facts. It is now an historic truism, but it will bear repeating here, that because of the American merchant marine we were able to fight and win two world wars and the Korean conflict on the enemy's territory rather than on our own. In all three conflicts it was our merchant ships that carried millions of men and their tremendous armaments and supplies over all the seven seas to final victory.

Therefore, because our merchant marine has become the indispensable factor in our whole defense system, we of the American Legion regard with real alarm, any threat, from any source, that would weaken this fourth arm of our national defense. In a troubled world of sinister portent, the Nation intelligently and rightfly approves the expenditure of billions to strengthen the Army, Navy, and Air Force. We must keep our fourth arm equally strong because of its vital importance to the other three.

The American Legion is acutely aware of the danger of altering or emasculating our present national policy on the merchant marine. Under your leadership, Mr. Chairman, this committee has displayed courage and foresight in originating legislation designed to sustain that natonal policy. In doing so, you and your colleagues have won the praise of every thinking American.

The American Legion, always deeply concerned with problems of national defense, supports you 100 percent in your unremitting efforts to foster and improve the merchant marine, and we are glad that you have called these hearings on the important question of the 50–50 policy which guarantees to American ships the right to carry half of those cargoes paid for by American taxpayers and shipped abroad for the aid of countries outside of the Iron Curtain. This guaranty has been enacted by Congress on nine occasions in the past. It partly expresses the characteristically American philosophy of the even break. It seems incredible that attacks on such an honest and cooperative policy should originate in nations we are doing so much to help. Thousands of Americans gave their lives to liberate these countries from brutal oppression. Our citizens are not only being severely taxed to pay the expenses of that war but are continuing to pay heavy imports to help rehabilitate and defend those nations. To deny to American ships the right to carry half of our agricultural shipments to these countries is simply unthinkable. But the attacks on our 50–50 policy, inspired by foreign shipping interests, continue, and constitute a real threat.

Mr. Chairman, the American Legion at its annual conventions has emphatically and unanimously expressed its views on the importance of maintaining the 50–50 principle so that we may maintain a strong merchant marine as a vital corollary of national defense. We reaffirmed ths policy pointedly at our 1955 national convention, and more recently on January 18, 1956, at the national security commission meeting in Washington in the following language:

"This legislation (the Cargo Preference Act) is literally a matter of life or death to a significant part of the merchant marine, and of health or sickness to the whole industry. The fact that more than 50 percent of American postwar exports have been foreign aid and similar Government cargoes were the basic principles which produced the 50–50 principle in 1948. Without it foreign shipping would probably have carried all but a negligible portion of these Government-aid cargoes. Therefore Congress has repeatedly enacted 50–50 clauses as the most practical and economical means of attaining its maritime objectives.

"We come back in the end to the real problem, which is that shipping interests in some foreign maritime countries have induced their governments to object to our 50–50 principle either as a bargaining lever or as an outright threat. This politically astute move kills 2 birds with 1 stone. It helps their government bargain for lower prices and it plays upon the fears of the most influential partner in our whole economy—the American farmer. Foreign shipping interests are thus trying to drive an artificial wedge between two great segments of this Nation, agriculture and shipping, which traditionally and in reality are partners.

Mr. Chairman, the American Legion must formally and firmly oppose any attempts to change this law that Congress has so wisely enacted. We believe, until evidence indicates otherwise, it should remain on the statute books unaltered as one of the most practical and effective supports we could give our merchant marine. Certainly its elimination or modification must wait until the case of those opposed to it becomes based on realism and fact, essential elements lacking to date. For anything harmful to our merchant marine in an economic sense weakens its potentiality as a vital defense factor also.

State of California Officially Opposes Upper Colorado Boondoggle

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. HOSMER. Mr. Speaker, in order to remove any doubt about the official position of the State of California on the upper Colorado River storage project, I am inserting below the text of the resolution adopted in the Assembly of the State of California on May 9, 1955, and adopted in the Senate of the State of California on May 27, 1955. The resolution, of course, opposes the project and urges that Congress suspend any further consideration of it.

The text of the resolution is as follows:

Assembly Joint Resolution 37

Joint resolution relative to memorializing the Congress of the United States in relation to pending legislation affecting the waters of the Colorado River

Whereas more than 6 million people of this State depend upon the Colorado River as an important source of water for irrigation, domestic and industrial needs; and

Whereas the metropolitan areas of southern California, including Los Angeles, San Diego, and some 60 other cities depend on the Colorado River for water and hydroelectric power; and

Whereas the Colorado River is the sole source of water to irrigate over 1 million acres of land in this State; and

Whereas legislation is now pending in the Congress of the United States to authorize the construction of two major power and irrigation projects in the upper basin of the Colorado River at an estimated total cost approximating $1,750,000,000; and

Whereas one of these projects as contemplated by S. 500, H. R. 270 and companion bills, known as the Colorado River storage project, includes (1) the construction of six large dams creating reservoirs with an aggregate storage capacity of 44 million acre-feet, and (2) the construction of 14 or more irrigation projects known as participating projects; and

Whereas these storage dams are not required to serve the proposed irrigation projects but would store water for power purposes under interpretations of the Colorado River compact now being defended against by California in the United States Supreme Court in *Arizona* v. *California et al.*; and

Whereas the major irrigation participating projects are very costly transmountain diversion projects to take large amounts of the highest quality water out of the Colorado River Basin to other river basins; and

Whereas the other project, as contemplated by S. 300 and H. R. 412, and known as the Fryingpan-Arkansas project, is also a very costly transmountain diversion project to take the best quality water out of the Colorado River basin to the Arkansas River Basin, and is the initial phase of a project to divert 900,000 acre-feet of water

per annum out of the Colorado River Basin; and

Whereas both of these projects are based upon interpretations of the Colorado River compact which are now at issue before the Supreme Court of the United States in the case of *Arizona* v. *California et al.*; and

Whereas these projects, if constructed under those interpretations, would be detrimental to both the quality and quantity of water to which California has rights long established by prior appropriation as well as by contracts with the Federal Government for projects now constructed; and

Whereas both proposed projects are based upon questionable standards of financial feasibility and if constructed would cost the taxpayers of our Nation several billion dollars in the form of a subsidy to the lands which would be irrigated; and

Whereas California is the second largest taxpaying State in the Nation, and would therefore be doubly injured if these projects were authorized both by the impairment of the quality and quantity of water to which existing California projects have established rights, and by the burden of a tremendous tax load: Now, therefore, be it

Resolved by the Assembly and the Senate of the State of California (jointly), That the Congress of the United States be and it is hereby respectfully memorialized and urged to suspend further consideration of legislation authorizing the Colorado storage project and participating projects, and legislation authorizing the Fryingpan-Arkansas project until the Supreme Court decides the case now before it; and be it further

Resolved, That copies of this resolution be transmitted to the President of the United States, the President of the Senate of the United States, the Speaker of the House of Representatives of the United States, and to each Senator and Representative from California in the Congress of the United States.

A Timely Article by David Lawrence

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. REED. Mr. Speaker, under leave to extend heretofore granted, I am inserting in the RECORD an article by David Lawrence entitled "Washington's Principles Called Applicable Today," which appeared in the New York Herald Tribune, Wednesday, February 22, 1956:

WASHINGTON'S PRINCIPLES CALLED APPLICABLE TODAY

(By David Lawrence)

WASHINGTON, February 21.—Not long ago, Chief Justice Warren made a speech in which he said that, if the Bill of Rights were up for adoption today, he was sure it would be ratified but not until after an extensive debate in which doubts about it would be widely expressed.

This suggests that the same thing might be said about George Washington's policies. It is often assumed that, if he were alive today and proposed the doctrines outlined in his Farewell Address, he would be denounced as an isolationist or a rightist. It is generally believed he would be accused at least of neutralism and as having failed to see that the world is all one nowadays and that there can be no such thing as isolation.

THE FAREWELL ADDRESS

Unfortunately, most of the critics who would be saying these things have never taken the time to examine carefully the text of Washington's Farewell Address. Somehow, they don't give it as much attention throughout American schools in connection with Washington's Birthday as they used to do. For there is nothing in the Farewell Address that opposes the pinciple behind an American membership in the League of Nations or in the United Nations. The first President of the United States, after 8 years in office, gave his countrymen the following advice:

"It is our true policy to stay clear of permanent alliances with any portion of the foreign world, so far, I mean, as we are now at liberty to do it. * * *

"Taking care always to keep ourselves by suitable establishments on a respectable defensive posture, we may safely trust to temporary alliances for extraordinary emergencies."

NO PERMANENT ALLIANCE

Certainly the United States has not entered into a permanent alliance with any country. The United Nations Organization is not an alliance. Each government retains freedom of action on specific issues, including the use of military power.

Certainly also World War I and World War II, so far as the United States was concerned, were temporary alliances for extraordinary emergencies. The cold war and the aftermath of World War II also may assuredly be considered extraordinary emergencies.

What George Washington wanted future administrations to avoid was entangling commitments. He said: "Why, by interweaving our destiny with any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice?"

This was a plain warning against becoming enmeshed in the internal affairs of European countries, and the advice holds good today. George Washington deplored foreign influences in our own affairs and declared: "How many opportunities do they afford to tamper with domestic factions, to practice the arts of seduction, to mislead public opinion, to influence or awe the public councils. * * * Foreign influence is one of the most baneful foes of republican government."

These words might have been written today. For unquestionably foreign influence, whether benevolent or malicious, is far reaching in the domestic councils of the Nation. The whole anti-Communist crusade in Congress is rightly based on the belief that foreign governments finance a political party and its apparatus here in America. Throughout America there are many groups, some of them with millions to spend, who are misguidedly arguing with conscientious zeal that the Communist Party is just another political party and hence Congress should cease investigating its beliefs. These people do the work of a hostile government whether they realize it or not.

So far as the expenditure by Congress of sums for foreign aid is concerned, there are two main points of view. One is that America should spend money in the role of a world philanthropist on the strange theory that mere spending will create friends abroad. The other is that America should spend money for temporary alliances of a military nature to help the defense of the United States and of the overseas bases it needs to intercept airplane attack in an atomic age.

There are those Americans who go about bemoaning the policies of their own country, arguing that America is losing throughout the world. On the one hand, those persons want money given abroad without strings and, on the other hand, they want America to buy a pig in a poke and get nothing except vague "thank yous" in return for the dollars of the taxpayers of the United States.

American capital is already invested abroad by the billions and expects a return on its investment.

AID IN DISASTERS

Aid where there is human distress and famines and other disasters is well understood by the American people as involving grants of sums for those emergencies.

But to pour out American billions abroad year after year, as some returning American travelers urge, merely to create an atmosphere of friendship is an adventure in extravagance which will never get past Congress no matter how much the hearts of the advocates of unlimited spending may bleed for the Nehrus and the neutralists who play one side against the other. The neutralists pontifically declare that, as between totalitarian tyranny and human freedom, they must observe neutrality, and that justice and morality are obsolete words in the face of expediency.

What the first President of our country prophesied has come true—that "at no distant period" a great nation would emerge "to give to mankind the magnanimous and too novel example of a people always guided by an exalted justice and benevolence."

All that America seeks today in connection with her benevolence is that it shall not be wasted among those countries which do not exalt justice or defend a moral cause. For they would ignore our crusade against those governments which have committed—and threaten again to commit—aggression and thus disturb the peace of the world.

The National Guard: An American Institution

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks, I include an address delivered by me before the annual convention conference of the Louisiana National Guard held in the city of Shreveport, La., Saturday, February 18, 1956. I am told that the National Guard is causing this to be printed but in the meantime I am extending this in the RECORD:

Gentlemen, I am extremely pleased that you have given me the opportunity to come here and talk to you about the National Guard. It is not only a privilege for me to participate with you at this convention—it is an honor. I say this because it is an honor for any American to be associated with an organization that is so close to the heart of the people of our Nation. I feel a close kinship to the National Guard, inasmuch as I am the senior Democratic member of the Armed Services Committee of the House of Representatives—and as such, I am in almost daily contact with officers and members of the National Guard Association, and I am continually working upon National Guard problems and legislation.

Our country would not be so great, its people would not be free, if it were not for the guard's proud record of service for over 300 years. And the Louisiana National Guard has played its full and valiant part in that record. The Louisiana Guard's participation has been earned the hard way—not only on the battlefronts around the world but in its service to our State.

In all the wars that have been fought by this country, the struggles have been won because they were backed up by the fighting sinews of the American people. The military muscles that packed the invincible wallop was in large part made up of National Guard troops. And, an important part of these troops have been the officers and men of the Louisiana National Guard. I know of no other organization in the country that hews closer to the line of American beliefs, that is dedicated more completely to American principles, than our own National Guard.

Today, with all our military forces taking new or expanded roles, both at home and around the world, it is important to understand the background and aims of America's oldest military organization. This is especially true since, more than any other military component, the guard is vested with the deep personal pride of our communities. It is supported by local effort, encouraged by the tradition of our home states, and staffed with officers and men who are friends and neighbors.

In front of the Archives Building in Washington there is a stone statue and at the base of this statue is an inscription which reads, "What is past is prologue." It is true that the Washington taxicab driver has interpreted this to mean, "You ain't seen nothing yet." I have never read this inscription, "What is past is prologue," without pondering the wisdom of its full meaning. It is simply that we must look to the past to get an indication of what the future has in store for us. It is, therefore, important that we remember the history of the guard, for by remembering its history we can gain an impression of its future.

Actually, the National Guard is older than the Nation. It antedates the Revolutionary War and the Constitution. The oldest regiment in the United States is the 182d Infantry of the Massachusetts National Guard, which was organized as a Middlesex County Militia in 1636. Such early patriots as Paul Revere were active members of the Massachusetts Militia, a forerunner of our own National Guard. I think that we should continually reacquaint ourselves with the long evolution through 175 years of our history which has slowly resulted in the general acceptance of the philosophy first expounded by George Washington, that we need on a continuing basis, a relatively small, able, standing regular establishment backed by a militant and trained organization of civilian volunteers.

George Washington recognized the need for the militia. He planned an organization composed of the younger men of the community, who should be properly officered and periodically trained under uniform supervision.

The debates during the Constitutional Convention reflect the widespread fears of large standing armies. The Constitution finally adopted was therefore a compromise in this field. A standing army was provided, but so was a militia. It was to be organized, armed and disciplined (that is to say, trained) by Congress, but, except when in Federal service was to be governed by the States. The President was made Commander in Chief of the Army, and of the militia—but only after it was in the Federal service.

Furthermore, when the Bill of Rights was made a part of the Constitution, the militia was protected by the second amendment, which reads:

"A well-regulated militia being necessary to the security of a free State, the right of the people to keep and bear arms shall not be infringed."

The first militia law was enacted in 1792. It was the only permanent legislation for the militia existing for over a century. Under that law, every ablebodied man between 18 and 45 was enrolled in the militia and required to arm and equip himself at his own expense. In that year, also, the Congress provided by statute for the calling forth of the militia to execute the laws of the Union, suppress insurrection, and repel invasions. It was under this law that the Whiskey Insurrection was quelled by the militia. It was the only campaign in American history to be led by the President in person.

In 1903, the Congress enacted the Dick Act, which organized the militia to be known as the National Guard; and in 1916 the National Defense Act provided the backbone of Federal legislation pertaining to the National Guard.

And so the efforts and faith placed in the National Guard, and our own Louisiana Guard, proved to be invaluable when the end product was tested by fire. The record of the guard in all of the wars of our history—in both world wars, and more recently in the Korean emergency, fills many pages in our Nation's history.

Now speaking of the guard as a whole, I want to remind you that in 1917 the guard furnished 18 divisions to the country, composed of some 380,000 guardsmen who served in that war. They won honors and distinction in every battle. As a matter of fact, the German General Staff recorded for posterity its opinion of allied forces. It rated 8 American divisions superior or excellent, and mark you, 6 of those 8 were guard divisions.

We hardly have to turn back the clock to show the contribution of the National Guard to our victory in World War II. At this time, the guard gave 19 divisions to the country. Ten were in action in the Pacific, 9 were in Europe. Other nondivisional guard units were in service in every major theater of the war.

At the end of World War II, the most important step in the history of the National Guard was taken. The guard was completely demobilized. All enlistments had expired during the war and all equipment had been diverted to Federal use. In fact, there was no National Guard. But this was far from the end of the citizen army. Rather, it was only the beginning. Immediate plans were begun for the formation of the new National Guard—a guard that would carry on the traditions of the service—would be geared to play a more vital role in our national defense. The new guard was given a vital M-day mission of immediate action in case of aggression and was made a first-line integral part of our defense team.

Starting with a personnel list that totaled zero, in a little over 4 years the new National Guard built an organization of more than 400,000 officers and men, in over 5,000 units strategically located in the 48 States, Territories, Puerto Rico, and the District of Columbia.

You all know what happened when Korea broke. The President knew where to turn when he needed trained and ready manpower. He called forth the guard and the guard responded as it always has done when the Nation needed help—in war or peace. More than 2,000 units and 150,000 guardsmen were ordered into service and performed a magnificent task.

Thus far, I have only touched on the guard's record of service in war and I would be remiss if I failed to mention its peacetime State service. This 100 percent organization is always ready to give help to fellow citizens when help is most needed. And again, using the past as a basis for an impression of the future—a future which may bring atomic war to our homeland—it is well that we remember the functions of the National Guard at home.

Wherever disaster strikes—wherever life and property are threatened, you will find the National Guard an immediately available force in all of the States—trained, equipped, and ready. Yesterday it may have been an explosion at Texas City—a hurricane in Florida—starving cattle in the Midwest. It may be a flood along the Mississippi, a tornado, a forest fire, or an epidemic. Whatever it is, wherever it occurs, the National Guard is there to help reenforce a levee, to set up emergency communications, to evacuate and care for refugees, to patrol and guard stricken areas.

It is not only for this devastation, caused by man or nature, but because of the possibility of sudden, dreadful atomic warfare brought to our own communities that we must look to the guard in the future. For the guard has the organized manpower, equipment, and facilities for such emergencies. It has the communications, the blankets, tools, medical supplies. It has the aircraft, trucks, boats; it has the tents and all that is necessary to save lives and relieve suffering. The National Guard is always ready to serve.

There have been many attempts to destroy the guard as we know it today. Nearly all of these attempts have been made by attempting to reorganize this citizen volunteer army, and, for all intents and purposes, to make of it the National Guard of the United States, under Federal control. All of these attempts have met with failure, and if this monster rears it ugly head in the future, the Congress must see that any plan which advocates the federalization of the National Guard is defeated.

I will remind you that, among other arguments, there is a moral issue involved here. The framers of the Constitution deliberately subordinated the military to civilian control. The military must serve the people, not be served by the people, and for a very good reason. History is filled with the dangers inherent in building a military monster at the expense of the civilian population. You have but to look to Germany and Japan for the most recent examples of the disasters that befall a nation when military power replaces civilian authority.

And would the creation of a federalized National Guard violate the principle of States rights? I say that it certainly would. The framers of the Constitution contemplated a standing army as the only Federal force. Complete federalization would violate the principle upon which the States bargained when deciding upon the provisions of the Constitution, by giving to the Federal Government, in addition to its standing army, a militia over which the States would have no power or control whatever. Nowhere in the Constitution is there any power given to the Federal Government to do other than raid and support armies—and only standing armies were contemplated. There is no authority to raise and support a Federal militia.

The Governors of each State have the right to commission the officers of the National Guard. They have control over the guard. I recall very definitely during the course of the Congress last year that I stood on the floor of the House and battled the vicious and insidious efforts to completely federalize the guard in time of peace by those more interested in politics than in our national defense. The guard constitutes a citadel of States' rights. It is one of the checks and balances provided by our Constitution to maintain States' rights. It is the one military organization in our country which in time of crisis will be available to prevent military usurpation or military dictatorship, which pray God may never come to this land.

To federalize the guard would place all military power in the Central Government—a mistake made by our friends and neighbors in Central and South America and often resulting in the overthrow of civilian government in those countries.

Last year we met with an early defeat in the Congress when we were battling efforts of selfish interest to expand Federal controls

so as to take over completely our State-controlled National Guard. Later I presented another bill to Congress to provide for our military reserves and our National Guard, and, after terrific efforts, we were victorious, and the National Guard remains today, as it has remained during its 300 years of history, still under State control.

Today America faces an emergency unique in our history. This is not the first time that a potential danger threatens our land; but it is the first time that war could come to our country swiftly and devastatingly by guided missiles and by atomic weapons delivered by jet aircraft.

I want to make myself clearly understood. I do not say that war is imminent; but we cannot overlook the fact that danger exists. This is true because of Russia and of a coalition of armed totalitarian states which continue to create tenseness that maintains the world in a state of uneasy peace. This is true despite the meetings at the summit and Russian smiles and handshakes. It is true despite the release of prisoners by Russia and Red China, the offer of a propaganda peace treaty, the return of a Finnish naval base wrongfully seized and other seemingly peaceful overtures.

Our country has a long history of being misled by such apparently kind actions. In my opinion, we must again look to the past and realize that our natural desire for peace has often closed our eyes to the facts of the present. So long as Russia, Red China, and their satellites continue to trouble the world by propaganda and infiltration—so long as these nations remain armed to the teeth—then free nations have no choice but to look to their own security.

Of course, I don't want to leave the impression that we are without adequate defenses at the present time. Our active forces are the largest we have ever had in times short of actual war. They are in a high state of readiness and are equipped with the latest weapons, but, because we cannot ever know the detailed plans of the Communist dictators, we cannot precisely gage their intentions. It would be folly, therefore, if we overlooked a single area of our defenses which should be strengthened in planning against the possibility of a surprise attack.

During the last 17 years, I have sponsored practically every bit of legislation which has passed our Congress having for its purpose the building up of our military Reserves and our National Guard. I am proud of the fact that almost every one of these bills were introduced by me. The latest measure, of course, was the Reserve Forces Act of 1955, which passed the Congress last year after the bitterest battle in the Congress. This bill seeks to provide for far better training and for higher standards for our National Guard and our military Reserves. Enemies of national defense and misguided reformers fought us from all sides. Hardly had the bill been signed by the President before these same forces which had made an all-out effort in the Congress to wreck this legislation, began to proclaim its failure. Within 20 days after the law had gone into effect, I read speeches reported in the press and received letters from people condemning the act because of its inadequacy and saying that it would not work. Recently, I heard a radio address by our own Chief of Staff of the Army, in which he stated the draft would be necessary because of the failure of the Reserve Forces Act of 1955 to produce the number desired.

We have heard witnesses before my committee—the Armed Services Committee—in the Congress, testify about our military Reserves and our National Guard as to how this program is working. I placed figures in the CONGRESSIONAL RECORD to show how the program is working under the new act—I tell you today that the act is working and that the results thus far have been most encouraging. If the entire act were implemented as of today, I am satisfied the National Guard and the active portion of our Army Reserve would in a short time exceed 700,000 men, and these men, outside of some of the guard members, would have the benefit of active training in the regular establishment followed by an active period of training in the Reserves.

This Nation must have an adequate force of trained civilian manpower. Without it, we will have no organized Reserve strength. Find me a military expert who will seriously argue against the concept of the properly balanced defense forces—land, sea, and air, all with strong citizen volunteer Reserve units, together with a strong supporting economy. You will look in vain.

What we need is a flexible and dynamic program, taking full advantage of our native genius for mechanics, and based on a healthy, expanding economy. This country will never subject its citizens to a subhuman living standard in order to maintain a vast military structure which devours the productive wealth of an entire nation. This is a practice in which the present rulers of Russia and Red China excel. We can answer the threat to our security implied in their enormous military machines by continuing to make our active forces the finest anywhere, and by backing them up with a strong and potent Reserve and National Guard—one that is able to move into action swiftly.

Our Reserve installation program is moving forward nicely at the present time. Several years ago we provided $250 million for the purpose of building armories and air installations for our guard and our Reserves. This money has been expended; and only recently we provided an additional $250 million to continue this program. I am pleased to report to you that the program is now approaching the point that we can soon say it is one-half completed. To provide the matching funds for the States for guard armories and the money needed for the Reserve armories, we will require a total of $1 billion. While we have had some trouble in obtaining the release of some of this money by the executive department after it has been appropriated, I can say that the Congress is enthusiastically behind this program of providing installations for guard and Reserve training.

The Farrington bill to allow certain employees of the National Guard to enter State-operated retirement systems is a good bill and should pass the Congress. It will give retirement advantages to some 24,000 employees of the National Guard throughout the country.

Another measure pending in the Congress is a bill to provide readjustment pay to guard and Reserve officers who have served a time on active duty and who are returned to inactive duty through no fault of their own and without their request. This measure should, in my judgment, be extended to cover enlisted men in the same status. In this event it will provide the needed financial assistance to enable them to readjust themselves in civilian life when their active-duty period is terminated.

And now, let me speak briefly of the history of Louisiana's Militia, now the Louisiana National Guard. This history dates back more than 200 years.

When the first colony of New Orleans in the Province of Louisiana was established by France in 1717, Governor Bienville found it necessary to call upon a local militia to assist the inadequate garrison of French troops required to preserve the peace and security of the colony.

When Napoleon Bonaparte reclaimed Louisiana from Spain in 1803 and then almost immediately sold the vast territory to the United States, it was the militia, called the volunteer battalion and consisting of well over 300 American and French citizen soldiers, which was called upon to take over at New Orleans until the arrival of United States troops. At the Place d'Armes in New Orleans marking the official transfer of Louisiana from France to America, this volunteer battalion stood at attention as the Fleur de Lis of France was replaced by the Stars and Stripes of the United States.

On October 6, 1814, the Governor of Louisiana received from the President of the United States orders to hold in readiness for immediate service a corps of 1,000 militia infantry.

This regiment of 1,000 was divided into 2 battalions which were organized and equipped without delay, and 9 days later Gen. Andrew Jackson asked Governor Claiborne for this entire force.

In the memorable Battle of New Orleans in 1815 the forces of Jean Lafitte and his pirates joined with the Regulars and the militia in routing the British.

A regiment of Louisiana Militia Infantry was among those units participating with General Taylor's forces in Texas in 1846, which action finally drove all the Mexican forces out of the Lone Star State.

At the beginning of the War Between the States, newly organized units of the Louisiana Militia were soon on the field of battle. The units of the Louisiana Militia have gone down in history. Do you remember these? The Washington Artillery, Louisiana Grays, Louisiana Cadets, Sarsfield Rifles, Orleans Cadets, Crescent Rifles, and the Zouaves to name only a few.

Many of these famed companies such as the Washington Artillery fought with honor and distinction from Bull Run in 1861 to Appomatox in 1865.

Upon the declaration of war with Spain in 1898, Louisiana Militia units were among the first to respond to President McKinley's call for volunteers.

Following the war with Spain, the Louisiana Militia was reorganized and largely as a result of excellent training and equipment received thereafter the Louisiana Guard was among the first called upon when President Wilson called General Pershing to command a punitive expedition on the Mexican border against Pancho Villa.

Even before the declaration of hostilities in World War I, the Louisiana National Guard went into action. The Washington Artillery was called out a week before the declaration of war to patrol both facilities and the levees at New Orleans.

Troops of the Louisiana National Guard thereafter served in eight major campaigns in France from Luneville to the Meuse-Argonne.

Again in World War II, the Louisiana National Guard responded to a call to duty and its units served with distinction in both Europe and the Pacific.

What was once considered to be our favorable geographic location now has become meaningless. Today, distance between potential enemies has literally been annihilated. Ocean barriers and distance vanished as protective factors with the arrival of the intercontinental jet bomber. Today war could come to us unannounced, traveling on the wings of supersonic speed. If such a war ever does come upon us, we will be courting disaster if we cannot mobilize effectively and relatively smoothly. In the shock of such a conflict, we would not have time for picking and choosing our way to readiness. We must be as close to 100 percent ready as we can get—without being on a full wartime footage.

In terms of today, we require a clear understanding, once and for all, that we shall never again have an opportunity to take our time in mobilizing. Time may well become the key to this Nation's survival. Both our manpower and our industrial power must be geared to this fact. As the first line

of national defense, the National Guard must be supported by all of our efforts. We must make sufficient appropriations available so it will not lack in equipment or facilities. And as I have said, we must continue with our education of the American youth so that volunteers for the Guard will not be wanting.

When I come back to my home State and meet with the members of the Louisiana Nation Guard, when I travel to other parts of the country and visit with other National Guard members and, above all, when I recall the glorious history of the National Guard, I have no fear for the future of America. What is past is prologue.

California's Opposition to Upper Colorado Boondoggle Based on Protection of Her Water Rights

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. HOSMER. Mr. Speaker, a football field is slightly more than an acre of ground. Cover it a foot deep with water and you would have about an acre-foot of water. Cover it with a tower of water 11,000 miles high, and you have an idea of the amount of water parched southern California will lose if the upper Colorado Basin storage project is built as now planned.

Imagine a canal wide enough and deep enough to float the world's biggest ship, the Navy's new aircraft carrier *Forrestal*. Imagine that canal stretching from New York City to Los Angeles. During just 1 year, enough of the Colorado River's water to fill it could be stopped from flowing downstream at the project's gigantic Glen Canyon Dam.

That is water that could not be used by southern California, Arizona, and Nevada because it would be withheld upstream and never reach them.

All this is true because the multibillion-dollar project is designed to put approximately 48 million acre-feet of water in storage behind dams in Colorado, Utah, Wyoming, and New Mexico. Another 10 million acre-feet of water would be dissipated into thin air by evaporation during storage. The bill before this Congress seeks to authorize a substantial portion of the overall project. Authorization of additional phases would be sought later.

In all, 58 million acre-feet of water would not flow down the Colorado River from the upper basin States of Wyoming, Utah, New Mexico, and Colorado to the lower basin States of Arizona, Nevada, and California.

Yet so vital is this water in the lower basin that even today arid Arizona and California are before the United States Supreme Court litigating their rights to it.

California agrees that the upper basin is entitled to use some of that 58 million acre-feet, but contends that most of it must be left flowing down to the lower basin under provisions of a solemn contract entered into by these seven States in 1922 known as the Colorado River compact.

California's basic position is that she conforms to the compact and must insist that the States of the upper basin and the Federal Government do likewise in the planning and administration of the storage project. California thus is fighting only to preserve rights to water she already has and not for any new and additional water rights.

Relying on these existing rights, California carefully invested between one-half and three-quarter billion dollars of local money, not Federal money, for water projects calculated to make maximum use of her share of the Colorado River. Thereby, southern California was transformed from a semidesert into an oasis constituting one of the Nation's key economic and agricultural regions, supporting millions who migrated to her borders from less hospitable climates.

As southern California continues to grow, her need for water becomes greater, not less. Should the bleak day ever come when her Colorado River water supply is cut off, on that day the jobs of the millions she supports will vanish and the value of everything they own that cannot be transported to another part of the country will be lost completely and forever.

That is why Californians in Congress are fighting so hard to prevent spending billions from the United States Treasury to build the upper Colorado project in such a manner as merely to transport the oasis of southern California to Wyoming, Colorado, Utah, and New Mexico. In the process, financial ruin would be imposed on almost 6 million southern Californians. These States can plan their projects without this disastrous result and California demands that they do so.

The reason they have failed so far to do it is clear. To find a common ground for agreement amongst themselves, each of the upper basin States had to accept every project, good, bad, or indifferent, any of the others asked for. They ended up with a monstrosity that did not fit the interpretations and meaning of the Colorado River compact. Rather than recede, they adopted a technique of twisting, straining, and distorting the compact in an attempt to stretch it over the monstrosity.

The reason they have adopted this technique is not so clear. To understand it requires some knowledge of the Colorado River compact and the situation that produced it.

Early in this century southern California already had begun its miraculous expansion in population, agriculture, and industry. A water shortage was faced, and Los Angeles began reaching up into the Owens Valley for water to be transported through an aqueduct over 100 miles long. Even then, men of vision foresaw water needs beyond those satiable from the Owens Valley and began talk of more ambitious plans. Plans which one day would result in such great works as Hoover Dam, Davis and Parker Dams, the All-American Canal, and the Metropolitan Water District's vast Colorado River aqueduct with its extensions reaching even as far as San Diego.

Meanwhile the upper-basin States were experiencing little growth or progress. A Supreme Court decision had laid down a rule of law respecting use of river waters which said that whoever first begins using them obtains a right to continued use that cannot be taken away by someone who later wants to use the same water. The upper States foresaw burgeoning southern California acquiring first rights to almost all the river's water before they were able to appropriate uses themselves.

In this circumstance, according to the language of Delph Carpenter, Colorado's negotiator of the compact:

> The upper States had but one alternative, that of using every means to retard development in the lower States until the uses within the upper States have reached their maximum.

And that exactly is what they did. The Boulder Canyon Project Act authorizing Hoover Dam was stalled in Congress for almost 10 years by the obstructive tactics of upper-basin Senators and Congressmen. It was passed only after tribute had been extracted from California and the lower basin in the following manner:

First, imposing the Colorado River compact, which removed at least 7½ million acre-feet of water from appropriation by them; and

Second, requiring the California Legislature to pass a law further limiting the amount of water to which the State could acquire first rights.

The net effect was to place on California a limit of slightly less than 5½ million acre-feet of water per year that she could use. Thus limited, the State had to jettison many desirable projects. Nevertheless, California went to work and tailored her developments on the river strictly to the limitations and to the intent and meaning of the Colorado River compact. Even with only a portion of the great dreamed-of projects built, no place in time or history has experienced developments of water resources comparable in scope and magnificance to those of southern California.

It is the water rights which underlie those developments that Californians seek to protect when they oppose the upper Colorado River storage project and charge that it tramples these rights.

Red Antarctic Claims Feared

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. TOLLEFSON. Mr. Speaker, a recent news item appearing in the Washington (D. C.) News points up the need for the United States to protect its interests in the Antarctic. Other nations have claimed portions of it although we have done more exploratory work there

than all of those countries put together. The news item follows:

RED ANTARCTIC CLAIMS FEARED

LONDON, February 7.—Radio Moscow announcements today of new Soviet advances in Antarctica stirred added concern in some circles here over British claims in the South Polar region.

Dr. C. H. M. Waldock, professor of public international law at Oxford University, yesterday urged Britain to emphatically stake out her claims in the Antarctic before Russia takes over. Prof. Waldock voiced his warning in a letter to the Times in which he disagreed with a Soviet claim that Russian explorers discovered Antarctica and with a Times editorial that hinted the Soviet has undoubtedly strong claims there.

Moscow, meantime, announced members of the Soviet expedition have visited one of the largest oasis of the eastern Antarctic. It said the oasis covered an area of "about 500 square kilometers on Queen Mary Land and was first discovered in 1948 by an aviator of the United States expedition led by Rear Adm. Richard Byrd."

Professor Waldock's warning followed a dispatch written for the United Press by Mikhail M. Somov, leader of the Soviet expedition, in which he said "all interested countries should be invited to discuss the territorial regime of any area of international significance." Professor Waldock said Britain should maintain its claims with absolute distinctness.

Reserve Building Lag

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks, I present herewith an editorial taken from the Air Force Times of February 25, 1956, entitled "Reserve Building Lag." I commend this to my colleagues for reading.

RESERVE BUILDING LAG

Contrary to earlier Defense Department predictions, the Air Force Reserve construction program is going to be hurting when this fiscal year ends. Of $31.5 million appropriated by Congress for Reserve facilities, only about $6 million will have been apportioned by June 30—80 percent of the planned construction sidetracked.

This means that 25 nonflying training centers are out altogether and that improvements can be made at only 11 flying installations where originally planned at 18. This is possible because Air Force Reserve construction people channeled all of the $6 million into flying units, but it's still far short of the $25 million originally earmarked for flying centers.

Blame for the snarl—if it can be called blame—falls at the feet of the Air Force's first things first policy. In striving to meet its 137-wing goal, headquarters weighs spending a given amount for, say, a runway extension at Thule or a Reserve training center at Waukegan. Invariably the nod goes to Thule. And every high Reserve official agrees it has to be this way.

Pity is that the squeeze is damaging the Reserve just when the Defense Department wants the Air Force to swallow unpalatable provisions of the Reserve Forces Act. Air Force Reserve unit commanders find it easier, according to Pentagon spokesmen, to fill their recruiting quotas when they have a presentable place to let a recruit hang his hat. As long as they can man their units, USAF can get along without Air Force Reserve, but this may be difficult without good facilities.

This whole business is possible because the Reserve, unlike the Air National Guard, draws its money from a lump sum USAF budget.

Congress alone has the tools to get Reserve construction back on the track. It could do this by giving the Air Force enough money to meet its regular obligations while at the same time sustaining its Reserve program. In view of the mounting defense load carried by the Reserve and the awesome job that would fall to it in an emergency, it seems at least to warrant the necessary facilities.

Never

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1956

Mr. BYRD. Mr. Speaker, Secretary of State John Foster Dulles will soon visit south Asia. During his visit, Mr. Dulles will no doubt be placed under great pressure by Prime Minister Nehru, of India, to agree to a conference with the Chinese Communists. Nothing could be more tragic to the cause of the free world than such a meeting. The conference at the summit last year was a mistake, as far as the United States and the West were concerned. I am confident that, having learned from this mistake, the United States will not repeat its error by succumbing to the platitudes of Nehru and Menon. A meeting with the Chinese Communists could only lend respectability to their illegitimate regime, and the United States must assume the leadership in defeating the efforts of these international brigands to gain such respectability. It is time that we faced the fact that we are already up to our ears in a war for men's minds and men's hearts. It is a war to the death, and there will be no end until one side is the victor and the other side is the vanquished. Once having realized this, we should yield not one single inch politically, geographically, normally, or otherwise, and there is no better time and no better way to convince the world that we mean business than by telling Nehru and Menon now that we intend never to sit down with the Chinese Communists. Mr. Dulles should do this on his trip to Asia, and when he uses the word "never" he should underline it and follow it with an exclamation point.

Under previous leave to extend my remarks, I wish to include an article by Constantine Brown which appeared in the February 23 edition of the Washington Evening Star. This article speaks of the difficulties which will confront our Secretary of State on his visit to India, and I commend it to the attention of my colleagues. I hope that Mr. Dulles will go to India with his eyes open and that he will remember that this is the same Nehru who, in bidding Khrushchev and Bulganin farewell after their recent visit to his country, declared with a note of emotion in his voice:

An entire generation will remember your visit. Please come back again. We will expectantly await you.

The article follows:

SOUTHEAST ASIA

Secretary of State John Foster Dulles will be leaving again shortly for what may well be a crucial visit to the hot spots of southeast Asia. In connection with the formal SEATO Conference, Dulles will stop off to call on the political leaders of the nations in the critical area of Communist imperialism's immediate target. But the Secretary's most important call, by far, will be in New Delhi, where he expects to have extended conversations with Prime Minister Nehru and the No. 2 man in the Indian Government, V. K. Krishna Menon.

Indications are that the wily Nehru will let his chief deputy and favorite counselor do most of the hard talking in the course of the visit. Nehru knows that India occupies the key position in the cockpit of southeast Asia, and he knows further that Krishna Menon is the man to exploit that fact to the hilt in any bargaining with Dulles, who will, of course, be in New Delhi with a mission of prime importance to the United States and to the entire free world.

Krishna Menon, of course, has made no secret of his attitudes in the course of the cold war. He is a neutralist of a decided pink tint. He follows the broad outlines of Nehru's policy of keeping India out of the warring camps on either side, refusing to become identified in any way with the national groupings behind the Iron Curtain or with the nations allied with the West in the fight for the survival of freedom. But, as is the case with so many of these so-called "neutralists," Krishna Menon's pronouncements on important matters of world politics sound consistently sweet to the Kremlin's ears and increasingly discouraging to the West.

In the New Delhi talks, Krishna Menon will have as his chief objective the convincing of Dulles that face-to-face talks with Chinese Red Premier Chou En-lai are of the utmost importance. This will be no easy task, and the Indian diplomat knows it full well. But he is not to be easily discouraged, because he is fully aware of the critical importance of southeast Asia in the growing world struggle. He will put the matter suavely but no less bluntly to the American Secretary of State: Do you want the chance, at least, to secure the friendship and the friendly neutrality of the Asian peoples, or do you prefer to throw it away because Chiang Kai-shek and the American politicians friendly to Nationalist China insist on nonrecognition and hostility to Communist China?

On a basis of pure principle, of course, Mr. Dulles will not even contemplate yielding any major concession to Red China in the form of American recognition, or American acquiescence in the admitting of Red China to the United Nations. But unwilling as he most certainly is at the present time to sit down across the table from the leader of aggression from Peiping, the possibility certainly exists that he may be constrained to some such agreement if the stakes are high enough.

And whether any possible talks with Chou En-lai could produce any concrete results, the fact remains that the mere holding of the talks would represent a major victory for Red diplomacy in the eyes of the world. That much victory alone would probably be sufficient for Communist China's plans to attack Formosa. For if Peiping can point to the actual holding of talks between Chou and Dulles, and the failure of the talks to produce any worthwhile results, then the stage would be set for aggression on the Na-

tionalist strongholds while the blame for the adoption of forceful methods would be laid squarely at the doorstep of the United States. No matter how false and hollow sounding such communist propaganda will be to the West, it will sound reasonable to the peoples of southeast Asia, who are suspicious still of Western motives because the West has been the defender of colonialism.

Dulles will have need for all his powers of resistance and all his devotion to principle rather than expediency when he talks with Krishna Menon. The pressure for a talk with Chou will undoubtedly be overwhelmingly strong, in America as well as abroad. But the talks would be a grave mistake for the West, a great triumph for the Reds, and an almost certain guaranty of disaster for Formosa if not for all of southeast Asia in time.

A Strong Army Reserve

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks, I include a very excellent address delivered by a great soldier, the Chief of Staff of the Army, Gen. Maxwell D. Taylor, before a National Defense Week luncheon at the Skirvin Hotel, Oklahoma City, Okla., on Thursday, February 16, 1956. The general's talk was carried by press and radio to every corner of America, but I think we would all like to have a full opportunity to read his remarks:

NATIONAL NECESSITY: A STRONG ARMY RESERVE

Gentlemen, I was very happy to accept the invitation to come to Oklahoma City and address the Reserve Officers' Association on the occasion of National Defense Week. Oklahoma and Oklahoma City have a rather special place in my affection, first, because my parents are longtime residents of the city, and, second, because Oklahoma is the home of the 45th Infantry Division, which it was my honor to command in Korea. It just happens that the officer whom I have chosen to head the Reserve activities of the Army General Staff in Washington, Maj. Gen. Philip D. Ginder, is a former commander of the 45th Division. Ginder was famous for the way he decorated the hillsides of Korea with the famous Thunderbird symbol of the 45th. He even had the cookies served at his division mess cut in the outline of a Thunderbird. The qualities of enthusiasm, initiative, and leadership which I saw him display at the head of this division led me to select him to lead this most important Reserve program.

I always remember one device of the 45th Division which characterizes the ingenuity of American soldiers. In the mountainous sector occupied by the division the Chinese Communists in many places had burrowed their way into the hillsides within a few yards of our own trenches. They did so to obtain some protection from the powerful artillery fire which we could mass upon them. Close as they were to our own positions on the very sharp slopes of the hillsides, they were a very difficult target for our usual weapons. So the 45th looked for the unusual.

Under General Ginder's guidance, a depth-charge launcher was borrowed from the Navy, and hoisted painfully and laboriously up to the division's front positions. Then the men assembled a large quantity of pot-bellied stoves of the kind used to heat their tents behind the lines. They filled these with napalm and inserted in each of them a simple firing device. Then they placed the pot-bellied stoves with their napalm contents in the depth-charge launchers, and proceeded to lob these cans down the hillside into the Chinese positions. On impact they exploded and poured out napalm like flaming lava in an operation known as Ginderizing the enemy. I sincerely hope that we will be equally successful in "Ginderizing" all obstacles to the progress of our Army Reserve program.

I am often asked as I go about the country why the Army needs Reserves. And it is a thoroughly legitimate question. Before undertaking to answer it, however, we must really answer a more fundamental question, namely, how does the Army contribute to national defense?

I would say that in national defense the role of the Army is, like that of the other services, to deter war—to prevent war from happening—both large war, general war, or the smaller so-called brush-fire type. However, if deterrence fails and the country is forced into war, then the Army must make its contribution, as part of the great defense team, to winning that war.

It may be asked, What can the Army do to contribute to the deterrence of war? How does one go about deterring war?

I would reply that the Army contributes to the deterrence of war by visible evidence of its readiness to fight any kind of war, large ones or small ones, with or without atomic weapons. The enemy must see clearly that if he engages in new aggression, he will be met quickly and decisively by Army men on the ground, standing between him and the objective of his aggression. This readiness must be the real thing; it cannot be a sham or a facade of strength. It must embrace not only the active Army—the so-called Regular Army—but the National Guard and the Reserves as well. It is the strength of the Reserves which will determine our ability to react quickly and to wage war over the long pull.

I said that if our efforts to deter war are in vain, then the Army must be ready to play its part in winning the war. In case of future hostilities the Army will immediately be involved in defending vital areas—the task of our units presently deployed overseas. As you know, we have an Army of five divisions deployed along the Iron Curtain in Europe. We have a corps of two divisions—the American part of the great Eighth Army—similarly deployed along the Bamboo Curtain in Korea, separated by only 4,000 yards from a formidable Communist army. These forces must be, and are, instantly ready to resist any aggressive act on the part of the Communists in the important areas where they stand guard .

If these forces are attacked, obviously we must come to their aid promptly and quickly. We must have behind them ready forces of the active Army, trained Reserve units, and trained individual reservists, whom we can send rapidly overseas to reinforce our deployed units and to replace the losses which they suffer in combat. In this operation, time is of the essence. We are no longer in an era when the United States can deliberately develop its Reserve Forces during wartime. You will recall that World War I broke out in 1914, and although we had the warning of imminent hostilities long before our declaration of war on April 6, 1917, we had only 200,000 men in our Regular Army in 1917 to support a conflict which ultimately required 4 million men. It took more than a year thereafter to get a force of five divisions to Europe, ready to fight. Specifically, it took us 13 months to get to Europe a force equivalent in numerical strength to the one which we now have deployed in that area.

In that World War I period, we were slow not only in developing our military units, but in producing the equipment necessary to support them in action. I would remind you that throughout most of that war our divisions had to be supported by French Army artillery, and, indeed, we never used in Europe a single artillery piece produced in the United States.

Similarly, in World War II, we had ample warning of involvement, yet we were equally improvident. In 1939, there were only 190,000 Army regulars in uniform for a war eventually requiring 10,400,000 men and women.

Yet in spite of our unpreparedness, circumstances twice permitted the United States the luxury of arming deliberately behind the protection of allied forces. That pattern of reaction is no longer possible in the world in which we live today. Our reaction must be far faster, if we are to avoid losing the next contest, during the early decisive phase. It is for this reason that we stress so much the need for more and better Reserve forces. Let me remind you of the fundamental time factors in developing Army strength.

It takes 4 months of basic training to equip an individual soldier with the bare essential knowledge to warrant his commitment to combat. Such a soldier is basically trained only in the fundamentals of his profession. If he is to be a technician or engaged in more advanced forms of military activity, he will require considerably more individual training before he can be of service. Thereafter, the individual trained soldier must be amalgamated into the team in which he works. In the case of the combat man, this team is the squad, the platoon, the company, or battery. In order to make that team work together and perform all the functions necessary to survive on the modern battlefield, a minimum of 2 months of additional training is required. But beyond this small unit training the company must eventually learn its part in the battalion, the battalion in the regiment, and the regiment in the division. All of these teams of increasing size must have time to practice, so to speak, before they can be safely committeed to action. About 3 months is the minimum additional time necessary for this kind of large-unit training. When we add up the 4 months for the individual, the 2 months for the small unit and 3 months for the large unit, we find we need a total of 9 continuous months to train these large tactical elements of a modern Army.

The role of the Reserves is to make possible the telescoping of some or all of these training phases. At a minimum we want individual soldiers in the Reserves who have had their basic training, so that the initial 4 months can be saved in time of mobilization. We would like, in addition, to have a large number of trained smaller units—company-size units—for which most of the 2 months training has been accomplished. These small units will be most important in filling the chinks in the troop structure of the Active Army and in providing logistical and combat-type support to National Guard units which may be deployed early in an emergency. Ultimately we would like Reserve divisions which have completed all or part of their training so that with a few months of refresher training it would be possible to deploy them faster than would be possible for divisions mobilized after D-day.

In summary, we need trained individuals, trained small units, and trained large units. All have an important part to play in compressing the time in which America can react to aggression. We have a long way to go in developing this ability to react quickly. Never in our history have we been able to

maintain Reserve forces which gave more than a slight time advantage over the creation of completely new units. Recently, however, our Congress took very significant action in the passage of the Reserve Forces Act of August 1955. I will not go over all the provisions of this act, which is somewhat involved and requires close study to understand all of its provisions. Furthermore I would not say that it is the ideal law. Indeed, it varies rather widely from the one proposed by the Department of Defense. However, it is a definite step forward, and we are very grateful to the Congress for having given us this act in its present form.

The purpose of the act is to increase eventually the size of the Army Ready Reserve to 1,600,000 men, mainly organized into trained units. As a part of this strengthening process, the Army is striving to obtain a hundred thousand predraft age young men into active training within the first year following its implementation.

Although only a brief period has elapsed since the act became law, the Army has taken positive and aggressive action down to the lowest echelon of command to insure that every benefit will be realized from this legislation. Within 10 days after the passage of the act, personnel were being enlisted in the Army. In less than 2 months, training was being conducted. Within a few days after the issuance of the Executive order, a nationwide publicity program was set in motion by the Army. Although, frankly, we are not obtaining volunteers at the rate at which we require them, I am much encouraged by a recent upswing in volunteering, 1,000 a week for 3 weeks.

I mentioned the speed with which the Army initiated training under this act. We now have a 6 months' training plan which is in effect. The Army insisted on the highest standards of training, housing, and welfare for the young men reporting for training under this act. The enthusiasm of the Army trainer personnel and the high morale of the trainees attest to the success of this phase of the program.

This new Reserve Act also provides the Army with a means for utilizing the full capacity of the Reserve Officer Training Corps. The class of 1955 produced some 4,100 lieutenants in excess of the needs for the Active Army. The new Reserve program provides ready employment for the lieutenants who are now assigned directly to the Ready Reserve for 6 months' active-duty training. We are now in a position to accept unlimited numbers of Reserve officers, hoping that we will eventually reach our full mobilization requirement for this very valuable individual, the ROTC graduate.

The Army has a strong sense of responsibility toward the Army Reserve units which will receive individuals trained under the new Reserve Act. I recognize that many of these units are in dire need of better training facilities within their hometown areas. We are trying to secure new facilities and we are making some progress. For example, we have authorized construction so far this fiscal year of over 50 training centers. We are planning over 200 projects for the next fiscal year. The actual construction of these installations is subject to the availability of funds and suitable sites.

There are essentially two aspects to this problem of strengthening the Reserve. First, the recruitment of an adequate number of individuals into units, and second, the conduct of effective unit training. These individuals, from our 6-month training period as well as those veterans returning from the active service with an obligation to participate in Reserve training, will be excellent potential for incorporation into our Reserve units. But they must receive effective training in these units. They will know their business, and they will insist upon realistic and profitable training. All of us who have a share in the responsibility for the Reserve program must, starting today, intensify the emphasis upon effective training. If we do not maintain a high standard of training in our Reserve units, the individual enthusiasm brought to the unit by the trained individual will be lost, and the success of the entire program will be jeopardized. I know the problem of the Reserve officer commanders of these units and the difficulty of reconciling the obligations of their civilian professions with the requirements of their military unit. I have the highest admiration for those individuals who succeed in reconciling these requirements which oft-times are conflicting. I want the Active Army to render all forms of assistance possible to assure that our Reserve units are improving not only in numbers, but in the quality of training and in overall combat-readiness.

In my talk today I have not mentioned the National Guard, primarily because of the nature of my audience. Although their legal status is different, the National Guard and the Reserves together form an indispensable team in providing the Reserve strength so necessary for our military posture. I view them both with an impartial eye, considering that the needs of both must be met if we are to develop our necessary Reserve strength. I find that the guard is in the best condition that I have ever known it. It is presently at its highest strength in our peacetime history, and is contributing directly to the Army mission in providing antiaircraft units to man sites near some of the Nation's most critical industrial and population areas. In so doing, the guard serves to economize on our requirements for military strength by relieving Active Army battalions for use elsewhere.

In closing, let me thank the Reserve Officers Association for sponsoring National Defense Week, a project which is both significant and timely. It should be an occasion for all of our citizens to take a good look at the Army, both Active and Reserve, to verify that it is ready to discharge its important role in national defense. I have often said that the Army will be no better than the Nation insists that it be. It reflects the interest and understanding with which our citizens view the Military Establishment. I only hope that you will recognize the indispensable contribution which the Army makes to your security today, and then insist that it receive all the means necessary to do its job well. There is no place for a second-class army in the world of tension in which we now live. The interest of the citizens of Oklahoma will be the surest guaranty that the Army performs up to the high level of the national interest and the requirements of our security.

Thank you.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

Appendix

National Defense Strengthened by Research and Development at Great Air Center in Tennessee

EXTENSION OF REMARKS
OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1956

Mr. EVINS. Mr. Speaker, the Arnold Air Engineering Development Center located in Coffee and Franklin Counties, in the district which I have the honor to represent, is daily contributing major achievements in the technical field of aviation directed toward the defense of our Nation.

This great air engineering and testing center is of major importance in the atomic age in which we live. Because of its importance, I ask unanimous consent that a copy of an article by Mr. Roy Calvin, appearing in magazine Business Week, issue of February 18, last, be reprinted in the Appendix of the RECORD.

The article follows:

IT'S HOMETOWN FOR COSMOPOLITES

The people who appear in the pictures on these pages are behaving normally in one of the least normal small towns in all of the United States today, Tullahoma, Tenn.

It is not that the town, physically, is so different; apart from the massive wind tunnels that are its distinguishing landmark, much of it is carbon-copied from the thousands of small cities and towns that dot the southern landscape. But its people are unusual, startlingly so.

Consider two of them. Ronald Smelt and Edmund Stollenwerk, who now play chess together, were enemies little more than 10 years ago. Stollenwerk, a German, had designed a supersonic wind tunnel that sped the perfection of the Nazis' V–2 rocket. Smelt, a British intelligence officer, had the job of ferreting out the V–2 center. Ultimately, intelligence pinpointed it, at Peenemunde on the Baltic, and British bombers blasted it. Among the Germans who escaped was Stollenwerk.

Today Stollenwerk and Smelt, both of whom rank among the world's foremost wind tunnel experts, who side by side in Tullahoma. They and many like them, a cosmopolitan group of scientists, engineers, and technicians, have settled fondly into a new way of small-town living in the highlands of middle Tennessee. And in the process, they have changed both Tullahoma and themselves.

When the Air Force in 1949 finally settled on Tullahoma as the site for its new supersonic wind tunnel laboratories, it still had decided qualms about the place. Success of the project was, and is, vital in the race for air supremacy, and that success depends in large measure on the well-being and happiness of the project's people.

The 1949 question was: Can they be happy in a small town, away from the centers of learning and far distant from big city lights? The 1956 answer is: They can be—and are.

For its part, Tullahoma is happy, too. It is experiencing a steady growth and a healthy prosperity that must rank as a boom, although it is nothing like a grim World War II boom that gave the town, justly or not, a black eye. That was when Tullahoma, with a resident population of about 4,000, was often host to as many as 170,000 Army troops spread over the adjacent countryside.

First, there was Camp Forrest, an infantry training center. Then the Second Army made Tullahoma the railhead for extensive maneuvers in the mid-Tennessee highlands.

A decade later, the facts about Camp Forrest days are in controversy. Indisputably, they were lush ones for business of almost any kind, but old Tullahomans want to fight at any suggestion that there was wholesale gouging of troops.

Be that as it may, Tullahoma's new boom is different in every respect—not the least important of which is that the people who are causing it and the people benefiting from it have formed a solid society of mutual admiration.

I. THE NEW TULLAHOMANS

Americans largely outnumber the Britons, Germans, and other foreigners attached to the Tullahoma project, known formerly as the Arnold Engineering Development Center (AEDC), in honor of the late Gen. H. H. (Hap) Arnold.

But Smelt and Stollenwerk, because of their foreign backgrounds, have seen perhaps as clearly as anyone the problems of transition undergone by the "new Tullahomans." In the aggregate, it has amounted to transplanting a bunch of big city people into a small country town. In many cases, family roots were planted reluctantly in Tullahoma. But once down, they have flourished.

Take Stollenwerk's story. He came to the United States in 1946 to work in Washington at the hush-hush Naval Ordnance Laboratory. It was there, in 1948, that he first met Smelt, his wartime adversary, newly arrived to join the NOL staff.

Domestic protest: Eventually both moved to St. Louis, where the engineering firm of Sverdrup & Parcel was designing technical facilities for what was to become the AEDC. One of the units, known as the gas dynamics facility, is an improved version of the Peenemunde wind tunnel. Smelt is the chief of this facility, which simulates conditions of flight at five times the speed of sound; Stollenwerk is his right-hand man. But at first the German had trouble getting to Tullahoma.

"Naturally, I wanted to get into this project," he says. "But my wife—well, she didn't like the idea. She told me pointblank one day that if I ever moved to Tullahoma it would break up our marirage."

Then President Harry S. Truman dedicated the Tullahoma project on a blistering summer's day in 1951. Not long afterward Stollenwerk moved his still-protesting wife and daughter to Tennessee.

"There's something about this place that gets you; it got my wife. Within 2 years she was insisting that we build a house."

Digging in: The Stollenwerks, by now naturalized United States citizens, are well settled in their new home, a handsome rambler on a big wooded lot in Oak Park, a new subdivision of $18,000 to $30,000 homes.

The Smelts, too, are new citizens of the United States—and Tullahoma lovers. Smelt, a tall, sandy-haired man, whose British accent is still strong, has a theory about what has happened.

"The impact is greatest on the women. After all, this is an international business that Ed and I are in. The problems are the same here, in London, or Washington. My wife and I have lived in London, Washington, and St. Louis. And I must say that this is the first place my wife has been really happy in.

"It's fairly simple—she sees friends, instead of merely thousands of blank faces on the streets."

Stollenwerk leans forward intently and interposes, "In Tullahoma, we know them all—including their dogs."

Smelt bought and remodeled an old farm house. There, he tinkers hour after hour with a barnful of electronic gadgets. At the moment, he's working on an electric organ "which, I hope, will successfully embody some new concepts."

Smelt's wife, Marie, has organized a woman's choral group of 16 fine voices—in which old and new Tullahomans alike are members. It is in frequent demand for concert and radio shows, and recently appeared on a Tennessee television program.

The bait ignored: Like a lot of their fellows, either Smelt or Stollenwerk could go to other important jobs elsewhere. Since New Year's, Smelt has turned down an offer to head a missile project in Detroit at $30,000 a year.

A Midwesterner who has lived "all over," Harvy M. Cook has settled in Tullahoma as supervisor of operations in another AEDC unit, the "engine test facility." Within the past month, he turned down three job offers—all at higher pay. In one, he could have been project engineer on a $40 million test facility. In all of them, he would have had to move to a big city.

Cook, an Annapolis graduate who bears numerous scars from Pacific combat in World War II, chooses the quiet Tennessee town because "you can live for living."

Relaxed living in Tullahoma means just about anything but a gay evening of nightclubbing. It can mean television at home, a quiet game of penny ante poker with friends, or mere visiting for the sake of talking. Or, as with Smelt, it can mean an occasional "gramophone concert" in which a few friends are invited in to drink tea and listen to music.

It means no traffic jams going to or from work; no parking problems in town, even on Saturdays. Haircuts cost 75 cents; 1 penny buys 12 minutes of parking time, and if you get a ticket it costs only 25 cents.

For $100 initiation and $40 annual dues, it means privileges of a new golf and country club with a small, but swank, clubhouse. And the countryside abounds with State-administered hunting preserves and lakes where the fishing is almost always good.

And, for almost any of the women who want such service, living in Tullahoma means at least a part-time maid.

II. A CHANGING TOWN

Tullahoma's population was 7,500 when the 1950 census was taken, and that figure was swollen by many newcomers who had arrived to work on the wind-tunnel project. Mayor Jack Farrar, a doctor by profession, figures it now at 15,000, give or take a few. It's still growing.

Statistics help a little to explain what's happened. They show, for example, that 1,214 new home building permits have been issued since 1949, that 20 miles of new water mains have been added, that 2 new public-school buildings have been finished—1 elementary, 1 junior high—with a new high school yet to come.

But they don't show that a prime reason for this permanent growth is an experiment in operating procedure. AEDC is an Air Force installation, but it has only a nominal Air Force staff. The project is operated by a private contractor, ARO, Inc., which employs civilians and pays wages competitive with those offered by the aeronautical industry.

Development: This has meant big city salaries in a small town. It has also meant that ARO's employees have been permanent type residents—stable and well-educated people wanting good homes and schools and willing to take a hand in community life.

The statistics also will show that John W. Harton, Sr., has developed or is developing six new subdivisions. But they don't show that the land isn't much good for anything else, that Harton was "land poor" for many years while holding on, confident that something would happen. When that something—the project—did happen, Harton had a big hand in causing it; he was once a Democratic power in middle Tennessee and a close friend of ex-Senator K. D. McKellar, who spun the necessary wheels in Washington. Now, Harton, is "Mr. Tullahoma" and is finally "land rich" as he nears age 73.

Local industry: The town sits high on flat terrain of the Cumberland Mountin rim, about midway between Nashville (75 miles to the northwest) and Chattanooga (80 miles to the southeast).

The land is poor for farming, and Tullahoma's prosperity—aside from the fantastic war years—had depended on small industry producing such diverse items as baseballs, golf clubs, overalls, bedspreads, cheese, leather jackets, gloves, and shoes.

In 1955, local industry paid about $5.6 million to 2,700 employees; at the same time, the wind-tunnel project paid about $16 million to its 3,500. (An estimated 60 percent, or about $10 million, of that payroll went to families living in Tullahoma; the remaining 40 percent of the project's employees live elsewhere within a 35-mile radius, a large number of them in two small towns—Manchester and Winchester.)

The obvious disparity in wage scales could have caused trouble, but it has not. AEDC and the local industries are not competitive in the labor market, except for clerical and stenographic help. There, the project wins hands down. It offers girl beginners about $3,000, against an average of less than $2,000 in the town.

III. THE OLD TULLAHOMANS

There was shouting in the streets of Tullahoma on November 9, 1949, when word came from Washington that the wind-tunnel project site had been chosen. Citizens rolled out the town's two firetrucks with sirens at full blast to join a motorcade of honking automobiles that rolled through the streets.

But not everybody shouted. One who didn't was Lee Soesbe, operator of a tannery and leather jacket manufacturing plant.

"Some of us stopped and asked, 'What's all the shouting about?' We thought this might hurt us, especially for labor," Soesbe remembers. It hasn't, and now Soesbe preaches that AEDC is a good thing for the town of Tullahoma.

An accounting: Ben H. Wilkins, a veteran of both wars and a native Tullahoman who manufactures Bulls Eye overalls in what he calls my britches factory, sat down recently to contemplate the changes.

One of the new people is on the town's board of aldermen, another is on the school board. The new Tullahomans have sparked—always sharing membership with the townspeople—diverse groups, including a community playhouse that has staged four productions in little more than a year. They have, through a lively junior chamber of commerce, pressured the aldermen into building Tullahoma's first public swimming pool. They have swelled church memberships and touched off expansion plans: indeed, the Catholic community—now about 150 families where there were only 5 before—has built a new $135,000 church and school.

Better schools: What does Wilkins think of this? It's good—and "the best thing is the big expansion and improvement of our school system."

This becomes a remarkable statement only when you understand that Wilkins, in middle age, has no children; he is one of the town's wealthiest citizens and owns extensive properties that must be taxed to pay for such improvement; and his overall business does not benefit directly from the project's presence.

"And most of us think it's a good thing to have different people, solid people like these, taking part in our community life," Wilkins says. "My daddy was chamber of commerce president for years and years; later on, I was president. It seems like before it was always the same people just changing chairs in civil affairs."

Humid Land Reclamation Will Be Greatly More Expensive Than Upper Colorado Reclamation Costs

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. DIXON. Mr. Speaker, it has been said that lands in the South, East, and Midwest may be reclaimed for a fraction of the cost of those in the West. The estimated total potential acreage of these lands is 21 million acres.

These lands would be cleared and leveled at costs up to $150 per acre. Most of the areas would have to be drained after major flood-control works had been built. On many of these areas the soils are shallow and infertile from centuries of leaching by heavy rains. To secure and maintain production from these lands heavy applications of fertilizer must be applied annually. These costs may be from $40 to $60 per acre.

Assuming a $200 per acre cost for reclaiming and a $50 per year cost of fertilizer, the equivalent cost per acre obtained by capitalizing the cost of fertilizer at 4 percent would be $1,250 plus $200 equals $1,450 per acre. In other words $700 per acre to reclaim Western lands with an annual water charge of $5 per acre would equal an equivalent cost of $825 as compared to $1,450 per acre that would have to be invested to secure production from the timber and wet lands of the East, South, and Midwest.

Furthermore, except for special areas the cropping pattern would be limited to a few crops which are now in surplus, while an acreage under the Colorado project would not be devoted to basic crops under surpluses.

If the reclamation of these unused and humid lands is profitable, one wonders why they have not been brought under cultivation long before this time.

Rundown on Roads

EXTENSION OF REMARKS
OF
HON. MYRON V. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting the following editorial from the Coffeyville (Kans.) Journal of February 20, 1956, entitled "Rundown on Roads":

RUNDOWN ON ROADS

Despite differences on details of financing, estimates of revenues, and the like, the administration and the Democratic leadership of Congress agree on the need to complete a 40,000-mile interstate highway system. While the House Ways and Means Committee is holding hearings on the (Boggs) highway revenue bill of 1956, designed to pay for the roads, the past, present, and future of the program shape up like this:

The President's (Clay) Advisory Committee on a National Highway Program on January 11, 1955, advocated a 10-year program to satisfy the traffic needs of the next 20 to 30 years. The overall program would cost $101 billion. The Federal Government would boost its road spending by $25 billion, to $31¼ billion.

Of the 40,000 miles of interstate system, 37,600 miles already had been designated for construction or improvement. The Federal Government's share was to be financed by bond issues of a Federal Highway Corporation.

The President on February 22 sent a special message to Congress embodying the general recommendations of the Clay report, including the bond-issue financing. This plan, with its provision that the new securities were not to be part of the regular public debt, had already drawn the fire of the Democrats.

The Senate turned down the administration bill, 60 to 31, on May 25. It then approved a highway bill providing for $12.6 billion in road spending, to come from general tax revenues.

The House in July successively voted down (1) a highway building program with no provision for meeting the cost, (2) the administration plan, and (3) a Democratic pay as you go plan for financing through taxes.

This year the Democratic program embraces two road bills. One calls for outlays of $25 billion over a period of 13 years for the interstate highway program, plus $9 billion in regular Federal aid for normal building. This is in line with the Clay report and administration recommendations. And the bill enhances the chance of passage of the superhighway program by combining it with the regular road appropriation, which would have to be renewed this year in any event.

The superhighway building would be paid for by a second bill, the Boggs bill, which calls for a 1 cent increase in the present 2 cents a gallon, Federal tax on gasoline and diesel oil, increases the excise tax on tires 5 cents to 8 cents a pound, causes the excise

tax on trucks, trailers, and buses to rise from 8 to 10 percent, imposes a new tax on camelback (heavy retread rubber). These rates would be frozen for 15 years.

The American Automobile Association, is attacking the revenue bill because the new taxes would be more burdensome on the automobile driver—and less burdensome for truckers—than those contemplated in the Democratic pay as you go program of 1955. Secretary of the Treasury George M. Humphrey disputes the revenue estimates of its supporters. However, it seems to be satisfactory to truckers, whose lobbies allegedly killed the 1955 bill.

What would the 13- 15-year program mean to the Nation's economy, aside from adequate highways? Experience on superhighways now in use indicates a drop in the highway death rate of up to 40 percent. And the program, the largest single construction undertaking ever attempted in the United States, would pour $51 billion into the construction, equipment, and allied lines, at the same time creating as many as half a million new jobs.

The Indian Picture in South Dakota

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. BERRY. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I insert the following item from the Timber Lake (S. Dak.) Topic under date of February 16, 1956, with regard to the Indian picture in South Dakota.

The article is as follows:

Speaking before approximately 200 people gathered in the Timber Lake High School auditorium, Sunday evening, February 12, Dr. Ben Reifel, director of Aberdeen area office of the Department of Indian Affairs, neatly summed up the basic difference between the Indian and his white neighbors.

"The American Indian is a victim of circumstances * * * something before us, even before Columbus discovered America, has prepared our life in which we find ourselves," Dr. Reifel stated.

There are three things which are central to American life, he continued: (1) concern with time schedule; (2) hard work; and (3) saving. For the Indians, nature provided most of their needs. The buffalo provided food, shelter, clothing and a certain religious element. Because the buffalo was so abundant, the Indians didn't have to work, didn't have to schedule their time; nor did they have to save.

Thus, Dr. Reifel enumerated the basic difference between the nature of the white man and the Indians. "Some of us will have to extend a helping hand to show brotherhood to the Indians * * * it will take patience on the part of both. * * * To have brotherhood is to live it," Dr. Reifel concluded.

Dr. Reifel's talk concluded a union service sponsored by the Timber Lake Ministerial Association in observance of Brotherhood Sunday. Before pronouncing benediction, the Reverend C. A. Carlson commented the white people must remember that we pushed the Indians to remote places, away from their lush hunting grounds, put them on the poorest kind of land, put them on a dole system, and thus further deprived them of the incentive to work and to save.

Anniversary of Independence of Lithuania

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, February 27, 1956

Mr. BUTLER. Mr. President, February 16 was the anniversary of the independence of Lithuania. I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I made in observance of this important day.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR BUTLER

Throughout the world freedom-loving men pause on February 16 to observe the anniversary of the independence of Lithuania. In America and other free nations there will be large gatherings to mark this occasion. But, the people of Lithuania can at best only gather in small groups in their homes to observe their Independence Day. The Communist overloards do not permit them to openly celebrate this day in their native land. Yet, while the right of open assembly can be denied to them, no power on earth can wipe the glorious past of this brave nation from the pages of history nor tear from the hearts of the people of Lithuania the ardor and devotion for freedom and independence.

For centuries the Lithuanian people have been in the forefront of man's continuing struggle against oppression. Over 600 years ago the first independent Lithuanian state was organized and through the centuries this small but noble country developed into a leader among the peace-loving peoples of Europe.

However, a strong and vicious neighbor, even then hungry for conquest, forcibly annexed Lithuania in the 18th century and she disappeared from the maps of Europe as an independent state. At the end of World War I Lithuania regained her independence and became a model republic, only to be engulfed in the Red tide of expansionism at the start of the global conflict in 1939.

Yet, the people of Lithuania are neither broken nor discouraged by these stark realities. The fever of liberty and freedom is heightened, not dispelled, by this adversity. Their courage and indomitable will to resist grows stronger with every outrage committed against them by those who seek to become masters of their spirits as well as their bodies. We in America and her countless friends throughout the free world will remain true in our struggle to free Lithuania from the Communist yoke. We shall take courage from the valor of the Lithuanian people. We shall be sustained by their devotion to our common cause. We shall continue the struggle with every resource at our command to overcome the scourge—that godless conspiracy—which would enslave the entire world, and which now has gallant Lithuania within its grasp. We will be steadfast in the position that all peoples can live in peace and harmony and that man's right to be free is not only inalienable, but unconquerable. With the strength of these convictions we have on our side the truly ultimate weapon of the atomic era, free man's faith in God and his own destiny.

People of Lithuania, we salute you on your Independence Day. You have our undying faith and respect, and we reverently pray that God will continue to give you the strength to carry on.

Reclamation Products Do Not Increase Surpluses

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Monday, February 27, 1956

Mr. WATKINS. Mr. President, it is gratifying to me to have a group of distinguished California newspapers recognize the fact that considerable opposition is being raised to reclamation projects largely on phony grounds.

This recognition is given in an editorial which appeared in the February 21, 1956, editions of the McClatchy newspapers of California—the Sacramento Bee, the Modesto Bee, and the Fresno Bee.

Undoubtedly out of consideration for their erring neighbors to the south, these great central California newspapers did not recognize the fact that most of the opposition generated to the reclamation program on a variety of phony issues has come from, of all places, an area which owes its amazing growth in the last quarter of a century largely to Federal reclamation, namely, southern California.

Perhaps the reason why the southern part of California is busily engaged in undermining a program still highly important to the Central Valley of California is that the southern California area has received such tremendous benefits from Federal reclamation, navigation, and flood-control works—undoubtedly more than any other given area in the country—and that the people living there feel there is no need or possibility for any further large-scale Federal assistance.

This relative regional security, obtained by getting the lion's share of reclamation and civil-works appropriations for years, also appears to be reflected in southern California's activities in delaying and thwarting water-resource developments in its own State.

The McClatchy newspapers themselves recently called attention to this fact in a newspaper feature article which charged that southern California interests were seeking to purchase the site for the proposed San Luis Reservoir in order to dominate that project, vitally needed by a Central Valley area where the underground water table is dropping at a rate of 25 feet a year.

I am sorry the McClatchy newspapers did not pursue the subject of this February 21 editorial a little further, and tell their readers in central California what southern California is doing to discredit the entire reclamation program through its vicious and absolutely unjustified attacks upon the Colorado River storage project. This attack has been made by southern California in spite of the fact that California water authorities have publicly stated that the State has available within its own borders sufficient water to supply the greatly expanded needs of the State for many, many years to come.

I ask unanimous consent that the editorial to which I refer be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RECLAMATION PROJECTS DO NOT INCREASE SURPLUSES

One of the cries raised by opponents of western reclamation projects is the question: Why construct these projects to bring more farmlands into production when the Nation already is burdened by staggering agricultural surpluses?

The question becomes apocryphal in the light of a survey recently made by the Federal Reclamation Bureau at the request of Senator ARTHUR W. WATKINS, of Utah.

The answer is that crops grown on lands irrigated by the Federal projects have a negligible effect upon the farm surpluses and the Government's price support program.

As of September 30, 1955, nearly nine-tenths of the Government's investment in price supported commodities was in wheat, upland cotton, corn, tobacco, and rice.

The reclamation projects produce none of the tobacco, less than 2 percent of the national yield of wheat, one-third of 1 percent of the corn, less than 1 percent of the rice and about 6½ percent of the upland cotton. And, of this, only from 5 to 50 percent of the production has been under price support.

Commissioner of Reclamation W. A. Dexheimer points out the great bulk of the agricultural yield on reclamation lands consists of fruits, nuts, vegetables, and seed crops, which are not in surplus, and forage which gives a stable spring feed supply for livestock on the West's 700 million acres of range land.

The opposition to reclamation projects obviously is phony and is raised either out of ignorance of the facts or as a coverup for antagonism to the low cost public power features of the developments.

As a matter of fact, agricultural land is being retired from production by urban and industrial expansion 10 times as fast as irrigation dams are making new lands available for tillage.

Agricultural experts estimate the increase in population will eliminate the Nation's food surplus within 3 to 5 years, or as soon as any irrigation project begun today could be completed.

Beyond that time, these experts figure, the Nation will face a food deficit unless steps are taken at once to bring the potentially irrigable land of the West into production. But this threat is not apt to faze those special interests which profess to see the great reclamation projects only as creeping socialism.

Washington's Birthday Address by Charles H. Silver, President, Board of Education of the City of New York

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, February 27, 1956

Mr. LEHMAN. Mr. President, I ask unanimous consent that a very acle and informative address delivered by Hon. Charles H. Silver, president of the board of education of the city of New York, at the annual luncheon of the Jewish Teachers Association in New York City on February 22, 1956, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. CHARLES H. SILVER, PRESIDENT, BOARD OF EDUCATION OF THE CITY OF NEW YORK, AT THE ANNUAL LUNCHEON OF THE JEWISH TEACHERS ASSOCIATION, WALDORF-ASTORIA HOTEL, FEBRUARY 22, 1956

Mr. Chairman, fellow members of the board, honored guests, ladies and gentlemen, it seemed to me, as the date of this annual luncheon approached, that the Jewish Teachers Association had chosen a day and time altogether blessed by good aspects on which to gather. I am not only honored to bear the greetings of the entire board of education—I also feel a thrill of pride that you have always chosen the birthday of our Nation's founder and foremost defender and that it falls within the week devoted to brotherhood.

The pleasure I feel in appearing before you is heightened by the wholehearted recognition you have earned by your efforts as an organization. The biggest system of public education in the world deserves nothing less than the best teachers. And that is exactly what I confidently believe we have in your association and other groups such as yours.

All of us on the board are constantly inspired by the caliber of our teachers and the vastness of the job you are doing. We know how vital that job has become. We realize, and every man and woman who reads a newspaper or hears a news broadcast realizes, that education has become a kind of fortress that must be kept strong to safeguard our land and our freedom.

I want you to know that every member of the board is behind you every step of the way in your fine work and in the fight to obtain sufficient reward for every teacher in our city's schools.

Let me take a moment to tell you about the people who constitute your board of education. This is not a tribute, but just a kind of inventory, to have you know more intimately the sort of men and women who are working with you and working for you to win the things you want.

You know the names of the nine members who sit on this supreme court of our city's huge educational enterprise. But do you know that among these selfless public servants who perform their tasks without monetary gain are three highly successful attorneys taking time from their very busy practice? One of our members is a dentist. I don't know when he gets to see his patients. Another is a minister of the gospel * * * who feels that he is doing God's own work in serving our city's children. Still another, a prominent accountant whose clients are among the top Wall Street firms, is almost always present at our council table. This is true, as well, of one of the leading insurance men of the city, who is practically never absent from our meetings. I don't know how he finds time for his business, but he is helping every minute to insure the future years of our children.

We have one woman on our board. She is active in every community project, plus the personal project of running her own household. Let me just say now that her sincerity and devotion are an example to us all. I will have more to say of her later.

There isn't a member of the board—and I will certainly include Dr. Jansen, Mr. Gilman, and Mr. Warschauer—who has not been active in the battle for better salaries for everyone in the public schools. And by active I don't just mean now and then with word and voice; I mean day and night with heart and soul. It is a battle we mean to win.

Off the record, I might add that though victory will come in our campaign for adequate teacher compensation, it is not going to come easy. In my time, I've sold millions and millions of dollars worth of merchandise with nothing like the problems and worries that have plagued us from here to Albany. Rest assured of one thing, though: I am sold on higher pay and so is every man and woman on the board. The newspapers are with us; the public is with us—and I do honestly believe that, if help is not forthcoming from the sources to which we have applied, the mayor will find the way. I may be wrong. This is just my opinion, but I give it to you for what it's worth—my money—or perhaps I should say your money—is on our mayor. I don't know how he is going to do it, but I'm pretty sure he will.

The President of the United States recognizes the importance of providing the schools with a well-paid teaching staff. Only a few days ago, our Governor, in acknowledging resolutions adopted by your board of education, stated, and I quote: "I am in complete accord with the determination of the board that the salary schedules for the supervisory and teaching staff should be adequate to attract and retain competent personnel." The mayor of the city of New York has expressed himself again and again as favoring increased pay.

The leaders of the Nation, of the State, and of our city stand together on the importance of our teachers to the survival of our way of life. They are of one purpose in the firm conviction that no one entrusted with so delicate an undertaking as the molding of young minds should approach that task with a faltering of spirit produced by the problem of making both ends meet. We must dignify the profession of teaching. * * * And the best way to do it is to grant it the dollars-and-cents dignity it deserves.

That is why we appealed for an increase in the budget. That is why we made our personal plea to the mayor and to Budget Director Beame. That is the cause that took us to the State capital to speak before the senate and the assembly. I want you to know, too, that I talked personally, privately, and at length with Governor Harriman * * * and a transcript of my own statement before the joint finance committees at Albany has been mailed to each and every legislator. You should know these facts because this is the way your board is keeping faith with the teachers.

Until now, my friends, I've been talking mainly about dollars. Now I'd like to talk about sense. Actually, I am going to talk about the lack of sense in some of the recent actions of our State Department regarding Israel. The headlines have been startling enough; but I have a few facts to give you that carry a shock of their own, not just for us as followers of the Jewish faith, but for all who love the American standards of justice and fair play and do not want to see them dishonored.

Since I am to speak for a few brief minutes about Israel, I might mention in passing that we have had an invitation from the Israeli school system to send a group of our New York high-school students to that country as part of a permanent exchange program. The first few of our students will leave for Israel at the end of March. Accompanying them, as representative of the board, will be our valued member, Mrs. Cecile Ruth Sands, with her graciousness and concern for the peace and progress of the world our children will inherit. I think you will agree with me that, in sending forth this wonderful woman and these selected young people from our schools, we are exporting far better merchandise to Israel than our State Department is shipping to Arabia.

You don't need me to tell you what a sorry mess is being made of our whole mixed-up Near Eastern foreign policy. Arms and money have been forbidden to the little state

of Israel, imperiled by the overwhelming power of its Arab neighbors, who are fortified by jet planes, tanks, guns, and submarines of Communist origin. That was bad enough. But now we can no longer say that all of the deadly weapons aimed at Israel's heart are of Communist origin. The tanks that were loaded at a Brooklyn pier may one day shed Jewish blood. That's what we're shipping to Arabia—packaged death, wrapped in lies, to destroy the State of Israel.

And let me tell you something I have learned about Arabia.

My dear friend, Dr. Israel Goldstein, has furnished me with the exact wording of a letter sent to American firms by their Arabian customers, and I quote:

"We very much regret to inform you that our government has duly published a notice announcing that any importers in Arabia must not be permitted to import any kind of goods from any Jewish firm in the world.

"Further, they have listed you as being Jewish and your firm as a Jewish firm. As these steps are taken suddenly against you, we are obliged to cable you to stop the shipment of our orders.

"We ask you to let us have full particulars as to what faith your firm belongs to, Jewish or Christian. Until we have full particulars, we are obliged to stop our business with you."

The same letter was received by an exporter of wheat, flour, and textiles whose business with Arabia ran about $2 million a year. Under the terms of the International Wheat Agreement, the United States Government pays 70 cents for each bushel of wheat shipped, as a subsidy to American exporters. The effect of this Arab boycott, therefore, in realistic terms, was that our own Government made grants to Christian firms while Jewish firms were excluded from the benefit of these grants.

The Arab boycott has been extended not only to firms that have Jewish ownership, but to those which employ Jews or have Jewish stockholders or branches in Israel. More than that, airlines have been compelled to dismiss Jewish personnel if their routes cross Arab countries. Neither Iraq nor Arabia permit Jewish passengers, not even if they are Government officials or members of our Armed Forces, to land on their territory. As a matter of fact, our Government has submitted, without protest, to the arrogant Arab demand that there should be no Jews in the military or civil personnel which are sent to that country.

Here is a situation sickeningly reminiscent of Nazi techniques. Reminiscent? It is a malodorous fish from the same rotten barrel.

Consider this. The Jewish taxpayer in the United States contributes to the arming of these countries. They mark us as second-class citizens. They stamp us as enemies. They don't want us in their territory and they won't do business with us or anyone who does do business with us. But our money goes into the subsidies that our State Department uses to send them shiploads of tanks.

This is a matter of tremendous impact upon the fate of humanity and the preservation of freedom. There is more than the future of Israel at stake. It is not a question of who sells planes to Egypt or tanks to Arabia. It is a question of how long civilized people will remain silent while these merchants of death barter today for the means to destroy Israel's tomorrow.

It does not matter whether you are a Zionist or not; this much is true:

If there is one country in all the world which, in 7 short years of precarious existence, without fixed boundaries, with few friends around her and not a day of peace, has shown a matchless zeal for creative effort and constructive accomplishment, that land is Israel. Can we afford to let her down? Can the world afford to let her down?

Huddled into a narrow, sandy strip, Israel has earned its integrity among the nations. Hounded and beaten about the globe for centuries, extended little compassion and less protection by law, these pioneers have survived their trials as a sword survives the flame in which it is tempered. Here, on a desert they have made to bloom, some of our brothers have emerged at last from their endless wanderings, resolved to preserve their own nation and ready to die in its defense.

They deserve the armed assistance of every other freedom-loving people in protecting their borders against attack.

We cannot forsake them now. Civilization cannot forsake them. If Israel goes down, then you and I go down, and down go the honor and decency of all mankind.

The things of which I have spoken, I felt that I should share with you because we share the same faith. You teach the principles of humanity, so I felt we could discuss the threat to those principles.

I have been glad of this privilege of expressing the thoughts of my heart to you who have given so much thought and so much heart to the instruction of the children entrusted to your care. I am proud and deeply grateful that you have shared this precious time with me.

The public schools of our city are the richer for your presence and I hope you will give me the pleasure of appearing before you many times in the years to come. God bless you for your good work—and thank you for your kind attention.

Freedom's Foundation

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, February 27, 1956

Mr. HILL. Mr. President, as we know, Dr. Frederick Brown Harris, Chaplain of the Senate, writes a column entitled "Spires of the Spirit," which is published in the Washington Sunday Star. The column published on yesterday under the title "Freedom's Foundation" is so timely and outstanding that I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

[From the Washington Star of February 26, 1956]

SPIRES OF THE SPIRIT

(By Dr. Frederick Brown Harris)

FREEDOM'S FOUNDATION

Our America is in mortal peril. The threatening danger is not simply in a foul conspiracy from the outside to snuff out freedom's glorious light. The graver peril is a disease which, if not checked, will fasten itself fatally upon the body politic. Its chief symptom is to make the victim look in the other direction from that in which a deadly enemy plots to strike. Another symptom is the deluded insistence on business and pleasure as usual. Avowed enemies have sworn by their false gods to rip to shreds the very fabric of our boasted liberties. Yet, oblivious to a growing preponderance of might by those who respect nothing but physical strength, our Republic of the free, the one bastion in all the earth which has the resources to make tyranny tremble and tumble, debates how much defense it can "afford." In the encroaching shadow of the Red menace, the marriage of freedom to adequate defense is denied and refused unless the fair Columbia can go on living in the lavish style to which she has been accustomed.

One of the dire signs of this disease, "complacency," which Toynbee tells us has killed more than a score of civilizations, is blindness to the fact that when a fully prepared bully system is in a position to say "do our bidding or else," a hothouse-nurtured economy will be smashed in the doomsday its foes are plotting. It was purposely and rightly a colossal understatement when, at Valley Forge, on Washington's birthday, the head of the Joint Chiefs of Staff of the United States, solemnly and with apparent conviction, declared, "Americans are not doing enough to protect their freedom." He knows full well that those responsible for the actual striking power of each branch of our armed services are crying "More! More! For safety's sake, more!" If the stark truth of the present situation, threatening the very survival of America, were known it would be enough to blanch every patriotic cheek and to raise a deafening demand from ocean to ocean, "Arm to the teeth." It is imperative now that we harness our total strength which, once mobilized, would be invincible. There is yet time—but not much. The sands of that opportunity for impregnability are running out. If America is not thus alerted, one does not have to be a congenital prophet of gloom to discern the handwriting on the wall, "the refusal of denials and the insistence on indulgences today will be the rope by which Freedom will be strangled tomorrow."

At Valley Forge, where Freedom's Foundation, with thrilling ceremony, made its annual awards to those who are defending the American way of life, the contemporary danger was faced, not only of determined foes without, but also of the deterioration of the democratic tradition within. It ought to be added that the eyes of the head of America's Armed Forces were not just on the gathering might of our enemies under the hammer and sickle. For this, too, he said, "American opposition to Communist aims must be more than military strength to resist aggression." On the very day these words were uttered at Valley Forge by this voice from the Pentagon, new defenders of the cause for which Washington and his troops braved peril and pain had been summoned from all parts of the Nation to be awarded the Freedom Medal with the inspiring imprint of the Father of His Country, sword aside, kneeling in agonizing prayer on the frozen ground of that testing winter, a spot hallowed forever.

These new soldiers of freedom, thus recognized by the Foundation, are fighting with tongue and pen and brush and deed. The humblest citizen of this dear land of liberty may be designated by impartial judges, as well as those whose names are in Who's Who, for some effective blow struck for liberty. What a setting for such a recognition, as Freedom's Foundation sounds the trumpets to the imperiled Nation. For there at Valley Forge one gazes almost incredulously at that flimsy tent in which Washington himself risked his very life as 3,000 of his men died around him that awful winter. This tent, exposed to the fury of the elements in the dead of winter, he chose as his habitation instead of the stately Mount Vernon he loved, where, in warmth and comfort, he might have been the pampered lackey of the oppressors. Here, Freedom's Foundation asks of Americans, not what they want from freedom, but what they are willing to give to it that it may not perish from the earth; not what they are against, but what they are for. This inspiring channel of patriotism reminds all under the Stars and Stripes that the question of questions in this grim day is not "Do you live in a democracy," but "Does democracy live in you."

Freedom's Foundation, nonpartisan and nonsectarian, is saying to very American, "The foundation of all we have is God"; and upon its banner is the great affirmation of Archbishop Temple, "The great and profound difference between Christian civilization and the kind of civilization which the Communists are aiming at lies in our affirmation that the primary fact of the world is God—that each individual is the child of God, that at the root of his being he is the child of God, and that he is a child of God before he is a citizen of any national community."

And so the bugles are blowing for the greatest battle of the ages—for the bodies, the minds, the souls of men. The moral, spiritual, and material arsenal of this global struggle is America. The fight is on, the issues are momentous, the odds against us are terrific. Henry IV of France, in the 16th century, wrote a letter to Crillon, his friend, who had failed to show up for a crucial battle. This is what Henry said to him with biting scorn: "Go hang yourself, brave Crillon. We fought at Aques and you were not there." Of any American who, in this day of desperate battle, is bent on personal success or pleasure—the most damning thing that could be said to him or of him would be, "We fought in America for the survival of freedom and you were not there."

America's Debt to France

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, February 27, 1956

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter entitled "Debt to France," written by Charles Parmer, of Alexandria, Va., and published in the Washington Post and Times Herald of February 24, 1956.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEBT TO FRANCE

"George Washington's News Scoop," a story appearing in the February 19 American Weekly, inadvertently gives the false impression that the French were our deadly enemies as this Nation was approaching birth.

The feature is based on the Journal of George Washington, which we are told "has just been put on display in reconstructed Williamsburg."

The contents of that journal have been known to historians for decades. It merely highlights one youthful episode in a great life: When 21-year-old George Washington was sent by Colonial Virginia's Governor Dinwiddie to warn off the French from disputed Ohio lands which the latter claimed by right of prior exploration.

The story gives not one pleasant thought about the French: A poor disservice to history, especially during the Washington birthday season. For it was the French Army—sent by Louis XVI to aid Washington in his fight against England for independence—which held the first Washington birthday celebration on American soil. That was in 1781 at Newport, R. I. The French General Rochambeau wrote to the Commander in Chief of the Allied Forces in North America:

"Your Excellency's birthday * * * we will celebrate it with the sole regret that Your Excellency is not a witness to the gladness in our hearts."

After the allied success at Yorktown the French wintered at that same Williamsburg, and in February 1782, Rochambeau wrote to Washington, "Tomorrow is Your Excellency's birthday anniversary. I propose to celebrate it with a great ball which I give on that account."

If one must pick an isolated episode and blow it to full-page dimensions, fairness calls for a line summing up the overall truth; which in this instance is that it was the French who, 20 years later, answered Washington's plea and came to his side in the American Revolution when he wrote to Col. John Laurens in Paris, "we are at the end of our tether."

The public might also be told of Jules Jusserand's declaration that France joined in our fight against England because of "enthusiasm for the Americans, not hatred of their enemies," a statement borne out by diary notes by Gen. Matthieu-Dumas and others.

In fairness to England, it might be recalled that not all scowled at us with Sam Johnson's venom. Quite a few leaders in Parliament favored the Colonies against the Crown's taxation demands. There was William Pitt (later Earl of Chatham) joined with Shelburne, Barre, Camden and others, who in a forceful speech stated: "The Americans cannot be bound to pay taxes without their consent * * * I rejoice that America has resisted."

As for Washington's view of the French, one need only recall his thanks to God at Valley Forge when he learned of the French-American alliance being signed—Lafayette was as a son—Chevalier de Chastellux a warm friend—and in one of the letters Washington wrote to Rochambeau following peace, you find this one, dated February 1, 1784: "We have been contemporaries and fellow laborers in the cause of liberty, and we have lived together as brothers should do in harmonious friendship."

We may be fair to France, while still acclaiming our English heritage.

CHARLES PARMER.

ALEXANDRIA.

Electoral College Outmoded

EXTENSION OF REMARKS
OF
HON. PRICE DANIEL
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, February 27, 1956

Mr. DANIEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Electoral College Method of Electing the President Is Outmoded," which appeared in the Baytown Sun, of Baytown, Tex., of February 15, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ELECTORAL COLLEGE METHOD OF ELECTING THE PRESIDENT IS OUTMODED

On the United States Senate calendar for early consideration is Senate Joint Resolution 31 proposing an amendment to the United States Constitution that would abolish the electoral college method of electing the President.

It appears now that this resolution has solid backing in both Houses of Congress, thus indicating a favorable vote when it is called up, probably sometime this month.

The resolution calls for abolition of the electoral college and the unit rule system of counting electoral votes. These would be abandoned in favor of a method whereby the President and Vice President are elected by distributing the popular vote cast for a given candidate according to the proportion which that vote bears to the total vote cast and the number of electoral votes available to a given State.

It is evident that the framers of the Constitution, for the most part, were definitely opposed to electing the President by direct popular vote.

During the Constitutional Convention, George Mason, of Virginia, observed that "It were as unnatural to refer the choice of a proper character for Chief Magistrate to the people, as it would be to refer a trial of colors to a blind man."

It can be seen that the convention delegates distrusted the ability of the average citizen of that day to decide questions of such great gravity. Moreover, the discussions of the convention reveal that the delegates did not believe it was possible for a voter in one State to know anything about the ability or character of public men in the other States scattered along our 1,500-mile shoreline.

In addition, those representing the smaller States believed that popular election would somehow increase the power and prestige of the more heavily populated States.

These considerations, after probably the most prolonged debate of the Convention, led to adoption of the indirect method of electing the President. Under this plan the States were to select well-informed public men who were to look the field over and elect a President and Vice President.

In selecting these electors, each State was left free to use any procedure it might see fit to adopt—direct popular election of the electors on a general blanket ticket (the procedure used in all States today); or by single member districts; or by the vote of the legislature itself (a procedure which all the States had abandoned by 1860).

The electors so selected by each State should meet, it was decided, on a given date at a designated place within the State and vote by ballot for two persons. They were required to send a list of all persons voted for and the number of votes for each, to the President of the Senate, where, on a date fixed by law, they were to be opened in the presence of the two houses and the vote counted.

The person having the largest number of votes was to be declared President if such number were a majority of all votes cast. The runner-up should be declared Vice President whether he had a majority or not (later modified by the 12th amendment).

This, then, is the system, which, modified by the 12th amendment, has continued in effect up to the present time. It has retained the original form, even though all reason for this form has long since disappeared.

Sinec the constitutional amendment proposed in Senate Joint Resolution 31 has as one of its objectives the correction of certain evils in our present method of electing the President, the need for reform is highlighted by a discussion of both the obvious and latent defects inherent in the electoral college—unit rule system of choosing our President.

The indictment that can be drawn up against the present procedure is an impressive one. In general, there are three principal counts in this indictment:

1. The evils arising from the retention of the office of presidential elector;

2. The method of selecting a President when no candidate commands a majority of electoral votes;

3. The defects and dangers which derive from the so-called unit rule method of crediting all of a State's electoral votes to the plurality candidate.

A Few Flyspecks

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Monday, February 27, 1956

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have incorporated in the Appendix of the RECORD an editorial appearing in the St. Louis Post-Dispatch of February 19, 1956, entitled "A Few Flyspecks."

There being no objection the editorial was ordered to be printed in the RECORD, as follows:

A FEW FLYSPECKS

Former President Truman writes in his memoirs that Adlai E. Stevenson made a major mistake as the 1952 Democratic presidential nominee. It lay, he says, in seeming to back away from the Truman administration and in appearing to accept even the Republican charge that there was "a mess in Washington." The Republican corruption charge, says the ex-President, involved only "a few flyspecks on our Washington windows."

What the former Illinois Governor did in the 1952 campaign was all he could in reason do. He supported the sound foreign policy and major domestic policies of the Truman administration to the full. But, as the reform executive in Illinois who cleaned up after the Dwight H. Green scandals, he obviously could not endorse the Truman administration scandals. And they were scandals, whatever Mr. Truman may now say.

If the former President thinks these were only flyspecks let him remember that beginning in March 1951 the Post-Dispatch disclosed that Federal income tax cases involving fraud were fixed by influence wielders who worked with faithless officials in the Internal Revenue offices.

That these scandals involved many cities among them St. Louis, New York, Boston, and San Francisco in addition to Washington.

That in 1 year 63 percent of the income tax fraud cases approved for prosecution by heads of intelligence units throughout the Nation were killed by the Bureau's regional counsel or by the Justice Department.

That a whitewash report was made after a secret investigation of the office of the then collector at St. Louis, James P. Finnegan.

That the coverup in process was so revolting that Chief Judge George H. Moore, of the Federal district court, a Democratic administration appointee, called for surgery "to the bone."

That 8 district revenue collectors resigned under fire or were dismissed and that 1 of them, Finnegan, was indicted, tried, convicted of misconduct in office, fined $10,000 and sentenced to 2 years in prison.

That close to 400 Internal Revenue officials or employees were either fired or forced to resign by the Truman administration itself.

That among those who resigned were Charles A. Oliphant, chief counsel in charge of regional attorneys who passed on prosecution of tax frauds; George J. Schoeneman, head of the bureau, and Daniel A. Bolich, first assistant, who was convicted of a $160,000 tax-fix conspiracy.

Outrageous as was this record of corruption of the Federal tax gathering forces, the above recital is hardly more than a start on scandals of the second Truman administration. For if the former President looks it over he will also find:

That William M. Boyle, Jr., then chairman of the Democratic National Committee, resigned under fire for being on the payroll of the American Lithofold Corp. whose business dealings were largely with the Federal Government.

That the then Attorney General J. Howard McGrath was dismissed under fire as was Theron Lamar Caudle, assistant attorney general in charge of tax prosecutions.

That the Department of Justice under Tom C. Clark so limited the FBI that the latter's investigation of the 1946 vote stealing in Kansas City became a waste of time and money.

That after the Jackson County grand jury proved itself more alert to ballot corruption in Kansas City than the Federal authorities, the vault was opened and the evidence stolen.

That from that night to this day no one has ever found what became of the evidence.

Harry S. Truman can take pride in foreign policy decisions that he made in the White House. He can also take pride in many of his domestic policies. But he fools no one when he dismisses as mere "flyspecks" the scandals which he himself was forced to move against.

The Truman scandals were many, ugly, and a disservice to democracy. Nothing whatever will alter the facts.

Use of Food Supplies for Emergency Needs

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 27, 1956

Mr. HUMPHREY. Mr. President, I wish to call to the attention of the Senate an interesting and imaginative proposal sponsored by the Federal Civil Defense Administration entitled "Back to Grandma's Pantry." This proposal was brought to my attention through an article published in the February 5, 1956, issue of the Denton, Tex., Record-Chronicle. This particular project was put into operation on a statewide basis in Arkansas by Mr. Bill Rosch, Regional Public Affairs Officer of the Federal Civil Defense Administration.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SURPLUS FOR EMERGENCY—GRANDMA PANTRY IDEA DEVELOPED

While Congress and farm leaders are looking for ideas and methods for disposing of surplus food, a practical approach was developed and put into operation on a statewide basis in Arkansas by Bill Rosch, regional public affairs officer of the Federal Civil Defense Administration in Denton. The theme of Grandma's Emergency Pantry, a project sponsored by the FCDA, calling for a 7-day supply of food to be kept on pantry shelves for emergency purposes. Rosch suggests the emergency stock be made up of plentiful foods which are produced in the State.

PLENTIFUL FOODS

Beginning in October several conferences were held by Rosch with State officials, civil defense leaders, and food producers in the State of Arkansas and particularly with the people who raised rice and fruits, since those items were in surplus in the State. As a result of these conferences, the plentiful foods idea was incorporated into the Grandma Pantry Idea. Arkansas was the first State and Little Rock was the first city in the United States to sponsor this joint program.

The program was officially launched by Arkansas Governor, Orval Faubus.

"I strongly urge all persons and families in both urban and rural areas to maintain at all times for current use an average, normal 7-day food supply for emergency situations, whether the result of natural or man-made disasters which cause widespread disruption of normal living," the governor said.

PRESS COOPERATES

One of the highlights of the week was developed by Mrs. Christine Unger, director of women's activities from the Denton office, who arranged, with the cooperation of Mrs. Faubus and Mrs. Mann, wife of the mayor of Little Rock, a viewing by press, radio, and television media of the civil defense emergency food pantries. Arkansas' plentiful foods were featured in the homes of the governor and the mayor of Little Rock.

Food stores in Little Rock cooperated with the Arkansas State office of civil defense and FCDA in promoting this program by setting up the Grandma Emergency Food Pantry displays and suggested food items that should be put in the 7-day pantry.

MORE FOOD SOLD

One Little Rock food store executive, commenting on Rosch's plan, said, while it was too early to determine the full impact of the program, a survey of his food stores during the first 3 days of Grandma's Emergency Food Week, showed an increase in sales in rice and dried foods, two of the items in plentiful supply in the State. When the program leaves Little Rock, it will move throughout the other areas in the State. Owen Payne, Jr., State director of civil defense, will continue to handle the plan in cooperation with State and civil defense officials.

Mrs. Faubus and Mrs. Unger will appear on a national radio hookup later this month describing the Arkansas plentiful food theme.

After seeing the plan in operation Rosch said, "the success of this program has resulted from the cooperation we received from the State civil defense office and the Governor's office and food producers and store executives in Arkansas."

"It is hoped that his plan can be further developed and made available to other States desiring similar operations," he said.

Bipartisanship in Foreign Affairs, a Fantasy

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including an article by a former Member of the House, the Honorable Samuel B. Pettengill, which appeared in Human Events for February 18. Mr. Pettengill calls the turn on an overworked phrase "bipartisanship" in foreign policy.

Mr. Speaker, I shall at a future date have more to say on this subject of bipartisanship.

The article follows:

BIPARTISANSHIP IS SUBVERTING THE CONSTITUTION

(By Samuel B. Pettengill)

"The consent of the governed" is the bedrock of our form of government. It is being dynamited and crumbled by this new and alien fetish called "bipartisanship."

All governments "derive their just powers from the consent of the governed." That is the one great affirmation in the Declaration of Independence with respect to government itself. And the Declaration is the spirit and the soul of which the Constitution is the letter and the page, as the Supreme Court has said.

The consent of the governed requires a choice between alternatives. Consent is based on access to the facts, followed by free speech, free press and a vote. The "governed" can consent or not consent. They can make the minority today, the majority tomorrow. They can be free and stay free as long as "the consent of the governed" is daily fought for and preserved.

No one will say that the laws which govern the Russian people are based on their consent. They have but one party and therefore no choice. Their one party is hard to distinguish from the prevailing "bipartisanship" so far as foreign policy is concerned.

In the face of the threat of world domination by the bosses of the Kremlin, the foreign policy of Roosevelt, Truman and Eisenhower—whatever it is at any time—has been protected by the hush-hush of "bipartisanship." Whatever the Executive does in foreign policy, whether right or wrong, it is not to be disagreed with. We can "be lied into World War II" and our sons must go. We can be hurled overnight into the Korean war by one man, without any say-so by Congress, and our sons must die without debate. Neither they, their parents, nor their Representatives in the National Legislature had any voice in the decision.

Such is our "bipartisan foreign policy," the huge dimensions, cost and appetite of which are engulfing domestic policy as a python swallows a rabbit. Indeed, as a part of its propaganda, the State Department, in an official bulletin, with a foreword by President Truman, said, "There is no longer any real distinction between 'domestic' and 'foreign' affairs." Bipartisanship in foreign affairs, therefore, leads inevitably to bipartisanship in domestic affairs and the one-party state, even if the party has two labels.

The present "brink of war" hassle gives the appearance of a real division on foreign policy. But it concerns details only—full of sound and fury, signifying nothing more than who holds office. It reaches no fundamentals. The leaders of both parties are for global busybodyism. They will not debate a total overhaul of how we got into the mess we are in, or how to get out. The patriotic groups all over the country who are demanding such an examination have no spokesmen except themselves. Let them speak up.

How this degradation of the consent of the governed came about, and how our constitutional Republic is being subverted into a major province of a world government by President, Pentagon, and foreign politicians is well but briefly told in a small book by the late Garet Garrett, entitled "Rise of Empire." But all the secret manipulations and conditioning of the public mind calls for another Gibbon to some day write a history of the rise and fall of the American Republic unless a stop is called—soon.

Such a history cannot be written now. For much of the sordid story is still marked "classified," and kept from historians who have the honesty to be critical. We can only guess at the pressures put on editors, publishers, Congressmen, Senators, manufacturers, bankers, exporters, professors, writers, teachers, clergymen, and others to swallow this notion that bipartisanship in foreign policy is patriotic, and shut their mouths.

However it was done, it is plain that behind the scenes, powerful hands pulled the strings that moved the puppets of public opinion. Without knowing how we got there, we now find ourselves committed by dozens of treaties and executive agreements to again go to war, when ordered to do so by one man.

A wrangle over some dim boundary line separating the goat pastures of rival tribesmen is now an international incident of very grave importance. These incidents, constantly recurring, become the daily bread of headline writers and radio commentators. Thus the public mind is kept in a constant turmoil which precludes a calm discussion of where we are and how we got there.

We do know that patriotic leaders of both parties, such as Lindbergh, Wheeler and Nye, who remained true to the historic policy of free debate and honest opposition, were smeared and driven from public life.

Although Dr. Samuel Johnson wrote caustically that "patriotism is the last refuge of a scoundrel," and George Washington, the purest patriot we ever had, warned "against the insidious wiles of foreign influence," we need not pass a moral judgment on all the authors of bipartisanship. Many of them were good men who became ensnared in the propaganda net which they helped to weave for others.

We need only, here and now, to see how bipartisanship is subverting the Constitution.

It made sense to say, as we did before we got into this series of world wars that "politics stops at the water's edge." That was when policies also stopped there. That was when American foreign policy was to defend our shores and preserve our independence from foreign conquest. But now, when this bipartisan cabal has involved us in every jawing match between diplomats all over the globe, this old saying has become a shibboleth used by cunning men to shut off debate on whatever they are planning to do.

To the shout of this slogan, the United Nations Charter was jammed through the Senate—with little discussion and no reservations while the war fever was on—before we used the atom bomb on Japan. Its promoters took no chances on free debate in a calmer time.

Today, our foreign policy affects domestic policy, in our most vital concerns. It embraces taxes, debt, inflation, high prices, wage, rent, price, and agricultural controls; import and export trade; the peacetime conscription of our sons; the right to travel and do business abroad; the allocation of the materials, money, and credit with which domesic business is done. It is so draining the taxable wealth of State, county, city, town, and village that they feel they cannot build the needed roads, bridges, hospitals, or schools, or pay thier teachers without Federal aid from the Government that impoverishes them. Hence, the leviathan on the Potomac is consuming State and local self-government and breaking down every substantial barrier our fathers so painfully erected to keep government limited and people free.

Yet, whenever the exercise of any of these ancient domestic rights is claimed to impinge on the undisclosed plans of the architects of foreign policy and world empire, the cry goes up, "Don't tie the hands of the President. Don't let the President down before foreign politicians by the Senate rejecting any agreement he negotiates with them. The honor of the Nation is at stake!

"Take from Congress its constitutional power and duty to declare war, or to refuse to declare war. That's obsolete. Under the NATO and other treaties, Congress has already abdicated its power to declare war. Don't let any Congressman question the State Department or the Pentagon on how much money they say they need. They're experts, aren't they? What do Congressmen, or the people know about such matters."

Such are the words we hear from the bipartisan bloc, many of whom plan to get rich from the tens of billions of dollars of Government loans, gifts, and bribes which pour across the seven seas from the Pentagon and other executive agencies.

The need to spend billions for national defense now, is of course due to the fact that the Bolsheviks, and "good old Joe," became a world menace largely because a previous administration demanded secrecy, and no criticism of its colossal blunders that lifted Stalin into Hitler's saddle. Despite the secrecy, many patriots like ex-President Hoover attempted to warn against cuddling up to "good old Joe." But they were denied access to the public mind by the bipartisan clique in Government, publishing houses, editorial offices, radio and television.

There is surely something very odd about a bipartisan foreign policy which now feverishly seeks to rearm Germany and Japan as our trusted allies against the freedom loving country which Roosevelt told us Russia was only 2 years after he had told us that it was a dictatorship as absolute as the world has known (when it attacked Finland). Yet the present administration has sought to maintain the historical blackout against any real investigation of Teheran, Cairo, Yalta, Potsdam, or Pearl Harbor.

The reputations for almighty wisdom of even dead politicians must not be called in question. And so we march our dreary and bloody way through the Chinese maze of universal meddlesomeness that is the thing of which the bipartisan clique is most proud. This clique is determined to reduce Congress to the impotence of a Nazi Reichstag, or a Russian Supreme Soviet.

As a republic is transformed into a world empire, the following steps occur:

The executive power of government becomes dominant; domestic policy is subordinated to foreign policy; the military mind gains such ascendancy as to intimidate the civilian mind; a system of satellite nations is set up; and finally, we are told that it is "our turn" to save civilization and take over "the white man's burden" from the palsied hands of previous empires which failed on the job.

All this we see. It is promoted by a flood of taxpaid pamphlets, radio discs, TV jingles, and canned speeches from the State Department and the United Nations into every school, church, kindergarten, and civic organization. As a task force of the Hoover Commission has said, "Free institutions cannot long survive when the vast powers of government may be marshaled against the people to perpetuate a given policy."

When the difference between Democratic and Republican bipartisans becomes little more than that between Tweedledee and Tweedledum, the voters twiddle their thumbs and stay home on election day. In the 1954 elections, out of 100 million eligible voters, 58 million stayed at home. Bipartisanship and general apathy are close relatives.

Every world empire from Rome to today has suppressed divergence of opinion at home in order to show abroad that it could engage in its external ventures unhampered. Empire requires a "united front."

If the Executive says the immigration gates should be opened to admit whatever number or group he supports, Congress is blackjacked into silence by the bipartisan cabal. If he says so many billions of dollars must be given to Panhandlia, or Upper Wemilkyou, any Congressman who questions either the wisdom or amount is charged with a lack of patriotism or of human sympathy.

He lacks neither. He knows that if any country will establish a stable government that respects property rights, private American capital will pour into it, as it has always

done, for example, into Canada and Venezuela. He objects, however, to taking our money by force—by taxes—and giving it to selected foreign politicians, many if not most of whom are Socialists or even Communists, such as Tito of Yugoslavia.

He doesn't think much of sending billions abroad to buy friends. He doubts if many of the recipients will stay bought when the heat is on. He recalls the billions we gave to "good old Joe." He knows that the proposed Covenant of Human Rights implies that governments have the "right" to confiscate our property "loaned" to foreigners.

But a Congressman who says these things is in for a rough time from the bipartisan cabal. There are too few such Congressmen left. And so "the control of the purse," the final bastion of a free people, passes from the hands of their chosen representatives whom they can hire or fire, and into the hands of a vast executive bureaucracy, in Washington and the United Nations, not chosen by them nor dischargeable by them.

With the people denied by the White House from any opportunity to pass on the merits of the Bricker amendment, the President—any President—together with foreign politicians, who have their own axes to grind, becomes the superlegislature of the American people with the power to make executive agreements that become "the supreme law of the land," without reference to a single Senator or Member of Congress.

When Congress surrenders its right and duty to debate, uphold or reject foreign policy, it betrays its trust and abdicates government "by the consent of the governed."

There is a small handful of men of both parties still left on Capitol Hill who see how bipartisanship is subverting the Constitution, and have the courage to say so. May their tribe increase as a result of the coming elections. It will, if the American people wake up to what is at stake. What they stand to lose is all they have.

Americanization Award

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, February 27, 1956

Mr. MUNDT. Mr. President, whenever and wherever American history is written about the decades of our development following 1930 down to date, the story of the infamous activities of Alger Hiss and the intrepid disclosures of Whittaker Chambers is certain to be recorded. Any interpretation of American history of this era which overlooked comment and reports on these epochal activities would, indeed, be omitting some of the strangest and most significant events of recent history.

Whittaker Chambers now farms, peacefully and I hope profitably, a small cluster of placid acres in the neighboring State of Maryland. He has paid the price of his earlier days of perfidy and his courageous willingness to disclose the procedures and personalities of the espionage ring the Russian Communist agents were operating in our Government during the 1930's and the 1940's has done much to tighten our internal security and to give greater hope for permanent peace to all Americans. He has followed and supplemented his testimony before the FBI, before the grand jury, before the courts of law, and before congressional committees by significant magazine articles and by one of the great books of our times—Witness.

I feel confident, however, that when all is said and done that both Mr. and Mrs. Chambers must derive maximum pleasure and reward from the fact that their children are growing up to be fine, patriotic, typical young Americans. The following article from the American Weekly points up the encouraging fact that Ellen Chambers—the daughter of the Chambers—was awarded a certificate of honor for a most persuasive article on the blessings of Americanism. For the reference of history, I now call attention to these current pumpkin papers from the gardens of Whittaker Chambers.

I ask unanimous consent to have printed in the Appendix of the RECORD, the article published in the American Weekly.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE NEW PUMPKIN PAPERS

(By William Engle)

Bright zinnias and asters nod this fall in a hilltop flower garden that used to be a pumpkin patch known around the world. It was Whittaker Chambers' pumpkin patch. Now it is Ellen Chambers' garden. She is his 17-year-old daughter. There in this pastoral corner of western Maryland she has tended the flowers and crops and cattle. She has tended them as diligently as ever her father tended the pumpkin shell where he hid his microfilm—the pumpkin papers, which helped to send Alger Hiss, former State Department official, to prison for committing perjury by denying under oath that he had given Chambers Government documents for the use of a Communist spy ring.

She's done more. While she's been busy helping with the farm work, some stirring thoughts have been crowding each other in her mind and a while ago she put them all in order in an essay.

It's an avowal of loyalties and ideals, hopefully symptomatic perhaps of youth's deepest reflections in a troubled time, and it won first prize, a certificate, in a contest conducted by the Moleville Farm Post, Veterans of Foreign Wars, in the Westminster, (Md.) High School.

Here, then, are the new pumpkin papers, by the thoughtful daughter of an American who made a grave mistake—and atoned for it by aiding his country at a time when his act must have required that quality of courage which, in the words of Ellen Chambers, helps to make her country unconquerable.

"What does my country mean to me?" she wrote, to start the essay. "What chords do those two words strike in my heart—my country?" she asked in the composition which she called What America Means to Me.

Her country, she declared, meant to her a place free, beauteous, unconquerable, wealthy, and peaceful.

This was the idea she developed slowly, often laying the writing aside to do the tasks she's used to in the neat farmhouse, in the fields among the Guernsey cattle and Shropshire sheep, in the hayfields, and in that sunny flower garden.

She explained a little about this—a forthright, serious girl, friendly and gracious.

"I don't have to go in for athletics at school," she said. "I get the exercise here.

"See that yearling over in the barn looking at us right now? That's Pipe Creek's Jasmine, named after Pipe Creek, our farm. She's my favorite, but it takes time to look after her. It's one thing and another."

She knows farm animals and she has won many 4-H honors. She's been president of the Carroll County Dairy Club, too, and president of her high school's honor society. This fall she expected to enter Smith College at Northampton, Mass. Her essay says: "My country is a symbol of freedom for all downtrodden peoples. Freedom for which great men gave their lives to become even greater for their sacrifice. Freedom of living, thinking, and expressing. Freedom to rise by merit, not on blood alone. Freedom of morals and ideals. Freedom of worship; freedom of self-government.

"My land is a beauteous one. Natural beauty abounds. * * * We have beauty for the heart of the workman in the whirr of the wheels, for the musician in melody, for the scientist in new discovery, for the farmer in self-owned and cultivated acres.

"When men fight with great courage because they know that they are really fighting for themselves, for the preservation of their livelihood * * * for freedom, is that country conquerable? If that country is backed by a foundation of brave, loyal men, full of spirit, can that country die? When the women of that country are in the fight, too, giving their all for freedom, can that country lose out and perish? No. Then my country is unconquerable because the spirit of its people is unconquerable.

"Wealth my country has, too—her people have the highest living standard in the world. She has a wealth of inventions, wisdom, science, culture, and knowledge. Wealth in good men, in new ideas, in richness of life, in fame, in strength, in power, in resources, in morality, in reputation, in personal liberties. * * *

"Our Nation is a crucible in which the ores of all nations are melted and stirred until they are completely merged into one. A nation where past histories, culture, theories combine to make a stronger nation. We have grown from the experiences of others. We caught the torch and held it high where it burns with the renewed vigor of youth.

"Here there is a composite of different personalities, likes and dislikes, opposites, and strangers working as brothers. * * * We are intermingled. * * * We are the melting pot of the world, a fatherland for all people. * * *"

That's the voice this fall from the pumpkin patch—Ellen Chambers speaking, it seems, for the youth of America.

Hardships in Agriculture

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, February 27, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from one of the leading farm women in my State dealing with the farm problem.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WAHPETON, N. DAK., *February 11, 1956.*

DEAR SENATOR LANGER: My home is on a farm a short distance from Christine, N. Dak. My parents have lived on this farm for 29 years. When they first moved on this farm it was extremely run down. My parents took this farm over with a mortgage on it in 1928. They lived through the horrible de-

pression and by hard work, perseverance, and decent prices they were able to build up the farm until today it is one of the outstanding farms in North Dakota. (You may confirm this fact by contacting the Lums, who have the newspaper in Wahpeton.)

Then came Mr. Benson with his new farm ideas. As a result, my parents, who should be able to retire and live on the farm in their old age are planning to move the buildings to Fargo for resale, and dispose of the land for what they can get.

Are you people in Washington going to let Mr. Benson run the farmers off their land, or are you and smart people like you going to run Mr. Benson out of Washington.

Sincerely yours,

MARCIA BERSETH.

Promotion of Farmer-Labor Conflict by Secretary of Agriculture Benson

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 27, 1956

Mr. HUMPHREY. Mr. President, labor has been shocked, as many of us in the Senate have been, by the attempts of Secretary of Agriculture Benson to sow strife between the farmer and organized labor.

Many of us believe that this campaign of misrepresentation is one of the most dangerous that the free trade unions have had to face in recent years.

A farmer-labor conflict, of which Secretary Benson is so desirous, can, in the long run, help only the enemies of our country.

At the moment, organized labor is angry and worried. Unions have answered the Secretary's attacks at every opportunity. They have especially referred to his San Francisco speech of February 16, 1956, in which he lambasted the food-processing unions.

An excellent reply was made by the two top officers of the Amalgamated Meat Cutters and Butcher Workmen of North America, AFL-CIO, President Earl W. Jimerson and Secretary-Treasurer Patrick E. Gorman.

I ask unanimous consent to have the statement printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY EARL W. JIMERSON AND PATRICK E. GORMAN, PRESIDENT AND SECRETARY-TREASURER, RESPECTIVELY, OF THE 315,000-MEMBER AMALGAMATED MEAT CUTTERS AND BUTCHER WORKMEN, AFL-CIO

In a speech in San Francisco today, Secretary of Agriculture Ezra Taft Benson launched a violent attack on labor unions—especially meat-industry unions. As has become his fashion, the Secretary used gimmicked statistics and distorted economic reasoning to whitewash the tragic results of his own ill-advised farm policy. We can see the Secretary's speech as only another crude attempt to make labor the scapegoat for his own monumental failures.

His attempt to set one group against another is a part of this unethical and irresponsible policy. Thus, in the attempt to end 90-percent parity, he tried to pit different groups of farmers against each other. To gain the same end, he attempted to arouse city consumers against farmers. Now, to alibi his own failures, he is trying to incite a farm-labor struggle.

Farmers and the public will not be taken in by Secretary Benson's poison propaganda. In order to defeat his ruthless and base attempt to divide the Nation, we offer the following to refute Secretary Benson's charges.

1. Secretary Benson's claim that most of the 1955 wage increase for packinghouse workers was paid by ranchers and farmers, through lower prices for meat animals, is absolutely false. Livestock prices increased one-half of 1 percent in August and September 1955—immediately after the wage increase in the meat-packing industry. They dropped again in October.

2. The packinghouse worker himself paid for his 1955 wage increase with a sharply increased productivity. Wage cost per hundred pounds of beef actually dropped after the wage increase—from $3.54 in May, June, and July, to $3.47 in September, October, and November. In other words, increased productivity not only covered the 14-cent-per-hour wage increase granted last August plus any overtime worked, but also cut labor cost per pound of meat beyond that. This further disproves Secretary Benson's charge that the farmer and the rancher are suffering because of labor's wage increases in the meat industry.

3. Actually, the prices paid by the meatpacker to the farmer depend upon the supply and demand of livestock. It does not depend upon the wages. Nowhere in economic history is there any evidence that prices paid for livestock go down when wages paid labor go up.

4. Secretary Benson demolishes his own charges by admitting that it is the oversupply of livestock which has caused the decline in the livestock prices. "Market gluts, such as recently were experienced with hogs, always mean a sharp break in prices," he says. He also states, "In recent years our farm production has been distorted and thrown out of balance with what our domestic and overseas markets will take."

5. Secretary Benson speaks of "soft wage settlements" in the meatpacking industry. Actually, the wage increases were won after tough collective bargaining. It is true there have been no strikes in recent years. Perhaps Secretary Benson thinks any increase without a strike is a soft settlement.

In short, Secretary Benson's speech is shot through with distorted statistics, false premises and perverted conclusions. He has reached a new low in a desperate effort to evade responsibility for his own mistakes.

Lincoln Day Address by Hon. Edward Martin of Pennsylvania

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, February 27, 1956

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered at the Lincoln Day dinner of the Upshur County Republican Executive Committee, at Buckhannon, W. Va., on February 11, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY UNITED STATES SENATOR EDWARD MARTIN OF PENNSYLVANIA, AT THE LINCOLN DAY DINNER OF THE UPSHUR COUNTY REPUBLICAN EXECUTIVE COMMITTEE AT BUCKHANNON, W. VA., FEBRUARY 11, 1956

I am highly honored by your invitation to address this meeting of patriotic Americans.

I sincerely appreciate the privilege of joining with you in tribute to the memory of one of the greatest of all Americans, Abraham Lincoln.

And let me assure you, with equal sincerity, that it is always a pleasure to come to the great mountain State of West Virginia.

Through the years I have enjoyed the most agreeable association with many of your fine citizens in business, politics, military affairs, and in the activities of government. There are so many whose friendships I treasure, but I cannot come into West Virginia without making special mention of my long-time friend, your Republican national committeeman, Walter S. Hallanan.

He is a real American, an unselfish leader of the Republican Party, and a tower of strength in support of good government. Without expecting anything for himself he gives generously of his time, his means, and his energy to advance the welfare of his State and the Nation.

In honoring the immortal fame of Abraham Lincoln we recall with gratitude his greatest achievement, the preservation of the Union. We recall with pride that West Virginia, in those days of national crisis, gave the world an example of loyalty and faith in the American Republic.

In Lincoln's time the Nation was torn asunder by a great internal upheaval. Out of the turmoil and struggle of that day patriotic Americans rallied to defend the Union and the cause of human freedom.

They formed a new party—the Republican Party—dedicated to the principles set forth in the Declaration of Independence and the Constitution.

As one of the founders of the Republican Party and first Republican President of the United States Lincoln grows in stature year after year. He lived by high ideals and had the courage to stand by them in the face of discouragment and disappointment.

We must have the same courage today to do our full duty as Americans. The future of our Nation depends upon the course of action we take and the outcome of our fight for the principles in which we believe.

As Republicans we believe in freedom of the individual, freedom of enterprise and freedom of opportunity. These are American principles which have come down to us as a priceless heritage. They were the principles of Abraham Lincoln. They are the principles of the Eisenhower administration.

Three years of clean, decent Government have proven that the Republican Party is the party of peace, progress, and sound prosperity. There has never been an administration with such a brilliant record of achievement in so short a time.

We can be proud that we have a Republican administration at Washintgon without favoritism, without corruption, without extravagance and without socialistic regimentation.

We have a Republican administration that is sound, trustworthy, and economical, serving no special interests, but working to advance the welfare of all the people.

We have an administration that believes in the Constitution of the United States and respects its limitations on the power of the Central Government.

We have an administration that supports the American system of free enterprise which means unlimited opportunity, progress, and prosperity.

But we must remember that this year of 1956 is one of tremendous importance. It is a year in which we face a challenge that

calls for all our courage, determination, and loyalty.

This year the American people will decide whether we will go forward to greater achievement under sound, constructive Republican leadership or whether we will return to the disastrous, crazy-quilt pattern of corruption, confusion, and Korea of the previous Democratic administrations.

There is no doubt whatsoever that the Republican Party has gained the confidence of the American people by its magnificent record under the inspired leadership of our great President, Dwight Eisenhower.

I cannot tell you whether he will be a candidate for reelection or not, but I am firmly convinced of one thing. His decision will be made without thought of himself but will be based solely on whether he can fully and completely serve the best interests of the United States and the world.

Whatever President Eisenhower's decision may be, we can go into this year's national campaign with a record of achievement that reflects the basic philosophy of the Republican Party and the principles to which the Republican Party is dedicated.

Every real American, regardless of his politics, rejoices that we have gone through 3 years of the greatest prosperity we have ever known—prosperity based on a sound, expanding economy—without the blood, sweat, and tears of war.

In the heart of every American there is gratitude for the crowning achievement of the Eisenhower administration in bringing to an end the death and destruction of Mr. Truman's so-called police action in Korea.

It took great courage for Eisenhower to go over to Korea in fulfillment of his campaign pledge to do everything within his power to end the fighting. But no one has ever questioned his courage. Less than 6 months after he took office the guns were silenced—the casualty lists were ended and no more brave American boys gave their lives without hope of victory.

If the Republican Party had no other claim for credit, that alone would shine forth as a bright beacon of honor and glory.

It took great courage for the President to stand firm for a balanced budget and the reduction of the national debt before a further cut in taxes. That may not be popular with some people, but it is the right course for the safety and security of our Nation.

Let me review briefly some of the accomplishments in 3 years of Republican leadership:

Taxes have been cut within the margin of safety. The Republican 83d Congress in 1954 reduced taxes by nearly $7½ billion, the largest tax cut ever made in a single year.

Government spending has been brought under control. The cost of government has been reduced by $10 billion below the latest budget proposed by President Truman. We will have a balanced budget this year and next.

In 3 years there has been no significant loss in the purchasing power of the dollar. Inflation has been checked.

The personal income of the American people is at an all-time high.

More than 65 million working men and women are employed at higher wages and salaries than ever before.

Unfair restrictions on business and labor have been eliminated.

The 20-year trend toward centralization of Government in the socialistic pattern has been reversed.

Communists, fellow-travelers, and other disloyal subversives have been weeded out of the Government service.

Social security has been expanded and its benefits increased.

We have built a balanced military defense, the strongest in the history of our Nation.

We now have a firm, strong, dynamic foreign policy that has lessened world tension and has brightened our hope for peace.

These are just a few highlights. There are many more I could enumerate. Not the least of these are the high moral and spiritual values which guide President Eisenhower and which have restored honesty and decency to our National Government.

We believe with President Eisenhower that to serve the cause of world progress we must first protect the liberties of our own citizens. To go forward in leadership for freedom, justice, and peace we must preserve the American system of government.

Therefore, the Republican Party seeks no alliance with those who would socialize our country. The Republican Party rejects the support of those who think the American form of government has outlived its usefulness. We ask no help from those who would distort the meaning of the Constitution to serve their selfish purposes.

In the great crusade which resulted in Republican victory and the election of President Eisenhower, we did not promise an easy way of life. We did not promise security from the cradle to the grave, without effort and without cost.

We did not seek to create disunity. We did not array one class against another or stir up sectional hatreds.

But we did make a solemn pledge to the American people that their liberties would be protected by a finanically sound Government structure, based on sound fiscal policies and rigid economy.

We promised to protect American freedom from the dangers of socialistic experimentation which would concentrate all authority in the Central Government.

We promised that unwarranted peacetime controls that shackled the expansion of productive enterprise would be removed. We pledged the Republican Party to create an atmosphere that would once more provide incentives for free enterprise to function for the maximum benefit of every man and woman who works for a living.

Those pledges have been fulfilled. The Republican Party has been faithful to its campaign promises.

The memorable words of Abraham Lincoln have come down to us for inspiration and guidance.

When the Republican Party was being organized 100 years ago he said, and I quote:

"Let us, in building our new party, plant ourselves on the rock of the Declaration of Independence and the gates of hell shall not be able to prevail against us."

The political wisdom of Abraham Lincoln grows more impressive wtih the passing years. It calls upon us in our day to reaffirm our allegiance to the heritage passed on to us by the Founding Fathers, preserved for us by the first Republican President and strengthened by the high spiritual concept of government to which our great President, Dwight Eisenhower, is dedicated.

Let us go out from this dinner with renewed determination to face the challenge of 1956.

America must not turn back.

With the honored memory of Abraham Lincoln to inspire us we can go forward to victory—victory for the Republican Party—victory for the United States and the free world.

Tribute to John Baer

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, February 27, 1956

Mr. LANGER. Mr. President, a few days ago the newspaper Labor Daily published an excellent article on former Representative John Baer, of North Dakota. Mr. Baer is very well known as a great labor cartoonist, and I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Labor's Daily of October 21, 1955]

MR. LABOR CARTOONIST—BAER'S POINTED PEN FLAYS LABOR'S FOES

(By Frank B. Powers)

WASHINGTON.—A sharp wit, colorful imagination, and potent pen-and-pencil set have earned for John Baer the title, "Mr. Labor Cartoonist."

Currently flaying labor's enemies as cartoonist for Labor, the newspaper of the railroad brotherhoods, 69-year-old Baer has been at it for some 45 years as labor writer, editorialist, and cartoonist.

A onetime football star at Lawrence University near Appleton, Wis., Baer became a country editor in North Dakota and eventually the youngest member of that State's house of representatives.

He was born in Blackcreek, Wis., in 1886, his ancestors having come to Pennsylvania in 1746. John Baer lived in Beach and Fargo, N. Dak., for a time, and ran for Congress from that area. He came to Washington in 1917, served two terms, and has since lived here, and in nearby Maryland. He now makes his home in Chevy Chase, Md.

SON CONTINUES TRADITION

John talks more about his son, John, Jr., than he does of himself. John Baer, Jr., has won honorable mention for his architectural drawings from the Beaux Arts Institute.

Baer was married to Estelle G. Kennedy, of Waukon, Iowa, in 1910. They have three children, John M., Jr., Alfred Sherman, and Byron.

When John appeared in Congress, as a young newspaperman from North Dakota, his main interest was the farm problem. That was in the days of the farmer-labor movement in Minnesota and North Dakota. But it was not long until AFL President Samuel Gompers and the railroad brotherhoods found in him one of their best friends in Congress. Baer championed the idea that labor should have its own representatives in Congress.

Old Bob La Follette was his idol, and Baer listened to all of his speeches in the Senate.

"I think old Bob holds the record for the length of his speeches. And they were not excerpts from the Bible, just to hold the floor, either," John will tell you. "Everything old Bob had to say was worth listening to. But it did become tiring especially to the predominant conservatives in his own party."

"Presidents I have known," John Baer could say, include Woodrow Wilson, Calvin Coolidge, Warren Harding, Herbert Hoover, Franklin Delano Roosevelt, and Harry Truman. He also knew William Jennings Bryan, admired his oratorical ability, and agreed with nearly everything Bryan had to say about solving the problems of the farmer and the worker.

But his memories are mainly concerned with them as cartoon subjects. An impromptu drawing of F. D. R. pleased the fourtime President so much that he requested the original. It was one of Roosevelt's many souvenirs on that famous presidential desk, with its statutes and knickknacks.

DREARY OLD DAYS

When it comes to subjects, John says that Calvin Coolidge presented the easiest to draw. F. D. R. and J. Ham Lewis, the picturesque Senator from Illinois, were others he found easy to put on the drawing pad.

John Baer has known labor leaders from Eugene V. Debs, Sam Gompers, and Frank

Morrison, down to George Meany and Bill Schnitzler. Despite this span of time, John never refers to the "good old days."

"They were the dark, dreary old days of 12 hours' work, 7 days a week," he said. "Labor of today has much to do, but long strides have been made in building up purchasing power and shortening hours."

The story of John Baer can best be told by a glance at his cartoons. One of his early cartoons, which have appeared over the years in Labor and in the railroad monthly publications, appears in this edition. Labor's Daily has printed scores of Baer's cartoons.

Another hobby—and job—is cartoonist and editorialist for the AFL Union Label and Service Trades Department. He lives, eats, and sleeps the union label.

PAINSTAKING WORKER

He does not claim to be one of the quick, chalk-line type of cartoonists. Baer spends from 1 to 3 hours just outlining his work in pencil. Then after a rest, he puts in another 4 or more hours inking in the cartoon.

If John Baer has any pet peeve it is that cartoonists need a labor union. He told us we would be surprised if we knew the small increase in his "wages," as compared to those of General Motors workers, which went, for example, from $28 per week in 1929 to $103 in the first 6 months of 1955. He belongs to the CIO Newspaper Guild, and the AFL Public Relations Federal Labor Union.

Baer probably has donated as much time in free public relations services to the Louisville & Nashville Railroad and Miami Beach hotel strikers, and to the struggle to organize southern textile workers, as any union official involved. And he's been doing just that for years.

Relationship of Soviet Objectives to the Winter Olympics

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, February 27, 1956

Mr. BUTLER. Mr. President, Mr. Louis Azrael, a veteran newspaperman and able columnist for the Baltimore News-Post and the Baltimore Sunday American, recently traveled to Cortina D'Ampezzo, Italy, to observe the winter Olympics. His comments with respect to the relationship of these games to the continuing struggle to capture the minds of men are most enlightening, and I therefore ask unanimous consent to have printed in the Appendix of the RECORD Mr. Azrael's excellent column of February 21 in the Baltimore News-Post.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SPOTLIGHT—ATHLETES HAVE ROLE IN COLD WAR

(By Louis Azrael)

The headlines and the story are on the sports pages; not in the general news sections: "Wes Santee, Track Star, Banned as Amateur—America's No. 1 Hope Knocked Out of Next Olympics."

It is on the sports pages presumably on the theory that only sports fans will be greatly interested. Normally, that may be good reasoning. A month ago I might have read the item with scant attention.

During that month, however, I was a woeful witness to the terrific shellacking that American athletes took, chiefly at the hands of Russians, in the winter Olympics at Cortina D'Ampezzo, Italy. And I now know that, whatever the merits or demerits of Wes Santee's case, it raises a subject which goes far beyond sports interest.

STRUGGLE FOR MINDS

The subject reaches into international relationships, into the struggle for the minds of men that is being waged between Soviet Russia and the Western World which America leads.

Wes Santee won't run in the Olympic games at Melbourne, Australia, next summer because officials of the Amateur Athletic Union say he chiseled about $1,500 in his expense accounts at several track meets. That, they say, makes him a professional. And the Olympic games are only for amateurs.

Knowing nothing about the facts, I am willing to assume the athletic officials did exactly what the rules require.

It is a mistaken notion, however, that the Olympic games are merely a great contest between amateur athletes for the glory of good, clean sports, and the promotion of international good will.

That's what they are supposed to be.

The Russians have made them something else.

BRILLIANT JOB

There was no doubt at Cortina that the Russians used the games as an important instrument of propaganda. They did it brilliantly, after long preparation. And they did it by a method which has become routine in much more important fields; by giving their own definition to words. This time, the word was "amateur."

Perhaps the best example was the hockey competition, in which the Russian team was undefeated and the American team surprised itself by doing as well as second.

The American players were amateurs by the American definition of the word. They weer chiefly boys who had recently played on college teams. They play hockey for fun, when other activities permit. They were selected for the Olympic team and have practiced together only since December.

They are not the best hockey players in America. In Detroit, New York, Cleveland, Springfield, Buffalo, and other cities are professional teams, any one of which could probably play havoc with them.

The men on these teams, however, couldn't play in the Olympics. They are professionals.

NONE IN RUSSIA

But Russia has no professionals—by its definition of the word.

The team which won for Russia has played together, constantly, for at least 4 years. Openly or by stratagem, the government subsidizes the team and the players.

Why? Because it wants to present, in this way and others, a symbol of Russian physical prowess, of Russian supremacy.

The same principle governs in almost all other sports.

One may argue, of course, that these are merely games. One may ask, "What difference does it make to the world that some Russians skate faster, ski faster, handle a puck better than our boys?"

The difference is that physical prowess has been admired always and everywhere. Such victories, therefore, evoke admiration for the nation which achieves them; evokes it among millions of persons throughout the world whose admiration and cooperation we need.

There is no easy answer to this challenge. Should the United States take charge of, or even subsidize, Olympic athletes? It might be argued that such action would mean we are copying Russia's tactics though we disapprove of them.

One way or another, however, the challenge in this field of Red propaganda, as in all others, should be met.

Financing Program of Democratic-Farmer-Labor Party in Minnesota

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, February 27, 1956

Mr. HUMPHREY. Mr. President, I wish to call to the attention of the Senate, and in particular of the select committee charged with investigating lobbies and revising the statutes relating to the Federal corrupt practices law, an editorial which was published in the Northland Times of Bemidji, Minn. The editorial discusses the financing program of the Democratic-Farmer-Labor Party in Minnesota.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Bemidji (Minn.) Northern Times of February 10, 1956]

THE DFL SUSTAINING FUND IS NECESSARY

The method of obtaining funds for Minnesota's Democratic Farmer Labor Party is unique. It is being studied by many States with an idea of inaugurating a similar system for their own use. The fact that it is to the benefit to have such a method of financial suport for a political party has never been brought home with more force than by the Senate fight last week over passage of the natural gas bill.

In asking for passage of the bill, the oil companies claimed that open competition would result in a decrease of price-cost for teh consumer; that rates would actually be less. Most of the cynical consumers—and that includes the majority—doubt the big companies' concern for the small individual would entice them to spend money for passage of a bill which would reduce their profits. And the constant activity of the Justice Department against monoplies seems to bear them out.

In the debate, three things were outstanding:

A Senator was offered á $2,500 campaign contribution; offered in his estimation, because he was in favor of the bill or with the hope of inducing him to vote for the bill.

Companies had employees solicit signatures for telegrams which were then sent to Senators at the companies' expense asking for passage of the bill.

Senators from States having huge oil—and gas—interests or resources, fought for passage of this bill regardless of party policy or platform.

The three things above indicate that our Congressmen need money—lots of it—to conduct a campaign. And, when elected, they are under obligation to those who provide the funds. Regardless of pledges, regardless of promises, regardless of platforms, such a system can only lead to domination of Government by "big money" unless a way is found to obtain funds from another source.

The Minnesota Democratic Farmer Labor Party has found that methods—thousands of small contributions from thousands of small contributors—through their sustaining fund program.

The method is simple. Anyone who desires to do so may make a pledge to contribute from $1 to $25 per month. Those so pledging receive a monthly statement.

However, they may pay as they can, in advance, quarterly, as they are able. If they pledge $2.50 per month or more, they receive the Democratic Digest and a ticket to the annual Jefferson-Jackson Day dinner.

What is accomplished? As pointed out before, our Congressmen need campaign funds. One Texas representative said he could not start a campaign without $50,000—in a Saturday Evening Post article—and it usually cost $100,000 before he is finished. Our Congressmen are beholden to their contributors.

If you, and thousands like you, make the contributions, then you, and thousands like you, are the ones to whom he is obligated. He need not worry about being obligated to a few big businesses or to a few big money men. He is already obligated to the biggest business with the greatest capital—you, the people.

Only a skeptic would believe that, if the oil States had had sustaining funds for their Congressmen, the natural-gas bill would have passed.

Raising and Exporting Fighting Gamecocks

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, February 27, 1956

Mr. NEUBERGER. Mr. President, one of Oregon's most interesting, but little-known exports are fighting gamecocks. Raising fighting gamecocks is admirably well suited to the beautiful hill country of western Oregon, and the Nation's only State club, Oregon Game Fowl Breeders Association, was organized 2 years ago by Vern Bridges, of Lebanon.

Gamecocks, whose history dates back to 700 B. C., were a favored sport of the fathers of our country. George Washington, Thomas Jefferson, Benjamin Franklin, and Andrew Jackson were avid owners of participants and Abraham Lincoln refereed many cock fights.

At one time, Oregon exported an average of 2,000 cocks a week, but that has declined somewhat with an upsurge of foreign breeding. Skill and science have united in making Oregon's birds world famous, and the birds' rich diets include staple grain ration, snacks of ground beef, bananas and fruit, lettuce, eggs, and other delicacies.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the interesting article written by Katherine Wonn Harris, which was published in the Sunday Oregonian rotogravure magazine, Northwest, on February 19, 1956. This aptly titled article, "Exotic Oregon Export," was written by Mrs. Harris, of Lebanon, who has distinguished herself for many years as news editor of the Lebanon Express.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EXOCTIC OREGON EXPORT

(By Katherine Harris)

Thriving in Oregon's hill country is a little-known industry whose existence depends on an export trade to exotic foreign climes—the breeding of fighting gamecocks.

At one time an estimated average of 2000 birds a week were shipped by sea from Portland to ports of call in Guam, Hawaii, the Philippines and elsewhere. Recently an upsurge in foreign breeding has been responsible for some decline in prices and shipments.

Besides distant countries, buyers of Oregon gamecocks include Mexico, Canada and sportsmen in states of the union where cockfighting is not in public disrepute. Oregon breeders, during the peak of their export sales, drew an average of $25 per bird.

Gamecocks, whose pedigree has been established back to 700 B. C., appear to be suited admirably to the climate of western Oregon in the mid-20th century A. D.

Though frowned upon in some sections, cockfighting in many parts of the United States is freely practiced, particularly in the South, where events are widely publicized.

It was a favored sport during the nation's youth, and many early Presidents were avid cockers. George Washington line-bred and fought a strain of Irish Grays, Jefferson both bred and fought cocks, Andrew Jackson bred and fought a black strain called Tormenters, and Lincoln attended and refereed many events.

Clay, Calhoun and other statesmen of the era matched their birds in committee rooms of the national capitol, and Jackson frequently invited friends to contest in the White House.

Benjamin Franklin had such respect for the valiant bird that he worked for its adoption as the national emblem instead of the eagle, which he termed "cowardly in comparison." It lost out by only one vote.

Oregon fanciers developing stock for commercial purposes have formed the Nation's only State club, known as the Oregon Game Fowl Breeders Association. It was organized 2 years ago by Vern Bridges of Lebanon, who now heads the group as president.

Other officers are vice president, Henry Burr, Coquille; secretary, Miss Jackie Matson, Roseburg; and treasurer, Marvin Hill, Roseburg.

The membership of 220 includes breeders in every part of the State, but the majority are in the Eugene-Roseburg section. Meetings are held quarterly to exchange information on breeding practices and marketing.

Widely known in State and National game fowl circles, Vern Bridges dates his interest in the birds back to days of his youth in Oklahoma. There, at the age of 11, he had a flock of bantams and frequently matched his cocks in mild encounters with those of boyhood companions.

When a game fowl breeder moved to the neighborhood, young Bridges secured a job at 50 cents a week feeding and watering the fowls and cleaning their pens. Soon he had a start of his own, and since that time has continued to breed the birds either as a hobby or a business, with the exception of the war years when he was overseas.

The Bridges game fowl farm, 5 miles south of Lebanon in the foothill country, is admirably suited to the enterprise, since it has excellent drainage (a requisite for successful breeding), a wide wooded area, and is isolated from close neighbors. The latter is necessary, Bridges explains, since the fowls must have a wide range during the first 5 months of their lives, but they are given to flight comparable to that of the pheasant and would prove troublesome to close neighbors.

After 5 monts of roaming in the wild state, the flocks are rounded up and culled. The cocks, known as stags for the first year, are put in individual pens where they stay for the rest of their lives.

At least 10 acres of ground is required for a successful operation. Bridges has 25 acres devoted to their needs.

Two hens are allotted each cock for breeding, and eggs are hatched in the natural manner. The game hens are unusually good mothers, with a strong protective instinct. At the appearance of a chicken hawk, a good game mother will rise to the attack. She meets the marauder in the air as he swoops to strike, stuns him with blows and finishes him off when the two plummet to earth.

The strength of these birds is remarkable. Carelessly handled cocks have been known to break bones in the hands of their keepers with a single strike and Bridges cites an instance when a 2-by-4 stick of lumber was shattered by one blow of a steel-spurred cock. Ordinarily the birds are quite tame, with pleasant faces belying their savage instincts, and respond with evident pleasure to handling and stroking.

Table scraps and common food are not for these elite members of the feathered world. Their menus include the staple grain ration, interspersed with snacks of ground beef, bananas and other fruit, lettuce, chopped boiled eggs, and other delicacies.

Prepared for the table, they are a tempting dish with meaty breasts and delicious flavor resembling that of the pheasant. They are too expensive to eat, Bridges points out, since stags bring an average price of $25 and hens $10. Average weight of the game cock is 5 pounds, the hens running to 4.

An operation such as Bridges conducts requires constant care, since the individual pens which house his 100 cocks must be moved frequently and kept in a state of ultracleanliness. Feeding and watering chores occupy many hours each day.

Preparation for shipment involves skill and scientific knowledge. Each fowl must be pullorum tested, vaccinated for Newcastle disease, and then quarantined under daily observation and special feeding for 45 days. If results are satisfactory, they are made ready for shipment in standard individual cases and hauled to Portland.

In addition to keeping a number of registered breeds, Bridges has developed his own strain, Hill-Top Gray, which he has bred exclusively for more than 5 years. Patriarch of his flock is Old Cockey, father of 300 stags which have been shipped abroad and sold nationally. The veteran, now a 5-year-old, is retired and used only as a breeder. Thus sheltered from the hazards of his kind, he may live to be 10 or 12 years old.

Good brood trios consisting of a cock and two hens normally bring $100 and up.

Game fowl breeding on a commercial basis cannot be regarded as a part-time job, Bridges points out.

I Speak for Democracy—Prize Essay

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 27, 1956

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the prize-winning essay for the State of South Dakota in the I Speak for Democracy contest. This was written by Jessie Bewley Parker, of Brookings, S. Dak.

Every year I am amazed and gratified at the quality of the orations and essays written for this contest. The sponsors of the program can be more than proud of the inspiration they are giving to the high-school students who participate in these contests. I believe that the patriotic sentiments and the love of country which shine through these orations are sincere and genuine. I believe that it is

good that students give voice to such thoughts.

No more stirring oration has been written, in my opinion, than the one which won the South Dakota State contest this year. I congratulate Jessie Bewley Parker, her parents, and her teachers. I want to call this work to the attention of the Members of Congress and to the public by placing it in the CONGRESSIONAL RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

I SPEAK FOR DEMOCRACY

(By Jessie Bewley Parker)

I speak for democracy. I speak for democracy because I have known her all my life, and I love her. Every moment I feel her presence, but today I felt especially near to her. I distinctly heard her voice three times today, and each time she took a different form. She first appeared as a small child upon his mother's knee.

I saw the child but a moment, and yet I knew that I had seen democracy. As I passed, he earnestly was saying to his mother, "Mommy, I'm going to be the President when I grow up."

In those simple, childish words, I heard democracy speaking. In them I felt freedom—freedom to choose an occupation, freedom to speak, freedom to dream. Yes; I had seen democracy once.

The next time I saw democracy she took the form of a young woman, mother of two children. In the living room of their home was a photograph of a soldier, the father of the children. I listened as the mother told the children about her husband, how he had died for the country he loved; died, so that his children, and men and women all over the world, might enjoy the freedoms he had enjoyed—died, that democracy might live.

As the young woman spoke, I knew democracy was speaking. I knew that I also must speak for those freedoms for which the soldier had given his life—for his democracy. Twice democracy had spoken.

In the light of an old man's eyes, I felt her presence a third time. Eyes that told a story of a young boy who came to America, a boy who came west when his country was unsettled; the story of a young man who had tilled the soil, had worshipped in the church his father had helped to build. The story of a father who had taught a child to print, and had seen his son develop into a man, printing a free newspaper, read by thousands. His eyes told the story of an old man's pride in his family, in his community, in his country, and in his world. His eyes told the story of pride in democracy.

Three times I had heard democracy speak, in the forms of youth, young adulthood, and old age. But it wasn't three times, it was a hundred, a thousand, a million. For every day of my life I have seen her, have spoken to her, and have felt her presence. And, like the young soldier, I, too, know what is worth dying for. Therefore, I speak for democracy.

State by State Cost of Flood Control

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1956

Mr. MILLER of Nebraska. Mr. Speaker, I insert in the Appendix of the CONGRESSIONAL RECORD a report on the total construction appropriation to date, by States, for active Corps of Engineers civil-works programs, including completed works.

Mr. Speaker, generally speaking, flood control is a direct appropriation to the States and communities. Neither principal nor interest is repaid to the Treasury.

This study of total expenditures for flood control, which amounts to $6,859,553,000, is about 3 times the amount spent on reclamation projects. Reclamation projects pay back the principal, and they bring a new source of wealth and security to the communities of the arid West.

I am hopeful, Mr. Speaker, that the States that have profited so much from flood-control projects will look with some favor upon reclamation projects. They are both an investment in America.

Total construction appropriations to date, by States, for active Corps of Engineers civil-works program, including completed works

Alabama	$55,404,000
Arkansas	369,412,000
Arizona	1,381,000
California	473,031,000
Colorado	31,713,000
Connecticut	31,966,000
Delaware	22,738,000
Florida	116,783,000
Georgia	148,235,000
Idaho	51,319,000
Illinois	263,260,000
Indiana	60,634,000
Iowa	97,564,000
Kansas	106,514,000
Kentucky	245,489,000
Louisiana	450,936,000
Maine	10,496,000
Maryland	26,423,000
Massachusetts	85,125,000
Michigan	118,076,000
Minnesota	58,774,000
Mississippi	255,858,000
Missouri	324,703,000
Montana	135,817,000
Nebraska	125,822,000
Nevada	0
New Hampshire	15,581,000
New Jersey	56,378,000
New Mexico	18,058,000
New York	238,109,000
North Carolina	62,821,000
North Dakota	233,255,000
Ohio	158,657,000
Oklahoma	154,393,000
Oregon	478,627,000
Pennsylvania	227,073,000
Rhode Island	6,895,000
South Carolina	59,789,000
South Dakota	267,688,000
Tennessee	195,594,000
Texas	292,530,000
Utah	708,000
Vermont	5,259,000
Virginia	100,328,000
Washington	451,282,000
West Virginia	120,851,000
Wisconsin	13,386,000
Wyoming	300,000
District of Columbia	4,518,000
Total	[1] 6,859,553,000

[1] Includes maintenance of the Mississippi River alluvial valley project prior to fiscal year 1942, since both construction and maintenance funds were combined in annual appropriations in the early years of the project and are inseparable.

Multiple Purposes of Colorado River Storage Project

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, February 27, 1956

Mr. WATKINS. Mr. President, the Colorado River storage project, now before Congress, makes a very positive, persuasive case, if people will take a few minutes to consider the multiple purposes of the project and the many reasons justifying it as a sound and economically feasible undertaking for the Federal Government.

It recently was my honor to be chosen to represent the proponents of this project by presenting the positive side in a pro-and-con analysis of the proposed legislation, published by the American Enterprise Association. The two opposing views of this legislative proposal, Raymond Moley having stated the negative side, were published by the American Enterprise Association as a public information service. Copies of this publication can be obtained from the Washington, D. C., office of the association at 1012 14th Street NW.

I ask unanimous consent that my views on this matter, as reflected in the American Enterprise Association publication be printed in the Appendix of the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

THE CASE FOR THE COLORADO RIVER STORAGE PROJECT

(By Senator ARTHUR V. WATKINS, Republican, of Utah)

I. INTRODUCTION

The Colorado River storage project is necessary to regulate, control, and convey the waters of the upper Colorado River for and to those areas entitled to its use under the terms of the Colorado River compact and upper Colorado River compact.

It is a well-planned, economically sound, completely self-liquidating, long-range project designed to provide for the conservation and development of a vitally needed water supply for a four-State semidesert area larger than New England.

No other comparable river development program has ever been presented to Congress for authorization backed by the detailed engineering and economic studies and interstate cooperation in its planning reflected in this bill. This project has been under detailed study and investigation for more than 20 years, during which time there have been expended, from State funds and power revenues allocated to these investigations from the Hoover Dam, approximately $10 million.

The Colorado River storage project is the culmination of an overall basinwide program for the total consumptive use of the waters of the Colorado River provided for in the Colorado River Compact signed by the seven States in the Colorado River Basin and the Federal Government. The first units of this basinwide plan, beginning with the Hoover Dam, all in the lower basin, have now been completed largely with Federal financial aid.

The Colorado River Compact was agreed to by the 7 States of the Colorado River Basin

and the Federal Government in order to insure an equitable division of the water resources of the Colorado among the several States, regardless of the time of development. It was recognized that the lower basin would develop first because of the greater ease of control and diversion of the water, the need for flood control in the lower basin, the need for an All-American Canal to serve the Imperial Valley, and the proximity of large centers of population in California. During the last 33 years, the lower basin, with the help of Federal funds and the support of the upper basin States, has enjoyed practically full development.

It was also recognized at the time of the signing of the compact that the upper basin, because of its difficult topography, relative inaccessibility, and the necessity for major storage for regulation, would develop much more slowly. The signers of the compact in the lower basin, however, pledged their support to upper basin development when such development was ready for construction. That time is now.

Why, then, has so much misinformation been spread about this program and why has opposition to the upper basin development been generated, largely by southern California, in the lower basin?

The explanation is simple, but first one must get a true picture of the situation.

(a) The Colorado River Basin is an arid region. The total flow of the river is not sufficient to meet the water needs of the area. This fact was recognized early and prompted the Colorado River Compact which divided the waters of the river among the States before it was put to use.

(b) The Colorado River is the last major source of water available to the upper basin States (Colorado, New Mexico, Utah, Wyoming).

(c) More than 90 percent of the water in the Colorado River system originates in the upper basin States. No water originates in California.

The flow of the river varies widely from year to year and season to season. For example, the flow at Lee Ferry may be as low as 4 million acre-feet in 1 year, and as much as 25 million acre-feet in another year. The flow at Yuma, Ariz., may be as low as 3,000 cubic feet per second during the dry season, and as much as 300,000 acre-feet during the season of flood flows.

To utilize the entire flow of the river, the flow at the points of diversion must be made to coincide with the demand, both with respect to amount and time. To meet this requirement the river has to be regulated, that is, storage must be provided which will make it possible to hold the water during wet seasons and release it during the dry seasons. Long-time hold-over storage for river regulation is necessary on the Colorado River because of the wide fluctuations in its flow. Wherever the term regulation is used in this discussion it means artificial storage to make the flow of the river coincide with the demand for water use.

(d) The Hoover Dam fully regulates the flow of the lower river. A fully regulated, safe supply is available to all water users below the dam.

(e) In the lower basin there are many thousands of acres of land for which there is no water within the allocation made to the lower basin by the compact.

(f) Water runs downhill. The value of this water resource to the upper basin is beyond measurement because it is renewable. Water is liquid gold.

(h) So long as the upper basin States can be prevented from using their water, the lower basin users, who are principally in California and Mexico, will enjoy the benefits from the upper basin's share of the Colorado River.

Therefore, the issue is clear. The Colorado River storage project will make it possible for the upper basin States to use their allocated share of the Colorado River. So long as this project is not built, the lower basin users, principally in California and Mexico, will be the beneficiaries of this great resource in terms of water and hydropower.

Each year that the present unused portion of the Colorado River water allocated the upper-basin States is allowed to flow into the lower basin, it means a windfall of roughly $4 million a year to southern California power users, and it gives southern California and Mexico an opportunity to utilize consumptively the waters belonging to the upper-basin States.

The following is a brief description of the principal features of the project and sound positive reasons why people interested in economy and sound fiscal governmental policies—a group in which I claim membership—can support the Colorado River storage project.

II. PRINCIPAL FEATURES

1. The Colorado River storage project and participating projects is a basinwide proposal which, when carried out, will provide the facilities necessary for the upper-basin States to use their share of the Colorado River water. The proposed basin development is unique and difficult because of topography, distances to be covered, storage to be provided, water exchanges to be made, and power to be developed. It must be planned and built as a basinwide project. This accounts for the large authorization requested, but it must be remembered that it will take 30 to 40 years to complete the works included in this project.

2. The Colorado River storage project and participating projects provides for regulation of the river—storage of seasonal floodwaters to make the river's water available for use year round in the upper-basin States where 90 percent of the river's water originates.

3. The Colorado River storage project provides water for consumptive use by direct diversion or by exchange, both within and outside the Colorado River Basin.

4. The Colorado River storage project provides power as a byproduct, the net revenues from which will be used to help pay the costs of the project.

5. The Colorado River storage project provides regulating and control works and conveyance channels to convey the water to the land, to municipalities, and other points of use.

6. The Colorado River Storage Project Bill, H. R. 3383, provides for the authorization of 4 storage dams, 3 allied hydro-power plants and 11 participating projects to deliver water for use in each of the 4 States. The estimated cost of these units is about $760 million and the construction period approximately 30 years.

7. The Colorado River storage project is self-liquidating. The cost of the power and municipal water features will be repaid with interest. The cost of the irrigation features allocated to the water users will be paid back in 50 years, plus a 10-year development period, without interest. The balance of the cost allocated to irrigation will be paid back from power revenues, all within 50 years. The cost of the interest on the irrigation features during the payout period will be exceeded many times by the new income taxes which will pour into the Treasury from the new wealth created as a result of the construction of the project. After the project costs are repaid, the project power plants will continue to pour into the United States Treasury many millions of dollars per year.

8. Historical summary of the development of the Colorado River, 1870–1954:

1870–1922: Isolated, limited small projects on tributaries, along banks of main stream and in Imperial Valley of California and Mexico—limited by uncontrolled late season flow and subject to frequent floods which would wash away the diversion works. Water rights acquired under doctrine of appropriation—i. e., "First in time is first in right."

1922: The Colorado River compact was drawn to divide the water resource of the river, prior to its being put to use. The compact provided for total ultimate consumptive use of the water resource, and equitable division of such use among upper and lower basin States and Mexico.

Total consumptive use of the water resource depends upon:

(1) Complete regulation of flow, with long-time holdover storage. Necessary to carry water available during wet years over to dry years and provides for:

(2) Storage of water for consumptive use.

(3) Power, the net revenues from which would help pay for the project.

1922–54 (lower basin):

(1) Construction of Hoover, Parker, Imperial Dams, and All-American Canal under reclamation law. Davis Dam under Mexican Treaty.

(2) These provide (a) storage for regulation and power and water for consumptive use; (b) power revenues pay entire cost of storage for regulation and power, and help pay cost of irrigation features.

(1) Investigations to establish plan for development.

(2) Investigation completed in 1950. A feasible project was reported by United States Bureau of Reclamation, and favorably recommended by the Secretary of the Interior, the Bureau of the Budget, and the President in 1954.

(3) Construction in the upper basin during the 32 years has been limited to the Colorado-Big Thompson project and a few very small, miscellaneous projects.

(4) Authorizing legislation has passed the Senate (S.500) and is now before the House (H. R. 3383). This legislation provides for 4 dams and reservoirs to provide for river regulation, holdover storage and water for consumptive use, and 3 allied hydropower plants for the generation of hydroelectric energy. It also provides for 11 participating projects, to convey water from points of origin to points of use.

And now may I point out some of the reasons why this project should be authorized and built.

III. JUSTIFICATION

1. The project will provide water for municipal, industrial, and agricultural needs.

2. The project will end a deplorable waste of fresh water into the sea.

3. The project will provide for holdover storage.

4. The project is well planned, based on sound engineering design, and the cost estimates and estimates of net power revenues are conservative.

5. The project is a true partnership enterprise.

6. The project is a multiple-purpose development.

7. The project produces power as a by-product.

8. The project will provide water and power for the industrial development of the area.

9. The project is vital to national defense.

10. The project is an investment of recognized Federal interest.

11. The project users pay all operation and maintenaance costs.

12. The project will benefit every section of the Nation.

13. The project will stabilize the river and protect downstream facilities.

14. The project will start the Navaho Tribe on the road to independence and self-sufficiency.

15. The project does not involve the public versus private power controversy.

16. The reimbursable project costs—99 percent of the total—will be repaid by the users of the water and power.

17. The reclamation fund provides ready cash in the Treasury to finance reclamation projects.

18. The project creates a new source of income to the Federal Treasury, not a tax burden on each State.

19. Water rights are established by compact.

20. The project construction period will be at least 25 years.

21. The project costs are reasonable.

22. The project does not add to the agricultural surplus.

23. A discussion of southern California's proposals for alternate reclamation in nonarid areas.

24. The contemplated future firm power production at Hoover Dam would not be adversely affected.

25. The real issue—who gets the water and power?

26. Partnership in reclamation.

IV. THE WATER PROJECT IS JUSTIFIED

1. The project will provide water for municipal, industrial, and agricultural needs.

The climate of the Colorado River basin is semiarid to arid. The river is snow fed. It runs high during the snow-melting period, and low in the late summer and winter. This project will store the water during wet years and wet seasons, and make it available during the dry years and seasons for all consumptive uses. The project will extend and stabilize the water supply and provide water for the maximum agricultural, industrial, and municipal development.

2. The project will end a deplorable waste of precious fresh water into the sea.

The upper-basin States are now using less than 2½ million out of 7½ million acre-feet apportioned to them by the Colorado River compact. From 4 to 5 million acre-feet annually are being wasted into the sea, or are being diverted illegally by lower basin or Mexican water users. This water flows through the turbines at Hoover, Parker, and Davis Dams, after which it wastes into the Gulf of Lower California. The Colorado River compact provides for total consumptive use, and after full development there should be no water reach the sea.

3. The Colorado River storage project will provide holdover storage for regulation of a wild and unruly river. Such storage, above Hoover Dam, also will improve the operation characteristics of Lake Mead, and provide increased firm power generation at any dam which may be built between Hoover and Glen Canyon. More important, the Glen Canyon Dam will extend the life of Lake Mead indefinitely, because much of the silt now building up in Lake Mead will be trapped in the Glen Canyon Reservoir. The holdover storage in the upper basin also will guarantee annual delivery to the lower basin and Mexico of the waters to which they are entitled under the compact and the Mexican Water Treaty.

4. The Colorado River storage project is well planned, based on sound engineering design, and the cost estimates and estimates of net power revenues are conservative. More than 20 years time and $10 million have been expended in engineering and economic studies. These studies were made by the Bureau of Reclamation, in cooperation with the respective States, and took into consideration the total potential basinwide development.

5. The Colorado River storage project is a true partnership enterprise.

The proposed development will be carried out under the terms of the upper Colorado River Basin compact, an interstate agreement entered into by the States of Colorado, New Mexico, Utah, and Wyoming. The irrigation water users will repay the irrigation costs up to the limit of the land and water capability, without interest. The municipal water users will repay the full cost of the municipal water features, with interest. The power facilities will be repaid, with interest, from power revenues. The costs allocated to irrigation, above the ability of the irrigators to pay, will be paid back out of power revenues. Thus all water and power users in the area concerned will participate in the repayment of the project costs.

Public benefits of great magnitude will result from this project. Recognition of these public benefits by the Federal Government is reflected in the provision of interest-free money on the unpaid balance of the construction costs allocated to irrigation. Save for contributing less than 1 percent of the total cost for such nonreimbursable benefits as flood control, the Federal Government makes no other direct contribution, even though the States involved are more than 50 percent federally owned.

The States contributed liberally to the costs of planning. The Upper Colorado River Basin Compact Commission has cooperated in the planning of the project and furnished information relating to it. The project has the unanimous support of the four upper basin States, on a bipartisan basis.

6. The Colorado River storage project is a multiple-purpose development.

It provides water for municipal, agricultural, and industrial purposes, and power as a byproduct. It will greatly improve the recreational and wildlife facilities of the area. It will provide for flood control by regulation and use of the water. All water uses developed in this project will be subject to the respective State water laws governing appropriation and use.

Although the initial use of the water may be agricultural, in this area of limited water supplies uses may change, with agriculture yielding to municipal or industrial demands under long-established legal priorities. The economy of the area is so closely tied together that the water and power users are essentially the same people. Therefore, there is no objection from the power users to paying an extra price for their power, when they know it is going to help pay for the cost of water, which in turn, benefits agriculture, municipalities, and industry, and contributes to general economic progress in the area.

7. The Colorado River storage project produces power as a byproduct.

Falling water represents energy. This energy, when converted into useful forms, becomes very valuable to man. Water is one of the few renewable resources. Therefore, power created from the energy of falling water is in great demand, because there is no recurring cost for fuel.

Hydropower is premium power, because of the ease of making the power output coincide with the demand for power. When the load goes off, the turbine gates close, and the water is put in storage. When the load comes on, the urbine gates open, and the water is drawn from storage. Such an operation is impossible with either thermal or nuclear power. Hydropower will never be put out of business by other forms of power, because of its value for peaking purposes.

The project storage dams are ideal sites for hydropower plants. These dams are necessary to the storage of water and the regulation of river flow. It is good business to utilize them also to convert the energy of falling water to power. This power, when sold at competitive rates in the intermountain area, will produce net revenues which will be used to help pay the cost of the irrigation features and thus make the entire project self-liquidating. After all costs have been repaid, these plants will still be producing power, the revenues from which will flow into the public treasury.

8. The Colorado River storage project will provide water and power for industrial development of the area.

The upper Colorado Basin States are storehouses of raw materials. Great quantities of coal, oil, gas, oil shale, strategic minerals, nonferrous and ferrous metals, hydrocarbons, and other minerals and chemicals are found in the area. All the raw materials for chemical and fertilizer industries abound in the area. To develop these materials, water and power are required. Both will be available from this project.

It is estimated that 500,000 acre-feet of water will be required to meet the industrial needs of the area in the next 25 years. It will take at least 25 years to develop this water resource.

9. The Colorado River storage project is vital to national defense.

In this age of the atomic and hydrogen bombs, most of our centralized vital industries are "sitting ducks." Many could be wiped out in a single aerial bombing or missile strike. Such industries should be dispersed.

New defense plants should not be constructed alongside old ones. When new plants to make steel, scientific instruments, machine tools, processing plants for vital materials, heavy equipment and armaments, are built, they should be widely dispersed, and some of them located in the mountains where they would be hard to find and hit. The Rocky Mountains provide such protected sites, but water and power are needed to make the sites useful. Early construction of the Colorado River storage project, to provide water and power for such industries, is amply justified on the grounds of national defense.

10. The project is an investment of recognized Federal interest.

Approximately two-thirds of the total cost of the Colorado River storage project is to be repaid with revenues from power and municipal water features. These costs are fully reimbursable, with interest; hence, for this portion of the project there is no cost to the taxpayers.

The irrigation features of this project will cost approximately one-third of the total. The costs of these features are fully reimbursable, but without interest. The estimated average annual cost of these features of the project is $10 million.

The Reclamation Fund, a revolving fund used to finance reclamation projects, is made up of income from the sale or lease of natural resources on the Federal lands in the public land States, including power revenues and other miscellaneous receipts. By June 30, 1954, this fund totaled $848,149,945, plus an unappropriated balance of $88,033,070. This fund is so large that currently more than half the total appropriations to reclamation, and more than all the appropriations to the irrigation features, come from this fund. In 1955 more than $20 million from the natural resources in the upper basin States (Colorado, New Mexico, Utah, and Wyoming) were added to this fund.

So long as the average annual appropriation to build the irrigation features of the Colorado River storage project does not exceed the annual contribution to the Reclamation Fund from the upper basin States, the construction cost of this project represents an investment of all or a portion of the upper basin's share of the revolving fund which is already in the revolving fund bank. Such construction, therefore, would take no tax money out of the Federal Treasury. As far as the irrigation features are concerned, this project pays its way with direct income from water users and the upper basin States and the contribution to the reclamation fund, which is made up in major part from the sale or lease of natural resources held in trust by the Federal Government in the said States. The other features of the project are built all or in part with borrowed money for which interest is paid.

11. The project water users pay operation and maintenance costs.

Almost all of the river and harbor and flood control projects are not only largely non-

reimbursable, but the Federal Government also assumes most operation and maintenance costs. During the next 10 years, the Federal Government will spend more on operating and maintaining these water resource projects than will be required to finance the capital construction costs of the Colorado River storage project, a completely reimbursable project that will require an estimated 30 years to complete. In the case of this Colorado River project, as with all other reclamation projects, the direct beneficiaries (water and power users) pay the capital costs and also the operation and maintenance costs.

This point is not made in criticism of the flood-control and river-and-harbor programs, as such. I believe that sound projects under these two great programs are just as much an investment in national economic and social progress as the comparable reclamation projects. But in supporting these other programs and appreciating their value, I have been impressed that most water-resource studies have recommended that all other water-resource development programs be placed on the same basis as the 54-year-old reclamation program, insofar as cost sharing by beneficiaries and payment of operation and maintenance are concerned.

In this connection, I also have been impressed that the major economic arguments against the Colorado River project have come from California, which not only has received the lion's share of the reclamation appropriations, but has also received more appropriations under the general flood-control program than any other State.

12. The project will benefit every section of the Nation.

Every State in the Nation will benefit from the Colorado River storage project. These benefits are tangible and can be measured. They come in different ways, but the end result is the same—benefit for every area.

Expansion of trade area: Products produced in a reclamation area create new trade through transportation, processing, manufacturing, wholesaling, financing, retailing, and all other processes between production and the ultimate consumer, whether the products be uranium or apricots.

New markets: New income resulting from reclamation projects is the source of new buying power for goods produced in other areas of the United States. A case study of the Central Valley project in California provides an excellent example of the influence of resource development on retail sales. This project alone resulted in a new market for a million pair of shoes each year, parts of which will be made in Massachusetts, New York, Pennsylvania, and Missouri; for $10 million worth of tobacco products, which will come largely from North Carolina, Virginia, Kentucky, Florida, and Pennsylvania; for 8,000 vacuum cleaners, 8,000 refrigerators, 8,000 washing machines, 8,000 radios and TV sets which will come from many States but largely from Ohio, Michigan, Illinois, Connecticut, New Jersey, New York, and Pennsylvania.

The increased purchasing power of this one project translates into an annual market for 15,000 new cars, some from Detroit, and South Bend and other cities, but many assembled in California from parts manufactured in Michigan, Indiana, Illinois, Ohio, and Wisconsin; for hundreds of thousands of dollars worth of textiles from New England and South Atlantic States; and for thousands of tires, accessories, home appliances, office machines, and all the assorted products of the day produced in all corners of the country.

Eighty-one percent of the construction costs of the Colorado River storage project will be spent in markets outside the Upper Colorado Basin, for the labor and materials with which to build the project. This means that practically every State in the Union will benefit from expenditures resulting from such construction.

13. The project will stabilize the river and protect downstream facilities.

The Colorado River carries a heavy silt load which is now being deposited behind Hoover Dam. These silt deposits will ultimately fill up Lake Mead. It is estimated that the life of Hoover Dam, without upstream storage, will be less than 300 years. The construction of Glen Canyon Dam, which provides for 23 million acre-feet of silt storage, above Lee Ferry, will make the life of Hoover Dam indefinitely greater, and will also protect subsequent developments planned between Hoover Dam and Glen Canyon. The storage in Glen Canyon will make feasible, power developments in the canyon between Glen Canyon and Hoover Dam. Glen Canyon, therefore, will provide the regulation for future firm power generation, at no expense to the lower basin power users. It will, in fact, be a free contribution worth many millions of dollars.

Extensive headwater holdover storage provided by the Colorado River storage project will add stability to the water supply for the lower basin during extreme drought, because such holdover storage will make it possible for the upper basin States to meet the required delivery at Lee Ferry of 75 million acre-feet each consecutive 10 years in spite of recurring dry years, when the flow at Lee Ferry drops below 7.5 million acre-feet per year.

14. The project will start the Navaho Tribe on the road to independence and self-sufficiency.

The Colorado River storage project is the Navaho's major hope for the future—their opportunity to become self-supporting.

The Navahos make good farmers—when they have water. There never has been a food surplus in the Navaho Nation, but always a shortage of food. Hunger and poverty are constant specters among the Navahos. The proposed development will provide food to eat, economic stability and opportunity for progress.

The Navahos do not ask for charity, but by authorizing the project, the people of the United States will be able to keep some of the promises made to the Navahos in the Treaty of 1868.

The average cash income of the Navahos today is about $150 per person per year. The project will raise the Navaho standard of living and provide opportunities for the Navahos to earn their own way.

The project will accelerate the educational program by providing a basis for a more concentrated population.

The project is the least expensive way to provide for long-range rehabilitation of a proud and deserving people.

15. The project does not involve a public versus private power controversy.

Ten private power companies serving the upper basin area appeared before the congressional committees in support of this project. The National Association of REA Cooperatives has endorsed the project. The power from the project powerplants will be sold under the provisions of the Reclamation law, which includes the preference clause. There is no Federal subsidy to power in this project. The entire cost of the power features will be repaid with interest. The power will be sold at competitive rates, expected to be about 6 mills per kilowatt-hour at the load centers. This means that the users of power in the area, who are also the water users, will help pay for the cost of the project.

16. All reimbursable costs will be repaid by the users of water and power.

The Federal Government, throughout its history, has provided financial aid to public works, where such public works would result in public benefits. The earliest aid was given in the improvement of rivers and harbors, ship canals, and roads. Later, such aid was extended to flood control, railroads, highways, shipping, airlines, and critical industries. In most of these uses, the first costs were never repaid and frequently the operation and maintenance costs were also assumed by the Federal Government. Currently the Federal Government is spending billions on water resource projects (rivers and harbors and flood control), little of which will be repaid and upon which no interest is charged.

In spite of the erroneous and misleading propaganda which has been widely disseminated, the construction costs of the Colorado River project will be 99 percent reimbursed by the water- and power-users of the area served. The nonreimbursable 1 percent represents a very modest appraisal of other values, such as flood control and fish and wildlife protection.

Approximately two-thirds of the total cost of the project represent the investment in power and municipal water features. These costs will be repaid with interest. The one-third allocated to irrigation will be repaid, without interest. This is in harmony with national policy which has been in effect for more than 50 years, because the value of the interest is the Federal Government's contribution toward the cost of the public benefits which are many, and recognition of the large percentage of public land in the reclamation States.

With the passage of the Reclamation Act in 1902, a revolving fund, called the Reclamation Fund, was established to finance reclamation projects. The major source of this revolving fund has been and still is the income from the sale of timber, public lands, and oil, gas and mineral leases and power revenues in the public land States. This fund has been built up to nearly $1 billion, and its annual accruals are now sufficient to finance reclamation investigations and overhead, and to provide more than one-half the construction appropriations for reclamation.

Considering the multipurpose character of reclamation projects, and the fact that the power and municipal features of these projects draw interest on the unpaid balance of the construction costs, it is obvious that the interest-free money outside that in the revolving fund required to finance the irrigation features of the reclamation program is very small. The charges that the Colorado storage project will place a heavy tax burden on other States are therefore completely erroneous.

17. The project creates a new source of income to the Federal Treasury, not a tax burden upon each State.

The widely disseminated charge that the Colorado River storage project will be paid for by States outside the upper Colorado River Basin is pure fiction.

The provision of interest-free money from the Federal Treasury for irrigation features of reclamation projects has been national policy for more than 50 years. This is not a subsidy. It is a form of payment for indirect benefits received by the public from the results of reclamation. These benefits are tangible and can be evaluated. During the payout period of a reclamation project, the value of these benefits greatly exceeds the cost of interest on the cost of the irrigation features.

Put in a more recognizable form, let's look at the income-tax situation alone, because this revenue goes directly into the Federal Treasury.

First of all, the expenditures for construction become income, which is immediately taxable. H. R. 3383 provides for an expenditure of $760 million. Assume for the purposes of illustration, that the construction is completed in 10 years at $76 million per year. This expenditure, in one form or another, becames taxable income. The Treasury Department estimates 20 percent is about

an average income-tax rate. Twenty percent of $76,000,000 equals $15,200,000. Out of the $760 million expended for construction, therefore, $152 million goes back directly into the Treasury as a new source of income to the Treasury, which would not exist if the project were not built.

A part of this new income would offset the interest on the unpaid balance during the construction period. The offset would be current, so only simple interest would be involved. The net new income into the Treasury during the assumed construction period, therefore, would equal $106,752,000.

At the beginning of the development period, the farm income would start to increase. This new farm income, which did not exist before the project was built, is taxable.

The new income taxes resulting from increased farm income, increase from 0 at the beginning of the development period to an estimated $4,947,000 annually at the end of the development period, and are assumed to remain constant during the 50-year repayment period. For a period of 24 years this new income to the Treasury annually will total less than the simple interest on the unpaid balance, but beginning with the 25th year after full development is reached, the total new income to the Treasury would exceed total simple interest, if applied to the unpaid balance of the construction costs. At the end of the payout period for the last unit of the irrigation features, the cumulative new income to the Treasury from increased income on the farm exceeds the total value of interest on the unpaid balance of the construction costs by $131,811,000.

In this analysis, no credit is given for increased State income or ad valorem taxes resulting from project construction, even though they would be considerable.

This claim for new Federal revenue from reclamation projects is not a theoretical assumption. The facts have been borne out in 50 years of reclamation activities. Typical of economic returns, exclusive of direct crop values, from reclamation projects are these from a sampling of long-established reclamation projects:

Salt River Valley, Ariz.: Total cost of project, $24,631,302; cumulative Federal tax revenues attributable to project—$310,700,000 on individual incomes, and $253,100,000 corporation income-tax receipts.

Yakima project, Washington: Total cost of project, $49,593,890; cumulative Federal tax revenues attributed to project on individual incomes, $239,600,000, and corporation income, $101,800,000.

Strawberry project, Utah: Cost, $3,348,684; current annual tax revenues attributed to project, $1,797,960 to State and local governments, and $4,432,800 to the Federal Government.

New income to the United States Treasury, regardless of the source, reduces proportionately the income taxes required or it provides additional revenue for new expenditures.

Providing interest-free Federal money for reclamation is not a subsidy (nor a taxpayer's burden) for the following reasons:

(1) No interest should be charged because the money for the irrigation costs would come out of the Reclamation Fund, which comes from the States involved.

(2) The project creates new wealth from which new income taxes, in excess of the value of interest, are paid.

(3) The value of interest may be considered as payment for public benefits.

18. Water rights as between the upper and lower basins are established by compact. Nothing in the pending legislation will impair these rights.

The upper basin States are required not to deplete the river at Lee Ferry below 75 million acre-feet each consecutive 10-year period, and, in addition, the upper basin States must carry one-half the Mexican requirements in case of short water supply. The bill affirms these compacts as the law of the river.

19. The project construction period will be at least 25 years.

If the project were authorized tomorrow, it would take 2 years to produce planned reports and contract documents. It is estimated that to construct Glen Canyon, Flaming Gorge, Currecanti and Navaho Dams, will take more than 10 years, and that at least 15 years will be required to fill the reservoirs.

The participating projects will start to deliver water at about the eighth year after authorization, and their construction will string along for about 17 years, even without the customary delays in appropriations. The flow of appropriations will govern, but it is doubtful that more than $30 million per pear, on an average, will be available for construction, which suggests 25 years as the minimum construction period.

20. The project costs are reasonable.

The Colorado River storage project is expensive, but so is virtually all water development these days. The Colorado project's costs are increased by the rough topography, large holdover storage requirements, long distances to the points of consumptive use, and the scattered arable land areas involved. The costs, however, are not excessive, because this project provides water for present and future municipal and industrial uses, as well as for agricultural uses. In addition, the reservoirs and dams which are necessary for river regulation and holdover storage are also valuable as efficient power sites.

The generation of electric power from the energy of the falling water as a byproduct of the irrigation project provides revenues which can be used to help pay the cost of the irrigation features of the project. This unique situation places the burden of repayment upon both the water and power users of the area, and no portion of the cost is passed on to those outside the area, in spite of the fact that they do receive benefits.

The per-acre costs on the 11 participating projects vary from $210 on the LaBarge project in Wyoming to $794 on the central Utah project in Utah. These costs are spread over a 50-year period, after a 10-year development period, making the annual costs per acre vary from $4.20 to $16, a rather modest annual cost for a long-term water supply.

The costs are reasonable and well within the limits of net increased returns per acre, after water is made available. Fifty years experience on Reclamation Projects show that the cost of supplying water to the land has averaged from 2 to 3 times the market value of the land and water at the beginning of the payout period. At the end of the payout period, however, the market value of the land is 3 to 4 times the cost of supplying the water. Every acre of land proposed to be irrigated under this project will show an increased net production, after water is made available, greater than the annual repayment plus the cost of operation, maintenance, and replacement. The propaganda arguments against the per-acre cost on this project are pure fiction.

Nonagricultural benefits from reclamation projects were cited in the recent Hoover Commission Task Force Report on Water and Power (vol. 1, p. 44) as follows:

"The justification for Federal interest in irrigation is not solely to provide land for farmers or to increase food supply. These new farm areas inevitably create villages and towns whose populations thrive from furnishing supplies to the farmer, marketing his crops, and from the industries which grow around these areas. The economy of seven important cities of the West had its base in irrigation—Denver, Salt Lake City, Phoenix, Spokane, Boise, El Paso, Fresno, and Yakima. Indeed these new centers of productivity send waves of economic improvement to the far borders, like a pebble thrown into a pond. Through irrigation, man has been able to build a stable civilization in an area that might otherwise have been open only to intermittent exploitation."

21. The authorization of the Colorado River storage project will have no effect on the current agricultural surpluses for the following reasons:

The basic crops which are under mandatory price support or which constitute the bulk of our surpluses are: wheat, cotton, corn, tobacco, rice, peanuts. None of these crops, except wheat and corn is grown in the upper basin States. Very little wheat is grown on land to be supplied with water and most of this on nonirrigated land, which, when water becomes available, will be diverted into specialty crops or alfalfa and forage, and thus reduce the wheat acreage and production. In Utah—and this is typical of the other upper basin States—less than 7 percent of farm income is derived from the basic crops which are now under mandatory price supports. The principal crops to be grown on this new irrigated land will be fruits, vegetables, alfalfa, and forage. None of these crops is in surplus, or under mandatory price supports.

The total acreage of new land that will come into production as a result of the project will be small (132,360 acres), and the timetable of construction so long, that the surpluses will have vanished before the area comes into production. For example, elapsed time between beginning and end of construction will be at least 30 years.

It is estimated that 10 years will be required to construct the major storage and control works and the conveyance channels to the participating projects. An additional 10 to 15 years or more will be required to fill the storage dams and to build the participating projects. Experience has shown that it takes about 10 years to fully develop the irrigation practices after water is made available to the area. Therefore, although a few acres will be irrigated annually after about the 10th year after authorization, the project cannot possibly be in full production before about 30 years after authorization.

The principal crops grown in the upper basin States are fruits and vegetables and other specialty crops so important to the American diet (75 percent of the present production comes from irrigated lands in the 17 Western States), and alfalfa and forage.

The upper basin States are deficit areas in the production of livestock feeds. Most of the Nation's feeder cattle are produced in the Mountain States. To maintain the supply of feeder cattle needed to fill the feed lots of the Midwest, sufficient alfalfa and forage must be produced to carry the intermountain area livestock through the winter. As of December 7, 1955, 17 counties in Utah and Wyoming were on drought relief. The upper basin States will remain deficit feed areas until water is made available so that more alfalfa and forage can be produced. The United States Department of Agriculture reports that drought assistance and relief through the loan and feed programs amounted to over $20 million in 1953–54 and over $14 million in 1954–55.

Population is growing at a staggering rate. Estimates for 1975 population vary from 200 to 250 million people in the United States. The President's Materials Policy Commission report in June 1952 says that the United States will need 40 percent more agricultural production in 1975 than in 1950. The commodity estimated to be in greatest demand by 1975 is livestock—a 49.4-percent increase in total consumption of meat is forecast, and a 41.6-percent increase in beef. Livestock feed and feeder cattle will control the supply, and the new demand will be built up before the Colorado River project can be put into production. A 6-percent increase in vegetables for processing is forecast, and a

37.2-percent increase in fruits other than citrus. The total demand for cereal crops also will be up—wheat only 23 percent—but not to the same degree.

The demands for food and fiber projected by the USDA and the President's Materials Policy Commission cannot be met in the next 20 years. For example, the USDA says we will need 35 million new acres by 1962 to produce the feed necessary to maintain the current per capita meat consumption of 156 pounds. About 17 million of this can be obtained by shifting acreage from wheat and cotton to livestock feed. A part of the balance can be obtained from increased per-acre production, but such increases are definitely leveling off. Projecting the period to 1975, when the population will be in excess of 200 million, we will need in excess of 100 million acres of new land in production. Actually, the acreage requirement by 1975 will be greater than 100 million, because each year approximately 1 million acres of farmland is taken out of production for highways, airports, urban development, military or public buildings. This will amount to 20 million acres by 1975. Erosion and alkali will take out additional acres.

It is not unreasonable to assume that by 1970, when the bulk of the land in the Colorado River storage project starts to come into production, that this country will need the equivalent of 100 million acres of new land. The USDA estimates probably 20 million could be obtained by draining and clearing land in the humid and subhumid areas; hence 10 million additional acres will have to be found elsewhere. This is about the equivalent of 6 million acres of irrigated land, and that is about all the irrigable land left in the 17 Western States.

The Colorado River storage project, as proposed in H. R. 3383, will bring into production 132,360 acres by 1980. The need by then will be 6 million irrigated acres. Therefore, the land brought into production by the Colorado River storage project can have absolutely no effect on the current agricultural surplus. The total new area to be irrigated would be only 0.027 of 1 percent of the total cropped land in the United States and would be used primarily to grow fruit, vegetables, alfalfa and forage crops, all of which will be in great demand by 1975.

The Colorado River compact apportioned, for beneficial consumptive use, 7,500,000 acre-feet of water per year to the Upper Colorado River Basin. Of this more than 5 million acre-feet per year are now unused in the upper basin and without holdover storage in the upper basin these waters flow downhill to become available to the lower basin and Mexico. In both these lower basin areas the physical facilities are available for the control, diversion and use of the entire flow of the river. Failure to use the 5 million acre-feet in the upper basin makes it available to the lower basin for the production of cotton, which is now in surplus. Cotton acreage in the lower basin and Mexico has increased greatly, because of the availability to these areas of unused upper basin water. Here is what has happened during the past year, 1955. Cotton quotas were reduced in California. Cotton growers moved over into Mexico, and, using upper basin water, produced in 1955 nearly 500,000 bales of cotton.

The acreage in California taken out of cotton was used to grow alfalfa seed, which soon flooded the market and threatens the demestic alfalfa seed industry. Water belonging to the upper basin States and not used now in the upper basin is being utilized to produce crops which increase the crop surpluses.

The Colorado River storage project will make water and power available for industrial and municipal development as well as for agriculture. The Colorado River basin is a storehouse of raw materials. Development of these resources will provide jobs, homes, create new wealth and add new income-tax pipelines to the Treasury. It is not unreasonable to believe that the increased population resulting from this project will consume more agricultural crops than it produces and this will create new markets for such crops from other areas.

The farm surplus is a current and temporary situation. This country will soon outgrow it. It is inevitable with the rapidly growing population. This country must project its food and fiber needs in to the future. It cannot afford to live only in the present with no concern for the future, when it takes so long to develop a dependable food and fiber supply. A few years ago, during the war, there was a shortage of food. Everyone remembers it. The people in the West remember the drought of 1934. Another year like 1934 would wipe out the present food surplus.

The United States has become the greatest Nation on earth because it invested in the future—in the promotion of transportation, communication, agriculture, industry, even to the extent of providing cash grants. It planned for the future. We must continue to look ahead, and 25 years is not too long a forward look. In 25 years we will need all the food the Colorado River storage project can produce, and it will take about that long to bring the land into production. The project must be built beginning now. It cannot possibly add to the current surplus. It is even doubtful that it can meet the increased food demand by the time it is in full production.

22. The reclamation fund: With the passage of the Reclamation Act in 1902, a revolving fund was established to finance the reclamation projects. This fund is known as the reclamation fund. This fund is supported by proceeds from the sale of public lands and timber, and was later augmented by a percentage of the oil, gas, and mineral leases and revenues from the repayment of construction costs of projects to develop the natural resources of the public-lands States.

The Hayden-O'Mahoney amendment to the reclamation law in 1938 provided that all revenues from reclamation projects should be deposited in the reclamation fund, an earmarked fund in the Treasury. In fiscal year 1955, more than one-half the total money appropriated for reclamation projects (irrigation and power) came from the reclamation fund.

Up to June 30, 1954, $936,183,015 had been paid into the reclamation fund. Of this total, $848,149,945 had been expended on reclamation projects, leaving a balance in the fund of $88,033,070 on June 30, 1954.

Up to June 30, 1954, the States of Wyoming, Colorado, Utah, and New Mexico had put into the reclamation fund $178,456,067.

During 1954, these same States, out of public land resources, put into the reclamation fund approximately $20 million. This is more than enough to have paid interest on the unpaid balance of the cost of the irrigation features of all reclamation projects in those States, including the Colorado River storage project, if its construction had been initiated during that year.

When all States, except the public land States of the West, were admitted to the Union, they retained all their land and mineral resources. These resources were developed as taxable private enterprises, or as sources of State revenue. In the Western reclamation States, more than half the land and most of the oil and mineral resources on it were kept by the Federal Government. Under these conditions it is no more than right that the proceeds from these Federal resources in the upper basin States should be used to offset the interest on the money advanced by the Federal Government to build the irrigation features of reclamation projects.

23. A discussion of the southern California proposals for alternate land reclamation in nonarid areas:

Wet lands of South, East, and Midwest can be drained and cleared. It is estimated that perhaps as much as 21 million acres might be reclaimed by such action.

The soils for the most part are shallow and infertile from centuries of leaching by heavy rains. Heavy applications of fertilizers will be required annually. These annual costs plus the first cost of reclamation greatly exceed the cost of reclamation by irrigation.

Except for limited areas, the cropping pattern will be limited to a few crops, most of which are in surplus.

If these lands had been attractive for reclamation at the very low costs as claimed by the southern California groups opposing upper Colorado River development, why haven't they been reclaimed before, during the period of agricultural shortages and high prices for agricultural products?

Within 15 years this country will need to have every available acre of productive agricultural land in production including the total irrigable area in the 17 Western States.

Every year the highway, airfield and urban expansion is taking out of production more available land than is being brought into production. It is reported by the Soil Conservation Service that these withdrawals amount to more than 1 million acres per year. In the four upper Colorado River Basin States, 160,000 acres of cropland are diverted to other uses every year.

24. Current power production at Hoover Dam:

The contracts for power were based on a rate sufficient to repay the entire cost of the dam and power facilities in 50 years. Power which was considered to be firm and available at all times, regardless of development in the upper basin, is under contract at the rate of 1.34 mills per kilowatt-hour. Power, which is to be available only so long as upper basin is not using its water, is secondary or dump power, and the rate for this power is .33 mills per kilowatt-hour.

So long as the upper basin is kept from using its water, the secondary power at Hoover is just as good as firm power, and the southern California users get it for the secondary rate and sell it as though it were firm power. The value of this power, being made with water apportioned to the upper basin States, amounts to approximately $4 million per year. This is an outright gift to the southern California power users at the expense of the upper basin States.

From 5 to 10 million acre-feet of water per year is now going into the sea from the Colorado River. This water is being used to generate power for the primary benefit of California.

With the completion of construction of Glen Canyon and Flaming Gorge Dams, this water which is now wasting into the sea will be used to fill those reservoirs, and later for consumptive uses in the upper basin.

The loss of this power source is one of the main reasons for California's opposition to the Colorado River storage project, in spite of the fact that California signed the Colorado River compact and agreed to a division of the waters of the Colorado River. Planned reductions of firm power to the lower basin as a result of expected upper basin water diversions are plainly provided for in Hoover Dam power contracts.

25. The real issue—who gets the water and the power.

There is not sufficient water in the Colorado River to supply all the agricultural, industrial and domestic needs of the area.

After all the water of the Colorado River is consumptively used, there will still be thousands of acres of thirsty lands, raw materials undeveloped and living space unoccupied by people because of lack of water.

To provide for an equitable division of this water resource among the States of the basin, a compact, dividing the use of the water among them, was drawn, signed by each State and the United States.

This compact divided the use of the water between the upper and lower basin, the first 15 million acre-feet equally.

The lower basin (California, Arizona, and Nevada) developed first with the support of the other States and the use of money from the Federal Treasury.

Storage reservoirs, powerplants, control structures and conveyance channels have now been built, largely under the reclamation law, sufficient to control, divert and convey all the water of the river.

There are more than 2 million dry acres in the Colorado River Basin of Mexico and 500,000 acres in the Imperial Valley of California waiting for water to make them productive. It would take more water to irrigate these lands than the entire allotment to the upper basin.

An insatiable power market exists in the southern California area sufficient to use all the power that can be generated with all the water in the Colorado River system.

The lower river is completely regulated by the Hoover Dam.

Water runs downhill. If by any means the upper basin States can be kept from using their water, this water will run downhill and southern California and Mexico will get it.

This water resource is literally worth billions of dollars. It is not surprising, therefore, that the southern California opposition is willing to spend hundreds of thousands of dollars to keep the people in the upper basin from utilizing their allocated water.

There is only one issue to this controversy—who gets the water and the power allocated by compact to the upper basin States?

Failure to authorize this project by this Congress will lend the support of this body to the consummation of the "steal of the century," whereby one Commonwealth, which has become prosperous and powerful as a result of water and power made available through Federal aid from a common river source which was divided by compact, now uses that strength and economic wealth to take, by indirection, that portion of the river resource apportioned to the upper basin by a valid contract which that Commonwealth signed.

26. Partnership in reclamation:

The reclamation partnership program joins good land and good water with good people. This combination creates new fertile acres, new wealth which will produce food and fiber in perpetuity. In one sense, a nation is only as strong and enduring as its food supply. In another and more important sense, no nation can be strong unless there exists a deep spirituality among its citizens.

Fulfilling the commandment God gave in the beginning, "to multiply and replenish the earth and subdue it," is one of the best ways to develop those spiritual forces every nation must have to endure. The good earth is man's best friend. In Proverbs it is declared, "Where there is no vision, the people perish." The subduing of the earth requires imagination—vision. Let us have that same vision that inspired the Dutch, who reclaim land from the ocean itself, to live their creed that "A nation that lives builds for the future."

American Mayors Urge Enactment of Depressed Areas Legislation

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. BLATNIK. Mr. Speaker, probably no group of men is more aware of the need for depressed areas legislation to offset the problems of chronic unemployment than the mayors of those communities with such unemployment. A group of such mayors, including Mayor George D. Johnson, of Duluth, Minn., which is in my congressional district, have indicated their support of such legislation in a jointly signed letter which appears below. I want to call to the attention of all the Members of this body the urgency of the situation and the need for prompt and positive action as called for by the signers of this letter and the American Municipal Association.

The letter follows:

FEBRUARY 24, 1956.

To the Congress of the United States:

On behalf of the municipal officials whose names appear below, the American Municipal Association urges legislation which will speed up the redevelopment of communities that suffer from chronic unemployment.

Persistent and substantial unemployment causes hardships to individuals and to the entire community. Unemployment weakens the economic base of the community and consequently reduces the financial ability of the area to cope with its problems. City officials in these communities find it increasingly difficult to provide an adequate level of education and a host of other municipal services. Unemployment also brings with it increased demands for social services, such as relief and welfare, which the community finds it difficult to supply.

City officials are aware of their responsibilities and are pledged to continue to do all in their power to redevelop their communities. The causes of unemployment, however, are very complex and often national in scope. Changes in national tastes, depletion of local natural resources and technological changes are all factors in the decline of employment in these areas. What is needed is a many-sided attack on the problem. There must be neighborly cooperation between all levels of government and private industry. Each must act without unnecessary interference with the other.

Because of the effects on the national economy of areas of chronic unemployment, the Federal Government has a responsibility to help these communities help themselves. Present Federal technical assistance, loans, and aid to community planning must be increased. Programs to provide aid to private business in these areas must also be expanded.

All levels of Government, as well as the citizens in these areas, have a large stake in a program of redevelopment. We urge the quickest possible action to help solve the problems of chronic unemployment areas.

Mayor Litz McGuire, Logan, W. Va.; Mayor R. T. Hicks, Jellico, Tenn.; Mayor B. W. Krodel, Point Pleasant, W. Va.; City Manager Ralph M. Wood, Hazard, Ky.; Mayor A. Valentin Vizcarrondo, Mayaguez, P. R.; Mayor Roy W. Eyes, Cumberland, Md.; Mayor Francis G. Fedder, Michigan City, Ind.; Mayor Milton DeVault, Kingsport, Tenn.; Mayor Reuben P. Anderson, Iron Mountain, Mich.; Mayor Albert C. Lambert, Biddeford, Maine; Mayor S. Thomas Capparell, Hazleton, Pa.; Mayor William G. Brown, Parkersburg, W. Va., Mayor F. R. Whalin, Middlesboro, Ky.; Mayor Everett A. Koomler, LaPorte, Ind.; Edward G. Nelson, President of the City Council, Superior, Wis.; Mayor George D. Johnson, Duluth, Minn.; Mayor J. W. Sembower, Uniontown, Pa.; Mayor Dave H. Miller, Herrin, Ill.; Mayor T. C. Atkinson, Jr., Marion, S. C.; Burgess R. C. Culp, Berwick, Pa.; Maurice J. Maurice, Chairman, Board of Selectmen, Sanford, Maine; City Manager Harlow R. Richardson, Mount Vernon, Ill.; Mayor Thomas S. Curtin, Bristol, Tenn.; Mayor Abe I. Daniels, Connellsville, Pa.; Mayor G. A. Bridges, Kings Mountain, N. C.; City Manager S. C. MacIntire, Jr., Rocky Mount, N. C.; Fred B. Hughes, President of the Borough Council, Clearfield, Pa.; Mayor John J. Buckley, Lawrence, Mass.; Mayor Guy W. Blackwell, Johnson City, Tenn.; Mayor William G. Meyer, Fairmont, W. Va.; Mayor C. L. Beard, Sheffield, Ala.; Mayor E. J. Evans, Durham N. C.; Bernard L. Manh, Borough Manager, Lewistown, Pa.; Mayor W. R. Young Appalachia, Va.; Mayor B. B. Cruton, Paintsville, Ky; Mayor Alexander Vineburg, Long Branch, N. J.; Burgess Joseph P. Bradley, Mount Carmel, Pa.; C. Martin Lutz, President of Town Council, Bloomsburg, Pa.

Small Business Loses Ground to Giant Firms

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include an article appearing in the Midland Cooperator, Minneapolis, Minn., February 20, 1956, entitled "Small Business Loses Ground to Giant Firms."

The article is as follows:

SMALL BUSINESS LOSES GROUND TO GIANT FIRMS

Small-business men are in the same boat with farmers, sinking on a rising tide of prosperity, reports Eric Sevareid, CBS news analyst.

Small businesses aren't disappearing as small farms are, Sevareid said.

"But neither are small businesses growing in number as the economy grows, and the number of small business failures has risen to levels that alarm some observers," the radioman reported.

"Net growth in the number of business firms stopped in 1953 after growing by 20,000 new concerns in the previous 4-year period. The profit margin of small business has dropped sharply, while that of big business has continued to grow."

Sevareid used Federal Trade Commission, Securities and Exchange Commission, and Dun & Bradstreet figures.

These show that "the smallest manufacturers suffered a 66 percent drop in profits after taxes, compared with 1952," Sevareid reported.

The Senate Small Business Committee has concluded "that there is simply no evidence the American small-business man will be able to hold his ground, shaky as it is."

"Big business can arrange big, long-term loans. Any workingman can buy a house, car, furniture for 10 percent down and 3 years to pay," the commentator declared.

"What about the modest retailer, jobber, wholesaler, serviceman? His credit situation hasn't changed at all. He still has to pay for his goods in 30 to 60 days."

Small Business Administration isn't much help. SBA has received 11,000 inquiries a month and granted less than 400 direct loans in 2 long years," Sevareid reported.

"So far, hardly a whisper of concern has been voiced by the administration over the profound social fact that the big get bigger, while the small get smaller—a fact, concludes the Senate committee, that will ultimately change the fundamental character of the American economy, perhaps beyond easy recognition by the present generation."

Is This Blackmail?

EXTENSION OF REMARKS
OF
HON. BYRON G. ROGERS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. ROGERS of Colorado. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an excellent editorial that appeared in the Denver Post, Denver, Colo., February 23, 1956. This editorial points out many pertinent facts and, in my opinion, answers contentions made by southern California in their opposition to the upper Colorado bill, H. R. 3383.

The editorial is as follows:

IS THIS BLACKMAIL?

California has received, over the years, more Federal reclamation money than any other State. In other words, California has been the chief beneficiary of the program under which Congress makes appropriations to irrigate dry land, produce hydroelectric power and control streams which are subject to flooding.

Significantly, the only new reclamation project approved by Congress last year was the Trinity River development in California.

One might expect California to be the leading advocate and defender of the reclamation program which has meant so much to its own prosperity. It is something of a shock, therefore, to find California Congressmen attacking the principle of reclamation in an effort to defeat the upper Colorado River storage project.

Congressmen from upper basin States have helped California get her projects. They supported legislation to enable California to use large quantities of Colorado River water.

They had every right to expect that California would help them get reclamation money to develop their part of the river when the time came. But what do we find? Many Californians are not only opposing the upper basin project for selfish reasons but they are so anxious to defeat it that they are attacking reclamation in general.

One of the most telling pieces of propaganda against the upper basin project is a list purporting to show how much the project would cost the taxpayers of each State, so many million of Illinois, so many million for New York, etc.

Actually, the upper basin project would be self-liquidating but the opponents do not mention that. Californians have been active in spreading this propaganda although they must be aware any argument of this kind plays into the hands of antireclamation forces.

This is an argument which is adaptable for use against any reclamation project any place—even a reclamation project in California. Fundamentally, it is the argument that Federal money should not be spent to benefit any particular locality—even though the money is to be paid back and even though no one but the Federal Government could undertake such large public works.

It is the principal argument raised against every reclamation project ever proposed. It ill becomes such an important reclamation State as California to embrace and further such an argument.

In their desire to defeat the upper basin project, Californians have been using another favorite weapon of the antireclamationists. "Why," they have been asking, "should we bring more land into cultivation when we already have crop surpluses?"

This is a phony attack because surplus crops are not raised on irrigated land. Principal irrigated crops are alfalfa, sugar beets, fruits, garden truck—not wheat, corn, and other products which are in excess supply.

Here again the Californians are using against the upper basin project an argument dreamed up by those who oppose all reclamation.

From time to time efforts have been made to call the attention of Californians to the damage they are doing the cause of reclamation (including California reclamation) by using against the upper basin project the arguments borrowed from the bitterest foes of any and all reclamation.

Apparently that is what Senator CHAVEZ (Democrat, of New Mexico) had in mind the other day when he sent out a letter soliciting support for the upper basin project. He pointed out that he for one is sympathetic with necessary river-control projects in all States, including California, and he hopes upper basin needs will receive similar consideration.

Californians are trying to interpret the Chavez letter as "threatening to blackmail against them if they continue to oppose the upper basin bill. Actually, it is high time that sometone told the Californians, straight, that they cannot be antireclamation where other States are concerned and proreclamation when they want Federal money for their own projects.

That is not blackmail—it's commonsense. Californians should realize that in their efforts to stop a project they do not like they are undermining the foundations of the reclamation system.

This Sort of Stuff in a Water Reservoir?

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. UTT. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Greenville (N. C.) Reflector of January 30, 1956:

THIS SORT OF STUFF IN A WATER RESERVOIR?

We received an interesting little package from Washington the other day from Congressman CRAIG HOSMER, of California.

The package contained two little pieces of what looked like purple rock. An accompanying note in the package read:

"Put this Chinle rock in a clean ashtray and pour water on it. This rock came from the walls of Glen Canyon, where the Bureau of Reclamation wants to build Glen Canyon Dam and Reservoir, the key unit of the proposed gigantic upper Colorado River project. You can see what happens. It disintegrates."

We did.

It did.

Most interesting.

It leads us to the conclusion that Congressmen, following the trend of the times, are trying do-it-yourself methods of getting a point across to the public.

If you want to try this little experiment in your own ashtray, just drop a line to Congressman HOSMER. We're sure he'd be happy to send you a little package just like the one we received.

We're Being Warned About Asia

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. BLATNIK. Mr. Speaker, for some time I have said that in order for this Nation to maintain its position of world leadership toward peace we must offer the peoples of the world positive and constructive leadership. If we do not, as we have not in the past 3 years, a vacuum will be created into which the Soviet Union will surely move, as it is now moving in the Middle East and Southeast Asia. Prompt and positive action is needed to check this Communist threat in these areas. Mr. John Cowles, president of the Minneapolis Star and Tribune, is writing a series of articles in which he shows a deep insight into and knowledge of the situation in the Middle East and Southeast Asia. His warnings of the threat and the need to do something about it should not go unnoticed. I note that Senator HUMPHREY and THYE, of Minnesota, have already included in previous CONGRESSIONAL RECORDS the first three of Mr. Cowles' articles. These articles are receiving wide attention as evidenced by the following article by Roscoe Drummond which appeared in the Minneapolis Star for February 21, 1956:

WE'RE BEING WARNED ABOUT ASIA—PROMPT ACTION NEEDED TO CHECK THE COMMUNIST THREAT

(By Roscoe Drummond)

WASHINGTON.—Two of the most eminent and able Americans in private life—Paul G. Hoffman, former Administrator of the Marshall plan, and John Cowles, president of the Minneapolis Star and Tribune—are uttering a sober and solemn warning on the most critical front of the cold war.

It is evident that, based on their wide, first-hand experience, they have reached the same conclusions independently and almost simultaneously.

When you lay alongside of each other the address on Asian aid which Hoffman delivered at the University of Bridgeport last week and the articles which Cowles is writing in his newspapers (Minneapolis Sunday Tribune, February 5, 12, 19) as the result of his latest trip through Burma, Indonesia, India, and the Middle East, their combined report constitutes something very near to a "shock treatment" which shouldn't go unheeded.

Their words are the more impressive because they are neither shrill nor emotional. They are calm, knowledgeable, free of wishful thinking.

Their warnings, carefully and faithfully briefed, are:

That the Communists are making frightening headway in all Asia, that the tide of the cold war in this area of the world is perilously uncertain and that unless we lay hold of the will and the means to reverse it, the free world faces dire consequences.

That through subversion and seduction, pressure and promise, communism is continuing to pull these 10 inexperienced, poverty-plagued, newly independent democracies of Asia into its orbit.

That just as we have usefully taken a new look at our military program, it is imperative that we take a fresh new look at our relations with Asian democracies, to seek better ways of helping them resist communism.

Hoffman urgently counsels a boid, resolute, and untimid program of aid and encouragement to do for the Asian democracies what the Marshall plan did for the war-torn countries of Western Europe.

He urges that we keep ourselves radically disassociated from any taint of colonialism, treat the new democracies "with the respect due sovereign nations" and free ourselves from the fallacy that neutral nations are enemies.

He says we should uphold the "right of the nation which wishes to remain neutral to do so." "Not for a minute," he adds, "should we assume that those nations which are unwilling to join a military alliance with us are necessarily against us."

Cowles' words are no less grave.

"The Communists are clearly gaining throughout much of Asia," he reports. "Unless the United States adopts a much more imaginative and understanding psychological approach toward Asia and enlarges the scope of its economic aid, the probability is that much, if not most of Asia, will gradually slip into the Communist orbit."

Cowles sees the opportunities to prevent this not in our reach indefinitely; action must be prompt as well as adequate.

"Whether the people of the United States," he says, "will come to appreciate quickly enough what is now happening in the underdeveloped areas of the world, or whether we will wait passively until the backward countries begin to accept Moscow's political and economic philosophies as their model, is the overriding political question in the period immediately ahead. Compared to it, most of our other problems shrink into insignificance."

None of the Asian nations want communism. But their leaders and their peoples are convinced that poverty does not have to be their lot. It is clear that if they cannot confidently turn to America for help to help themselves, they will turn in the only direction open to them—Moscow-ward.

The consequence of neglecting the Asian democracies may well be that the Western World would find itself a shrinking island in a Communist sea.

The reward of helping the Asian democracies could be, in Hoffman's view, the "beginnings of the first durable peace men have ever built."

Wildlife Refuges

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend my remarks, I wish to call to the attention of my colleagues the very interesting column by Michael Hudoba, the Washington correspondent of Sports Afield in the March issue of that magazine. Mr. Hudoba, in his Report From Washington, discusses Secretary Douglas McKay's order on leasing the wildlife refuges to oil and gas interests. He. also discusses the all-important question "Can the national wildlife refuge system survive?" In view of the increasing encroachments and whittling away of our wildlife refuges by the Defense Department, private gas, oil and lumber interests, I believe this is a very pertinent and timely question.

Mr. Hudoba's article follows:

NEW ORDER MAKES FISH AND WILDLIFE SERVICE PROVE THE VALUE OF EACH ACRE OF REFUGE LAND

All but 12 of the national wildlife refuges are now open to oil and gas prospecting and leasing. Drilling will be done under the general supervision of the Fish and Wildlife Service.

While Secretary Douglas McKay's oil and gas leasing order provides for Fish and Wildlife Service supervision of the oil and gas leasing, prospecting, drilling and operations, the inescapable fact is that the national wildlife refuges are now vulnerable to exploitation.

The primary purpose of any wildlife refuge is to conserve and restore wildlife species. This purpose now is diverted. Wildlife must now share the refuges with the oil and gas drilling operations.

Secretary McKay's order raises the question whether wildlife preservation can continue even to remain the primary purpose of the refuge. It is the most serious reversal of policy toward wildlife conservation since the refuge system was established and built laboriously over the years.

Regardless of the protection the new order is supposed to give wildlife, the order inevitably encourages exploitation of the refuge lands. Refuge personnel must now divide their time between refuge and wildlife management and protecting wildlife against oil and gas operations due to come.

The national wildlife refuges, with the exception of the 12 exempted from leasing, must now be reproven for their wildlife value. As each application for a 2,560-acre lease, or 640-acre competitive lease on known oil deposits, is made the Fish and Wildlife Service must prove acre by acre the value of such refuge. Your reporter cannot escape the conclusion that the concept of a wildlife refuge has been drastically changed, and not for the better.

Although the Fish and Wildlife Service has supervision of lease applications, a requirement makes it necessary for oil and gas operators to submit operating plans for the refuge lands for Fish and Wildlife Service approval. This is somewhat diluted by the statement in the order that this applies only to those cases where such operations might seriously impair the wildlife values of the refuge lands in question.

We can assume that each applicant will claim that his operations would not seriously impair the wildlife uses, and in such case the veto power of the Fish and Wildlife Service would be questioned by arbitration and appeal.

The appeal would go to the Secretary of Interior who has already indicated his sympathy and interest in oil and gas exploitation by the signing of the order. At the same time, the Fish and Wildlife Service, handicapped by having its top officials changed into political appointees, is vulnerable to the pressures that political patronage can apply.

There is no argument that it was vitally essential for national defense to open the refuges to oil and gas exploration and drilling operations; the new order provides more supervision than the previous regulation in effect before McKay's stop order on leasing in 1953. But, even this stop order was waived to make leases on refuges in the period following 1953.

But if Secretary McKay had stood firm to protect the wildlife refuge system as previous Secretaries of the Interior had done, and not allowed oil and gas leasing on wildlife refuges per se, then the previous order would have been just as effective as the present order.

The issue resolves to the fundamental question of maintaining the integrity of the national wildlife refuge system and its 262 more or less individual units.

It is urgently hoped that Secretary McKay will immediately put the entire refuge system under the exempt classification on which no oil and gas leasing or allied operations may be permitted—the classification which now has only 12 refuges so protected. Then, if the public interest is endangered by periphery operations on some one refuge, the present order would be an effective instrument. Until this is done, we can only decry the descending gloom and pessimism over the fate of the wildlife refuge lands—which in reality are the last resort lands for wildlife conservation in the sportsmen's interest.

REFUGES BATTERED BY TRIPLE ATTACK

Can the national wildlife refuge system survive?

Not in the memory of this reporter has there been such a concentrated series of pressures to disrupt, exploit, and take over the 17½ million acres of wildlife refuge lands. Nor, have these threats and raids been so successful.

Although the refuge system is sadly inadequate, it has been laboriously built over the years to about 50 percent of its needs for wildlife conservation (the waterfowl refuge system is only up to one-fifth of what is needed for the ducks and geese). Yet the past 2 years have seen direct assaults, erosion, and subtle moves encroaching, whittling, and slicing away at the entire system and its individual units.

Whether the refuges can be saved becomes a serious question for even the sportsman who wonders casually about his wildlife resources. It will take the most drastic steps to stem the cancerous gnawing at the refuge concept.

There are three basic types of deterrents to the system. These all have been accentuated in the past 2 years.

The first is the demands by the Army, Air Force, and Navy for refuge lands to be used for bombing, target ranges, and maneuver areas. Where these demands were formerly for temporary permit, requests are now pending for permanent use by the Defense Department.

The second is the whittling away of the refuge system areas under the theory of multiple-purpose-use of resources. The oil and gas leasing order for prospecting and drilling comes under this category.

The last is the failure to expand and develop the refuge system through inadequate budget.

The first two of these threats to the refuge system income from the Federal Government and the Interior Department, which administers the refuge program.

The latter is the result of joint responsibility between the Interior, Budget Bureau and the Congress for failure to seek, recommend, and make adequate appropriations.

Unless prompt steps are taken to inhibit encroachments on the refuge system, in addition to measures designed to strengthen protection of refuge lands and provisions for stepped-up budgets to enable the refuge system to meet the critical wildlife and waterfowl needs, there is more than enough reason for concern over the future of the refuges

as a fundamental game management program.

Representative FRANK KARSTEN, Democrat of Missouri, a member of the Migratory Bird Reservation Commission which approves the acquisition of refuge lands, has become concerned over these problems to the point of introducing House Resolution 350.

House Resolution 350 would set up a special five-member committee of the House of Representatives to conduct a complete investigation of the operations of the Fish and Wildlife Service pertaining to replacement and conservation of wildlife and the maintenance of wildlife refuges.

The special committee, if approved by the House, would also give particular attention to the oil and gas leasing on wildlife refuges. It would study the adequacy of the oil and gas order to protect wildlife on the refuges, and whether the usefulness of the refuges would be impaired by this order.

The committee would have subpena powers for witnesses and records, paper and memoranda, and would hold hearings to investigate, study and report recommendations to the present Congress.

House Resolution 350, referred to the House Rules Committee, offers a prompt and direct method to produce results for strengthening the national wildlife refuge system.

If the oil and gas leasing order protects the refuge system, as the Interior Department so vigorously claims, it should not fear the special congressional study. And Congress should welcome the interest of its members to concentrate a study of the refuge program. It is of particular importance to all those interested in wildlife conservation-restoration.

Atomic Power Will Obsolete Upper Colorado Powerplants

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. UTT. Mr. Speaker, the proponents of the upper Colorado project seek to a large extent to justify the huge expenditure on the assumption that the sale of power will reimburse the Nation for the funds advanced with interest.

When the Boulder Canyon Project Act authorized Hoover Dam on the Colorado River, the legislation required that contracts for the sale of power be negotiated before the construction began. No such protection or guarantee is included in the upper Colorado project bill, and it is extremely doubtful that there will be a market for anywhere near a hundred years for power produced by the project.

The power units are proposed to be located in a region which has almost boundless energy potential in the greatest coal, oil shale, and uranium deposits in the country. When it is considered that atomic electric power will be available in the comparatively near future and this, combined with the other natural resources of the area, will make 6-mill power competitively obsolete in a few years, there would be little or no reimbursement to the Federal treasury.

We know that whereas 15 years ago nuclear power was practically unheard of, today commercial nuclear electric energy generating plants are actually being constructed. We are assured that nuclear electric energy will be produced much cheaper than hydroelectric energy and the time when this will be a fact is not far distant. Yet the planning figures for this project show that it may take up to a hundred years to pay for them out of the revenues produced by hydroelectric power. In fact, it is expected that these powerplants will pay not only for the cost of the power dams and installations but also 88 percent of the cost of the irrigation projects.

Proponents of the bill in having such expectations completely ignore the cost figures prepared by James A. Lane of Oak Ridge National Laboratory which show that while the cost of producing electricity in conventional steamplants is 7 mills per kilowatt hour, the cost in a nuclear plant would be 6.7 mills. The actual production of power, therefore, is less costly than by steam and then in addition, plutonium is produced as a by-product of the nuclear electric plant and can now be sold for approixmately $100 a gram. Even if the plutonium price were to drop back to its fuel value of about $20 a gram, the cost of producing power by atomic energy would still be far less than any other method.

Can anyone doubt, in view of these facts, that the Colorado River project is financially unsound? The taxpayers of our Nation should not be forced to bear such a tremendous burden. I hope my colleagues will join with me in defeating this measure.

Sacramento Municipal Utility District, Redding Chamber of Commerce Favor Colorado Project

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. MOSS. Mr. Speaker, certain opponents of the upper Colorado River storage project in my State recently have made public a resolution purporting to show that members of the California Municipal Utilities Association are unanimously opposed to this great reclamation project.

These men have made it appear as if all California utility districts deplore the upper Colorado project as both unfeasible and endangering California's use of Colorado River water.

The truth is that the resolution in question was prepared and released without apparently going through the formality of asking the opinion of many members of the association. In this connection, in the Third Congressional District of California, alone, the Sacramento Public Utility District—largest in the area—has been forced to publicly deny that it opposes the project. Additionally, the Redding (Calif.) Chamber of Commerce has felt constrained to take an opposing view to that announced by the California Municipal Utilities Association.

The facts are indicated in a news story appearing in the Sacramento (Calif.) Bee of February 25, 1956. This story follows:

SACRAMENTO MUNICIPAL UTILITY DISTRICT, REDDING CHAMBER OF COMMERCE FAVOR COLORADO PROJECT

The Sacramento Municipal Utility District and the Redding Chamber of Commerce have sent telegrams to California Congressmen supporting the proposed Federal upper Colorado River reclamation project.

The stands, taken yesterday, are in direct variance to a position taken by the California Municipal Utilities Association last week in Los Angeles.

LAWMAKERS ALARMED

The telegrams were dispatched after Congressmen CLAIR ENGLE, Democrat, of Red Bluff, Tehama County; JOHN E. MOSS, Democrat, of the Third (Sacramento Valley) District; and B. F. SISK, Democrat, of Fresno, expressed alarm at the association's action.

Rex B. Goodcell, chairman of the association's legislative committee, this week sent a letter and copies of the resolution to the California congressional delegation.

Committee hearings on the project are scheduled for next week in Washington, D. C.

In his letter Goodcell contended the association took a unanimous stand against the proposed project and claimed it is unfeasible and would endanger California's use of Colorado River water.

Fearing the effects such statements might have on the support of congressmen from the upper basin States who want the project, ENGLE, MOSS and SISK asked SMUD and the Redding Chamber for a clarification of their positions.

SISK charged the Goodcell statements were factually incorrect.

Goodcell is an official of the Los Angeles Water and Power Department. The agency is a member of the Colorado River board.

This board has strenuously opposed the Colorado project, causing concern of northern California congressmen.

The congressmen fear uncontrolled California opposition would endanger support for Federal appropriations for Federal reclamation projects in their districts.

SMUD OFFICIAL

James E. McCaffrey, SMUD general manager, stated in his telegram to Moss the utility has not officially been asked heretofore for its position on the project.

"We do not concur in the claims of unanimous opposition in the letter from Goodcell," McCaffrey wrote.

He went on to point out SMUD favors an expanded Federal reclamation program to assist local districts and States in urgently needed water and power developments.

In consequence, he added, SMUD favors any projects found feasible by the Federal Department of the Interior for the upper Colorado Basin States in accordance with the terms of the Colorado River Compact, an agreement among Colorado, Arizona, and California for use of the river. The compact terms are being tested in the Supreme Court.

The utilities association's resolution in opposition was adopted by a voice vote. Carl Richey, SMUD assistant general manager, as association president, did not cast a ballot.

REDDING FOLLOWS

The Redding Chamber of Commerce directors at a meeting yesterday followed SMUD's lead. They sent a telegram to Congressman ENGLE similar to the one sent by McCaffrey.

"Some question has been raised regarding Redding's attitude on the upper Colorado project," it reads. "Assure you continued support on your position."

Mayor George Fleharty told the directors the association opposition telegram is a blow to reclamation as a whole and the Trinity River project as a part of the overall reclamation picture.

He singled out three Colorado project proponents for special praise in their backing of the Trinity, Senator ARTHUR V. WATKINS, Republican, of Utah; Senator CLINTON D. ANDERSON, Democrat, of New Mexico; and Congressman WAYNE ASPINALL, Democrat, of Colorado.

Fleharty, in asking for approval of the telegram to ENGLE, pointed out the three are stanch friends of northern California and fought for the Trinity.

The five-member Trinity River project committee of the Redding Chamber studied the suggestion before approving the telegram.

New Hope for Election Reform Bills

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. UDALL. Mr. Speaker, the sponsors of legislation to reform our outmoded Corrupt Practices Act have been heartened by developments of recent days. These bills—S. 636 and H. R. 3139—would realistically control election spending and require a full disclosure by candidates—and their supporters—of all their expenditures.

Two days ago the two Senate leaders, Mr. JOHNSON and Mr. KNOWLAND, agreed there is need for a change in our wholly inadequate election laws. Indeed, Senator JOHNSON predicted "we are going to have a strong election bill this session," and an agreement has been reached for prompt floor action in the other House on S. 636.

Such bipartisan support takes cognizance of the swelling demand by our citizens for respectable ground rules to govern the election of public officers.

It is my conviction that nothing will do more this year to elevate public life and bring new respect to persons in positions of public trust than the enactment of an honorable election code which will put to rest the suspicions that now becloud American politics.

I hope that our colleagues will take increasing concern in this legislation, and to whet that interest I present an editorial which appeared today in the Washington Post and Times Herald entitled "Honest Elections Bill":

HONEST ELECTIONS BILL

The drive for enactment of the so-called honest elections bill is a necessary concomitant to the investigation into lobbying and use of money to influence legislators. One effect of the furor over Senator CASE's disclosures and the forthcoming inquiry is likely to be a drying up of contributions for the 1956 campaigns from donors interested in getting bills through Congress. Even regular contributors are likely to think twice before offering any substantial sum to a Senator or Representative while the investigation is underway. It becomes especially important, therefore, to encourage campaign contributions from other sources.

The evil that has come sharply into focus as a result of the natural gas lobby's activities is not the spending of money in political campaigns. The people must be informed about issues and candidates if they are to vote intelligently. Our democratic system is admittedly expensive to operate. The real danger arises when special interests contribute heavily to political campaigns in the expectation that the legislators elected with such help will pass bills the special interests want. The Senate concluded, largely on the basis of the Case incident, that this danger demands thorough investigation.

At the same time the Senate leaders are keenly aware of the fact that campaign contributions do not grow on bushes. While striking a blow at gifts from special interests, they see the need for encouraging more numerous donations from the rank and file of citizens interested in good government. Consequently, the plan that seems to be emerging from conferences by Majority Leader JOHNSON, Minority Leader KNOWLAND, and other Members of the Senate and House emphasizes three important steps:

First, it would permit taxpayers to deduct from their taxable income political contributions up to $100. This would be a substantial incentive to taxpayers to aid the party or candidates of their choice. Contributions on this level would not be large enough to create any sense of obligation on the part of the candidate to the donor. For some legislators, this proposal may well become a declaration of independence.

Second, it would permit radio and television networks to give free time to major candidates without extending similar favors to every fringe or splinter office seeker. This would notably ease the high cost of campaigns.

Third, expenditure limits would be lifted to make the law meaningful, and reporting requirements would be drastically tightened. Means should also be found, in our opinion, of extending the safeguards of the bill to campaigns for nomination, which, in about one-third of the States, are equivalent to elections. Senator MUNDT's proposal that congressional candidates be required to file in Washington duplicates of their reports to the States on campaign contributions and expenditures appears to have a good deal of merit in this connection.

The important objectives are to stimulate a flow of contributions from the right sources, to discourage gifts that tend to sway legislative judgment and to expose all transactions bearing upon nomination and election to public office to the fullest public scrutiny.

Upper Colorado Project

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. HILLINGS. Mr. Speaker, I wish to place in the RECORD an editorial which appeared in the Elkhart (Ind.) Truth of February 1, 1956, in opposition to the upper Colorado project:

FIVE THOUSAND DOLLARS PER ACRE FARMLAND

Representative CRAIG HOSMER, of California, has picked a sensitive occasion to attack the proposed upper Colorado River project.

Main purpose of this proposed project is to bring irrigation to parched, drought-ridden Western States.

But HOSMER claims that this river development would cost $5,000 for every acre brought under cultivation.

Meanwhile, he declares that 20,937,153 acres of the best American cropland now lie unused in 19 Eastern, Southern, and Midwestern States—1 of which is Indiana.

And now, of course, we have the proposed soil bank which would remove still more acres of land from production.

It seems fantastic to HOSMER that we would go ahead with a plan to develop dry land in the West at exorbitant cost, when we are taking other land out of production, and have a crop surplus worth more than $8 billion stored away.

What's more, HOSMER claims that rock at the site of a proposed dam and reservoir is of a poor quality which disintegrates quickly under waterflow.

It all depends upon who views this problem, of course. HOSMER, in California, fears this project is going to divert water that now reaches his own State.

Here in Indiana, as Federal taxpayers, we woudd pay a big share of this western project. Whereas HOSMER claims that the four Western States directly benefited would pay only 2 percent of the cost.

People in Wyoming, Colorado, Utah, and New Mexico naturally take a much different view.

First of all, they declare that 90 percent of all this Colorado water originates in their States, yet they now use only a small part of it. They say they are only asking Uncle Sam to help them keep what is largely theirs.

They say that the river project also will improve recreation areas patronized by people from all 48 States; would help the Navaho Indians; would improve fishing and hunting territory; and would aid national defense.

We are sympathetic to such needs, but wonder whether the percentage share paid by the States benefited should not be much greater.

And we also wonder whether this is the particular time to do it, when there are such shocking surpluses of food on land already in production.

Old Man on the Monument

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. UTT. Mr. Speaker, under leave to extend my remarks, I would like to insert the following editorial from the Bedford (Pa.) Gazette:

OLD MAN ON THE MONUMENT—ROCKS IN A BOX

The Old Man has received all types of communications during his career, but never before Saturday did he receive a box of rocks.

We opened it with interest, because we seldom receive a box of any kind from a Congressman, and this came from Representative CRAIG HOSMER, Republican, of California. In the box, wrapped up in tissue paper, were some chunks of gray-green rock, which seemed to have crumbled in transit.

Was some kind-hearted politician sending us samples of uranium? We hastily unfolded an affidavit of certification, which stated that two geologists of good repute "personally collected a large quantity of samples of the Chinle formation in the area of the Colorado and San Juan Rivers to be covered by the reservoir of the proposed Glen Canyon Dam. On said date these samples were flown

by helicopter to Lee Ferry, Ariz., and then and there were delivered to Congressman CRAIG HOSMER, of California."

By this time our curiosity was thoroughly aroused. We opened a second small slip of paper, and got the answer to our rocks in a box:

"Put this Chinle rock in a clean ash tray and pour water on it. This rock came from the walls of Glen Canyon, where the Bureau of Reclamation wants to build Glen Canyon Dam and Reservoir, the key unit of the proposed gigantic upper Colorado River project. You can see what happens. It disintegrates."

We did what the man suggested. Sure enough, it crumbled into a mud puddle.

The soft rock—known as Chinle shale—forms immense cliffs in numerous areas that would be covered by water impounded by the proposed 700-foot-high Glen Canyon Dam, according to HOSMER. He predicts that gigantic landslides would promptly devastate the $421 million dam and reservoir, which is the key unit of the proposed multi-billion-dollar upper Colorado River project.

"The size of the landslides which would occur may be pictured by considering the fact that the Chinle itself has a thickness of 800 to 1,000 feet in the drainage area," geologists reported. "On top of the Chinle are the great cliff-forming sandstones, which would tumble, as big as houses, into the reservoir."

"If this is permitted to happen, the finances of the entire upper Colorado River would collapse. The Nation's taxpayers would be left with a billion-dollar mud puddle."

We are quite a distance from the upper Colorado. Why should we care?

Well, during the next biennium Bedford County will fork over $12,199,000 to help balance the Federal budget. That is roughly four times the amount paid out to industrial employees in the county, and two-thirds of our total assessed valuation of taxable real property.

Twelve million dollars is quite a chunk of change; $400 million is quite a bit more. When we get to talking about billion-dollar mud puddles, perhaps it's time even for us, far from the Colorado, to get interested in the ways bureaucrats spend our money.

Thank you, Congressman HOSMER, for our rocks in a box. It looks a bit to us as if the Bureau of Reclamation has rocks in the head.

Can Free Enterprise Exist Without Small Business?

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. WIDNALL. Mr. Speaker, Mr. Harold B. Wess, professor of business administration and marketing at American University, recently made a speech entitled "Can Free Enterprise Exist Without Small Business?" Mr. Wess, a former vice president of R. H. Macy & Co., of New York, spoke at the opening session of the university's second institute on profitable management for small business.

It is my belief that this talk outlines the problems of small business quite clearly and it should be brought to the attention of the American public. It contains such desirable material that, under unanimous consent, I make it available through the Appendix of the CONGRESSIONAL RECORD.

The speech follows:

If and when small business disappears from our midst, then our free-enterprise society will be no more. I use "when," because I fear that unless appropriate action is taken, it is possible that small business will no longer be present, keeping our economic system healthy and dynamic.

How many big businesses that began as small businesses would have been able to grow and expand under our present tax structure? If Henry Ford had started his pioneering venture under the current tax system, would the Ford Motor Co. have reached its present size; would it be able to make its present contribution to a prosperous economy and to the economic wellbeing of our Nation?

Our present tax structure makes it difficult, if not impossible, for small and struggling business concerns to accumulate sufficient working capital to expand, purchase up-to-date fixtures and machinery, improve plants and stores, and hire additional labor.

Let us face it squarely. Small business, now as in the past, must depend on plowed-back earnings for working capital. Access to the capital markets and to the savings of investors by issuance of stocks and bonds is not available to small business. Small business must turn to commercial or bank credit and, more important, to previous earnings plowed back in the business, to meet financial requirements. Our taxing system makes it difficult for the small-business man to accumulate adequate profits to plow back into his business, credit is often not available when needed and, when available, the cost is high, and the open market for securities is largely closed to the small-business man. The usual result is under-capitalization. This means that with a slight economic squall, many a small-business man capsizes and then sinks.

There are more than 3 million small businesses in our economy. In discussing the place and problems of small business in our society and in paying tribute to the contribution of small business to our economy, let us not forget that big business is equally essential to our prosperity and high standard of living. We need both for a well-balanced and soundly integrated free economy and free social climate. In this connection I quote Prof. J. D. Glover, of the Harvard School of Business Administration, from his book, The Attack on Big Business:

"Facts, it seems to me, teem about us on every side to attest the great contribution that big business has made to American life. Big business deserves much of the credit—not all by any means—for our unequaled technological advance and standard of living."

As to the claim of certain rabble rousers that big business is running the country, he has this to say:

"It seems to me that no reasonable man, looking objectively at the facts, can believe that big business runs the country, nor that it is pushing us, willy-nilly, into totalitarianism. In fact, it ought to be perfectly obvious that, if there is any real threat of this sort, it comes from those who desire, by authoritarian political action—by the power, and ultimately by the force of the state—to remake the country to correspond to some fixed ideal of their own, or to push us back into some never-never golden age."

Much emphasis has been given to the high mortality rate of small business. Let us remember that bigness itself is no guaranty of survival. A study by the Brookings Institution showed that, of the 100 largest corporations that existed in 1909, only 31 remained on the list in 1948. The rest either slid down the scale or went out of existence entirely. No company, large or small, has a permanent guaranty of survival. That is as it should be in a free society. In the last analysis a business, large or small, must serve the public or go under.

Why is maintaining the health, growth, and survival of small enterprise vital to a better social and economic performance? The answer is implicit in our conception of free enterprise. Free enterprise makes available to individuals the opportunity to try their talents and abilities in new ventures. Private enterprise must provide these opportunities in order to retain its dynamism.

There must be opportunities for the rugged individual to attempt the new and untried. We must have a climate which makes it possible for the newcomer to make a better start and with guidance and education, enable him to prosper and survive and become, perhaps, a medium and important middle sized business. In order to make all this possible, we must provide a flexible business system where such attempts on the part of the individual will have a reasonable chance for success.

With over 3 million centers of business entrepreneurships and initiative we can have, and in fact must have, a dynamic society with millions of opportunities for new ideas, for trial and error, for daring ventures into the future. Newcomers force established businesses into alertness and efficiency. In this way they serve to keep the advantage of a competitive market open to the consumer.

It is to the best interest of big business to foster the success of small business and to the best interest of us all. In recent years an attempt was made by the Federal Government to take over the steel industry. Let up hope that Government ownership zealots do not come into power. Healthy small business makes this difficult. It is reassuring to contemplate that it is not simple for a government to take over several million small enterprises.

I am not suggesting that the Federal Government has no part to play in our private enterprise economy. What makes our society dynamic and vigorous instead of static and inflexible is the decentralization of authority and decision making, in contrast to a society under centralized direction and control. We have many governments and centers of activity and decision making. Labor unions, business associations, fraternal orders, clubs, churches, universities, professional organizations, the family unit, and many groups of farmers, adult study groups, town councils, and so forth, are all participating directly and indirectly in the Government of our Nation.

We may best sum up the case for small business by quoting Dr. Harold W. Dodds, president of Princeton University:

"In an age of bigness there is need to preserve islands for the cultivation of the resources of smallness."

We know that many people by temperament and makeup will be happier and more effective in a business of their own. There are also many who should try their own wings before becoming part of a large organization.

Let us take a look at small business; how many are there, how do they perform, and what happens to them? There are 4,200,000 firms now in operation. Of this number, 75 percent have fewer than 4 paid employees. Less than one-tenth of 1 percent employ 1,000 or more people. More than three-fifths of the 4.2 million firms now active have been in operation by their present owners since the end of World War II. The median age of all operating business is nearly 7 years—that is, half of the businesses are older than 7 years and half younger. Taking the business population as a whole (4.2 million), only 19 percent remained in operation under the same ownership for more than 10½

years, 54 percent survived 1½ years, and 25 percent survived 6 years. The chances are that about 1 out of 5 small businesses will attain the age of 10 years.

Not all businesses are liquidated because they are unprofitable, but a study made in 1946 disclosed that half of all liquidations and about one-fourth of all transfers were made either to avoid or minimize a loss.

Why do we have this high mortality rate among small businesses? Need this always be so? Such high mortality is sheer economic and social waste.

We know there are functions the small business can perform more economically than big business can. There is a need and a market for goods and services which a small enterprise is more flexible and qualified to achieve. The small-business man can give better personal service; he can meet the needs of his customer because he is closer to them; he can move faster than the big business. Small business can compete and capture a market in manufacturing, retailing, wholesaling, and services because of this personalized service—high in convenience, quality, specialization, and accommodation. Yet the small-business man usually gets into trouble because—

1. He tries to make limited capital stretch too far.
2. He handles his credits poorly.
3. He lets his inventories get out of hand, carrying too much slow-moving and dead stock instead of concentrating on fast-moving items.
4. He lacks training and preparation for his job.
5. He has little understanding of his market and the personal and physical equipment needed for success.
6. He lacks financial understanding, does not know how to determine the availability of funds and how to use them to the best advantage.
7. He has little or no record keeping and does not understand the accounting function.
8. He is so involved in the pressure of day-to-day details that he has no time to analyze his situation.
9. He fails to seek help from the outside.
10. He is frustrated by changing competitive conditions because of his inability to evaluate them and does not know how to cope with them.
11. He does not understand nor has he been trained in the art and science of management.

In addition to these handicaps, small businesses characteristically have insufficient working capital and, therefore, cannot afford to tie up this capital for any long time on improvement in plant and equipment.

The small owner must meet the same problems in the management of his business as his large competitor with this difference—he is the buyer, the seller, the financier, controller, recordkeeper, etc., all in one. Yet he must learn to appraise all of these functions himself as though he had delegated them to others. For these reasons he frequently needs outside qualified counsel to help with an objective examination of his operation and suggestions for improvements in areas where he is weak.

It is the duty of big business, of government, and of educational institutions to encourage and help the rugged pioneering individuals who are ready and willing to take the risks of blazing new trails. Today, alas, there are too few young people willing to take the risks of going into a small business of their own. Witness how few are the young people who will go into selling as a career, and note that those who do, generally prefer the security of a straight salary rather than the hazard of a straight commission.

What can schools of business administration do to help small business? They can, in setting up their programs, bear in mind that the small businessman must have versatility. He cannot delegate to specialists jobs of finance, control, personnel, advertising, marketing, production, etc. He must be the specialist in all or many of these functions. Schools of business must therefore develop courses of instruction that will fill his needs for an overall expertness and skill peculiar to the requirements for a small enterprise.

Uppermost in everyone's mind is what will happen to small business under automation. It is encouraging to find Congressman WRIGHT PATMAN, chairman of the Subcommittee on Economic Stabilization, reporting to Senator PAUL H. DOUGLAS, chairman of the Joint Committee on the Economic Report, on November 25, 1955, that—

"Relatively small business may be in a position to turn its disadvantages into an element of strength by capitalizing upon its comparative adaptability and flexibility. While big business fights for mass markets, smaller business may capture the business left behind. While big business concentrates on mass assembly, the manufacture of components and parts—even the mass production of components—becomes the opportunity for small new enterprises. There is no doubt that the smaller plants will need to give especial study to product design and standardization problems in order to achieve longer product runs and secure the maximum benefits from automatic machinery.

"Small business unquestionably has its problems in the contest for survival. These include the terms of competition, the difficulty of securing sufficient capital, adequate management, and the problems of research and development. The trend toward automatic machinery may result in making these difficulties even greater, but it is far from clear that automation itself is going to add a wholly new and overwhelming set of survival problems of its own."

Small business is indispensable in a free enterprise economy. However, wholesale subsidizing of economic inefficiency and wasteful use of resources as a method of promoting the growth of small business will do only more harm to our economy, and, in the long run, will be a disservice to small business itself.

President Eisenhower in his economic message to Congress on January 24, 1956, said: "The lasting prosperity of our Nation depends far more on what individuals do for themselves than on what the Federal Government does or can do for them." Let us, therefore, turn our thoughts away from subsidies and artificial props to thoughts of how to help small business help itself.

The Late Edwin Franko Goldman

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. BOLAND. Mr. Speaker, Edwin Franko Goldman died a few days ago. One of the great bandmasters of history. His name has been identified with free, open air band concerts for nearly 40 years. His great band has been heard by millions all over this Nation. His name has been indelibly inscribed upon the musical history of this Nation.

Mr. Speaker, I remember Goldman's Band coming to my community some years ago. His music was one of the highlights of the great Industrial and Agricultural Eastern States Exposition at West Springfield, Mass. This exposition is one of the finest in the Nation. Goldman's Band played for better than a dozen years there and his reputation as a bandmaster in our locality was unexcelled.

Mr. Speaker, I ask unanimous consent that an editorial which appeared in the Washington Post and Times Herald be included with my remarks.

EDWIN FRANKO GOLDMAN

Dr. Edwin Franko Goldman, who died in New York the other day, was probably the last of the great band leaders. There were some who even thought him the greatest of all. What is certain is that he belongs in the galaxity of John Philip Sousa, Arthur Pryor, Guiseppe Creatore, and the other idols of the age of innocence, spontaneity and enthusiasm that came to an end in 1914, when the quasi-military band was the most popular form of musical pleasure, and perhaps the only one to which the generality of Americans were really habituated.

Thus the most remarkable thing about Dr. Goldman's band was that most of its success was achieved in an age when musical taste had become more fastidious and less sincere. The proof was in the enormous attendance at all his concerts, though it was in every sense voluntary and afforded no reward in the way of social approval. It is safe enough, though, to say that nobody ever slept through one of them. The great appeal of good band music lies in an irresistible power to stir the pulses.

The difference between a band—as the term is understood in this country—and an orchestra is simply an emphasis on wind instruments, though most of the great bands, including Dr. Goldman's, Sousa's, and the marine band, have also included a section of strings. Where Dr. Goldman, in his time a cornetist and trumpeter of great talent, excelled most of his peers was in the management of massed brasses. He avoided the weakness of many band leaders for arrangements transcribed from symphonic and operatic works, believing that a band does best pieces written primarily for its own instruments. He was himself an indefatigable composer of band music, though perhaps only one of his works, On the Mall, has quite achieved the great popularity of the Sousa and Pryor marches.

But the chief value of the great bandmasters was the stimulus and influence they exerted on younger and lesser musicians, amateur and professional, throughout the country. Musicians like Dr. Goldman made them aware that band music can equal and occasionally surpass orchestral music in artistic quality; and, after all, as Dr. Goldman himself once pointed out, there are still at least 10 wind-instrument bands for every symphony orchestra.

Cost of 6-Year Program of Civil Works, Flood Control and Navigation

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. MILLER of Nebraska. Mr. Speaker, I insert in the Appendix of the CONGRESSIONAL RECORD a chart showing

the civil works—flood control and navigation—6-year program, as of September 1, 1955. This chart was prepared by the Civil Works Division, United States Army Corps of Engineers.

Mr. Speaker, you will note that the estimated Federal cost of this proposed program is $13,818,716,000.

Flood control projects are designed to keep water off the land. They are generally an outright gift to the community. Irrigation projects in the arid West are designed to put water on land. Every penny of money appropriated for reclamation is repaid by water users from power revenues and other means. Great wealth is added to this country by reclamation projects.

Civil works (flood control and navigation) 6-year program, as of Sept. 1, 1955

ESTIMATED COST

	Federal (July 1954)	Non-Federal	Federal appropriation to date
Alabama:			
Flood control	$1,025,000		
Navigation	140,393,000	$143,000	$27,469,000

Economic Conditions in Italy

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1956

Mr. WIER. Mr. Speaker, under permission to extend my remarks in the CONGRESSIONAL RECORD, I include a letter from Bob Fitzgerald, B. S., D. C., Chicago-Lake Chiropractic Clinic, Minneapolis, Minn., regarding his trip to Italy and commenting on the economic conditions as he found them.

Dr. Fitzgerald's letter follows:

CHICAGO-LAKE CHIROPRACTIC CLINIC,
Minneapolis, Minn., February 17, 1956.

Representative ROY WIER,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE WIER: Just recently I returned from a trip to Italy. Three things impressed me very much about Italy. The beautiful and historic scenery and only two classes of people, rich and poor. I discovered that the richest man in Italy paid $100 income tax last year. There are enough excise taxes for the little fellow to pay and the income tax laws are on the Italian books—if the Italian Government would inforce them.

Until these inequities are brought about through reform within the Italian Government, perhaps a more tempered attitude on our part toward financial assistance to Italy should be taken.

Perhaps the answer would be investment of private American money in Italy rather than American tax money.

The threat that Italy will go Red if we don't assist her financially will only present itself again and again when our money runs out, if the tax reforms do not come from within the Italian Government. 25 percent of the Italian people control the wealth of their country leaving 75 percent poor.

Sincerely,

BOB FITZGERALD, B. S., D. C.

Colorado River Storage Project

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1956

Mr. DAWSON of Utah. Mr. Speaker, there is an increasing tendency on the part of southern California spokesmen to attempt to convince other Members of Congress that without the use of the Colorado River the State will die of thirst. This is simply not true. Southern California does not need to take Colorado River water belonging to the upper basin States in order to meet her own water needs.

Informed California officials are on record to the effect that California has enough water within its borders to meet its own requirements for many years to come.

Excerpt from Preliminary Report on the Major Features of the California Water Plan in the North Coastal Area, dated January 3, 1956:

The data developed in State Water Resources Board Bulletins Nos. 1 and 2 demonstrate the basic geographical water problem of California, and also indicate the solution to that problem. From the abundant water supplies of the north coastal area and the Sacramento River Basin, an average of approximately 23 million acre-feet of water per season will ultimately have to be developed and exported to the remaining inherently water-deficient areas of the State. These exports will be surplus waters, over and above the waters needed in the north coastal area and the Sacramento River Basin for ultimate local use. With the full practicable development of local water resources in all areas of the State for local use, and with the water available under California's rights in and to the waters of the Colorado River, these exports from the north will satisfy the probably ultimate requirements for water in all parts of the State.

Excerpts from an article by J. J. Deuel, director, California Farm Bureau Public Utilities Department and Water Problems Department, entitled "California's Water Program," which appeared in the California Farm Bureau Monthly of January 1956:

It is estimated that the present annual use of water in California is approximately 21 million acre-feet; that 51 million acre-feet will support a population in California of 40 million people, and that the total amount of water available each year is approximately 70 million acre-feet. Based on the above figures, which are supported by extensive studies made by the State engineer, it is apparent that there is sufficient water available to supply the needs of California into the far distant future. The problem is one of stopping the surplus water from wasting into the ocean and making it available where needed for domestic, agricultural, and industrial uses. The Feather River project has an important place in the plan to bring that about.

Quotation, Engineering News-Record, February 9, 1956:

Spokesman for the Metropolitan Water District of Southern California, C. C. Elder, held that while sewerage reclamation is the district's most important reserve, with its Colorado River aqueduct operating at only 33 percent of capacity the district couldn't see asking taxpayers to pay for waste water reclamation when the aqueduct won't reach full capacity for another 20 years.

California Opposes Upper Colorado Scheme Because It Tramples Her Water Rights

---

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1956

Mr. HOSMER. Mr. Speaker, the upper Colorado River storage project now before Congress seeks the construction of 11 irrigation projects in the so-called upper basin States of Wyoming, Utah, New Mexico, and Colorado. These would irrigate about 200 square miles of new land and supply supplemental water to about 400 square miles of land irrigated inadequately at present. They are known as participating projects.

According to Government experts, they would cost about $300 million, and that amount would be repaid to the United States without interest over a 50-year period as required by Reclamation Law and precedent.

The participating projects would use an estimated 400,000 acre feet of Colorado River water a year for irrigation, domestic and industrial purposes. This amount is well within what the upper basin is entitled to use and California cannot object on that score.

There is, however, a "but" to the proposal and it is a big one. It is that revenues from the sale of water from the 11 participating projects during the 50 years would bring in only about 15 percent of the money needed to repay the Government for its investment.

As a consequence the proponents of the projects had to look elsewhere for an additional source of revenue to pay the remaining 85 percent of the price tag within the time limit. They seized on the idea of building vast power dams and utilizing the revenues from the sale of power for this purpose. In the proposals before Congress, these are called storage projects to obscure their true cash register nature.

As a starter three power projects are proposed—one at Glen Canyon, one at Flaming Gorge, and one, conditionally at Curecanti, costing respectively: $421,270,000, $82,942,000, and $88,500,000. Total: $592,712,000. Other power projects would follow later.

The power projects are unrelated in any way to the 11 participating projects, except as cash registers. The latter could function to supply water entirely without them. Yet Congress is being asked to spend about $600 million additional for the power features for the sole purpose of paying the $300 million participating projects' cost.

It is little wonder that alert citizens throughout the Nation, concerned over the Federal debt and high taxes, have voiced opposition to the scheme. Federal taxpayers would be better off if Congress makes an outright gift of the 11 participating projects to the Upper Basin States and forgets the power features completely.

It is with these power features that Californians have also a special concern. They would hold back, for power use, most of the 48,000,000 acre-feet of water to be stored by the project. In the storage process, another 10,000,000 acre-feet of water would disappear by evaporation. Thereafter, they would evaporate another 600,000 acre-feet of water per year, enough to supply the needs of a city of 3 million people. The magnitude of the evaporation is apparent when compared with the 400,000 acre-feet figure that is to be put to beneficial use by all 11 participating projects. It is 150 percent of that amount.

That is mostly water that thirsty southern Californians claim they are entitled to have flow downstream to their State and which cannot legally be withheld from them because of their prior right to it established by contract, appropriation, and the Colorado River compact.

The Colorado River compact was negotiated at Santa Fe, N. Mex., in 1922 by the seven States bordering on the river. It is a contract between these States and authority for such interstate agreements is found in the United States Constitution. Herbert Hoover, then winding up his affairs as World War I food administrator for starving Europe, acted as chairman during the negotiations.

The compact did not attempt to divide up water in the river as such, nor did it make any specific allocations of water as such to the States involved. Rather, it proceeded by regarding the river as consisting of three parts:

First. The upper basin: Wyoming, Colorado, New Mexico, and Utah.

Second. The lower basin: California, Arizona, and Nevada.

Third. That part of the river which crosses the international boundary and flows in the Republic of Mexico.

The dividing line between the upper and lower basins was fixed at a point called Lee Ferry in northernmost Arizona, near the Utah border.

Thereupon the negotiators proceeded to apportion "beneficial consumptive use" of the river's waters between the basins. The compact nowhere defines "beneficial consumptive use," and its meaning is one of the issues in the pending Supreme Court suit by Arizona against California. In general, it amounts to use of water for irrigation, industrial, or domestic purposes.

That kind of "use" of water in the amount of 7½ million acre-feet yearly was apportioned to each basin by the compact's article III (a). This totals 15 million acre-feet; and since that was not all the water the negotiators believed available, by article III (b) they permitted the lower basin to make use of an additional 1 million acre-feet of "surplus" water.

Having no authority to cut Mexico out of water to which she might legally be entitled, they wrote article III (c), saying Mexico was to have whatever might be determined by a later treaty. This again was to come out of "surplus," but, if need be, equally out of each basin's III (a) apportionment. A subsequent treaty fixed Mexico's entitlement at 1½ million acre-feet a year.

At this point the negotiators had disposed of 17½ million acre-feet of water a year, but they thought there was even more in the river, so in article III (f) they set up machinery for "a further equitable apportionment" of remaining water at a later date. Subsequent experience with the river has shown not only that this additional water is nonexistent, but also that part of the apportioned water likewise is nonexistent. The river, in fact, averages a critical deficiency of almost 2½ million acre-feet a year.

Unless she desires to enter into a one party "suicide pact" California must resist to the utmost the upper basin's bold attempt, by means of the upper Colorado Basin storage project as now planned, to charge almost all this deficiency against California's preexisting water rights.

Unfortunately, this is only one of many ingenious ways in which the attempted invasion of California's water rights is being conducted. There are about a dozen other provisions in the compact on which upper basin proponents are placing weird interpretations trying to deny California and the lower basin even more water. Illustrative is the dispute involving article III (d).

Since the flow of the river varies widely from year to year, lower-basin negotiators insisted on guaranties preventing the upper basin from manipulating its uses between wet and dry years to the disadvantage of the lower basin. This turned up as article III (d) prohibiting the upper basin from depleting the amount of water flowing past Lee Ferry below a total of 75 million acre-feet in any period of 10 consecutive years.

In their desperate water grab, project proponents now contend this proviso, rather than amounting to a minimum guaranty to the lower basin, amounts to the maximum amount of water they are required to turn down the river. They say they can keep everything in

excess, storing it for power purposes or making any other use or nonuse they desire.

They persist in this contention even in the face of an interpretation of the compact made by Herbert Hoover at the time it was negotiated in his words as follows:

The compact provides that no water is to be withheld above what cannot be used for purposes of agriculture. The lower basin will therefore receive the entire flow of the river, less only the amount consumptively used in the upper States for agricultural purposes.

In the past, California has not opposed upper basin developments. Many projects in Utah, New Mexico, Wyoming, and Colorado have passed Congress without an objection from the Golden State. But when schemes are proposed such as this that cut deeply into the vital water supply, like a man attacked in his own home, Californians must command their every means and skill for self-preservation.

New Support for $100 Exemption on Campaign Contributions

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. UDALL. Mr. Speaker, last June I introduced a bill—H. R. 7001—which would allow individuals to deduct for Federal income-tax purposes political contributions up to $100 annually. Senator THOMAS HENNINGS simultaneously introduced an identical proposal—S. 2302—in our sister body.

This measure was designed to enlarge the base of political participation by encouraging modest contributions and to reduce the dependence of candidates and political parties on large contributors.

Interest in this proposal has quickened since the Neff-Keck campaign contribution was disclosed by the Senator from South Dakota [Mr. CASE]. Only last Saturday the majority leader of the Senate [Mr. JOHNSON] announced his support of this legislation, and there is good reason to hope that other congressional leaders will shortly perceive the commonsense of this proposal.

The origin of this idea—and a discussion of broader aspects of political campaign financing problems—was explained in an article written by Chalmers Roberts which appeared in the Washington Post and Times Herald of last Thursday. Mr. Roberts' article follows:

CAMPAIGN DONATIONS

(By Chalmers M. Roberts)

If the coming senatorial investigation of lobbying and election practices is to have any lasting value, it must lead to major changes in the methods of financing political campaigns. Minnesota offers suggestions on what might be done.

Last April Minnesota altered State income tax laws to permit two new sets of tax deductions: For political contributions and for campaign expenses of candidates for office.

Any citizen may deduct up to $100 for his contribution to a political party, candidate, or political cause. County chairmen may deduct up to $150; congressional district committeemen up to $350 and national committeemen and State chairmen up to $1,000 each. (The $100 exemption idea applied to Federal income tax has been proposed by Representative STEWART L. UDALL, Democrat, of Arizona, and Senator THOMAS HENNINGS, JR., Democrat, of Missouri, but nothing has been done about it so far.)

The Minnesota law also provides that candidates may deduct unreimbursed campaign expenditures personally paid by the candidate up to these levels: Candidates for governor or United States Senator, $5,000; for other State office or United States Representative, $3,500; for State senator, State representative, presidential electors at large, $500; for presidential electors chosen by congressional districts, $100; for any other public office, one-fourth of that office's annual salary, a provision covering mayors, councilmen, and so forth.

The Minnesota law is the baby of Byron G. Allen, State commissioner of agriculture and former Democratic national committeeman. Allen has said that "as a working politician, I know the subterfuges that are used" to get around the current campaign expenditure limitations of the Federal Corrupt Practices Acts. "I know," he said, "that the realities require money which must be passed under the table."

Allen would like to see the Minnesota law serve as a model for a new Federal deductions plan. But he also has a more sweeping idea which he recently brought to Washington.

He wants to raise money, big money in total, but made up to small contributions, this way: Have Congress grant a Federal charter, such as that to the American Red Cross, to a new foundation for campaign contribution collections. The foundation would be run by a broadly representative board of directors "not packed with practical politicians," as Allen puts it. It would seek contributions from 10 cents up with some unspecified limitation to be set.

Up to this point Allen's proposal is somewhat similar to the one the advertising council was prepared to take on for the 1956 presidential election.

But Allen goes further. He also proposes to distribute the money collected this way: 25 percent each to national committees, State committees, congressional committees and county committees. But not on a 50-50 basis between the 2 major parties.

Allen suggests that of each 25 percent share half the money go to the majority party, as judged by the last election returns. The other half would be divided among opposition parties in proportion to their share of the minority vote at the last election. This would mean small amounts for socialists, prohibitionists, or splinter groups in various States and counties as well as on a national level. Of course, it also means that a Democrat's $10 contribution might end up helping the GOP or vice versa.

Allen would have the money paid out this way: The party committees would spend it as they see fit, drawing funds from the foundation on vouchers and accounting in detail on the public record.

If the scheme worked well, Allen figures State legislators could then charter State foundations to take over State and local contributions—or the Federal foundation might be limited to funds for Federal office, leaving to State foundations the job of raising funds for use in State and local campaigns. A good many variants on these ideas are possible. One point is important: A lot of people would contribute to a nonpartisan foundation who would not contribute to either party.

In Minnesota the Democratic-Farmer-Labor Party sponsors the Minnesota Foundation for Political Education, modeled on European party fund-raising tactics and experiences. This foundation has begun to collect contributions from $1 to $100 and gets 1 percent of the net proceeds of such party affairs as the Jefferson-Jackson Day dinners and congressional dinners for its endowment fund.

The idea of this foundation, in Allen's words, is "to improve political ethics" in the State "to the end that campaigns in Minnesota will be educational in value rather than merely biennial emotional binges." The word "educational" includes the idea of lecture courses, political "reading rooms" on the Swedish model, schools for candidates, fellowships for youthful and impoverished candidates and political internships such as some colleges and other groups now annually conduct in Washington Government and congressional offices.

Allen's ideas are certain to run into a lot of "practical" objections from "practical" politicians who would prefer to let things remain as they are. But the $2,500 campaign contribution to Senator FRANCIS CASE, Republican, of South Dakota, already has opened up the contributions issue despite the "practical" men in Congress who would have preferred to keep the lid on. If the future investigation turns out to be meaningful, such ideas as those Allen offers may serve as models for cleaning up one of the least odoriferous phases of the democratic process.

Arab in Israel

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. MULTER. Mr. Speaker, the January 1956 publication of the Anti-Defamation League of B'nai B'rith contains a biographical sketch of the president of Haifa's Rotary Club, Mr. Fawzi John Banda. I am pleased to direct the attention of our colleagues to the article which is as follows:

ARAB IN ISRAEL—HAIFA'S ROTARIANS WERE UNANIMOUS IN THEIR CHOICE OF FAWZI BANDA

Arab-Israel tensions haven't destroyed the brotherhood spirit of this city's Rotary Club. Its president this year is Fawzi John Banda, a 48-year-old Palestinian Arab. He was the unanimous choice, a tribute to an urbane and deeply humanitarian personality which has endeared Banda to his fellow Rotarians, most of whom are Jews.

If his selection is a pleasant surprise to the outsider viewing it against the backdrop of Arab-Jewish animosity, it is accepted as commonplace among Haifa's 170,000 citizens. The honor—they agree—was deserved. "The man's enthusiasm for community work is inspirational," was a club member's simple explanation.

Banda himself is a shy man, but of strong moral convictions. "I wouldn't have accepted," he said, "if I felt there was any racial or nationalistic factor involved." Banda can, with pride, trace his ancestry back to the 13th century. For almost 600 years the family members have been faithful communicants of the Greek Orthodox Church.

Banda was born in 1907 in Acre, the son of a prosperous grain merchant. On sunny days he can see the city of his birth across the semicircle that is Haifa Bay. His adopted city of Haifa is not yet 40 years old as a modern, westernized port, although for 2,000

years it existed as a fishing village in the shadow of Acre, one of the world's oldest communities whose beginning is shrouded in the dawn of history.

But by the 20th century, ancient Acre had lost out to its younger, more energetic rival. Within 20 years, Haifa's population jumped from some 7,000 in 1910 to nearly 50,000 in 1930. Christian and Moslem Arabs, Jews, Germans, British, French, Italians, Armenians, and others lived side by side in the expanding city, keeping much to themselves socially, mixing only during working hours.

One of the few common meeting grounds was the Rotary Club, founded in 1932. Its membership reflected the cosmopolitan nature of the populace. "Whatever doubts might have been entertained by the skeptics [the official club history records], the success of the new club quickly set them at rest. Five religious denominations were represented among the members, who were also leaders in the respective ethnic communities.

"It is not easy to forget the anarchic conditions which prevailed during the late 1930's. One bright Wednesday, Hassan Shukri, then mayor of Haifa and a member of the club, showed up for the weekly luncheon, calm and unruffled, without any indication that only a few hours earlier there had been an attempt by Arab extremists on his life."

Up to 1947, the list of club presidents, included 11 Britons, 3 Jews, 1 Arab, and 1 Italian. To this day, English has remained the club's language.

Fawzi John Banda was educated in Roman Catholic and Protestant boarding schools, the French-Jewish Alliance School, and a German Templar institution. One result of this is that he speaks English, French, German, and some Hebrew, besides his native Arabic.

At the age of 11 Fawzi enrolled as a cub in the Baden-Powell Boy Scout movement. Six years later he was chosen to represent Palestine's Boy Scouts at a worldwide jamboree in England. His love for scouting kept Banda active in the movement long after his boyhood; he became a district scoutmaster and secretary of the Palestine branch of the Baden-Powell international group.

But when the Palestinian branch quietly but firmly instituted a restrictive racial policy, Banda, characteristically, quit the movement cold.

He studied accounting, banking, and insurance, becoming senior representative in Palestine for a large insurance firm. Young Banda wrote policies for Arabs and Jews; both respected his integrity in business and liked his gentle ways. In 1942, Banda was admitted to the Haifa Rotary Club, on recommendation of a British civil servant and an Arab medical officer. During the 13 years of his membership he served the group in a variety of tasks, and was both its secretary and a member of its board of directors.

Retiring and quite publicity-shy, Banda has always kept aloof from politics and public affairs. Even the social prominence that goes with a Rotary presidency makes him uncomfortable. He is unmarried, devoting much of his spare time to club work, to stamp collecting, and to community welfare.

The outbreak of war between Israel and the Arab States in May 1948 caught Banda in Lebanon on a business trip. The borders of newly born Israel, besieged by the armies of five Arab States, were sealed. Banda was, involuntarily, a refugee. When hostilities ended, Jewish Rotarians successfully pleaded his case and the Israeli Government allowed him to return.

Banda had been gone for 20 months. Haifa was not the same city as he remembered it. Most of its Arab residents had gone to Lebanon to await the outcome of the fighting, while Jewish refugees from Europe and the Middle East quickly filled the void. Death, destruction, and hatred were the legacy of the fighting.

Like his father in World War I, whose grain stocks had been confiscated, Fawzi Banda suffered his share of war damage. During his temporary exile, he lost his home and personal effects. But he kept his refined, dignified manners and the affection of his fellow citizens.

While he was gone, Haifa's Rotary Club experienced its most trying period. At the time there were 13 Arab members, 18 Jewish, 12 British, and 1 Dutch. Whatever may have been the political differences among them, they met on common ground at Rotary when they came, often crawling under gunfire, to the brotherhood of the Wednesday luncheon.

The spirit and the comradeship forged in those days has endured. Today members of the Haifa Rotary have a personal understanding of the needs for peace and true international cooperation.

To their minds, the virtues of brotherhood are exemplified in the character of Fawzi John Banda, the man they chose as their leader.

A War Is on in America

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. DAVIS of Georgia. Mr. Speaker, recently Hon. Hugh G. Grant, of Augusta, Ga., who was formerly United States Minister to Albania and Thailand and an official of our State Department, delivered an address before Phi Delta Phi Legal Fraternity at the University of Georgia, in Athens.

The address is worthy of the earnest consideration of all who are seeking a proper solution of the race question in this country, and, under unanimous consent previously granted, I insert Mr. Grant's address herewith:

A WAR IS ON IN AMERICA—A RACIAL REVOLUTION INVOLVING OUR WHOLE SOCIAL STRUCTURE

(Address by Hugh G. Grant)

A war is on in the United States of America, a racial revolution, involving our whole social structure.

This racial revolution is spearheaded by the National Association for the Advancement of Colored People (NAACP). The NAACP was organized in New York City in 1909 by 5 persons, 4 of whom were white, including a Russian-trained revolutionist and an American social worker who is said to have left her Fifth Avenue home in order to live in a Negro settlement. The Negro member was W. E. B. DuBois, who has a long record of Communist, Communist-front, and subversive connections, according to the files of the Committee on Un-American Activities of the United States House of Representatives. DuBois is known today as the honorary chairman of the NAACP, of which he was the research director until 1949.

The NAACP is today the most powerful political pressure group in the United States. Although it is primarily a Negro organization its president is a white New York City lawyer and on its board of directors are several widely known white persons, including Mrs. Eleanor Roosevelt; Senators Lehman, of New York, and Morse, of Oregon; Walter Reuther, of the CIO; and Eric Johnston, motion-picture czar.

The NAACP has enormous funds at its command and powerful allies, including the Urban League, with a racially mixed membership but predominantly Negro, the Anti-Defamation League of the B'nai B'rith, and the American Jewish Committee. Other allies are the National Council of Churches of Christ in the U. S. A., an interdenominational organization comprising some 25 Protestant churches; wealthy foundations, some tax exempt, such as Ford, Carnegie, Rockefeller, Rosenwald, and Marshall Field. It was the Carnegie Foundation which sponsored the investigation of the racial issue by Swedish socialist Gunnar Myrdal, whose An American Dilemma provided the psychological and sociological basis for the Supreme Court's school segregation decision.

Other influential allies of the NAACP are important sections of the American press, such as the New York Times and other big metropolitan newspapers; national magazines, including Life, Time, and Look; top political leaders in both the Republican and Democratic Parties, whose goal is to corral the Negro bloc vote; big labor groups, such as CIO–PAC, which are greedy for more members and greater political power; various interracial councils, such as the Southern Regional Council, successor to the defunct and notorious Southern Conference on Human Welfare; numerous prominent self-styled white liberals; and (strangest of all) a host of white Christian church members, both Protestant and Catholic, who, under the influence of false leadership, have confused the concept of Christian brotherhood with racial segregation. These misguided Christian people have ignored the fundamental fact of race—that it is God made and not manmade.

Behind the scenes, aiding and abetting the NAACP conspiracy to integrate the races, are Communists and Communist-fronters, who see in this plot a means of destroying the American Republic from within.

The goal of the racial revolutionists is a leveling off of our American society into a common racial mold, eliminating all racial distinctions on the false theory that this constitutes democracy. Members of various colored races are being brought into the American scene as an aid to breaking down the color line between whites and Negroes in the United States. Even the big national magazines, such as the Saturday Evening Post and McCalls, are publishing fiction stories in which there is mixing of the races, in lovemaking and marriage. You find examples of this also in the motion pictures and on the television screens. This racial theme is also being developed abroad through American Government-sponsored cultural programs such as the Porgy and Bess theatrical show with a Negro cast.

Never in all the history of these United States has there been such a widespread and insidious propaganda campaign.

The racial revolutionists propose to achieve their objectives in the United States in practically every phase of human behavior through judicial fiat, Federal executive decree, and State legislation. They have stormed the citadel of the Nation's highest Court and have captured the nine political judges of that heretofore august body.

The President of the United States, Gen. Dwight D. Eisenhower, and other top members of the present Republican administration have joined the procession of racial revolutionists, with an eye on the coming elections in 1956. Vice President NIXON extended greetings from President Eisenhower at the 46th annual convention of the NAACP in Atlantic City last summer. Said NIXON, "The greatest progress since 1865 has been made toward the objective to which this organization (NAACP) is dedicated," and the young and ambitious Vice President added, "The most important objective of all is the integration of the public-school systems."

The Capital of the Nation, Washington, D. C., under the impact of the Republican sponsorship of racial integration, is rapidly becoming a Negro city with more and more

Negro Federal officeholders and the racially integrated public schools. Thousands of white citizens have fled the Nation's Capital, settling in nearby Virginia and Maryland. Is there no limit to which our political leaders will go in their quest for Negro votes? How can Mr. RICHARD NIXON square his conscience with his comment at the NAACP Convention: "He (President Eisenhower) has consistently declined to play partisan politics with this (racial) issue. He has placed the full moral weight of his personal prestige and power behind a realistic program designed to realize our common objective."

And more recently we find Attorney General Herbert Brownell, Jr., in a speech in New York before the Interfaith Movement, Inc., denouncing racial segregation and castigating southern white leaders as "hatemongers who apply the whiplash of intolerance," members of "the infamous fraternity of professional bigots" who are "just as determined and just as destructive" as Communists and Fascists.

It may be recalled that it was Mr. Herbert Brownell, former chairman of the Republican National Committee, who flew out to California for a secret conference with Gov. Earl Warren in regard to appointment as Chief Justice of the Supreme Court. This affair had all the earmarks of a political deal in the light of the important role subsequently played by Warren in the unanimous Court decision declaring public-school segregation unconstitutional. When a citizen of California appeared before the Senate Judiciary Committee to voice opposition to Governor Warren's appointment, he was arrested and jailed on some minor charge which subsequently was dismissed in his home State, according to press reports.

Meanwhile, the liberal press was beating the propaganda tom-toms, bewailing the delay of Chairman LANGER'S Senate Judiciary Committee in giving the green light to the Warren appointment to the Supreme Court.

Speedy confirmation was a sacred duty, although the Senators share equal responsibility with the Chief Executive in such appointments—the "sacred bull" philosophy.

Let us take a brief look at the historical background of this racial revolution. Obviously, its roots are to be found in the nefarious slave trade which antedates the discovery of America. British, French, and Dutch slave traders were the early offenders. The first Negro slaves in America were landed at Jamestown, Va.; in 1619. Thereafter, British and New England slave traders took the lead in this business. Newport, Boston, and New York became the great slave ports in America, the South the slave market because of climatic conditions. While the Yankee traders were ravaging the African jungles for more slaves and piling up great fortunes in New England, the abolitionists of that section began their attack against the South, preaching about "the moral depravity of the southern slave owners." The "moral depravity" of the Yankee slave traders was overlooked.

Although the slave trade was outlawed by the Congress in 1807, a thriving business in the smuggling of slaves was carried on right up to the time of the War Between the States, which marks the real beginning of the racial revolution in the United States. After 4 years of bitter fratricial strife, constituting the great tragedy of the American scene, the South lay in ruins. The horde of Negroes, made free theoreticaly by Lincoln's Emancipation Proclamation, were still the responsibility of the impoverished southern white people.

Not satisfied with their decisive military victory, the Republican politicians of the North now plotted the destruction of the white civilization of the South. This was to be accomplished through three amendments to the Constitution, the 13th, 14th, and 15th amendments. In the proposed 14th amendment, particularly, were the seeds of destruction. This was recognized by the Southern States, which, with the exception of Tennessee, rejected the amendment, resulting in the failure of ratification. As the distinguished historian, Charles Wallace Collins, states, "that should have been the end of the matter."

An infuriated Republican Congress now adopted high-handed and extra-legal measures. In 1868 it placed the Southern States under rigid military rule, disfranchised the southern white men, and placed the Negroes in control under the supervision of avaricious northern carpetbaggers. Corruption and fraud were rampant. The southern people were helpless. The 14th amendment was ratified and placed in the Constitution at the point of Federal bayonets.

The 14th amendment was a fraud and a violation of the Constitution. And yet it was the only legal basis cited by Mr. Chief Justice Warren in his announcement of the infamous decision of May 17, 1954, outlawing segregation in the public school of the sovereign States. What a travesty on justice.

The southern white people survived the tragic era of reconstruction through their fortitude, courage, and racial heritage. They stood up and were counted in their vigorous opposition to northern tyranny. Through organization and with the help of a Supreme Court which recognized its obligations to uphold the Constitution they foiled the plot and regained control of their State and local affairs. The result—there was peace in the South for 60 years, two distinct races of people living side by side in friendly coexistence.

The second phase of this racial revolution began with the great Negro migration to the Northern industral centers in the late 1920's and the early thirties. Under the scheming white political bosses of the North and the NAACP, there migrating Negroes began to gain political power through simple manhood sufferage. The big labor bosses of the CIO began to admit them to membership. Result—Roosevelt's New Deal party captured the Negro bloc vote in 1936 and about the same time the President and Mrs. Eleanor Roosevelt began stacking the Supreme Court with New Deal politicians. President Truman followed along with his so-called civil-rights program, an all-out bid for the Negro bloc vote. Truman's attempt to force the nefarious Federal FEPC through the Congress failed as the result of a Senate filibuster led by Southerners with the assistance of some northern conservative Senators. (The Senate filibuster may serve a good purpose and should be retained, in my judgment).

Meanwhile, the NAACP and its allies pushed their campaign for racial integration in the North, resulting in the adoption of the civil rights codes by 19 northern State legislatures. These codes, in effect, constitute discrimination against the white man, as pointed out by Aldrich Blake, an authority on the scope and intent of the so-called civil rights revolution. FEPC laws have been adopted in eight northern States and it is only a matter of time when another attempt will be made to force a Federal FEPC upon the Nation's employers.

This national revolutionary program promoted by the NAACP and its satellites, constitutes an attack against our American constitutional Republic with its unique plan of the separation of Government powers, legislative, executive, and judicial, commonly known as the system of checks and balances. This system was designed by the Founding Fathers to establish and maintain a strong sovereign Nation and at the same time protect the rights of the people of the sovereign States. These rights were guaranteed in the first 10 amendments to the Constitution, known as a Bill of Rights.

The Supreme Court of the United States has joined in the attack of the racial revolutionists against the American constitutional system. It has collaborated with the executive department of the Federal Government in its recent decrees affecting racial relations, which is a violation of our system of the separation of powers. The Supreme Court has not only scrapped the fundamental principles of the Bill of Rights of the Constitution, but it has usurped the legislative prerogatives of the Congress and the legislatures of the sovereign States. Furthermore, the Supreme Court has ruthlessly violated the ancient common-law doctrine of stare decisis, which means that a principle established by a previous Supreme Court shall not be set aside by the Court.

The Supreme Court's recent decisions telling the people of the sovereign States how they shall conduct their educational and social systems is fantastic, a clear and unequivocal violation of the Constitution. It is centralized tyranny and dictatorship, in the same category with facism, nazism, and communism. We Americans have proudly boasted of our freedom. Are we going to retain this freedom? My answer is "Yes." What is yours?

At this point we should consider another factor in the establishment of our American constitutional Republic which is under attack. This Republic was established and developed by white people. While all of this loose talk about so-called "racial equality, the brotherhood of man, and democratic ideals" is being bandied about and shouted from the housetops, let us not lose sight of these historical facts: White men settled the American Colonies, developed the opposition to British tyranny, wrote the Declaration of Independence, fought and won the American Revolution; framed the Constitution and subsequently expanded the litle American Republic across the continent into a great Nation.

Now such achievements in the brief period of less than 300 years is no accident. Back of the sturdy determination and courage of the American white pioneers was a racial heritage which was developed through thousands of years of struggle, sacrifice and war.

And what of the racial heritage of the negroes, who, under the leadership of the NAACP and its allies, are now trying to force their way into our white institutions on the basis of full racial equality? The answer is obvious. Their forbears were primitive savages in the dark jungles of Africa. The chieftans of their ancestors actually aided the white traders in capturing the slaves for the overseas slave markets. There are today approximately 150 million negroes still living in a primitive state in Africa. The negro race has never made the slightest contribution to civilization.

I do not minimize the achievements of the American Negro. He has made remarkable progress under the friendly tutelage of the white man and through the system of racial segregation. If these American Negroes, who have many fine qualities, are let alone by the radical leaders of the NAACP and their white allies, they will continue to make greater progress, individually and collectively, as a race of people.

I shall always remember a conversation that I had several years ago with Dr. Robert R. Moton, successor to Booker T. Washington as the president of Tuskegee Institute, in Alabama. Dr. Moton, a fine-looking, full-blooded Negro, said to me that he was proud that he was a Negro, member of a distinct race of people, that his ambition in life was to make a contribution toward the development of his race and that the best way to do that was through the system of segregation.

What the American Negro needs is a program which will help him to develop pride of race. This can be achieved only through his own institutions in which he can develop his own special talents in competition and cooperation with members of his own race.

Pride of race is a far cry from the destructive program of the racial revolutionists, spearheaded by the National Association for the Advancement of Colored People. The Negro leaders of the NAACP, many of whom are frustrated colored persons, are ashamed of their Negro blood. They are aiming at racial amalgamation.

Make no mistake about it. The ultimate goal of the NAACP is mongrelization, which means the passing of the Negro race from the American scene.

In order to attain this goal the NAACP, aided by its powerful allies, is attacking on all fronts—complete integration in the armed services, which has been attained through the political leadership of both parties; in both interstate and intrastate transportation systems; in both public and private housing projects; in recreational facilities (parks, playgrounds, swimming pools, and golf links), in sports, both professional and amateur; in hotels and restaurants; in the churches; and the grand climax—in the public schools of the Nation all the way from the kindergarten through the colleges and the universities.

This is revolution. We also have a cold war on the home front. The Daily Worker, of New York, on May 26, 1928, sounded the battle cry. Here it is:

"The Communist Party considers it as its historic duty to unite all workers regardless of their color against the common enemy, against the master class. The Negro race must understand that capitalism means social oppression and communism means social and racial equality."

The issue is joined. The best defense is offense. The white people of the Nation constituting the majority of the American citizenship, north, south, east, and west, must organize themselves by community, county, and State for the protetcion of their constitutional rights and to preserve their racial heritage and integrity, using every lawful means to this end.

Upper Colorado Project

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1956

Mr. HILLINGS. Mr. Speaker, I wish to place in the RECORD an editorial which appeared in the Omaha (Nebr.) Evening World-Herald of February 7, 1956, in opposition to the upper Colorado project. The editorial follows:

A SACRED BUREAUCRACY?

In Washington the other day Representative HOSMER, Republican, of California, told a news conference that the proposed Glen Canyon Dam in the upper Colorado project would be a "billion-dollar mud puddle."

Mr. HOSMER explained. The shale which lines the canyon walls of two rivers leading to the proposed reservoir, he said, dissolves in water and turns into mud.

To demonstrate, Mr. HOSMER produced a fist-sized chunk of shale which he said had been taken from a canyon wall. He put it into a bowl of water and within 5 minutes it had disintegrated to mud. This mud, Mr. HOSMER said, would soon fill up the reservoir. Moreover, as the shale disintegrated it would undermine a higher layer of sandstone, and chunks "as big as houses" would fall into the streams.

Promptly Representative DAWSON, Republican, of Utah, a Glen Canyon backer, took the floor to reply. Mr. HOSMER, he thundered, is trying to "destroy the confidence of the Nation in the Bureau of Reclamation."

Is the Bureau of Reclamation so sacred that its judgments cannot be questioned?

There are countries in which the bureaucrats may not be gainsaid, at least with safety. Happily, the United States is not among them.

Particularly in connection with gigantic reclamation projects, it is high time that someone started asking some pointed questions.

Government Bodies and Organizations Offically Opposed to Upper Colorado Project

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1956

Mr. HOSMER. Mr. Speaker, I am submitting the following list of governmental bodies and organizations which officially have recorded their opposition to the proposed upper Colorado River storage proposal. It undoubtedly is an incomplete list, but even as such, the imposing number of important groups included should give serious pause to anyone inclined to favor the project:

1. Engineers Joint Council.
2. American Society of Civil Engineers.
3. American Institute of Mining and Metallurgical Engineers.
4. The American Society of Mechanical Engineers.
5. The American Water Works Association.
6. American Institute of Electrical Engineers.
7. The Society of Naval Architects and Marine Engineers.
8. American Society for Engineering Education.
9. American Institute of Chemical Engineers.
10. Brotherhood of Locomotive Firemen and Engineers.
11. Brotherhood of Railroad Trainmen.
12. Order of Railway Conductors and Brakemen.
13. Brotherhood of Locomotive Engineers.
14. Brotherhood of Railway Clerks.
15. Brotherhood of Railway Carmen of America.
16. Brotherhood of Maintenance of Way Employees.
17. Order of Railroad Telegraphers.
18. Brotherhood of Railroad Signalmen of America.
19. Sheet Metal Workers International Association.
20. Railway Employees Department, AFL.
21. American Public Power Association.
22. Colorado River Board of California.
23. Imperial Irrigation District.
24. Metropolitan Water District of Southern California.
25. Los Angeles City Council.
26. Department of Water and Power of the City of Los Angeles.
27. Anaheim City Council.
28. Anaheim Chamber of Commerce.
29. Calexico City Council.
30. Calexico Chamber of Commerce.
31. El Centro City Council.
32. El Centro Chamber of Commerce.
33. Holtville City Council.
34. Holtville Chamber of Commerce.
35. Imperial City Council.
36. Imperial County Board of Supervisors.
37. Imperial County Farmer Bureau.
38. American Legion, District 22, San Diego and Imperial Counties.
39. Burbank City Council.
40. Los Angeles Clearing House Association.
41. Chula Vista City Council.
42. Chula Vista Chamber of Commerce.
43. Otay Municipal Water District.
44. San Ysidro Chamber of Commerce.
45. Property Owners Association of California.
46. California State Grange.
47. Glendale City Council.
48. Hemet City Council.
49. Hemet Chamber of Commerce.
50. Los Angeles City Council.
51. Los Angeles County Board of Supersors.
52. Los Angeles Central Labor Council.
53. Orange County Board of Supervisors.
54. Pasadena Board of Directors.
55. Riverside County Board of Supervisors.
56. Santa Ana City Council.
57. San Diego County Board of Supervisors.
58. San Diego City Council.
59. San Diego County Water Authority.
60. Rainbow Municipal Water District, San Diego County.
61. San Bernardino County Board of Supervisors.
62. San Marino City Council.
63. Agricultural Council of California.
64. Calavo Growers of California, Los Angeles, Calif.
65. Calcot, Ltd., Bakersfield, Calif.
66. California Almond Growers Exchange, Sacramento, Calif.
67. California Asparagus Growers Association, Stockton, Calif.
68. California Beet Growers Association, Ltd., Stockton, Calif.
69. California Canning Peach Association, San Francisco, Calif.
70. California Cattle Feeder's Association, Los Angeles, Calif.
71. California Cattlemen's Association, San Francisco, Calif.
72. California Date Growers Association, Indio, Calif.
73. California Fig Institute, Fresno, Calif.
74. California Fruit Exchange, Sacramento, Calif.
75. California Lima Bean Growers Association, Oxnard, Calif.
76. California Planting Cotton Seed Distributors, Bakersfield, Calif.
77. California Prune and Apricot Growers Association, San Jose, Calif.
78. California Turkey Growers Association, San Francisco, Calif.
79. California Vegetable Growers, Santa Barbara, Calif.
80. California Wool Growers Association, San Francisco, Calif.
81. Central California Berry Growers Association, San Jose, Calif.
82. Challenge Cream & Butter Association, Los Angeles, Calif.
83. Consolidated Milk Producers for San Francisco, San Francisco, Calif.
84. Farmers Cooperative Exchange, Inc., Santa Cruz, Calif.
85. Farmers' Rice Growers Cooperative, San Francisco, Calif.
86. Fontana Producers Egg and Supply Co., Fontana, Calif.
87. Hayward Poultry Producers Association, Hayward, Calif.
88. Imperial Grain Growers, Inc., Brawley, Calif.
89. Imperial Grain Growers, Inc., Brawley, Calif.
90. Milk Producers Association of Central California, Modesto, Calif.
91. Poultrymen's Cooperative Association of Southern California, Los Angeles, Calif.
92. Poultry Producers of Central California, San Francisco, Calif.
93. Qualitee Dairy Products Association, San Diego, Calif.
94. Ranchers Cotton Oil, Fresno, Calif.

95. Rice Growers Association of California, Sacramento, Calif.
96. San Diego Co-operative Poultry Association, San Diego, Calif.
97. San Joaquin Valley Poultry Producers Association, Fresno, Calif.
98. Sebastopol Apple Growers' Union, Sebastopol, Calif.
99. Sunkist Growers, Inc., Los Angeles, Calif.
100. Sun-Maid Raisin Growers of California, Fresno, Calif.
101. Tri-Valley Packing Association, San Francisco, Calif.
102. Turlock Cooperative Growers, Modesto, Calif.
103. Coachella Valley County Water District.
104. California State Chamber of Commerce.
105. Brawley City Council.
106. Brawley Chamber of Commerce.
107. City of Calipatria.
108. Calipatria Chamber of Commerce.
109. City of Beverly Hills.
110. Westmorland City Council.
111. San Jacinto City Council.
112. Torrance City Council.
113. Costa Mesa City Council.
114. Laguna Beach City Council.
115. City of Chino.
116. City of Compton.
117. Newport Beach City Council.
118. County Supervisors Association of California.
119. City of Fontana.
120. City of Fullerton.
121. City of Long Beach.
122. City of Ontario.
123. Perris City Council.
124. City of Pomona.
125. Santa Monica City Council.
126. Upland City Council.
127. California Academy of Sciences.
128. Citizens Public Expenditures Survey, Inc., Albany, N. Y.
129. Oklahoma Public Expenditures Council.
130. Whittier City Council.
131. City of Gardena, Calif.
132. City of Lakewood, Calif.
133. City Council of the City of El Segunda, Calif.
134. Seal Beach City Council, California.
135. City of La Habra, Calif.
136. National Avenue Business Men's Association, Chula Vista, Calif.
137. South Bay Irrigation District, Chula Vista, Calif.
138. City Council of Oceanside, Calif.
139. City Council of City of Escondido, Calif.
140. Escondido Chamber of Commerce.
141. City Council of the City of National City, Calif.
142. National City Chamber of Commerce.
143. La Mesa Chamber of Commerce.
144. City Council of the City of Manhattan Beach.
145. City Council of the City of Lynwood.
146. Fullerton Chamber of Commerce.
147. City Council of the City of El Cajon.
148. El Cajon Valley Chamber of Commerce.
149. Santee Chamber of Commerce.
150. California Taxpayers Association.

Arab Co-Op Fund

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. MULTER. Mr. Speaker, I desire to call to the attention of our colleagues the following report on a cooperative movement among Israel's Arabs. The report appears in the Israel Digest for February 3, 1956.

ARAB CO-OP FUND IS EXPANDING

JERUSALEM.—A report on the cooperative movement among Israel's Arabs was submitted to the shareholders of the Arab workers and farmers fund at its second meeting. The fund was founded in 1949 with the purpose of encouraging the development of cooperatives and loan societies among Israel's Arab citizens, and the extension of financial aid to the rural Arab farmer.

I£65,000 of the I£100,000 capital fund has been paid in by some 4,000 Arab shareholders from 78 towns and villages.

The fund has leased 3,500 dunams (875 acres) of state domain and is establishing a cooperative agricultural machinery unit.

Thirty-five Arab cooperatives were assisted by the fund during the past year. They have a membership of 1,500 persons and capital totaling I£63,527. The fund extended I£40,000 in investments and loans to these societies.

The fund was also instrumental in opening the Tamra irrigation project, in Galilee, undertaken by a special company established by the fund in cooperation with 80 villagers. Upon completion, this project will provide irrigation water for 2,000 dunams (500 acres) of land, 800 dunams (200 acres) are already under irrigation.

The fund also aided in the implementation of the irrigation system at Tira, in the Sharon.

Both projects were initiated by the Ministry of Agriculture, which allocated I£48,000 for this purpose. The Ministry has also extended I£50,000 to Arab farmers in addition to the I£100,000 recently lent to some 650 farmers in 58 villages.

The fund intends to expand its activities and to include cultural, social, and housing projects.

There are 192,000 Arabs in Israel, of whom about 80 percent are engaged in agriculture.

Americanism

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. PELLY. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I am including a resolution bearing on the subject of Americanism. This resolution was adopted by the department of Washington, American Legion, at its State convention, held in Seattle, August 11-13, 1955. The State chairman, Lawrence Timbers, was the author and presented the resolution to the floor of the convention.

Whereas the primary purpose of the American Legion is stated in the preamble to the Legion constitution, "To uphold and defend the Constitution of the United States of America"; and

Whereas the Constitution of the United States of America plainly states the purpose for the formation of the United States of America in the following words, "in order to form a more perfect Union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity"; and

Whereas this plainly states and means that the primary purpose is to provide the exercise of the above-stated rights to "ourselves and our posterity," and not to the people of any other nation; and

Whereas there has developed a movement among our people to endeavor to extend these rights and privileges to other nations by attempting to coerce our citizens with the dialectical fancies of a nebulous world government, to the detriment of ourselves and our posterity: Now, therefore, be it

Resolved, That the American Legion hereby again emphatically rededicates itself to the provisions embodied in the preamble of the Legion constitution; and be it furthur

Resolved, That the American Legion demand that every official and servant of the Government of the United States of America strictly adhere to his oath of office to uphold and defend the Constitution of the United States in order that the blessings of liberty may continue to be secure to ourselves and our posterity; and further

Resolved, That copies of this resolution shall be spread in the CONGRESSIONAL RECORD for all Senators and Representatives to read, and that copies be sent to the State Department and to the members of the President's Cabinet, with the request that copies be supplied to all their personnel.

Welcoming a New Industry

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. HENDERSON. Mr. Speaker, American industry is showing a growing appreciation of the manifold advantages which the 7 counties of the 15th Congressional District offer in natural resources. I believe it appropriate that I also call to the attention of the Congress the enthusiastic and forward-looking attitude with which the people of one of these counties have accepted the challenge of the sudden promise of industrialization. I refer to Monroe County whose economy has been traditionally rural. Today, the people of this county stand on the threshold of new experience occasioned by the construction of the $90 million aluminum plant by the Olin-Mathieson Chemical Corp. within its borders. This tremendous enterprise brings with it complex problems which must and will be solved by the determination of Monroe County citizens. This determination is typical of that in each of the counties which I have the honor to represent. It can be described best in the following editorial which appeared in the Marietta (Ohio) Daily Times, of February 8, 1956:

MONROE SHOWS ITS SPIRIT

Room could be made for between 300 and 500 new homes within the corporate limits of Woodsfield, county seat of Monroe County, according to a preliminary survey of the Woodsfield Central Planning Committee, a subdivision of the Monroe County Industrial Development Committee. That town, centrally located in Ohio's "little Swizerland," expects to grow. So do the other towns in the county that has just become a new industial frontier.

This county next door to us has come to life again. Its people are awakening to the fact that a challenging opportunity has come

to them, one that will take tremendous efforts and plenty of cooperation if they are to obtain potential benefits in full. The resurgence of civil consciousness is showing. It was displayed graphically in the special 16-page edition published last week by the Monroe County Beacon, which carried expressions of welcome to personnel of Olin-Mathieson Chemical Corp. from business concerns, civic organizations, and public officials. Large display space in the Beacon was taken for this purpose by Woodsfield merchants; by the communities of Hannibal, Sardis, Duffy, and Fly; by Beallsville, Jerusalem, and Malaga; by Clarington, the town more or less in the middle of the new riverfront industrial activity.

"Few things are handed to anyone on a silver platter," the Beacon reminded its readers editorially. It said every inhabitant and every town must realize the task ahead in living up to the opportunity which the sudden appearance of big industry presents.

"It is the job of every one of us to see that Monroe County gets the greatest amount of benefit that will be associated in one way or another with the opportunities that now lie before us in the industrial expansion that has become a reality after many lifetimes of hoping, hoping, hoping. * * * There will be areas that will benefit more than others, but in the end the prosperity created by employment for all our people will mean prosperity, or an opportunity to prosper, for every one of us."

Monroe County still has to show what it has and what it can do. It really has just got its feet wet in the big whirlpool of mid-20th century community competition. As the Beacon editorialist says:

"Now is the time for our people to organize and to sell Monroe County far and wide. Every service club, every organization, and every citizen has a job to do. We must organize and amply finance a Monroe County Publicity Service, its job to be salesmanship. We must buy space in out-of-town newspapers showing our schools, our churches, and other advantages we already have to make people want to live in our county. We must make plans for better things, road improvements, new homes, etc., and tell the world of these plans, too."

The spirit shown in the pages of that particular issue of the Beacon ought to be contagious. While Washington County is hoping to see the influence of the impending industrial boom around Clarington extend itself much farther down the valley, in the meantime we must doff our hats to Monroe County for the way it is facing its big challenge.

Leftwingers Must Have Issues So They Scream "Scandals"—All of Which Have Been Knocked Into Cocked Hat

EXTENSION OF REMARKS
OF
HON. SAM COON
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. COON. Mr. Speaker, every now and then the press throughout the country contains editorials and articles indicating a realization of the feverish attempts of the New Dealers and Fair Dealers to cook up issues for the forthcoming elections regardless of how fictitious the basis may be for these issues. The following excerpts from the Myrtle Point (Oreg.) Herald of February 2, 1956, is indicative of this:

KNOCKIN' AROUND
(By George)

LEFTWINGERS MUST HAVE ISSUES SO THEY SCREAM "SCANDALS"—ALL OF WHICH HAVE BEEN KNOCKED INTO COCKED HAT

Our highly esteemed contemporary, the Coos Bay Times, in its issue of January 23, printed an editorial on the subject No Report on Giveaways.

The Times editorial started its "wiggle" thusly:

"In his message on the state of the Union the President dwells briefly on the importance of the wise use and conservation of our great national resources of land, forests, minerals, and water, and calls for faster progress and without delay, the development of these water resources. * * *"

However, he fails to give any report on the progress, thus far, of his partnership policy in the development of these resources, a policy sometimes referred to as the "giveaway."

Then Shelly goes on to mention some of those alleged giveaways, which, of course, includes Hells Canyon Dam, the Dixon-Yates contract * * * and then, of course, that mining claim timber steal—DICK NEUBERGER'S brain child, for the purpose of the character assassination of Secretary of the Interior Douglas McKay. Space forbids going into this scandal in all its ramifications—it can be told—that scandal has exploded in the very faces of the leftwingers. * * * NEUBERGER'S attempt at the character assassination of Secretary of the Interior Douglas McKay in the Al Sarena timber steal so infuriated Mr. Ellsworth that he labeled it a giveaway "stink."

Shelly talks about the Truman administration knowing full well that Al Sarena was interested in the timber rights and not the minerals, had consistently refused to grant the application. Perhaps Shelly should study the Al Sarena case a wee bit before making such a statement. That's just a pack of leftwing press "hooey." No one connected with the Truman administration ever denied Al Sarena a patent. Shelly will find that truth out, if he will study the actual facts rather than jump at conclusions arrived at after listening to scandalmongering politicians.

Then, again, what happened to DICK'S howl of the great steal from the schools of the Nation when Ike returned the tidelands oil rights back to the lawful and moral owners. The reason the leftwingers have quieted down on that terrible scandal is because they knew, from the time of the accusation, that the tidelands oil had nothing to do with schools and that the scandal was made up of ballyhoo, purely for political reasons only. There wasn't any scandal connected with it, but, it did assist mightily in electing NEUBERGER—so what.

Flash: Now comes this boy NEUBERGER—not a scandal this time—he stoops to a lower level by making the statement that "the GOP might use drugs to keep President Eisenhower in a reelection campaign." Such a statement is not only malicious and cruel, it was downright cowardly. In fact, such a statement compares favorably with Shelly's recent open-letter editorial to Ike, informing him that he wasn't physically fit to be a candidate and insinuated that Ike was doing a disservice to the American people by not immediately announcing that he would not be a candidate. If the above-named gentlemen had any sense of shame they would crawl in a hole some place and pull the hole in after them.

Incidentally, Shelly loves to shout "scandal." Wonder why he overlooked DICK'S jackass publicity stunt to emancipate the downtrodden mamas, papas, sons, daughters, and baby squirrels of the White House lawn?

Statement by Earl L. Butz, Assistant Secretary of Agriculture, United States Department of Agriculture, at a Hearing Held by Livestock and Feed Grains Subcommittee of the House Committee on Agriculture, February 25, 1956

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. HILL. Mr. Speaker, on Saturday, February 25, 1956, Mr. Earl L. Butz, Assistant Secretary of Agriculture, appeared before the Livestock and Feed Grains Subcommittee of the House Committee on Agriculture and submitted an excellent statement. I wish to include these remarks in the Appendix of the RECORD:

The cattle industry is now up against a serious problem in the marketing of heavyweight well-finished cattle. This is currently the most serious aspect of an overall heavy supply and depressed price situation. It is a situation that did not come into being overnight. The problem has been building up for the past few years.

The cattle situation became serious in 1953 because of a combination of increased numbers and a severe drought over wide areas, which forced increased marketings and lower prices. At that time the Department of Agriculture undertook a beef-purchase program to help bolster the cattle market. We purchased approximately 250 million pounds of beef and beef products at a cost of more than $90 million.

During 1954 and early 1955, the cattle market was more stabilized and, despite continued large marketings of cattle for slaughter, the cattle situation was not particularly unfavorable for most producers and feeders. By good fortune, the large increase in cattle and beef production has coincided with high employment and record incomes of consumers. More dollars have been available to be spent for meat than ever before.

Cattle and calf slaughter in 1955 turned out even larger than in 1954. The combined slaughter last year was the largest on record. Nearly 40 million head of cattle and calves were slaughtered. Just 5 years ago cattle and calf slaughter was only about 26 million head. In other words, cattle slaughter has increased over 50 percent in the past 5 years. And for the first 7 weeks of this year cattle slaughter under Federal inspection has been about 7 percent greater than slaughter in the corresponding period last year.

There is a basic difference between the present depressed market situation and that of 3 years ago. In 1953, the widespread drought over much of the principal cattle producing areas intensified the problem by forcing many cattlemen to market their stock because of lack of feed and water. The serious situation then was centered in the basic producing herds. Also, hog production 3 years ago was relatively small, and therefore, the competition for the consumer's dollar was much different than during recent months when sharply increased market supplies of pork were competing with the record output of beef.

As a result of the very large output of beef and the increase in pork output, the market for fed cattle last summer failed to advance as is usual for that time of year. The market for fed cattle was relatively stable at that time, but apparently many

cattle feeders felt that the market would advance seasonally. These feeders delayed marketing their cattle when they reached the usual weight and grade.

In the meantime, hog marketings increased sharply and coincidental with the fall movement of cattle off pastures and ranges, prices for the better grades of cattle weakened. This unusual and complex development has resulted in a large overproduction of long-fed overweight cattle this season. The market for heavyweight beef is relatively limited. Therefore, even a small overproduction of such beef has a considerable adverse effect, not only on the market for heavyweight cattle but also on other grades and weights as well.

On January 1 this year there was a record number of cattle on feed, 1 percent more than a year earlier. In 14 leading cattle feeding States the number of cattle on feed for 3 months or more was 30 percent greater than a year earlier. Also, in those 14 States there were 69 percent more cattle on feed weighing over 1,100 pounds. This illustrates the unusual situation which has developed in supplies of heavyweight fed cattle.

Cattle in the feed lots obviously have to move to market some time. Of course they had been showing up in slaughter before January 1, but as of the first of the year there still were burdensome supplies to be marketed. Since the first of the year these heavyweight cattle have been coming to market in a floodtide. This very heavy market movement has had an adverse effect on prices of almost all cattle. Understandably, prices of the highest grades have weakened most. Here are some figures on recent marketings of these long-fed cattle:

At five leading midwestern markets (Chicago, Omaha, Sioux City, Kansas City, and St. Joseph) in January, 184 percent more Prime steers were reported sold out of first hands for slaughter than a year earlier. There were 36 percent more Choice grade slaughter steers sold. The weights of these cattle also reflect the situation. At those five markets in January, all steers sold out of first hands for slaughter weighed an average of 42 pounds heavier than a year earlier. In fact, the Prime steers were 84 pounds heavier, and the Choice steers were 21 pounds heavier than last year.

For the first 7 weeks of this year, cattle slaughter under Federal inspection was about 7 percent greater than a year earlier. However, the weight of all cattle slaughtered was about 33 pounds greater than a year earlier. As a result, the production of beef so far this year has been about 11 percent greater than in early 1955, with an unusual proportion of the total beef produced being in the highest grades. This great abundance of high-grade beef has come into the markets at the same time that pork supplies have also been unusually large. This has been an exceptional occurrence, and undoubtedly caused both cattle and hog prices to drop to lower levels than otherwise would have been the case.

We in the Department have been greatly concerned over what has happened to these prices, not only prices received by producers but also prices paid by consumers. The studies we have made show that the reduced prices received by farmers have not been fully reflected in lowered prices paid by consumers. This has resulted in wider margins for processors and distributors. Marketing margins for beef alone have been growing wider since 1950.

In the case of United States Choice grade beef, for example, our studies show that the retail price declined 5 percent from the fourth quarter of 1954 to the final quarter of 1955. The farm value declined 19 percent. Charges for marketing beef advanced 26 percent during the period.

The price farmers received for Choice grade beef cattle declined $4.15 per hundred pounds from the first quarter of 1955 to the final quarter. About 60 percent of this reduction was associated with the widening of beef marketing margins. Our studies show that packer-wholesaler margins increased by $1.08 per hundred pounds of live weight cattle, and retail margins widened by $1.50 100 pounds of live weight cattle, or $2.54 per hundred pounds on a carcass weight basis. About 42 percent of the overall increase of marketing margins was accounted for at the packer-wholesaler level, and approximately 58 percent at the retail level.

We recognize that fluctuations in margins come about because cattle and beef prices do not maintain a fixed relationship to one another at any one point in the marketing channel. But a widening of margins such as that which has taken place since 1950 is a clear indication of a more permanent upward trend in the cost of marketing beef, which is a cause for concern on the part of beef producers and consumers.

There is no question whether costs borne by marketing agencies have increased during the last 6 years. Department records disclose a material rise in hourly wages paid to workers in the meatpacking and distributing industry. They also show a very substantial increase in the cost of supplies used in the packing and distributing operation. To the extent that rising costs have contributed to rising marketing margins, the meat industry has no alternative for doing other than it has done in adding such costs to the price of meat. Nevertheless, there is an indication of a gradual widening of profits and margins in packing and distributing beef that causes producers to raise justifiable complaints of having to bear more than the full force of the price decline on beef sold to consumers.

The meatpacking industry and the wholesale and retail distributors of beef need to be as much concerned as anyone about maintaining an economically sound beef production economy. The failure of any one segment of the industry has its impact on the other segments.

We in the Department are doing what we can to focus public attention on the recent trends in food marketing costs and in the distribution of the consumers' food dollar. The results of our studies to determine the extent to which marketing margins have been increased are being widely disseminated. They are being brought to the attention of the appropriate industry and related groups so that corrective action may be taken. The Department itself has no legal authority to force such action, but the public release of the facts themselves carries great weight in bringing about improvements. We have just sent to the printer a report which discusses in detail the trends in marketing margins for beef.

In the present situation of weakened prices for fed cattle, we have received and given consideration to many recommendations for providing assistance to the cattle industry. We have received a number of requests for a price support program on cattle, but have not found a sound and practical method that would work. Nor has any previous administration found such a method. Moreover, the cattle industry has traditionally been opposed to direct price supports or Government controls affecting their operations. In the present circumstance, we can expect improvement in the depressed cattle market as soon as the unusual backlog of heavyweight cattle has moved out of feed lots and the supply of cattle for slaughter becomes more normal.

The Department has taken a number of actions in recent months to help the cattle situation. The Department has been working very closely with all segments of the cattle and beef industry in intensive promotional efforts to stimulate consumer demand for beef during the curernt heavy supply period. The Department is cooperating with various trade groups, such as retailers and resturants, and with newspapers, magazines, radio stations, and TV outlets in focusing consumer attention on the plentiful supplies of beef. Retail and other trade groups have greatly intensified their merchandising activities in order to increase consumer buying of meat.

Beginning in December, the Department purchased 12 million pounds of frozen hamburger for nationwide distribution to the school lunch program. This quantity is in addition to the large volume of beef purchased locally by the participating schools.

At our request, the Department of Defense has accelerated its purchases of boneless beef from heavy cattle. We are informed that they are expanding purchases so as to accumulate a 90-day supply instead of the usual less than 60-day supply. This program for accelerated purchases of beef from heavy carcasses should be especially beneficial during this period of large marketings of heavy beef.

Direct action has also been taken by the Department to stimulate exports of beef. On February 10, for example, an agreement was made to sell 40 million pounds of beef, worth $10 million, to Israel under title I of Public Law 480. Also, during recent weeks a total of 20 million pounds of beef has been moving from the United States to Spain under an agreement worked out between the two Governments. We anticipate that additional export sales of a substantial volume of beef will materialize shortly as a result of discussions now under way with other foreign countries.

Through our agricultural attachés stationed abroad, prospective foreign purchasers are being kept informed on the availability of United States beef. At the same time exporters in this country are being advised of beef sales opportunities abroad as soon as they become apparent.

These several actions which we have been taking are helpful in the present situation. However, it should be pointed out that the overall cattle problem remains large and complex. This has just been made more evident by the latest information on the size and composition of the Nation's cattle herd. The annual report on livestock numbers as of January 1 shows this picture of our cattle inventory on farms and ranches.

Last year, cattlemen increased their herds again, for the seventh consecutive year. On January 1 there were 97.5 million head of cattle and calves on farms and ranches; a new record. Last year, numbers increased 873,000 head, instead of declining as had been expected on the basis of the rate of slaughter. There was a record large calf crop of 43 million head last year. And with our present huge breeding herd there undoubtedly will be a large calf crop this year, although, of course, not necessarily a new record.

You may recall that the low point of the present cattle numbers cycle was the beginning of 1949. Then there were 77 million head of cattle and calves. We now have 27 percent more cattle than at that time, 7 years ago. We now have about 60 percent more beef cows than at the beginning of 1949. It is easy to see that the problem that has risen from the high level of slaughter during the past year is not a short-time problem that faces cattlemen. It is a problem that has been built up over the past several years, and one that will take some time to work out. Short-time remedies, even of drastic nature, obviously cannot provide the needed solution. The basic solution to the heavy production appears to lie primarily with the cattle industry itself. In dealing with this problem, the cattle industry will need the help and counsel of Government, the cooperation of the meat industry, and, of course, the backing of the consumer, who, in the last

analysis, is the recipient of the abundant beef output.

Despite the present difficulty which is so pronounced in the marketing of heavyweight well finished beef animals, the cattle industry is in a fundamentally strong position. There are good prospects ahead. While we can expect the cattle cycle to work itself down from the present high record, it of course will not recede to the level of 7 years ago. The reasons for this are quite obvious.

During the last 7 years our population has increased very substantially and we can expect the rise to continue. In fact, looking ahead, we can expect an increase of about 25 million persons in the next decade. This would add to our present total population of around 165 million persons, almost as many more people as are now living in the States of New York and Pennsylvania.

Another important factor is the favorable trend in meat consumption. During the last year, beef consumption moved up to 81 pounds per capita, the highest on record. It surpassed by 2 pounds the previous record reached in 1954. Indications now are that beef consumption will set another new record and reach an estimated 82 pounds per capita for 1956. This would compare with an average of a little more than 54 pounds per capital during the 1935–39 period and an average of 64 pounds per capita during the 1947–49 period.

Our per capita consumption of beef in this country has been increasing very substantially during the last few years and undoubtedly can be increased still more. This provides a sound basis for continued growth in the industry. While for the time being a modest adjustment is needed in the cattle industry, it obviously must be combined with efforts to maintain a continuing high rate of consumption in our growing population.

Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. GARMATZ. Mr. Speaker, February 16 marked the 38th anniversary of Lithuanian independence, and on February 18 the Council of Lithuanian Societies of Baltimore commemorated the anniversary with appropriate exercises. It was my privilege to be with them again to mark the event.

February 16, 1918, marked the proclamation of the reestablishment of Lithuania as an independent republic, after three insurrections against the Russians. But today Lithuania, together with other great nations behind the Iron Curtain, is waging another struggle, this time against world Communist expansion.

It is fitting, therefore, that on the observance of Lithuanian independence American sympathy for that fateful nation should once again be restated, as an added manifestation of the warm regard Americans hold for those Lithuanians behind the Iron Curtain.

Freedom-loving Americans everywhere admire the spirit by which this small country had attained its independence, and it is our hope that, with the help of the Almighty God, Lithuania may soon again take its place among the free democracies of the world.

The following resolution was unanimously adopted by the Lithuanian Americans of Baltimore present at the celebration:

RESOLUTION

Whereas the intolerable conditions, which now prevail in eastern and central Europe, including Lithuania and her two Baltic neighbors Latvia and Estonia, should be of serious concern to western democracies, and principally to the United States, since no peace and stability in the world is possible without participation of the vast area, which comprises a population of over 100 million people, who are separated from the rest of the world by the Iron Curtain;

Whereas President Dwight Eisenhower in his recent letter of reply to Soviet Premier Nikolai Bulganin urged the carrying out of the wartime pledge to respect the right of peoples to choose the form of government under which they will live; Now, therefore, be it

Resolved, That this gathering convey its deepest gratitude to the President and the Congress of the United States for their sympathy with and steadfast attitude toward the eventual restoration of the independence of Lithuania and at the same time urge that a resolution be promptly introduced in the United Nations to debate the forced captivity of Latvia, Estonia and Lithuania by the Soviet Union in violation of its solemn treaty pledges.

COUNCIL OF LITHUANIAN SOCIETIES OF BALTIMORE.
By THOMAS G. GRAY, *President*.
JUOZAS AUSTRA, *Secretary*.

The gathering was privileged to hear an address by the Honorable Joseph Kajeckas, counselor of the Lithuanian Legation in Washington, which I would like to insert, under permission to extend my remarks:

Today's commemoration of the 38th anniversary of the proclamation of Lithuania's independence comes during a time when the Lithuanian nation is enslaved. The hardship endured under Russia's czars is incomparable with the present-day slavery imposed by the Red czars of Russia. The fate of Lithuanian deportees to Siberia is a very sad one indeed. Many have perished and many more other innocent Lithuanians will perish before the day of freedom dawns.

The enemy ridicules the martyrdom of enslaved peoples. The Lithuanian nation is represented by him as being jubilant because of its sons' blood, tears, because of its trampled rights and liberties, because of its chains of slavery. Soviet mockery is an insult to the memory and intelligence of the whole free world. Examples are not lacking. I will refer to but a few.

The Red imperialists have falsely announced to the world that the Lithuanian nation freely chose the fate of slavery. This did not hinder the Kremlin from driving hundreds of thousands of them to Siberia. They are returning the last Nazi so-called war criminals, but an extremely large number of innocent Lithuanians are left to perish in Siberia. We do not envy the return of the Germans from Soviet hell. We only think that much earlier, and long ago, the Lithuanians should have been permitted to return to their homeland. What an insult to reason to release what they consider war criminals and, at the same time, to condemn enormous numbers of Lithuanians to certain death in the slave labor camps of Siberia.

Evidently in the eyes of the Kremlin, Lithuanians are far more numerous and more horrible criminals than the Nazis who fought against them. But why does not one hear of Lithuanian criminals and Lithuanian bandits in the free world?

Soviet eyes fear no smoke. Their efforts are not directed toward the release of deportees to Siberia. Their efforts are directed to fishing for slaves among the refugees in the free Western World. Needless to say, that fishing expedition for human souls is doomed to failure so far as the Lithuanians are concerned.

Recently the Red lords, while on a visit to southern Asia, displayed how scandalized they are at colonialism. This they did with the full knowledge that the Baltic States have been transformed by these same lords into the lowest form of colonialism that the world has ever witnessed. An outsider can easily travel to any non-Russian colony in any continent. But it is unheard of that a westerner be admitted to a hermetically sealed colony called Lithuania. There certainly must be something there to hide.

Khrushchev was infuriated by President Eisenhower's and Secretary of State Dulles' expressed greetings, comforting words of hope and sincere wishes to the enslaved peoples last Christmas. He termed this "crude intervention." And this he said, in spite of the fact that it is not the United States but the Kremlin that has trampled on all pacts and treaties with the enslaved nations, interfered in the internal affairs of the Baltic States, enslaved them, and continues to keep them in bondage.

The West, according to Khruschev, is not interested in the souls of the enslaved but only in their purses. But the type of concern shown by the Bolsheviks toward the enslaved Lithuanians is entirely foreign to the Western World. It is not America, but Molotov who, for Judas' coins, traded Lithuania's territory with the Nazis. It is not the United States but the Kremlin that only a few weeks ago stretched its bloody paw to the gold purse of the Baltic States in Great Britain. The Lithuanian proverb says: One who smells blames it on to another.

On lies and deceit is based the enslavement of Lithuania and other nations, by lies and deceit Russian imperialism also seeks to "liberate" other nations.

Such is the sad side of the commemoration and of present-day reality.

The sources of comfort and hope of the enslaved Lithuanians are more effective than the blows of the enemy. According to Paparonis:

"Lietuva's body is racked by her foes,
But her free soul they will never conquer."

The source of the Lithuanian nation's comfort and hope is, in the first place, God Himself. Christ is a shining example to the suffering Lithuanian nation. He Himself was in His lifetime homeless in the midst of His nation. He was also a refugee in Egypt and the victim of Golgotha. But the finale of that world drama was the triumph of the crucified.

The Lithuanians also gather strength from their past history. Vytautas the Great also suffered the fate of a refugee. He was even a prisoner of the Teutonic knights. He, too, ended his reign nobly and gloriously.

The third source of comfort and hope of the Lithuanians is history. It speaks loudly of the fate of tyrants. The emblem of the neighboring State of Virginia with its inscription, "Sic semper tyrannis," is very instructive in this respect.

Finally, the free world is the source of comfort and hope of the enslaved Lithuanians. Never in its long history has Lithuania been the object of so much moral support abroad as here in these United States. The President and Secretary of State, numerous Senators and Congressmen, governors and mayors, speakers and writers, by public statements and resolutions, by pen and by speeches, and by television programs, such as those of Bishop Sheen, re-

peatedly extended sympathy and comfort, as well as hope in its future freedom, to the suffering Lithuanian nation. It is impossible to enumerate all friends of Lithuania. I dare not even attempt to enumerate the contributions of the Lithuanian-Americans to the cause of the liberation of the land of their ancestors. To all friends, patrons, and fellow countrymen, I venture to express the deep gratitude of the Lithuanian Minister, the Honorable P. Zadeikis, and that of the Lithuanian nation.

The country of the green ruta, of wayside crosses and shrines, has become the holy land of martyrs for God and country and freedom-loving peoples everywhere. As Poet Bradunas, of Baltimore, said:

"May the blood from every martyr's grave
Give strength to make the Lithuanians brave."

May that strength maintain our hope, increase our efforts, strengthen our perseverance, and unite our forces. Let us firmly believe that the glorious, long-awaited day will certainly come, when Providence will put a stop to the rage of the enemy in the land of our fathers, and turn away that scourge from the Lithuanian horizon. I conclude with a verse of Brazdzionis:

"O God, Who reigns on high
Extend Thy ruling hand,
Light freedom in the sky,
Protect and free our land."

In connection with Lithuania's struggle for freedom and independence, I believe it is appropriate to include an article from the Marian, a magazine published by the Congregation of Marian Fathers, entitled "The United States Penny's Birthday," written by Francis J. Jancius, M. I. C., which follows:

THE UNITED STATES PENNY'S BIRTHDAY

(By Francis J. Jancius)

This year the penny, the lowliest coin of our monetary system, celebrates a birthday—its 43d. It will pass unnoticed and unheralded by the average American citizen, who is too busy to concern himself with the story of the coin that most frequently passes through his hands.

If asked, Mr. Average American would probably reply that the penny was cast to honor the memory of a great man, one of our Nation's most illustrious Presidents, Abraham Lincoln. And he would be right.

But, if the penny could speak for itself, it would add more, much more, to that reply. It would tell us that its story does not begin just 43 years ago. Instead, it would take us back many more years into the past and across a wide ocean to a land washed by the white-capped waves of the Baltic Sea.

And here, just a few short years after the tragic assassination of Honest Abe, its story would begin in the village of Siauliai, Lithuania, where on June 12, 1871, Victor D. Baranauskas, the designer of our Lincoln penny, first saw the light of day. His father was a skilled engraver and maker of seals. From his father young Victor learned all the skills and secrets of a difficult trade. At the age of 16 he was already established in his own shop and his fame was spreading throughout the countryside. Somewhat later, he transferred his business to the thriving metropolis of Kaunas.

In Kaunas, Victor's reputation grew by leaps and bounds. His amazing skill became the envy of his competitors and led him into serious trouble, which caused him to flee the country.

Someone, whether from jealousy or misguided patriotic zeal, informed the Russian police that young Baranauskas was a skilled counterfeiter and forger. Since the Russian governors of Lithuania had no proof of counterfeiting and forgery, they did not arrest Baranauskas immediately. Instead in an attempt to catch him redhanded, a watch was maintained night and day.

One day, unknown to Baranauskas, two members of the secret police entered his shop and inquired about some work. They showed him the signature of a famous government official and asked him to make an engraving of it. So well did the young artist perform the work that the police had difficulty distinguishing the facsimile from the original. This was all the proof they needed. They declared young Baranauskas a forger. Exile to Siberia and its dreaded labor camps threatened to cut short his career.

Baranauskas fled the country. In 1890, he came to New York where he found work in a medal-engraving shop. He worked by day and studied by night. Here he changed his name to Brenner.

Baranauskas was commissioned to make a cut of Beethoven for a New York musical society medal. The critics lavished praise on his work. His feet were firmly planted on the first rung of the ladder to success.

In 1898, he went to Paris where for 3 years he studied at the famous Academie Julian. At the Paris World's Fair in 1900, his exhibits took the highest honors. In 1901 and 1904, at Buffalo and St. Louis, Baranauskas again took the highest honors.

In 1908, President Theodore Roosevelt, the famed colonel of the Roughriders, visited Baranauskas' studio to pose for a Panama Canal medal. A bronze plaque of Lincoln on the studio wall so captivated the President that he immediately commissioned Baranauskas to make a similar one for a new United States penny.

In 1909, the new United States penny was released. It was the first coin bearing the image of an American President. Art critics raved over the beauty of the new 1-cent piece. And truly, it was an outstanding piece of work, worthy of all praise.

Quite a furor was raised, however, because Baranauskas had signed his work with his initials. They were to be found on the opposite side of the coin. So great was the public's reaction that after a week orders were issued to remove the initials and to recall all coins already cast from that mold. To this day the coin remains a collector's item.

Lincoln and Baranauskas—two great lovers of freedom. The one, a President famed for freeing the slaves, the other, a great artist, who fled persecution and in the freedom of our land rose to fame and fortune.

We Americans of Lithuanian descent can rightfully be proud of Baranauskas and his achievements. His monument, the United States penny, is a significant Lithuanian contribution to our American culture.

This article was the inspiration for an award-winning script in the Voice of Democracy contest, written by Gabriel G. Kajeckas, a Washington high-school student and son of the counselor of the Lithuanian Legation. Young Kajeckas was 1 of the 4 national winners of the contest, each of whom receive a $500 college scholarship check, a television, clock radio, trophy and certificate from the sponsors. More than 1.5 million students from public, private, and parochial high schools participated in the Voice of Democrary contest, which is based on writing and reading a 5-minute script on the meaning of democracy.

Last Friday, at a luncheon at the Franklin Institute in Philadelphia, the four winners were given the Poor Richard Almanac award by Mr. George Neil, president of the Poor Richard Club. The award consisted of a certificate and a medal. The medal was issued in connection with the 250th anniversary of the birth of Benjamin Franklin. Only 400 were minted, and Sir Winston Churchill was the recipient of one of them.

Gabriel Kajeckas is a senior at Gonzaga High School, where he is on the debating team, a member of the dramatic society, the sodality, is active in publicity work, and a cheer leader. He hopes to continue his studies at Holy Cross or Georgetown University. Last week he served as a member of the panel of the College Press Conference which interviewed our Ambassador to India, John Sherman Cooper, on the ABC TV-radio program. His award-winning script follows:

"Democracy cannot be defined." How many times have we heard this statement, and how many times have we agreed? Yet, we find that such is not the case, for democracy can be defined, here in my hand I hold its definition. It is small and insignificant, and yet it represents America, it symbolizes our way of life, it speaks for democracy.

"What is it," you ask, "that can be held in my hand, and yet represent the unlimitedness of America?" The answer is simple, but so often overlooked. The answer is, "A mere coin, a penny."

But how can a penny define democracy? How can something we take so much for granted, how can it speak for democracy? Because engraved on this little copper coin is the definition of democracy. Look at it, and you will understand.

On it, the first thing we see is the strong, determined profile of a great man, the man who made all men in this country free and equal, and without whom we would never have been one and indivisible, Abraham Lincoln.

Then we see the word "liberty" engraved on the metallic surface. Liberty that gives my father the right to operate a restaurant if he so schooses; that gives your brother the right to be printer; that gives each and every one of us the right to worship as we please, vote as we choose, and live as we wish. Indeed, this is more than just the word "liberty" engraved on a small coin, this is a way of life for the American people.

Next, we turn our gaze to the words "E Pluribus Unum," an ancient phrase, brought to life in our lives, meaning one from many, existing as a country of diverse interests, and yet a country of one in unity. But how can a country be unified in which there is a fruit stand next to a jewelry store, where 160 million people of different nationalities, races, and creeds are intermingled, where 9 million of these people can exist in a concrete maze of tall buildings and winding streets, where a general and a railsplitter can become President, where a youth can address an adult audience with his own thoughts and can be heard with attention? This is a gigantic dream come true, a living miracle. And this, my friends, is the miracle of America. And the reason for this miracle, why we are the United States, is also stamped on this small copper coin. The reason for this mircale is God. Therefore, in God We Trust, and it is in this trust that we are one, that we are free, that we have life, that we have the miracle that is America. These are the ideas generated by a small coin, a coin that we pass through our hands daily. These are the ideas that add up to our definition of democracy, our democracy of freedom, equality, unity, and trust in God.

Democracy, my friends, is an old idea. But having been betrayed by so many ancient lands, it was brought to a new land—a land of red men and virgin forests, a land of peaceful rivers and fruitful plains inhabited only by the buffalo. And in this land, through the tearful sufferings of Valley Forge and the sweat and blood of Bunker Hill, this

spirit was fanned into a roaring fire of freedom which became our democracy.

This spirit that has made our country the greatest nation on earth is as old as the human race. But the forces of hate, lust, and greed are also as old as the human race, and from time immemorial have opposed all justice, honor, and law in the world.

And so, my friends, these representations of justice, honor, and law on this small coin are not enough to preserve our way of life—we, as the inheritors of this coin and its defined freedom—we must take these words from the coin and inscribe them on our hearts, and in our spirit—and then, through the common usage of a small coin, realizing its value as representative of our way of life—we can continue this flaming spirit of democracy.

And then, this little coin alone won't speak for democracy—then, we will speak for democracy, and if we speak for democracy, then the eternal engraving of the American people will read: "There will always be a democracy—and there will always be an America."

Widespread Opposition to Upper Colorado River Projects

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1956

Mr. McDONOUGH. Mr. Speaker, nationwide interest in a correct evaluation of the proposed upper Colorado River project has become evident as the true facts concerning this project are brought to light.

The upper Colorado River project is a gigantic undertaking which will require financing from Federal tax funds collected from every taxpayer in the United States, and for this reason the people's Representatives from every State in the Union must give careful consideration to the merits of this proposed project as well as to its actual cost to each taxpayer to determine whether this cost in Federal tax dollars can be justified.

The following two editorials appeared recently in leading newspapers in cities thousands of miles from the States where the upper Colorado River project would be constructed, and they justify that the use of Federal funds for this project, so far, cannot be justified by the facts:

[From the La Salle (Ill.) News-Tribune of January 31, 1956]

EDITOR CORNERED

(By Floyd Esche)

Why should a Member of Congress from California be sending me rocks, I wondered as I spilled the handful of gray and red chips on my desk. It can't be because the News-Tribune's supply of rocks to hurl at Congress is exhausted—there is an inexhaustible supply all over the country.

So I read the material sent with them by Representative CRAIG HOSMER, Republican, California. The instructions were to put this Chinle rock in a clean ashtray and pour water on it. This rock, the note continued, came from the walls of Glen Canyon, where the Bureau of Reclamation wants to build Glen Canyon Dam and Reservoir, the key unit of the proposed gigantic upper Colorado River project.

There was also a geologist's certification that he (a Ph. D., no less) had personally clambered around some canyons to collect these samples in an area to be covered by the proposed reservoir.

I had trouble finding a clean ashtray, but finally located one. It's true. The rocks, about the size of a pecan, disintegrated in a few minutes.

Representative HOSMER has demanded the dam project be held up while geologists determine whether taxpayers would be building a good dam or a mud puddle costing $4 billion.

It sounds like a question worth asking.

If the Congressman from California has proved nothing else, he has proved a good publicity man. I will never be surprised again at what the mail from Congressmen contains.

[From the Wakefield (Mass.) Item of February 1, 1956]

DAM OR MUD PUDDLE

The Federal Government is thinking of spending $421 million to construct a dam. It appears that after the dam were built, the rock which forms steep walls of the lake which would be formed would disintegrate into mud and slide into the water.

Representative CRAIG HOSMER, of California, has challenged the wisdom of such a dam, planned for the Glen Canyon of the upper Colorado River. He presents his evidence that very shortly instead of a supply of water the dam would hold back a huge mud puddle.

The representative has the testimony of qualified geologists that they have inspected the location and find a soft shale called Chinle composing the walls of the canyon. This, when covered with water, crumbles. And Representative HOSMER proves it.

He has sent small samples of the shale to newspapers and other places to publicize what would happen if the dam were built. The pieces can be put into a dish and covered with water, and in a few minutes the rock has become mud.

The planned dam is far removed from New England, but Federal funds would build it. The representative's dramatic presentation of evidence that the dam would become a mud-filled puddle is convincing, and his plea that the eventual condition of the dam should be determined before any money is spent in construction most certainly must be given weighty consideration.

Tribute to Cantor Aaron Horowitz, of Wilkes-Barre

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1956

Mr. FLOOD. Mr. Speaker, I would like to call to the attention of the Members of the House of Representatives the outstanding record that has been achieved by one of my constituents, Cantor Aaron Horowitz, of Congregation B'nai Jacob, in Wilkes-Barre, Pa.

This fine spiritual leader has served for the past 60 years, without interruption, as a cantor in orthodox Judaism, a record of longevity that perhaps exceeds that of any other cantor in the United States.

He has served well the spiritual needs of his congregation, B'nai Jacob, for 33 years, and still serves the congregation fully and actively.

During his 60 years of cantorial service, Cantor Horowitz has participated in approximately 44,000 daily synagogue services. That figure perhaps also establishes a record in this country.

Cantor Horowitz, in addition to his accomplishments in orthodox Judaism, is a splendid musician and composer as well as a Biblical and Talmudic scholar.

Therefore, Mr. Speaker, you can readily see that I am speaking of a fine, well-balanced and outstanding individual—a man of great spiritual strength and dignity.

As befitting a man of such stature, his congregation tendered to him and his wife a testimonial dinner on Sunday, February 26, 1956.

I would like to join his many friends and admirers in wishing Cantor Horowith many more years of service to his congregation.

Washington, Too, Had His Second-Term Health Problem

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1956

Mr. WOLVERTON. Mr. Speaker, the question of whether President Eisenhower intends to be a candidate for reelection continues to be the all-absorbing subject whenever any two persons meet in conversation. It will continue to be so until the President makes an announcement.

In writing upon the subject in my weekly Washington in Review, on January 12, last, I said:

I am of the opinion that the President's health, under certain conditions, might have a bearing in determining his final answer. I do not think, however, that it would necessarily be a controlling reason. I have a strong feeling that fear that it might be detrimental to his health or even mean his possible death for him to continue the heavy responsibilities of the Presidency would not, standing alone, determine him to answer "No; I will not be a candidate." We all well know that at no time during his service in the Army of his country would any possibility of death deter him from the full performance of his patriotic duty, whatever it might be.

Thus, it is my thought that if the President should feel that the world situation is such that continued peace would be imperiled by his relinquishment of the office of President, that then in such case he would feel an obligation to continue regardless of the possible physical consequences to himself. I am strongly of the opinion that fear of death or physical harm would no more determine him to avoid responsibility in time of peace than it would in time of war. President Eisenhower is too patriotic, and his love of country is too strong to permit him to make any decision other than what he thought necessary for the best interests of his country, regardless of any personal physical considerations.

Thus, it seems to me that in the final analysis, I would expect the President's decision to be based primarily on world conditions, and, if they be such as to cause him to feel that his continuation in the office of President is either necessary or advisable, that then he would respond and assume the duties in the same patriotic spirit that we all know would actuate him to accept responsibility in a time of national emergency growing out of a war that required his services.

On Wednesday, February 22, 1956, the Courier-Post of Camden, N. J., carried an editorial entitled "Washington, Too, Had His Second-Term Health Problem." It was an exceedingly interesting article, particularly because of the fact that President George Washington had a similar question of health facing him, before deciding to be a candidate for a second term, as now confronts President Eisenhower.

The editorial to which I have referred reads as follows:

WASHINGTON, TOO, HAD HIS SECOND-TERM HEALTH PROBLEM

As President Eisenhower ponders his great decision, it is interesting to recall that George Washington would have preferred not to run for a second term because of his health.

Though the first President was a strong, powerful man, the rigors of the Revolution and his earlier campaigns and travels had left their mark on him when, at the age of 61, he came to the end of his first term.

To Thomas Jefferson, Washington wrote that he felt himself "growing old," that his memory was "becoming worse" and his health "less firm." He prepared a farewell address, but it was only delivered, in amended form, at the end of his second term instead of the first. In it he said:

"I constantly hoped that it would have been much earlier in my power * * * to return to that retirement from which I had been reluctantly drawn. * * * But mature reflection on the then perplexed and critical posture of our affairs with foreign nations and the unanimous advice of persons entitled to my confidence impelled me to abandon the idea."

The troubled foreign affairs to which Washington referred arose primarily from the outbreak of the French Revolution and the ensuing war between France and England, with the strong sympathy felt for France by many of Britain's recent colonists, especially the Jeffersonians, which was fanned by the machinations of the French envoy to this country, Citizen Genet.

Washington was determined that the infant Nation would not imperil its precarious existence by taking sides in the European conflict. So to make sure of that, he subordinated his personal inclinations to the country's welfare and accepted a second term.

During this term the excesses of the French revolution made his neutrality policy popular instead of unpopular, and there were notable achievements in several fields.

Threats from hostile Indians were lessened. Open resistance to excise tax collections was put down. Access to the Mississippi was assured. The national credit was made firm. The Nation's international standing was strengthened.

It was fortunate for the United States that health which was less robust at the end of his first term than it was at the beginning did not deter Washington from a second one. The second term added greatly to his luster. Without it he might not have been called first in peace as well as first in war and first in the hearts of his countrymen.

There are certain striking parallels between Washington and Eisenhower, though it would be foolish to stretch them too far. But one of them is the perplexed and critical posture of our affairs with foreign nations that existed in 1792 and exists again in 1956.

It would be a strange working of fate, but entirely conceivable, if the 34th President should decide for the same reasons as the first to forego his own personal desires and serve a second term.

Mr. Speaker, thus, it will be seen there are certain striking parallels between Presidents Washington and Eisenhower in this matter of health. As President Washington accepted the responsibility of a second term because of the perplexed and critical posture of our affairs with foreign nations that existed in 1792, so it can be hoped that President Eisenhower in 1956 will also accept the responsibility of a second term because, as stated in my news release, "the world situation is such that continued peace would be imperiled by his relinquishment of the office of President."

We need President Eisenhower today for the same reasons that the world conditions in 1792 created a need for President Washington at that time.

What a Price for Peace

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. PELLY. Mr. Speaker, in the State of Washington, the Bremerton Sun, in reprinting a Tuscaloosa (Ala.) News front-page editorial headed "What a Price for Peace," cites it as a fine example of clear thinking and courage. Under permission to have this editorial appear with my remarks in the Appendix of the RECORD, I introduce it with the Bremerton Sun's own nomination, which I second, that the Tuscaloosa News' bold utterance on behalf of law and order may win the highest award possible for courageous journalism:

WHAT A PRICE FOR PEACE
(From the Tuscaloosa (Ala.) News)

When mobs start imposing their frenzied will on universities, we have a bad situation.

But that is what has happened at the University of Alabama. And it is a development over which the University of Alabama, the people of this State, and the community of Tuscaloosa should be deeply ashamed—and more than a little afraid.

Our Government's authority springs from the will of the people. But their wishes, if we are to be guided by democratic processes, must be expressed by ballot at the polls, by action in the legislative halls, and finally by interpretation from the bench. No intelligent expression ever has come from a crazed mob, and it never will.

And make no mistake. There was a mob, in the worst sense, at the University of Alabama yesterday.

Every person who witnessed the events there with comparative detachment speaks of the tragic nearness with which our great university came to being associated with a murder—yes; we said murder.

And "if they could have gotten their hands on her, they would have killed her," that was the considered judgment, often expressed, of many who watched the action without participating in it.

The target was Autherine Lucy. Her "crimes"? She was born black, and she was moving against southern custom and tradition—but with the law, right on up to the United States Supreme Court, on her side.

What does it mean today at the University of Alabama, and here in Tuscaloosa, to have the law on your side?

The answer has to be: Nothing—that is, if a mob disagrees with you and the courts.

As matters now stand, the university administration and trustees have knuckled under to the pressures and desires of a mob. What is to keep the same mob, if uncontrolled again, from taking over in any other field where it decides to impose its wishes? Apparently, nothing.

What is the answer to a mob? We think that is clear. It lies in firm, decisive action. It lies in the use of whatever force is necessary to restrain and subdue anyone who is violating the law.

Not a single university student has been arrested on the campus and that is no indictment against the men in uniform, but against higher levels which failed to give them clean-cut authority to go along with responsibility.

What has happened here is far more important than whether a Negro girl is admitted to the university. We have a breakdown of law and order, an abject surrender to what is expedient rather than a courageous stand for what is right.

Yes; there's peace on the university campus this morning. But what a price has been paid for it.

Important Vote Coming

EXTENSION OF REMARKS
OF
HON. JOHN J. DEMPSEY
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. DEMPSEY. Mr. Speaker, when the upper Colorado River storage project bill comes up for a vote this week most of the Members of this honorable body will be concerned primarily with the extent to which this legislation will serve the best interests of the entire Nation. Its opponents have sought through propaganda to characterize it as a project which would serve only the upper basin States of the Colorado River. That is far from being the truth as is shown in an editorial in the Washington Star of Sunday, February 26, 1956. I present herewith for inclusion in my remarks that editorial, which I commend to the careful attention of all of my colleagues in the House:

IMPORTANT VOTE COMING

The upper Colorado River storage project has been cleared for debate and an early vote in the House this week. Indications are that the vote will be close. Despite the removal from the measure of the controversial Echo Park Dam project, and the absence of any public versus private power issue, opposition of the lower basin States led by California continues, while many Eastern and Midwestern lawmakers are reported dubious as to the justification for the relatively large expenditure involved.

The House bill, as presently constituted, would authorize a series of dams and storage reservoirs at strategic points along the rivers of the upper Colorado Basin. The

chief immediate purpose of the project is the control of the immensely valuable waters of the great inland drainage area to permit regulation of the rivers' flow, now highly variable and, in many years, largely wasted.

President Eisenhower and congressional leaders of both parties have urged approval of the project as a needed contribution to the national interest. The value of a dependable source of water and power in the four-State area—Colorado, New Mexico, Utah, and Wyoming—has been greatly increased in recent years as a result of the important discoveries in strategic minerals, notably uranium, in the region.

Now that any possible threat to national parks and monuments have been averted by the elimination of Echo Park Dam site and inclusion of definite safeguards for the Rainbow Bridge National Monument, the national interest in general and the needs of the great intermountain empire in particular call for approval of this legislation. We hope that sectional interests in California and disinterest on the eastern seaboard will not combine to defeat a measure of such great importance to the future of the entire Nation.

Dental Research

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith an editorial from the Chicago Daily Sun-Times entitled "Dental Research."

As the Sun-Times so aptly says, health is "one of our most precious assets." But the editorial also notes that dental research—an important part of a total health research program—has been handicapped by lack of funds, and it supports the American Dental Association's request for increased appropriations for research grants. I, too, support this request by the dentists themselves to speed research on the causes and treatment of dental ailments. The sooner we put some teeth into dental research the better.

The above-mentioned editorial follows:

DENTAL RESEARCH

Of the various forms of health research in this country, perhaps the most poorly endowed is dental research. Dental diseases are more annoying than dramatic and hence do not attract the kind of public financial support given in the fight against cancer and other maladies associated with a high death rate.

The Nation's 43 dental schools and 7 dental research centers are practically without endowment. In fact, the single largest sum dedicated to dental research comes from the dentists themselves, who currently spend about $250,000 a year through the American Dental Association.

With considerable reluctance, the ADA has concluded that the only practical way to speed dental research is through larger Federal grants. In a recent appearance before a House Appropriations Subcommittee, Dr. Harold Hillenbrand, ADA secretary, urged that the $800,000 earmarked for research in President Eisenhower's public health program be increased nearly 500 percent—to $3,855,000.

Dr. Hillenbrand pointed out that while Federal funds for other health activities had increased as much as 6,000 percent in only a few years, the amount for dental health had gone up a mere 23 percent.

He proposed that the extra research funds be used to help increase the effectiveness of fluoridation, to help find a sugar that will not cause decay, to help bring pyorrhea and gingivitis under greater control, and to help find whatever relationship may exist between oral hygiene and cancer of the mouth and certain heart conditions. He said that adequate research could do much more than has been done to spare millions of children the deforming and disabling conditions that accompany severely crooked teeth.

By and large Dr. Hillenbrand and the ADA have made out a good case for what actually amounts to an infinitesimal increase in Federal appropriations. Congress would be wise to grant the request in the interest of improving one of our most precious assets—national health.

Moscow Turns on Stalin

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials from the New York Times and the Christian Science Monitor:

[From the New York Times]
MOSCOW TURNS ON STALIN

Even the most calloused observer of the Soviet scene must be astounded by the speed and extent to which the 20th Congress of the Soviet Communist Party has been turned into an anti-Stalinist demonstration. Khrushchev, Malenkov, Mikoyan and Suslov once vied with each other to praise Stalin, whom Khrushchev once called the "father, wise teacher and directing genius of the party, the Soviet people and the workers of the whole world." Now these same men compete to find the most bitter phrases to apply to Stalin's regime. "Twenty years of dictatorship and lies" sums up their characterization of the Stalinist era.

Mikoyan has gone furthest of all. He has explicitly opened the Pandora's box of official Soviet history and exposed a few of the lies and falsehoods contained therein. So far Mikoyan has only rehabilitated two of Stalin's many victims, Kossior and Antonov-Ovseyenko, but the process can hardly stop there. Virtually all of Lenin's closest associates in the Bolshevik Revolution and the first few years of Soviet power—Trotsky, Zinoviev, Kamenev, Bukharin, Rykov and many others—were put to death at Stalin's order and put into Soviet history as "traitors" and "enemies of the people." In the land of falsehood, even a small gleam of truth is a dangerous thing. Can the new revision of Soviet history about to begin be contained within the limits the present leadership deems desirable, or will the whole edifice of Stalinist lies, frameups, and murders be exposed?

Why has this startling reversal taken place? Most likely Khrushchev and his fellows are responding to the great revulsion against Stalin and Stalinism among the people. The Khrushchev gang, Stalin's creatures and accomplices, hope to retain their power by harnessing this torrent of popular sentiment themselves. Abroad, they presumably hope to impress democratic Socialists, anti-Communist Russians and others that the Soviet dictatorship has been reformed and is now different from the monstrous evil that was Stalinism.

But we should not be tricked. The men who denounce Stalin now were trained by him and their hands are as bloody as were Stalin's with the blood of innocent millions. They have no claim to power other than that they were, as they once phrased it, the "closest comrades-at-arms of the great Stalin." It is good that they have begun to confess some of Stalin's crimes against the Soviet people. Stalin is dead and cannot be punished. When will the Russian people call his living accomplices to account for their share in those crimes?

[From the Christian Science Monitor]
KHRUSHCHEV TELLS THE WORLD

The Khrushchev speech to the Communist Party Congress provides a most timely service for the free world, including cold-war neutrals as well as the Western alliance. No one else could have done that service better. No non-Russians, nor any other Russian, could have spoken with such authority about Soviet aims.

It will be well to believe that Nikita S. Khrushchev, head of the Soviet Communist Party and now clearly top man in the Kremlin, means what he says.

And what is this? Simply, starkly, that the Soviet Union will use international communism to destroy other nations' ways of life and government throughout the free world, allied or neutral. Foreign aid programs, trade, disarmament—these are all subservient considerations in Soviet foreign policy. Subservient, that is, to a central objective that amounts to aggression short only of major war.

Coexistence as Mr. Khrushchev spells it is not an end, but a means to an end. The end is the omniexistence of Communist dictatorship and the nonexistence of any other form of government.

The Soviet Union, he has told the Communist Party meeting, is now strong enough to achieve this aim without war. But the aim is as fixed as ever. The atom may have produced an East-West military stalemate. But it does not, in Mr. Khrushchev's plan, prevent communism from infiltrating free world politics.

Wherever possible, Communists should form popular fronts with Socialists and other leftist groups, he says. Perhaps this will work readily in some neutral Asian countries. In Western Europe, however, Socialists may take warning from the experience of their brothers in former popular-front governments in what are now Russian satellite countries. From that they learned that defense of political liberty must take primacy over defense of economic liberty.

In France today one of the few encouraging signs in the domestic political picture has been the refusal of Socialists to ally themselves with Communists in recent electioneering. In Britain even Socialists who were once impressed by Russian rather than American peace statements have lately been alienated from Moscow by the anti-British campaign Mr. Khrushchev launched on his Indian tour.

Mr. Khrushchev's speech is another call to the Western nations to close ranks against an unremitting—if momentarily smiling—antagonist. There need not be war, he assures us all. But we should note the reasoning back of this. It is that the Soviet Union can get all its wants—even though to that there is no limit—without war.

When in history could not free men have had peace with oppressors on such terms as these?

President Gronchi of Italy

EXTENSION OF REMARKS
OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1956

Mr. ANFUSO. Mr. Speaker, on Wednesday of this week, His Excellency Giovanni Gronchi, President of Italy, will address a joint session of Congress. It is my understanding that he will ask for no new American grants-in-aid, but he is sure to stress the need for increased economic and financial collaboration between the United States and Italy in order to strengthen the ties that bind the two countries. Before his departure from Italy on his visit to America, those seeking to weaken Italo-American relations and to drive Italy into the Communist camp wrongly and deliberately sought to represent President Gronchi as only a lukewarm friend of Italy's Western allies. President Gronchi's background belies this accusation.

Giovanni Gronchi is a very pious, religious and devoted family man. He is strongly opposed to dictatorship in any form. During the Mussolini regime he was deprived of his seat in Parliament because of his opposition to fascism. In the later period of World War II he not only fought back the Fascist elements but was also active in the anti-Nazi resistance movement, and thereafter became one of the founders of the new democratic Republic of Italy.

Since then he has fervently opposed communism in Italy and throughout the world. His methods are not those of violence and revolution. Basically, he is a scholar and a man of intellect. He believes in reforms, in upholding the rights of the working people, and in improving the lot of all the underprivileged, but that all this is to be done in an orderly fashion and in a democratic way. Thus, he strips the Communists of their most effective appeals to the masses. Were Signor Gronchi in American politics, he would undoubtedly be classified as a liberal Democrat or a Lincoln Republican.

Insofar as NATO is concerned, Gronchi believes that greater emphasis should be made on the economic phases of the North Atlantic Treaty rather than stressing too much the military aspects as is done at the present time. He is not alone in this thinking. During the NATO Parliamentary Conference in Paris last July, which I had the honor to attend as a member of the United States congressional delegation, there was considerable talk on this subject. It was noted by a number of delegates that NATO was set up as a practical organization, geared for immediate and collective action not only in the military field but also in the political and economic fields. Yet the emphasis was almost entirely on the military clauses of the treaty binding the Atlantic nations and very little on the other clauses of the treaty. This, it was felt by many at the Conference, was regrettable because by developing the political and economic aspects of the treaty the nations forming the Atlantic alliance would be considerably strengthened.

Mr. Speaker, because President Gronchi has been maligned, misrepresented and maliciously misquoted, I was happy to read in the New York Times magazine section yesterday a very fine analysis of the man Giovanni Gronchi by Mr. Arnaldo Cortesi, the New York Times correspondent in Rome, who has followed Mr. Gronchi's career for many years.

I should like also to call to the attention of my colleagues an interview on the television program Between the Lines yesterday by Mr. Lester Wolff, the producer of that program, with Italy's Foreign Minister Gaetano Martino, who is accompanying President Gronchi on his visit to the United States. I believe this interview is further evidence at this time of the traditional friendship between Italy and the United States.

Mr. Speaker, let us give a genuine and warm welcome to our Italian friends and allies. Let us do our part to help the country they represent to become totally free from the scourge of Communist influence and disruption. Let us help make Italy one of our stanchest allies and supporters in the struggle for a free world. I take this opportunity to extend my heartiest greetings to the President of Italy, Giovanni Gronchi, and to his Foreign Minister, Gaetano Martino, and wish them a most pleasant and successful visit to our country.

The New York Times article and the television interview mentioned above are inserted in the RECORD under leave to extend my remarks. They read as follows:

[From the New York Times of February 26, 1956]

PRESIDENTIAL VISITOR FROM ITALY

(By Arnaldo Cortesi)

ROME.—Giovanni Gronchi, the third President of Ltaly, was elected by Parliament in 1955 and immediately made it plain that he was something new in the European experience of parliamentary republics.

He does not subscribe to the European view that Presidents, like the children of a bygone age, should be seen and not heard. He does not conceive of them as mere figureheads. He thinks they have better things to do than to look decorative at public functions and to hold more or less superfluous "consultations" at times of cabinet crises.

In this he is significantly broadening the major powers conferred on him by the constitution—the veto power (all laws must have his signature) and the power to send messages to Parliament on any subject, to dissolve Parliament or either chamber, and to nominate Premiers. The framers of the Italian Constitution intended to model their republic on France, and it was thus considered axiomatic that the Italian President would do nothing and say nothing of political significance. The first two did follow the French precedent, but Gronchi has clearly indicated his belief that as President he has not only the right but the duty to urge his views on the Government and the nation.

In little less than a year since he was elected President Gronchi has delivered more speeches of political significance in all parts of Italy than any other European President has done in the whole of a term. His influence has always been exerted in favor of a policy based on the idea that the best way to fight communism is to steal its thunder by moving resolutely toward the working masses and the poor with a policy of pronounced left-wing flavor.

His insistence that to be elected President is not the same thing as being put on the political shelf has made Gronchi a far more powerful figure in politics than any of his European counterparts. Nevertheless when he arrives in Washington on an official visit this week as the guest of the United States Government, neither he nor the Italian Minister of Foreign Affairs, Prof. Gaetano Martino, who accompanies him, will have any specific demands to make. They have, above all, no intention of asking for new American grants-in-aid. They will, however, certainly make out a case for increased economic and financial collaboration between the United States and Italy, pointing out particularly how vast a field is available in Italy for American loans and investments.

In their journey across the Atlantic, which will take them also to Canada, Gronchi and Martino count on cementing the already excellent relations among the three countries concerned. While in Washington they expect to discuss all aspects of the international situation frankly with their American opposite numbers and to reach a more perfect alinement of Italian and American policy within the framework of the Atlantic Pact.

President Gronchi is a self-made man of humble origins who graduated first to considerable success as an industrialist and later to the highest political position of his country. At the age of 68 he is a vigorous man of less than average height, with horn-rimmed spectacles, a full head of almost completely white hair, and a healthy out-of-doors complexion. He radiates energy and self-confidence and is clearly a go-getter.

Even in Italy, where the population is almost solidly Catholic, Gronchi distinguishes himself as a devout and practicing Catholic. It follows that he is anti-Communist to the innermost fiber of his being. A man of deep and wide culture, he understands and reads English without difficulty, but does not trust himself to speak it. The address that he is to make to a joint session of Congress will, therefore, be delivered in Italian.

This will not be Gronchi's first visit to America. He was there as a businessman for a month at the end or 1935 and the beginning of 1936. He returned, again on business, in May 1940, but was obliged to cut his stay short because of Italy's entry into the war on Germany's side. He has been married twice, and lives in Rome—not in the rather stuffy splendor of the Quirinal Palace, formerly the residence of Italian Kings, but in his private home, together with his second wife, a pretty woman 25 years his junior; their son, Mario 13; and their daughter, Maria Cecilia, 11. Signora Gronchi will accompany him on his trip to America. An affectionate husband and father, Gronchi is a home-loving person whose main hobbies are fishing, oriental art, and classical music. He has been known to miss important political appointments because he had gone to the zoo or circus with his children.

In his Washington talks, Gronchi believes he will be aided by the fact that he is acquainted with most of the men with whom he will be dealing. He met President Eisenhower before either was President, and also knows the American Secretary of State. Indeed, Gronchi professes a very high regard for Mr. Dulles and often expresses appreciation of the courtesy that Dulles did him by stopping off in Rome to speak to him when he was on his way to the second Geneva Conference.

Gronchi has often been represented as an adversary of the Atlantic Pact and a lukewarm friend, at best, of Italy's allies. He denies the charge most emphatically. He says that adherence to the Atlantic Pact is the necessary basis of Italian foreign policy, and declares it unthinkable that Italy should

ever abandon the alliance. He recalls that, as long ago as 1953, when he was still President (Speaker) of the Chamber, he said to Ambassador Clare Boothe Luce: "I wish you could persuade them in America that only the Communists and leftwing Socialists are against the Atlantic Pact; and new perhaps not even the Socialists."

When pressed for an explanation of why he is regarded in many quarters as an enemy of the Atlantic Pact, Gronchi says the reason is that he disagreed with the way—and only with the way—in which Italy joined the alliance in 1949. He felt that Italy should have exacted some political advantage, and particularly guaranties about Trieste, in exchange for her adhesion to the treaty. As far as treaty itself is concerned, he says he has always been heartily in agreement with it.

The problem now is, Gronchi adds, not whether Italy should or should not remain in the Atlantic alliance. She is in and will remain in, wholly and unreservedly, he says. The problem is to make the alliance work as efficiently as possible. What is required, Gronchi believes, is to lay greater stress on the economic clauses of the treaty, thus emphasizing that the Atlantic alliance is an Atlantic community of nations. The present tendency, Gronchi feels, is to think too much of the military clauses and not enough of the others.

Another fault, in Gronchi's opinion, is that the lesser powers in the alliance (which in effect means all except the United States, Britain, and France) should be permitted to contribute more than they do at present. This could be done by calling more frequent meetings of the Atlantic Council and by consulting smaller nations in all matters of policy toward the East.

He is perfectly aware, Gronchi says, that the greatest burden of responsibility must necessarily be shouldered by the big powers. That is inevitable and entirely as it should be. He is, however, strongly of the opinion that to share out more responsibility to the smaller states would increase the cohesion among all members of the alliance.

In the minds of most people, both in Italy and outside Italy, Gronchi is the advocate of the opening to the left, or in other words, the man who would like to see room made in the Cabinet for the leftwing Socialists, who are now in alliance with the Communists. In his inaugural speech he said things that were widely interpreted to mean that he wanted the Socialists in the Cabinet with the least possible delay. On second thought, he now says he does not want anything of the sort, and he points out that he spoke of the Socialists being in the Government not as an imminent but as a remote possibility.

"As I said in the Christian Democratic Congress of 1954 in Naples," Gronchi points out, "I have never conceived of the opening to the left as meaning that the Government parties were to negotiate with the leftwing Socialists in the hope of inducing them to enter the Cabinet. My idea is the exact opposite. It is the leftwing Socialists who must move away from the Communists and toward the Christian Democrats and the other center parties, until they are worthy of entering the Cabinet and their admission becomes logical and almost inevitable."

The movement of the leftwing Socialists away from the Communists and toward the center has already begun, Gronchi thinks, and what the Christian Democrats should now do is to accelerate it. The Christian Democratic Party, he says, has a good program, which was approved in 1946 and never repudiated. It provides for a social development of the economy by means of land reform, expansion of housing, measures to combat unemployment, and the like.

Let this program be applied integrally and with courage, Gronchi urges. He believes the leftwing Socialists would soon find themselves facing a difficult dilemma. They would have to decide whether to stick to their Communist allies or break away from them in support of the Government's reform program. If they decided to stay with the Communists, they would be extremely vulnerable at the next election, Gronchi thinks.

The President of Italy is in agreement with most Western European statesmen that Germany is the central world problem of this moment. It may well be that this problem holds the balance between war and peace. Gronchi would like to see the West adopt a more dynamic policy where Germany is concerned, though he does not say just what such a policy should be. He feels that the presence of millions of refugees and the division of Germany into two parts can easily produce irredentist feelings and attitudes, and may even bring into being a body of German opinion favorable to direct negotiations with the Russians.

What Gronchi fears is that the Soviets may make some headway with their propaganda that it is only Germany's NATO membership that stands in the path of German reunification. It is an argument, he thinks, that is likely to find a more and more receptive audience as resurgent German nationalism gains ground; and the West must find some way of combating it.

Giovanni Gronchi was born in Pontedera, a small town in the province of Pisa, Tuscany, on September 1, 1887. His father, Sperandio, was an accountant in a food-processing plant, and eked out a miserable living with odd jobs, which included selling salamis and sausages for a local manufacturer. His mother died in 1896, when Giovanni was a small boy of 6, and his father remarried shortly afterward.

Things began to look up when a gifted priest, Don Giuseppe Carlini, became interested in the boy and prevailed upon his father to send him to high school. Giovanni soon stood out as a brilliant student and paid for most of his subsequent education with the scholarships he won. Don Carlini was also responsible for introducing young Gronchi to the Catholic youth movement, and so getting him started in politics.

From that point, Gronchi never looked back. He delivered his first public speech at the age of 12, was elected chairman of the newly founded Catholic club of Pontedera at 16, and at 20 ran for office for the first time, being soundly beaten in a municipal election.

In 1909, with a degree from the famous normal school of Pisa, a state college founded by Napoleon, young Gronchi taught in high schools in Pisa, Parma, and Bergamo. In 1913, he married Cecilia Comparini, whom he had known in the Catholic youth movement. When Italy entered the First World War 2 years later, Gronchi, though a professed pacifist, did his full duty and returned home when it was over with the rank of captain and 1 silver and 2 bronze medals for gallantry.

On his return from war, Gronchi participated in the Catholic congress of Bologna in 1919, which gave birth to the Catholic political movement that took the name of Italian Popular Party. The present dominant Christian Democratic Party is its successor. Gronchi was one of the 133 deputies that the P. P., as the Popular Party was known, elected to the first postwar chamber. He was vitally interested in the Catholic labor movement, and in 1920 was appointed national secretary general of the "white," or Catholic, labor confederation.

He was soon in the forefront of his party's losing struggle with fascism. When, after the 1922 march on Rome, his party decided to collaborate with fascism, Gronchi was Undersecretary for Industry and Commerce in one of Mussolini's cabinets. But he soon resigned and resumed the fight against fascism.

Gronchi was reelected a deputy in 1924, and shortly thereafter suffered the loss of his father and his wife. After the murder of Giacomo Matteotti, he joined the anti-Fascist Parliament known as "The Aventine." In 1926, the Fascists deprived him formally of his seat in Parliament.

If he had now wished to resume teaching, Gronchi would have had to take an oath of allegiance to fascism. He preferred to make a new life for himself. At the age of 39, he found himself selling neckties and falling far short of making enough to support himself. Then he became a traveling salesman for a paint manufacturer. A few years later, he had founded his own firm and was on his way to becoming a successful and prosperous manufacturer. His plant was first at Brugherio, near Milan, and later at Casoria, near Naples.

In 1941, during the Second World War, Gronchi married again. His second wife was the former Carla Bissantini, whom he had first met in 1926. In the closing stages of the war, Gronchi played an important part in the anti-Nazi resistance movement as a member of the National Liberation Committee of northern Italy. After the liberation, he was one of the men who reorganized the old Popular Party into the Christian Democratic Party.

As one of the big men in the dominant party, Gronchi found himself in all the early postwar Cabinets. He was Minister of Industry and Commerce in the 2 Cabinets headed by Ivanoe Bonomi, in that headed by Ferruccio Parri, and in the first of the late Alcide De Gasperi's 8 successive Cabinets. In 1948, he was elected president of the Chamber of Deputies, and he held this post for 7 years, a record that ahs been exceeded by only two persons in Italian parliamentary history.

On April 29, 1955, a joint session of the Senate and the Chamber elected Gronchi President of the Italian Republic on the fourth ballot by 658 votes out of 833. It was a most confused election, which in the end saw almost the entire Parliament, including both the extreme left and the extreme right as well as most of the Christian Democrats and the center, voting for Gronchi.

Italian Presidents are elected for 7-year terms, and Gronchi will therefore be President until 1962. He looks upon it as a good omen that his presidency has been opened, within 1 year of his election, by a trip to the United States. He is confident that a better understanding will result from it, and that this will strengthen Italo-American friendship and make it more enduring.

INTERVIEW WITH FOREIGN MINISTER GAETANO MARTINO, OF ITALY, BY LESTER WOLFF FOR BETWEEN THE LINES TELEVISION PROGRAM, SUNDAY, FEBRUARY 26, 1956

Question. What is the purpose of your visit to the United States?

Answer. As you know the visit takes place as a result of an official invitation of President Eisenhower to President Gronchi. It certainly was a very courteous gesture which can't but furrther improve the good relations between our two countries. I think that the first and most important purpose of the visit is to strengthen, through a more personal and informal exchange of views at high level, the traditional friendship between Italy and the United States.

Question. Can you give us, Excellency, some information on Italy's economic situation today?

Answer. Italy's economy is steadily improving as the figures of our statistics show. Since the huge destructions of the war, which left the country in an almost hopeless situation, the recovery has been amazing. Today Italy has overstepped, in almost every sector, the prewar economic standards. Of course, we shall never forget that these wonderful results have been quickly reached be-

cause, side by side with the tenacity and the will to fight for a better future of our people, we had the generous American contribution which helped us through, and is still helping us to reach our goals.

Question. Do you think the death of Minister Vanoni may affect Italian policies?

Answer. The death of Ezio Vanoni, our Minister for Budget, is certainly a great loss for our nation. He not only was a well-known expert for economic affairs, the author of the recovery plan that bears his name, but also an honest and good citizen and a convinced friend of your country.

I, personally, do not think that his death will change the course of the economic policy of the Government. The general pattern of said policy is decided and accepted by the Cabinet as a whole and I do not see any reason to modify it.

Question. Could you, Mr. Minister, give us the names of men who, according to your opinion, are to be watched for Italy's future?

Answer. Well, this is a rather difficult question to answer. Still, as I have faith in the future of my country, I think I'll take on me to answer: all the boys and girls of the new generation.

Question. And now, Excellency, may we have your idea on Italy's attitude toward America and on what can be done to further improve the relations between the two countries?

Answer. Our attitude toward America is one of friendship and trust. We belong to the same western civilization and we cherish the same ideals. Our nations are bound in the same defensive alliance in order to protect that civilization and those ideals. As I already said, I think that this mutual friendship can be further promoted by a better reciprocal knowledge of our people. I, therefore, think that visits of officials, experts, or even plain tourists, also scholarships, etc., should be encouraged and facilitated in both our countries so as to allow a better understanding of each other's problems, and of the methods to adopt in order to face and solve them.

Salute to Lithuania

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared on February 15, 1956, in the Wilkes-Barre (Pa.) Record, on the occasion of the 70th anniversary year of the Lithuanian Roman Catholic Alliance and the 38th anniversary of the declaration of Lithuania's independence of Russia:

A dinner held last night at American Legion Home, 45 North River Street, served to direct attention to some of the activities of a large body of residents of Lithuanian origin in our midst. Primarily the dinner was held to note the 70th anniversary year of the Lithuanian Roman Catholic Alliance and the 38th anniversary of the declaration of Lithuania's independence of Russia.

As the history-minded must know, this declaration came on February 16, 1918, and eloquent note has been made by Secretary of State John Foster Dulles of the fact that the 38th anniversary will be observed generally tomorrow.

Plymouth saw the birth of the Lithuanian Roman Catholic Alliance on November 22, 1886. From small beginnings the alliance grew to a membership of some 20,000. An officer informed us that the bulk of the membership is in the anthracite fields. Leonard Simutis, editor of a Lithuanian language daily in Chicago, where 100,000 residents are of Lithuanian ancestry, is the president, and John J. Grigalus, a Boston lawyer, is vice president. The six other officers reside in this region. Among them is William Kvetkas, of Academy Street, the secretary. He has held the office for 18 years and prior to that served 14 years, first as trustee and then as treasurer.

Of timely interest is the invitation the organization's spiritual director, Rev. John F. Boll, has received to give the invocation at an opening session of the House of Representatives at Washington one day soon. The alliance was formed as a mutual benefit organization and has continued through the years to serve its original basic purpose, but not the least of its values is found in occasional social gatherings, such as last night's held on the eve of Lent and almost on the eve of Lithuanian Day.

February Is Catholic Press Month

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. KEATING. Mr. Speaker, February is being commemorated all over this Nation as Catholic Press Month. It is with great pleasure that I pay tribute today to those publications which faithfully report on events of significant and special interest to Catholic readers.

The Catholic press of the United States is filling a definite need. It is primarily concerned with giving a more detailed report on Catholic events than do secular papers and evaluating the changing times in which we live. The high quality and uniform excellence of our Catholic press is confirmed by the high esteem in which it is held by all its readers. They look to it for the guidance and interpretation so badly needed by all of us today.

The paper with which I happen to be most familiar, and which I salute also today, is the Catholic Courier Journal, which is the official newspaper of the diocese of Rochester. Its circulation is over 53,000. Its coverage of the news is complete, timely, and well written. By means of wire services from all over the world, the Courier Journal is able to supply its readers with the latest, up-to-the-minute happenings soon after they take place. This fine paper also carries accurate accounts of important Catholic events and is noted for its complete coverage of significant Catholic news.

Mr. Speaker, the Catholic Courier Journal of my city is just one of many fine Catholic newspapers of this country. It is an integral part of the network of diocesan papers which, though restricted in its readership and area of coverage, is a most effective and good influence on our public life.

The Catholic press is serving its ends well. It is a strong and enlightening influence in the homes of all who read it. As Catholic Press Month draws to a close, I salute these publications for their past accomplishments and wish them continued success in the years ahead.

Our Most Impoverished Citizens

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. O'HARA of Illinois. Mr. Speaker, wide national attention has been given to a booklet issued by the Christian Century, of Chicago, and containing reprints of a series of articles by Dr. Harold E. Fey on our treatment of American Indians. The Christian Century is one of the outstanding and most influential Protestant publications in the country. Work is a Catholic newspaper, excellently edited, and of wide circulation. The following article from the July 1955 issue of Work indicates a unanimity of opinion in a considerable segment of both Protestant and Catholic circles on the question of our treatment of the American Indians. The article follows:

A ROVING EDITOR PROVIDES AN ANSWER—WHAT PEOPLE IN UNITED STATES OF AMERICA ARE IN DEEPEST POVERTY?

(By Bob Senser)

The people who once owned all the wealth of this country are now its most impoverished citizens. While a few Indians own oil wells and other riches, as a group the 400,000 United States Indians "live in deeper poverty than any other racial group in the Nation."

So says Harold E. Fey, executive editor of the Christian Century, in a new booklet titled "Indian Rights and American Justice."

"The original American is buried to his neck in legal paper," Dr. Fey points out. Congress has passed more than 5,000 statutes on the Indian since 1900, as a followup to United States Indian treaties which swore they would endure "so long as the grass shall grow and the waters run."

Yet all these legal papers have spared the Indian only a small part of his original inheritance. The tribes were squeezed into less and less land—and into the most barren. "As a result of the Indian Allotment Act of 1887, Indian landholdings (in 80 years) shrank from 139 million to 48 million acres," Dr. Fey says.

Sixty-five percent of Indian land has an annual rainfall of less than 15 inches, less than half of Indiana (where there are only a scattering of Indians).

"Throughout large sections of Indian country," the booklet states, "water for human use is transported long distances in rusty metal barrels, often with no cover except a burlap bag spread over the top to prevent loss by splashing or evaporation. * * *

"Lack of clean water helps explain why the incidence among Navaho children of diarrhea and enteritis is 20 times that in the general population, why life expectancy among the Papagos (Arizona) is 17 years, against 68 for the Nation as a whole." (The average Indian life expectancy is 36.)

Dr. Fey recalls how Congress in 1859 set up the Pima Indian Reservation in Arizona, where the Gila and Salt Rivers were to be reserved for the use of the Indians. "But after the Civil War white squatters, first Mormons and then others, settled upstream and took the water of the river for their own use. In a few years the ancient canals of the Pimas went dry, and for nearly 40 years these peaceful farmers fought a losing fight against starvation."

In many other places, too, the choice land that in 1900 had still been in Indian hands was lost to the whites.

An erosion of Indian rights has taken place since 1950, Dr. Fey charges. Samples of the evidence that he cites to prove this:

"Land belonging to Indians in New Mexico was sold without their consent.

"Government representatives interfered with the election of tribal officers of the Blackfeet Tribe in Montana.

"The practice of consulting Indians on legislation or other matters affecting their welfare was virtually stopped.

"Some tribes could not get statements concerning balances in their tribal funds on deposit with the United States Treasury, and finally had to appeal to the United States Indian Claims Commission for the information."

Dr. Fey's booklet examines in detail the plight of the Klamath Indians of Oregon, the Pimas of Arizona, the Chippewas of North Dakota, the Navahos of Arizona and New Mexico, and the Cherokees of North Carolina and Tennessee. But he discusses not only the Indian problem, but the problem of the white man's conscionce:

"Since the beginning of this century our Government has spent more than a billion dollars to improve the economic condition of this minority. But the simple materialistic faith that filling stomachs solves all other problems, which seems to underlie our policy toward underdeveloped countries with communism, has not solved the problem of our relations with the Indians.

"The only policy we have not tried consistently, determinedly, and on a large scale, is the policy of study of the Indian heritage, respect for the Indian as an individual and for his social groups as essential to his way of life."

The booklet, which originally appeared as a series of 8 articles in the Protestant weekly, Christian Century, has a Protestant mission emphasis in several sections, but most of its 24 pages are loaded with facts for anyone interested in justice for the original Americans.

Shall We Tolerate Those Flying Saloons?

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article by Harry C. Kenney entitled, "Shall We Tolerate Those Flying Saloons?" which was published in the February issue of the Christian Herald. I am very much interested in this subject matter since I have introduced legislation in the House to prohibit the serving of alcoholic beverages to passengers in flight.

The article follows:

SHALL WE TOLERATE THOSE FLYING SALOONS?

(By Harry C. Kenney)

Sky-high drunks not only make airplane trips less enjoyable, but potentially present a serious threat to the chances of your landing safely at your destination. This is no mere conflict of morality between drinker and nondrinker. The peril is impartial. Airborne alcohol endangers not only the lives of nondrinkers, but the lives of the drinkers themselves.

With air travel constantly and phenomenally growing (in 1954, for example, more people flew the oceans than crossed them by ship for the first time in history), the alcoholic headache aloft is destined to become worse, not better, unless something is done about it promptly.

I have flown well over 100,000 miles in this country and abroad, and there have been few flights when I have not been disturbed or concerned over the threat to the safety of the flight due to intoxicating liquors served to passengers.

One such experience occurred on a major airline nonstop flight scheduled for New York to Miami. As the huge, heavily loaded plane raced down the runway the fire warning mechanism sounded. Fortunately the crew had enough runway distance to halt without taking off.

In 2 hours we tried it again. Once more the fire alarm sounded, indicating serious trouble with one of the engines. We returned to the airport and waited until another plane could be readied. By the time we took off for the third try the passengers were rightfully nervous.

A fine-looking businessman sat opposite me. The stewardess served him drinks and he called for more. Soon he was under the influence—and yet he was served more liquor. Suddenly he let out a shrilling, startling, between-the-teeth whistle which just about sent the nervous passengers through the ceiling of the plane.

The passenger wanted the stewardess and more liquor. In the process he made obvious advances to the stewardess, tried to buy everyone on the plane a drink, and conducted passenger-bumping excursions up and down the aisle.

The male steward tried to quiet him down but he became argumentative and difficult. He was going to "get" the jobs of the personnel and he knew his "rights." Finally, the captain had to leave the cockpit, come back, take away the man's matches and cigarettes, strap him in a seat, and assign the very busy steward to watch over him. Passenger comfort was devastated and the safety of the flight was seriously jeopardized.

What is it going to take to convince the Nation's airline executives and the Civil Aeronautics Board that serving liquor in airplanes is gambling with passengers' lives?

Overwhelming evidence is piling up that the incidents of disturbance, anxiety and danger due to drinking and drunks aboard have reached the alarm stage not only for many passengers but for many of those persons responsible for the safe conduct of a plane.

A flight engineer writes that "to be of assistance to a stewardess and do a job" he opened a champagne bottle in the cockpit with his pocket knife. The cork came out with a loud explosion "and with a motion similar to a small projectile." He admitted that the bottle should never have been brought to the cockpit and that "since the cork was made of rather heavy rubber material, had it been aimed just right it could have hit a feather button, an instrument or a crew member with obvious results."

The engineer said the incident "really shook me, particularly when I fully realized all its possibilities. From such acorns, oaks of disaster grow."

A publisher of a large newspaper writes: "I have observed with great concern the procedure in both types of flights: (a) where drinks are provided free; (b) where they are sold. My reaction has been very definitely negative to the whole idea. To see fine young women pushing the sale of liquor in an otherwise refined atmosphere, is very irritating to me. Serving liquor on planes is still very distasteful to nondrinkers as well as to those who believe liquor is a contributing hazard."

Yet airlines that encourage drinking aloft forbid cigar smoking, because its heavy fumes may disturb other passengers.

An overseas captain reports two cases of intoxicated, hard-to-control men passengers and one case of a drunken woman who insisted on parading up and down the aisle nude.

One airline captain with 12 years' experience says: "I feel that the airlines not only lowered their standards but added a hazard to the safe conduct of a flight when they started serving drinks. I feel that in-flight is definitely not the time for liquor."

A major airline pilot has stated: "I have had two cases when I had to order an obviously intoxicated person from the cockpit at night during final approach to landing."

Another airline pilot writes: "Once I saw a dozing drinker light several cigarettes and drop each one of them down in the upholstery still burning." This same pilot reports the experience of another drinker who "attacked the plane's captain and had to be tied with a rope on the floor where he spent the rest of the flight."

A woman who has flown the Atlantic twice writes about the discomfort caused by the liquor served all passengers who accepted it. "Passengers got noisy in a very short while on the return trip, and nothing was done to quiet them down." A stewardess told her: "Aside from the noise, the smell, and the problems liquor brings with it, there is always the possibility that in an emergency at least half of the passengers could not be relied upon to be of service to themselves or others. They might even hinder the rescue of other passengers."

She was referring to the possibility of "ditching" in the ocean. At such a time all passengers would be expected to be helpful. There would be excitement. Precision and clear thinking would be vital. Getting passengers into "Mae Wests" and launching the liferafts would demand speed.

Where would a drunk fit into this picture? He would be a threat to the whole situation and endanger the rescue operations. Not only would he be a severe hazard but ironically would require special attention because he was drunk and would steal precious time and attention. His own chances of survival would be drastically reduced.

Air flight personnel have to contend constantly with "champagne flights" and "cocktail hour" flights over land and sea. Such schedules are dramatically headlined in national advertising. Can two stewardesses and a steward (sometimes only two stewardesses) be expected to take care of the requests and needs of 50 to 90 passengers for an hour and a half to eight hours and longer and still handle the drinkers?

Some airline officials contend that drinking on planes is no more dangerous than drinking on trains. This just doesn't stand up. The trains are on the ground, on tracks. The engineer and fireman never leave their posts to handle drunks. There are numerous conductors and trainmen to deal with difficult situations. There are separate drinking cars or drinking compartments and the nondrinker and family groups do not have to be subjected to an atmosphere that is contrary to their thinking, education and beliefs.

The pilot of a plane from necessity is closely associated with the passengers and

yet should he be expected to leave his post at times when his job needs him most? Take the regulation which states that the cockpit door should never be locked. This is provided as an escape possibility in case of a crash. However, each airline determines whether the door shall be open or not during takeoffs and landings.

Several airlines leave the door open during these times because if there is a crash there is no likelihood of the door's jamming. There are many times when the pilot has to land in weather so bad that he has to be talked down. Is this the time to contend with drinkers? Is this the time to be concerned whether a drunk is going to get into the cockpit and take a swing at the captain?

The above incidents are not rare. Yet one major airline official declares—and it is generally accepted by the others that serve liquor: "We know of no evidence which will support any suggestion that the safety of operation is diminished by the limited service of alcoholic beverages which we permit and provide."

This is not the way the Air Line Stewards and Stewardesses Association sees it. This organization has passed a resolution opposing bar service aloft "in the interest of the safety of the flying public." President of the ALSSA Rowland K. Quinn, Jr., says this resolution was adopted "because of the safety hazard and deterioration of reasonable passenger discipline necessary to provide for the pleasure and safety of all passengers."

Mr. Quinn further states: "The modern aircraft is a complex machine. The cockpit crew should not be expected to double as bouncers in the cocktail lounge. As a general rule, stewardesses today are younger and less mature than they were even a few years ago, when all applicants were required to be trained nurses. It is unreasonable to expect a young woman scarcely 20 years old to function as the enforcement agency in their flying saloons. The airlines should have recognized these problems and acted on their own volition. However, since they have not and do not intend to do so, Federal legislation should be enacted to protect the flying public and crews against the inherent dangers existing as a result of uncontrolled drinking on commercial aircraft.

The executive board of the Air Line Pilots Association also has called on commercial aviation companies to discontinue serving liquor or set-ups on flights. Clarence N. Sayen, president of the association, says: "We feel that drinking aboard airplanes is a growing problem that alarms pilots who are charged with the safe conduct of a flight."

Harold L. Pearson, former president Air Transport Association, drew up a code which he hoped his fellow executives in the industry would adopt. It included such points as these: No person giving evidence of intoxication shall be permitted to board an aircraft; no beverage service will be available to intoxicated persons or minors; no liquor service on Sundays or national election days; service will be confined to the hours between noon and midnight; no service on flights of less than 2 hours duration. No service on coach flights; beverage service shall not be permitted to interfere with serving of meals or comfort of passengers; and ATA should be empowered to police the industry code.

While any and every attempt to bring about the control or denial of serving liquor aloft is to be applauded, there are wide loopholes in the above suggested code. Take, for example, the item which suggests no liquor service on flights of less than 2 hours. Do not the longer flights provide the greater danger? There is time to consume more liquor, the planes fly higher, farther, and faster. Long trips require larger planes which carry more passengers and are subject to a different set of flying problems from the short routes.

Mr. Pearson presented the 15-point code in full before airline delegates to the recent Air Traffic Conference gathering in San Francisco. The airline officials refused to adopt even this compromise set of liquor controls. An ATA spokesman said the group "found the code unacceptable" and "left the matter with the individual airlines."

Mr. Pearson also could get little satisfaction from CAB. The acting chairman of the Government regulatory organization said in reply to Mr. Pearson's letter of complaint that it was keeping the liquor question in mind; that while protests against drinking in flight "have become more pronounced, CAB will determine when public safety is involved and will take corrective steps as they are required."

CAB can stop the serving of liquor whenever it wants to and can accomplish the job within 24 hours. But what is its position? It is stated in a memorandum on policy:

"The serving of alcoholic beverages aboard air-carrier airplanes in flight is not specifically prohibited or restricted by Federal law. * * * The Board has held in the past that the matter is one subject to State law enforcement. Notwithstanding * * * it is possible that if the privilege were abused, safety might be jeopardized. * * * Consequently the Board has been vigilant in examining all complaints of this nature * * * and as a result of these investigations we do not believe there is any evidence to show, on the basis of present practice, that safety of flight is jeopardized."

No evidence, they say.

Capital Airlines, which does not serve liquor and yet is not taking sides over the conflict, complained to the CAB that another airline, a competitor, was serving drinks over States where the sale of alcoholic beverages was illegal. Capital claimed that the practice not only was illegal but unfair competition, and what was CAB going to do about it?

The Board dismissed the complaint without action and stated that: "* * * it is not thought that any action thereon or investigation thereof by the Board at this time would be in the interest of the public."

Some day, however, some organization is likely to investigate the extent to which airlines can be prevented from serving liquor over dry States. This could well be a provocative investigation. Mr. Quinn declares: "The carriers possibly proclaim that they religiously observe State liquor laws. This is so absurd as to be laughable. The cabin crews haven't the vaguest idea what State restrictions are imposed upon the serving and sale of liquor. Moreover, it is pretty difficult to know at 25,000 feet when you pass over the State line."

Thus the merry-go-round turns. The airlines' own trade association refuses to act as a body and has tossed the ball back to the individual airlines. Some airlines have tossed the ball to CAB. It has tossed it back to the airlines. The pilots, stewardesses, and stewards are on record against liquor. Many passengers have objected. Incidents of danger and potential danger have been recorded by flight personnel. In the meantime, the planes are flying high in more ways than one.

Who wants liquor on airlines? A few years ago the companies queried passengers on drinks in flight. In a 60-day survey customers of one company registered a 78-percent vote against liquor. In all cases the vote was against the service.

One airline president said: "You may rest assured that as long as I have any connection with this company no such equipment (bars to serve alcoholic beverages) will be installed."

Another declared: "Public opinion is against the practice and we will serve neither cocktails nor other forms of intoxicants."

These lines are now serving liquor.

What started it?

One major airline serving the New York to Miami "race-track run" takes the credit for starting it domestically in 1950. It felt that red-carpet treatment with drinks at $1 each (with no limit) would not only bring in business but provide passengers with "appetizers, relaxation, and a sense of luxury." Representatives of this airline say the company does not make money on the service, and yet it has no intention of giving it up.

Another major airline flying to Miami held off serving beverages for 2 years but finally gave in to the competition. Gradually liquor went aboard on flights to other parts of the country, and more airlines gave in to meet the competition.

Today it is on record that several airline spokesmen have declared in effect: "We wish the idea had never come up. It's been just one big headache. If only the airlines could get together and agree to stop, we would be ready tomorrow."

Why can't it be that simple? Because 2 or 3 major companies insist upon serving liquor.

What is being done to help them see the light? Senator STROM THURMOND, Democrat, South Carolina, told this reporter that he has already written the CAB requesting that it impose a ban on serving liquor aboard commercial airlines. Also, "if nothing is done by the CAB, then it is highly probable that I will introduce legislation during this session of Congress that will impose Federal restrictions on this menace to public safety."

Representative THOMAS J. LANE, Democrat, Massachusetts, also told this reporter, "I have been hoping that the airlines concerned would take some action to banish the serving of liquor in the air, but evidently they do not care to do so. I plan to introduce legislation in this session of Congress to make it a Federal crime to serve liquor aloft."

Congressman LANE further stated that "the practice of serving liquor 'upstairs' is a contradiction of all other safety measures. It is a thoughtless invitation to a new kind of disaster, which, fortunately, has not yet occurred. That it will happen is inevitable, unless this practice is stopped."

It is also reliably stated in Washington that the Subcommittee on Transportation and Communication will soon begin extensive hearings on aviation legislation and the permissive attitude of the CAB."

There is growing evidence that either CAB or the airlines are going to be forced one way or another to either eliminate, or drastically control, liquor serving aloft.

There is an ironic factor to this whole business. Numerous executives of airlines have told this reporter, off record, of course, that they would be very happy if liquor were not served on airplanes. Most of them lose money on the service; it is a messy business; it takes the time of flight personnel; it takes up pay-load space; it has caused trouble; and now it is creating a national issue.

Another ironic point is that the airlines have always made safety their most important goal. They spare no expense to maintain fabulous safety records. Their overhaul bases are a marvel of scientific and engineering skill. Their pilots and stewardesses and stewards are trained to perfection. Their weather observation and training challenges the best in the world. Their adoption of advanced equipment in the electronic field such as radar is quick and every aviation safety item is explored and adopted if helpful.

Yet, one passenger could brush this all aside with the swish of a bottle.

What can individuals do about the problem?

1. Register objections with Senators and Congressmen and urge legislation outlawing liquor aboard commercial aircraft.

2. Inform the Civil Aeronautics Board in Washington of your own unfortunate experiences caused by the serving of liquor in planes.

3. Express your opinion to the House Interstate and Foreign Commerce Committee, Washington, and to the Senate Interstate and Foreign Commerce Committee, Washington.

4. Select airlines that do not serve liquor whenever possible and let the airline know why you have done this.

5. Write to the executives of airlines expressing your position. In the pockets on the back of the seats in most planes there is a card asking how you have enjoyed your trip and for recommendations for improvement. Use these cards, write your opinions and send them in.

6. If you are asked whether you would like a cocktail, not only say "No," but express your objection to paying for the drinks others are consuming. On many luxury flights, cocktails are served "free" but all the passengers are actually paying for them.

7. Compliment airlines which do not serve liquor—from the ticket counter to the president's office.

Scattering Abroad

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. BYRD. Mr. Speaker, I am against sending any more American dollars to India. I think that the moment has come in which we should remember the Scriptural admonition:

He that is not with me is against me, and he that gathereth not with me scattereth abroad.

India's leaders have been scattering abroad and carrying water on both shoulders too long, and the sooner we stop bowing and scraping to Nehru and Menon the sooner we will regain the respect of the peoples of Pakistan and Ceylon and other countries who have dared to take a positive stand against communism. It will take a little bit of backbone, but the American people have always had plenty of this, and I hope that Mr. Dulles will demonstrate some of it during his forthcoming visit to Mr. Nehru's country.

Peter Edson, in an article appearing in the February 24 Washington Daily News, points to the growing impatience of Americans who are tired of bearing the insults of Nehru, an impatience which will reveal itself succinctly when Congress begins to debate the subject of foreign aid before many days have passed.

The article follows:

DULLES AND NEHRU

(By Peter Edson)

Secretary of State John Foster Dulles goes to India in March with half a dozen foul-ball strikes called against him.

It is an open secret that India's Prime Minister Nehru has no great love for him. The strain is said to go back to a slight which Mr. Dulles gave Mr. Nehru while negotiating the Japanese Peace Treaty.

Then in 1953 when the United States opposed India's participation in the Korean cease-fire talks—because India hadn't been in the war—Mr. Nehru called Mr. Dulles' policy "immature," for two reasons.

First, Mr. Nehru thought neutrals might bring the two opponents together. Second, he thought Asians should have a voice in settling Asian problems—not non-Asians.

As it worked out, India was the neutral power that handled prisoner exchange after the Korean armistice.

Mr. Dulles has been in South Asia three times since he became Secretary of State, but in India only once.

In September 1954 Mr. Dulles went to Manila where he signed the SEATO Pact, creating the Southeast Asia Treaty Organization. India did not attend and has not joined the alliance, since Mr. Nehru opposes all such military pacts.

Mr. Dulles went to the SEATO Conference in Bangkok a year ago. Afterwards he visited Burma to assure Premier U Nu that SEATO offered no threat to his neutrality. The job of reassuring Mr. Nehru on this score was left to Anthony Eden.

Mr. Dulles capped his own unpopularity in India when he made his unfortunate Goa statement about having discussed Portuguese "provinces" in the Far East during the Washington visit of Portugal's Foreign Minister Gunha in December.

This being the situation, about the only thing Messrs. Dulles and Nehru can talk about to improve their relations will be American participation in India's current 5-year industrialization plan.

Because Mr. Nehru's unwillingness to play better ball with the United States and because of a complete inability in this country in general and the United States Congress in particular to comprehend what India is up to and where it's going, the chances of large-scale aid seem dim.

Any change in the existing situation which Secretary Dulles can bring about on his forthcoming visit should be an improvement. Because the present state of strained relations couldn't be worse.

A Plea for Highway Sanity

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. MACHROWICZ. Mr. Speaker, the Hearst newspapers are to be complimented for their services in the past few years in their campaign for the adoption of an adequate Federal highway program. In view of the recent renewed controversy on the method of financing the better-roads program by increased Federal aid, I commend to my colleagues a particularly appropriate and sensible editorial on this subject which recently appeared in the Detroit Times and in all Hearst newspapers throughout the country.

The editorial follows:

A PLEA FOR HIGHWAY SANITY

The battle, in and out of the newspapers, between the American Automobile Association and the American Trucking Association would be interesting if it were not so discouraging.

The fight, and it is a real one, revolves around the new taxes needed to finance a better roads program through increased Federal aid.

The AAA insists that the truckers pay a higher rate of taxation than the passenger car owners.

The ATA insists that it is willing to pay higher taxes, but it insists that they be applied "across the board" so that they pay at the same rate as the private motorist.

This is a difference of tax philosophy that apparently cannot be settled by compromise.

If this is so, may the Detroit Times and the Hearst newspapers make a constructive suggestion so that the better roads in which America is in dire need will not be sacrificed to organizational policy.

The suggestion is this:

State your cases to the Members of the House Ways and Means Committee, the men upon whom the responsibility has been placed to write a new tax schedule.

Abide by their decision and support the subsequent highway bill reported out.

To act in any other way seems to us to be a piece of sophomoric folly in the light of a great national need for both truckers and private car drivers.

A folly, we believe, we can no longer afford. Any of us.

Pension Legislation

EXTENSION OF REMARKS
OF
HON. WINFIELD K. DENTON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. DENTON. Mr. Speaker, on January 5 of last year I introduced H. R. 656, which provides that World War I veterans shall receive substantially the same pension benefits as those received by the veterans of the Spanish-American War. The rates are set forth in the bill, but in brief, a World War I veteran at the age of 62 would receive $101.59 a month, without a means test.

World War I ended more than 37 years ago. Thirty-five years after the close of the Revolutionary War, the veterans of that war were given a pension on the basis of service alone. Similar pensions were bestowed by a grateful Nation 39 years from the end of the Mexican War, and just 24 years after the Civil War was over the veterans of that conflict were granted pensions as a matter of right.

Only 18 years elapsed before a system of general pensions was set up for the Spanish-American War Veterans. But in the period more than twice that long, since the Armistice of 1918, no such benefits have yet been provided for the veterans of World War I.

I am a veteran of both World War I and World War II. During World War I, I was in a branch of service which we in that first Air Corps considered hazardous. During World War II, I was a "retread," performing office work, and was as safe as if I had been at home in bed. Nevertheless, I am very proud of my World War II service.

I entered the Army in that war when I was 46 years of age. To have taken preliminary training at an Army school at that age, together with the financial sacrifices I made, gives me much pride

in my World War II service, and, for that reason, I generally wear the "ruptured duck" service emblem in my lapel. However, I cannot help but contrast the difference in the way the veterans of the two world wars were treated at the close of each conflict.

When their service was ended, the World War II veterans were each given mustering-out pay of $200 to $300, which cost the Government approximately $4 billion, without a question. Veterans of World War I were given mustering-out pay of only $60 apiece in 1918 and 1919. At that time, $60 would not purchase a suit of clothes.

A man who enters the military service in wartime must give up his job or position, and when that service ends there generally follows a period of hardship during which he must find employment and readjust himself to civilian life. The Government did very little to help the veterans of World War I tide themselves over this period. Even men released from prison are given a suit of clothes and travel fare home. They are treated with more consideration than was accorded the veterans of World War I.

And then came the long struggle to right that wrong. First, the Government gave World War I veterans the so-called adjusted-service certificates. The Government ascertained the amount of mustering-out pay that it should have paid to these veterans at the time of their discharge. An increment was added to make up for delay in payment. There was determined how much paid-up insurance due in 20 years could be bought with each veteran's adjusted-service credits, and each veteran was given a certificate for that amount of paid-up insurance, due in 20 years.

At first, the veterans were permitted to borrow on 10 percent of the face amount of these certificates; then legislation was passed permitting them to borrow on 50 percent; and, finally, in 1936, a law was passed over a Presidential veto to pay the veterans of World War I the full amount of their adjusted-service certificates — or mustering-out pay. Three similar bills had been vetoed by other Presidents.

So, 18 years after they were discharged, World War I veterans got their due mustering-out pay. The amount they received, under the forced-investment or insurance idea of the adjusted-service certificates, was $3.8 billion. The expenditure involved would have been much less—only about $1.5 billion—if the veterans of World War I had been paid this money due them when they were mustered out of service, as were the veterans of World War II.

In addition to mustering-out pay, since World War II, veterans have been given terminal-leave pay which cost the Government $3.1 billion, and unemployment compensation which cost the Government $3.8 billion. They have been given social-security credits for the time they spent in military service. Complete figures as to the cost of these are not available, but it will amount to something over $600 million. None of these benefits were given the veterans of World War I.

The veterans of World War II were also given the GI bill of rights. Under this program, they received on-the-job training and academic education. To date, these benefits have cost the Government approximatley $15 billion. These veterans also were given the benefit of guaranteed loans to purchase homes, to go into business, or to start farming. Loans for veterans' homes, alone, have totaled $30 billion, and $16 billion of this sum has been guaranteed by the Government.

Similar benefits were granted to the veterans of the Korean conflict, although in some instances they were not so great as those granted World War II veterans.

Excluding disability pensions—which are available to veterans of both World Wars—and aside from the housing-loan program, which has cost relatively little but provided an enormous benefit, World War II and Korean veterans have received benefits at a direct cost of about $26.5 billion. This figure will almost certainly exceed $30 billion within 10 years from now.

That sum is 20 times the amount given World War I veterans as adjusted-service credits, before the increment made because of delay in payment. Twenty million World War II and Korea veterans will have received 20 times the benefits which were begrudgingly granted the 4.6 million veterans who survived World War I. That is a benefits ratio of more than 4 to 1 against World War I veterans.

Now World War II and Korea veterans have received these benefits because of the activity and work that World War I veterans unselfishly gave in support of the GI bill proposal. The veterans' organizations were very active in initiating this program, and, in 1943, a group of Members of Congress who had served in the First World War met and decided on a course of action to obtain for the veterans of World War II the benefits which those Members thought should have been provided after World War I. And that movement was, of course, successful.

These benefits which World War II veterans have received have been money well spent. Any benefits of any kind that we might now provide World War I veterans would come to them late in life when their days of opportunity are, for the most part, long past. It was a priceless advantage to veterans of World War II to have their education and readjustment benefits when most of them were young and their days of opportunity were just dawning.

It has been estimated by a Census Bureau expert that the sum of $9,000 invested in college education for a young man will increase his lifetime earning capacity by $103,000. That is a return, or a benefit, of more than 11 times the investment. Multiply the World War II veterans' education-benefits payment of $15 billion by 11; the product is $165 billion in final economic benefits to those veterans. And the benefits of the housing-loan program are countless and beyond all calculation.

The educational provisions, alone, of the GI bill of rights have added materially to the wealth of America by providing us with trained scientists, engineers, doctors, lawyers, businessmen, farmers, skilled laborers, and followers of many other useful occupations. This is a wise program and America is much richer for it.

But don't forget, it was the veterans of World War I whose support assured the veterans of World War II of these benefits. And don't forget, either, that World War I veterans got no such benefits—either in terms of first cost or final result.

Many veterans of World War II have said to me that they appreciate greatly what has been done in their behalf by the World War I veterans who supported the GI bill. They said that, without this support, they would never have received these benefits. And they say, too, that they would like to see World War I veterans treated with the same fairness as were veterans of other wars.

Whenever it has been proposed to do anything for the veterans of World War I, someone has always stated that the cost will be prohibitive—that general pensions for them would drive the Government bankrupt. These opponents of such a program launch into a flight of astronomical figures which might overawe and frighten off people who have not taken a look at our budget history.

Let us look at the situation in the year 1910. That was the 45th year after the end of the Civil War, by which time all who fought in that war could have qualified for a service pension. That year, we paid Civil War veterans pensions totaling $105,399,354. The total of all Federal expenditures for that year was $693.6 million.

Thus we see that, in 1910, the Government spent 15.2 percent of the total budget on Civil War veterans' pensions. I think everyone will agree that the country did not go bankrupt then (and I might mention, incidentally, that the Treasury ran a deficit of $18 million that year).

Now let us suppose that my bill, H. R. 656, had already been enacted and were in effect during this year, 1956. Approximately 1,272,000 World War I veterans now at least 62 years old could qualify. And assume that everyone of those veterans did apply for a pension, and did qualify. And suppose those in good health got $101 a month, and those who are invalids got $135 a month—resulting, for the whole number, in an average monthly payment of perhaps $120 apiece. On that basis, the total cost for this year, 1956, would be $1.8 billion. That cost would be 2.8 percent of the total Federal expenditures estimated for the current year.

These figures I have mentioned are without reference to the sum which will be paid out this year under the currently existing, but inadequate, World War I pension program. That sum is approximately $480 million for veterans' pensions. Both as to Civil War pensions and as to World War I pensions, I have excluded any reference to sums paid as dependents' pensions, for convenience of discussion and comparison. If you consider the $480-million sum already due to be paid, my bill would add $1.3 billion to the current annual cost—an

increase of 2.1 percent over present total expenditures.

So, if paying Civil War veterans' pensions amounting to 15 percent of the total budget did not break up the Treasury and drive the country to disaster in 1910, it is reasonable to believe that World War I veterans' pensions of 2 to 3 percent of the national budget would bankrupt us in 1956? I don't believe that it is.

Now, someone may say that the Federal budget is a far different thing today from what it was in 1910, and that the Government has taken on new and costlier responsibilities. Granted, it may have. So, let us just make a comparison of pension costs with the national income, then and now.

The national income in 1910 was $25.6 billion. The sum of $105 million paid as pensions to Civil War veterans that year amounted to approximately one-half of 1 percent of the national income. And to pay World War I veterans the pension I propose—$1.8 billion for the year 1956—would take from the estimated national income of $340 billion a portion no greater than one-half of 1 percent. By 1963, when the budget cost of H. R. 656 probably would reach its peak, it is highly unlikely that this cost would ever have reached 1 percent of the national income, even if the national income does not increase at all—and we have assurances on every hand that our national income will increase, substantially.

Someone may say: "But look at the burden the Government now has to bear in paying pensions to other veterans—those of the Indian wars and the Spanish-American War." And I say: So was there a burden in 1910 of paying pensions not only to Civil War veterans, but also to the veterans of the War of 1812 and the war with Mexico, as well as the Indian wars. A total of 23 percent of the Federal expenditures that year went for veterans' pensions of various types. Today, we set aside only 7.4 percent of the Federal budget for veterans' benefits of every description.

Maybe someone else will say: "But in this modern age we fight total wars, when ever fit person of military age must serve without expectation of compensation in money." My answer to this is, that, happily, we have not yet had to fight such a total war. But some of the wars we have fought have been more nearly total than others. And World War I was, fortunately for the United States, one of the least total of all.

This country has fought in 6 really major conflicts, and more of the population stayed safely at home in their ordinary pursuits during World War I than in any of the other 5. During the Revolutionary War, 14.2 percent of the population saw military service; 7.4 percent served in the war of 1812; 9.7 percent of the available population performed Federal service during the Civil War; 11 percent served in World War II; 4.4 percent served in the Korean conflict; while only 4 percent of the population was called up for service in World War I. Relatively speaking, those who served in World War I were but a few selected from among the many.

I believe that the figures I have presented here should convince any reasonable person that this country can afford to pay the veterans of World War I the pension I have proposed in H. R. 656, with certainly no more—and probably less— strain than was imposed by Civil War veterans' pensions in 1910. The Government affords a great many more things today in the cause of ordinary human justice than was thought it could afford 45 years ago, and, to my mind, we have already delayed long enough, now, in affording ordinary human justice to the vetrans of World War I. It is time some action was taken.

For the veterans of World War I, the sands in the hourglass of time are running low. Today, their average life expectancy is only 15 years. Of the 4.6 million who came home when the fighting in France was done, barely 3 million remain. Taps has already sounded for more than one-third of the doughboys of 1918. Every passing day, 235 of them die. Tomorrow, 235 of them whom we could have pensioned today will be dead. A year from now, 90,000 more of the boys who faced shot, shell, and gas in the trenches will have gone to eternity—unpensioned and very nearly forgotten.

I think there is a just cause in the argument for World War I service pensions. And I know that when the case for them is put squarely to those who oppose these pensions, some of these opponents become sheepish, and their arguments weaken and falter. Their last resort of opposition is that these pensions would cost too much at present. To me, that is an admission that we have not done right by our World War I veterans, and that a service pension for them would be only just and proper, "but for the cost."

Surely no one would want to say that, while these veterans in all fairness are deserving of these benefits, we had better wait until death has thinned their number still more, and start paying them pensions when it can be done more cheaply. Surely no one would want to play such a cold-blooded waiting game as that.

I prefer to believe that all of us will recognize now the justice in the proposal to pension those veterans, and that we will take steps now to do now what ought to be done. And there are bills now pending on which action can be taken to produce the appropriate result.

I have no extreme pride of authorship in H. R. 656. There are other good bills which are similar to mine. Among them I would mention H. R. 170, by the gentleman from Alabama [Mr. RAINS], H. R. 551, by the gentleman from Massachusetts [Mr. LANE], and H. R. 4264, by the gentleman from New York [Mr. FINO].

Let me urge that favorable action be taken on some one of these bills. Let the veterans of World War I be treated with the same consideration as those of the other wars in which our Nation has fought. Let there be no generation of forgotten men among America's veterans.

Bad for Roads

EXTENSION OF REMARKS
OF

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1956

Mr. MACHROWICZ. Mr. Speaker, those who have attended the hearings just concluded before the House Committee on Ways and Means have had difficulty in reconciling the position of two Cabinet members, Secretaries Humphrey and Weeks, with the statement of the President in support of the bills now pending in the House to put the President's road program into effect.

This certainly looks like sabotage right within the President's own Cabinet. The writer of the editorial appearing in the New York Journal of February 23, which I am submitting herewith, is certainly right in saying that this unusual situation requires that the President "again make his position clear and undo the damage done to a project in which he has a personal interest."

The editorial follows:

BAD FOR ROADS

President Eisenhower's highway program in Washington is suffering today from foot-dragging and sabotage from members of his own Cabinet.

Whether accidentally or by design, the performances of Secretary of the Treasury Humphrey and Secretary of Commerce Weeks as witnesses before the House Ways and Means Committee definitely lessened the chances of passage of a highway bill that will carry out the President's program.

The position taken by Humphrey perhaps can be rationalized to be that simply of a treasurer desiring to balance his books whether any roads get built or not.

The position of Secretary Weeks was just plain baffling.

The committee heard Weeks because he has supervision of the United States Bureau of Public Roads.

Weeks read a long prepared statement praising those sections of the highway bill with which the committee has no responsibility and very little concern.

He was then questioned on the tax features of the bill, which are totally the concern of the committee and presumably the reason for Weeks' appearance.

The Secretary had no advice and no counsel.

He was unable to answer questions that almost everybody in the room, including the spectators, could have answered readily.

Not only did he not know the answers, he refused to let two officials of the Bureau of Public Roads give the answers themselves.

It was more than sheer ignorance.

It was obvious to everyone present that Weeks was not going to help the Democrats write a tax bill to finance the Eisenhower highway program.

If the Eisenhower program is voted down in the House because of lack of Republican support, the blame can be traced directly to the attitude shown by Humphrey and Weeks.

They were negative witnesses.

Apparently the President will have to state his position again.

He will have to state it bluntly and specifically so that no one will confuse his position with that taken by his two Cabinet members.

He has said already that he will support a highway bill financed by higher taxes, and in saying so he attempted to make the bill bipartisan.

At least that is the way everybody but Humphrey and Weeks saw it.

Their actions have served only to confuse those Republicans who will have to vote on the bill.

They are wondering which administration position is the official one.

The Weeks' performance looked particularly bad because he was preceded as a witness by a Republican who intelligently and enthusiastically supported the highway bill and its tax schedule.

He was Charles P. Taft, mayor of Cincinnati, and a brother of the late United States Senator Robert Taft.

Taft disagreed with previous testimony given by Humphrey and certainly will disagree with the position taken by Weeks.

The facts are that a Republican Ohio mayor did more to advance the Eisenhower highway program, for which he has no responsibility, than the two responsible Cabinet officers put together.

The New York Journal-American and the other Hearst newspapers regard it as of vital importance that the President again make his position clear and undo the damage done to a project in which he has a deep personal interest.

Taking From Peter To Pay Paul

EXTENSION OF REMARKS
OF
HON. CECIL R. KING
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. KING of California. Mr. Speaker, we are faced with subsidies for taking land out of production and with subsidies for putting land into production at the same time.

This is the anomaly that is presented to the House in its consideration of the upper Colorado River project.

I wish to insert in the RECORD the letter I have directed to each Member of the House, together with a copy of the "expert testimony" of the distinguished former Governor of Nebraska, Robert LeRoy Cochran, who is eminently qualified to speak on the subject:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., February 23, 1956.

DEAR COLLEAGUE: Enclosed is a reprint of a recent interview in Newsweek magazine with Robert L. Cochran, relating to the upper Colorado River project.

Mr. Cochran recently retired from the United States Bureau of the Budget, where he served more than 10 years as an expert on the financial and engineering aspects of Federal water-conservation projects. His distinguished career dates back to 1915 when he entered the office of the State engineer of Nebraska. He also served an unprecedented three consecutive terms as the Governor of that State.

Now free to speak publicly, Mr. Cochran points out the economic folly of authorizing the upper Colorado River project and also points out that the power features of the project, which are supposed to help pay the costs, may well be obsolete before the repayment period begins.

He further states that 90 percent of the irrigation costs would be Federal subsidy and that with the pending soil-bank proposal, Congress is faced with subsidies for taking land out of production and with subsidies for putting land into production at the same time.

I hope you will find it possible to take the time to read Mr. Cochran's statements prior to action by the House on the matter.

Sincerely,

CECIL R. KING,
Member of Congress.

EXPERT TESTIMONY

(By Raymond Moley)

On January 31 Robert LeRoy Cochran retired from the United States Bureau of the Budget, where he served more than 10 years as an expert on the financial and engineering aspects of Federal water-conservation projects. His distinguished career suggests that there is no man in the United States better qualified to advise in that field of Federal activity. Beginning in 1915, he spent 20 years in the office of the State engineer of Nebraska, during 12 of which he was head of that department. In 1934 he was elected on the Democratic ticket Governor of his State, and was reelected in 1936 and 1938. This was the first time in the history of the State that a governor was elected for three consecutive terms. In addition to this unparalleled official experience in a reclamation State, he himself has owned a reclamation farm for 40 years.

He is now free to speak publicly, and I have asked him a number of questions concerning the multibillion-dollar upper Colorado storage project which is now before Congress.

Question. Governor Cochran, since the great majority of the readers of this article are interested in the Colorado River storage project as taxpayers rather than as beneficiaries, I believe they would like to have your opinion concerning the possibility of repayment to the Treasury of the money spent for power and irrigation. What is the formula proposed by the Interior Department for repayment?

Answer. It is called the Colibran fomula. It proposes that the power features be paid off first, with interest, from the revenues from the sale of electricity. After those expenditures are liquidated, which it is estimated will take about 50 years, the power profits would be used to pay off the costs of the irrigation aspects of the plan. Such repayment, if ever made, would take considerably more than another half century.

Question. What is your opinion about the practical prospects of repayment?

Answer. According to the claims of the Bureau of Reclamation and the congressional sponsors of the project, the cash boxes from which most of the repayment must come are power installations, the largest of which is Glen Canyon near the Utah-Arizona border. On the basis of the figures submitted, only Glen Canyon could be justified as financially feasible. Even if the revenues from that one dam were as good as anticipated, they would be entirely consumed in paying the deficits on the other power dams. That would leave nothing at all for the repayment of the irrigation costs during the first 50-year period.

The analysis presented by the department was based upon a 50-year period, generally considered to be the useful life of a project. Such a period may be too long in the light of the future potentials of power production from atomic energy and other sources.

Question. How then could the costs of the irrigation aspects of the upper Colorado project be paid back to the Federal Government?

Answer. A small proportion (about 15 percent) of the construction costs alone would be repaid by the farmers during the first interest-free 50 years. While it is proposed that the balance (85 percent) be paid back out of the revenues of the power aspects of the plan, we have already see that there is no validity in that claim. Payment from that source would not begin anyhow until after about 50 years. By that time, the power features might well be obsolete. It should be emphasized that there appears to be a very serious doubt as to whether any power revenues would ever be applied to the payment of irrigation costs in the upper Colorado basin. I submit that a proposal to start payment after 50 years on a debt for any purpose is not worth the paper it is written on.

Meanwhile, because of the high construction costs per acre of the irrigation works and the accumulating unpaid interest, the Federal subsidy would be enormous. Under the ultraliberal construction of the reclamation law by the department, freedom from interest extends not only through the 40 or 50 years beyond a development period, but indefinitely into the future.

Something like 90 percent of the irrigation costs (including interest) would be Federal subsidy. Besides, experience with reclamation projects indicates that after 30 years or so it is necessary in a considerable number of cases to spend further money on rehabilitation. This is another large item of expense for the Federal Government. There is also the fact that there is pending in Congress a proposal to subsidize a soil bank of land now under production. We are faced with subsidies for taking land out of production and with subsidies for putting land into production at the same time.

Question. But proponents of the upper Colorado storage project, ignoring the fact that in humid or semihumid sections of the country there are millions of acres which might with relatively small cost be prepared for cultivation, say that new irrigated land will be neecssary by 1975 because of the rapidly increasing population in the United States. What about that argument for bringing new irrigated land into cultivation?

Answer. Such a claim must be balanced against the fact that through technology increased production can be and is being obtained from fewer acres. It will be very many years, if ever, before such land as is proposed in this project could be needed.

I would conclude that if Congress proposes to pay this immense subsidy to bring this arid land into production, it should be done in the open. As it is, the subsidy is pretty well concealed by means of a repayment formula which is absolutely without validity.

Gaining Momentum

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. OSTERTAG. Mr. Speaker, I recently called the attention of the House to the fact that Eastman Kodak Co. has formally recognized Good Friday as a day of deep spiritual meaning to the Christian world, and has designated it as a paid holiday.

My attention has since been drawn to the fact that another large company in my district, the Massey-Harris Ferguson Co., of Batavia, N. Y., has also signed a contract with its employees in which Good Friday is designated as a paid holiday, thanks in large measure to the interest and efforts of the works manager of the plant, Mr. Robert L. Benson. I am indebted to Mr. M. O. Clement, civil

defense director of Genesee County, for this information.

Regardless of one's faith, the increasing recognition by industry of the spiritual significance of Good Friday underscores the fact that this is indeed one nation, under God, indivisible.

American Friends of the Middle East

EXTENSION OF REMARKS,
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. MULTER. Mr. Speaker, permit me to call to the attention of our colleagues the report on American Friends of the Middle East, which appears in the January 1956 issue of the ADL Bulletin. The report is condensed from the forthcoming book Cross-Currents, by Arnold Forster and Benjamin R. Epstein, which is a documented study of the use of antisemitism as a political whip by men high in international councils.

The report follows:

THE FACTS ABOUT AMERICAN FRIENDS OF THE MIDDLE EAST—SPECIAL PLEADERS FOR ARAB NATIONS

(From the pages of a new, exciting book, Cross-Currents, by Arnold Forster and Benjamin R. Epstein)
